4766. It has been suggested that those terms gave to the shareholders a much larger sum than the market value of their shares?—They may have given them 10, or perhaps 15 per cent. more; but after all we considered this, that we did not give them a shilling that they had not expended, directly or indirectly, if you had counted the capital they had spent and the interest which had accumulated, at a very moderate rate. I believe they had spent more, at any rate as much. It is quite true that when we proposed to the Secretary of State to buy up the Company, the shares were considerably below par, but the company never would have sold them at anything much below, if at all below, what was proposed or settled by the Secretary of State. He, in point of fact, gave them something less than we proposed. That was the case; what would have been the use of our going into the matter of buying them up or not, when we knew that they would not take the reduced price? As long as they were content to be without the money, they could have gone on like the dog in the manger; they could have prevented us from doing anything, while they did nothing themselves. I do not mean that they had not the disposition to complete the canals, but they had not the money, and they would have said, "We will wait and see the result of what we have done, and then if it is successful we will induce shareholders to come forward with the money to go on." Then, not only were we in difficulty with the Orissa Company as regards Orissa, but they had a lien on the Government of India as regards the Saone Works in Behar. We said to them, "We have lent you money, and done various things to help you, and we ask you to give up the Saone project, and we will commence it ourselves." "No," they said, "we will not." The consequence was, that until we had bought them out of Orissa, we could not have done anything on the Saone. By the arrangement which was made, we contented them as regards Orissa, and they gave up the Saone project to us. I think myself it was a good speculation on our part. As a private individual, I should have said that a proprietor of land would have been very wise, if he had bought out a party under similar circumstances to that company.

4767 Has anything been done to promote the Saone irrigation;—Yes; I did not see the works myself, but we had excellent opinions, much better than any that I could have given; Mr. George Campbell, a member of the Commission, who inquired into the state of things in Orissa, and Colonel Moreton, one of the Commissioners, an engineer of considerable ability, gave an opinion very much in favour of what the company had done, not only officially, but in private to me. I spoke to them very seriously, and they told me what they had seen, and that the work had been constructed very well. The engineer on the part of the company, was a Madras engineer of high reputation, whose whole life had been devoted to such matters under Sir Arthur Cotton; I allude to Colonel Rundell. He was so good a man, that when our engineer, at the head of our irrigation in Bengal, went home, I think Lord Mayo selected him to succeed to the post. So that we had every reason to suppose that what had been done had been well done; and that all that was wanted was money, and we instantly gave the means and appliances, under Colonel Rundell, to complete the works.

4768. On the whole, you considered that the arrangement was beneficial to the finances of India and the public?—I did; I rejoiced on every account when it was settled in England by Sir Stafford Northcote.

4769. Now, the Bombay Government would seem to have entertained at times, probably a different view from yours in promoting the reclamation of the shore at Bombay by means of private enterprise?—Yes.

4770. Were you of opinion that it was desirable to reverse that policy, and put an end to those

those enterprises?—I presume that you allude to such undertakings as that of the Bach Bay Compay? That was a very different thing; it was a mere scheme to reclaim a certain amount of land submerged by the sea, and as far as I could judge, seemed a very excellent project. The outgoings and incomings of Bombay are very much narrowed from want of area, and this would have recovered a very considerable portion of the foreshore. At that time the Government were under engagements to make over to the Bombay and Borada line, a given quantity of land, to enable them to come in from the outskirts of Bombay into Calaba. If we had taken land occupied by the people, we should have paid a fabulous sum for it, something approaching to what you pay in London for land; whereas, by this reclamation, it would have cost the Government nothing, and the company would have recouped themselves by the remainder of the land, which they would have had to sell, or to do what they liked with. It seemed to me a very good plan, but the scheme broke down from various reasons. But one obvious reason was, that they had 90 lacs of rupees in one of the banks which failed. There were other things connected with the Bombay scheme more or less discreditable, but that was no part of the real scheme, but it merely arose from the gambling spirit in Bombay.

4771. Did the Government of India determine the sum that should be paid to the shareholders for taking back the grant of land before the reclamation?—I was looking over the correspondence about a week ago, with the view of trying to find out what had been done, and I could not find out exactly what the Government had given to the company; but it was arranged by the Bombay Government, and approved generally by the Secretary of State. A good deal less land was reclaimed, and a much less sum paid than what perhaps was spent; but what was the exact sum that the State has paid for the land, I do not know.

4772. Did you find whether the Government of India sanctioned the terms of the Secretary of State, or whether they were sent direct to the Bombay Government?—I fancy that they went home from the Government of Bombay direct, and came direct from the Government at home. My impression is, that both Governments were in communication with the Secretary of State, and that it was arranged with their general consent.

4773. There is also the project of what is called the Elphinstone reclamation on the other side of the island, which was in like manner taken back from the shareholders?—Yes.

4774. Was your attention called to the sum paid to the shareholders for that land as compared with the value of their shares in the market?—Yes; the shares had been greatly depreciated; I forget how low they were, but they were very low at that time, and they rose to about half, and they remained a long time at that rate, especially during all that period of commercial depression; but intrinsically, I have no reason to suppose that they were not very much more valuable than what the market value was at that time; and the probability is, that they would have risen considerably; but whether they ever would have risen to par, or not, I cannot say. But in my time, I think it was in 1867, the Government of Bombay urged the Government of India to buy up the concern from the shareholders, and I objected. I did not object from any knowledge that absolutely it was a bad bargain; but I had an instinctive feeling that at that distance it was better for us not to go into the matter, and therefore I urged the Council not to agree, and they did not agree. But after I had left, Sir Seymour Fitzgerald pressed the matter on Lord Mayo's Government, and there was an understanding, as I gather from the papers, that it would be so arranged, that the dues that would be levied would pay a fair interest on the capital; and, in fact, give even more, in the shape of something to go to a sinking fund. Under that understanding Lord Mayo urged very strongly on the Secretary of State to allow the concern to be bought up, I think, at par; and he agreed to that; but I gather now that it is not likely to pay so well as was then stated, but I have no data on which to form an absolute opinion on it.

4775. It was not concluded whilst you were in office in India?—No; I thought that it was a question that might be asked me, and I have looked up the correspondence, and read it, and what I have said seems to me to be the general outline of the case.

4776. Was it not presented to you, in the first instance, as an arrangement by which the Government would be recouped out of the revenue of the land?—When they brought it before me in 1867 they did not go much into the question of whether we would be recouped or not, but the general idea was that it was a good work, a valuable work, in such a position that it would be of considerable public importance, and that it would pay. The Bombay Government did not go into details with me as they did afterwards, in Lord Mayo's time, but they made a general suggestion of our buying it over; and I suppose if we had agreed generally, then they would have gone into the details, but we objected to it altogether, and said that we were not in a condition to buy it.

4777. To pass to the question of railway enterprise, which is another mode of developing the resources of India, is it your opinion that it is desirable that any railway should be constructed by joint stock companies, or that they should be also undertaken by Government?—My view as regards the construction of railways is very different from my view as regards the construction of canals. In the one case I can see no valid argument in favour of giving them over to companies; on the other hand, I think there is a great deal to be said in favour of railway enterprise. I think, for instance, in the origin, we should not probably have had railways at all for many years, if they had not been entrusted to companies. But I think myself, in making that admission, as I said the other day, railways have been expensively constructed; and I think that that has arisen mainly, though not altogether, from the system of guarantee. With a guarantee of 5 per cent. capitalists will agree to anything; they do not care really very much whether it succeeds or fails; 5 per cent. is such a good rate of interest that they are content to get that, and not really to look after what is done. Hence one of the reasons why the cost of the railways has been more than it ought to have been. On the other hand, what I would have liked to see instead of a guarantee was helping the companies by a subvention while the companies undertake all the cost, with the exception of the amount contributed by the

Lord *Lawrence.*

13 June 1873.

Government. We tried that system of subvention in India, and it failed. We tried it as regards the Oude and Rohilcund Railway, and we could not get anybody to look at it. The fact was, that they liked the system of guarantee so much better than the system of subvention, that they poohpoohed the other. That being the case, I would say that I would rather run the risk of the Government making the railways, because I believe, in the long run, they would make them cheaper, even with all the disadvantages of their being done by the Government, than continue the system of guarantee.

4778. Do you think that there would be any danger of the Government running into what may be called theoretical views in making the railways?—It depends upon what you call theoretical views. I think that the Government have neither time, nor money, nor inclination, to go into anything which is not practical. The Government in itself I think, is not so constituted, that its members are such men that they would wish to add to their labour, and trouble, and liabilities. I think it was only forced on us that it was better to try and make the railways ourselves, seeing the enormous cost of the guarantee system.

4779. Do you think that the guarantee system is working or did work while you were there sufficiently well to justify its existence as regards the existing railways companies, or since the time of the first contract?—I think they are working very much better than they formerly worked, whether it was that the engineers became more experienced in the circumstances of India and the peculiarity of the country, or the pressure of public opinion; certainly they were working much better on my side of India than they had been, judging by the cost.

4780. Do you think it good financially, that that system should be maintained, or that it should be brought to an end as soon as the Government can do so in accordance with their engagements, by taking them over for the Government? — They have cost such an enormous sum of money, that it seems to me that we should have to pay frightfully on all these railways if we took them over.

4781. Have you not to pay a guarantee on all these railways? — It is Hobson's choice, I think, whether we continue to pay the guarantee or take over the railways. There is one consideration which would induce me to advocate the buying up of the railways if you could get them at a moderate price and raise the money in such a way as that which I believe Mr. Thornton described to this Committee; at least, he, talking to me one day on the subject, stated that money might be raised on such terms, that we might pay off the whole cost of the railways in a given number of years, 90 or 100, and have the railways for nothing. If that could be made clear, or anything approaching to that, I should like to see it done. But irrespective of those considerations, there is one point that I have a very strong feeling upon as regards the railways, namely, that this double system, this system of *imperium in imperio* is not good for the country. Now the natives in my time (and I see little difference to this day in spite of all the attempts of the directors of the companies to improve the system) greatly complained of their treatment on the railways; and I myself believe that though it is difficult to prevent abuse of power under such circumstances, yet the Government could be more effective in that respect than companies. I think that it is very difficult to do this; still if you have got the men in India as managers of the concerns of the companies, of that temperament and character that they are very earnestly desirous of enforcing good conduct on the part of their subordinates, then I think that they could do a great deal. But the inherent difficulties of managing their subordinate European establishments are very great. The natives complain very much in that respect; and on inquiry that I used to make in India, both official and private, I was confirmed in the view that these statements of the natives were to a considerable extent true.

4782. Do you think that the system of double administration which we have been informed goes on in reference to these railways on the part of the railway companies and the Government, tends to efficiency or economy? — No, I should think not. I think in all expenditure, the only time to check it is at the beginning. What can you do when money has been spent? You can only bear it. I do not think that there is any real check afterwards. Stop men at the beginning, prevent them from undertaking a wasteful expenditure, and you succeed; but when once they have expended the money, whether it is Government officers or a private company, I do not think there is any difference; the expenditure is past recovery.

4783. Do you think that the Government, if it took over these railways, would really devote any sufficient time and attention to their administration?—Of course, it would add to their labour; but I do not think it would add to their labour so very much as to prevent their doing it more or less effectually. What they would do is that they would organise a system such as they do in the Public Works Department, or the Irrigational Department, or any other department; they would work through it; they would pick out all the best men they could lay hold of to work it; and there would be their general control. It would be divided also among the Governments. For instance, the general Government of Bengal used to look after the East Indian line from Calcutta to Delhi, on to Umballah. Then the Government of Bombay looked after the Bombay and Baroda line, and so on; and the Madras Government looked after their railway. And in that way I think that the work would be divided among the different Governments; and I think, on the whole, such a system would work better.

4784. Do you think that any sufficient inquiry was made as to the return that could be expected in the railways that the Government itself has undertaken since it ceased to subsidise companies?—I think a great deal of trouble was taken in trying to estimate what would be the returns; but these things are very uncertain in India. It is very difficult, under any circumstances, to calculate the returns; but the lines that are being made, as far as I recollect, by Government, are lines which are almost certain to pay, partly from the economical mode in which they are being constructed, and partly from the country they run through. For instance, the line from Delhi to the Sambhur Lake, through Jeypore, and the line from Agra to join that line, are almost certain to pay. I think the salt coming on the line would probably alone pay a cheap line like that.

4785. Do you know whether what are called the cheap lines in India are, in their first estimate, nearly as dear as those which are called the dear ones?—My impression is not so. Take that line between Mooltan and Kotri, on the Indus; I was looking over a pamphlet on the subject by Mr. Andrew, and I think he estimated that that line would cost 12,000*l.* a mile; but General Strachey told me, not long ago, that the estimate for a cheap line was 7,000*l.* a mile; that is 5,000*l.* difference; however, Mr. Thornton says that there would not be that great difference, though the one would be a great deal less than the other. Still that is a question which should be determined, after careful consideration, and after seeing the estimates of the different engineers. My impression is that, whether you consider the first cost, or whether you consider the working, it is impossible that there would not be a considerable difference.

4786. Do you know whether any estimates had been made on the same basis of construction and collateral works for what is called the cheap system and the dear system, resulting in the cheap system being about 700*l.* less than the dear system?—If it turned out that there was a very slight difference, then, of course, the argument in favour of a cheap line is very much reduced. But if you could save something like 1,000*l.* a mile when you come to lines, I will not say like the line to the Sambhur Lake, on which the salt may give an adequate return, but a line where for years and years you cannot hope to get the expenses paid out of the income, it seems to me that when you make a calculation of what the result of the other plan would be in loss of money at the end of 20 years, it would be very large. I would say in that case, cut your coat according to your cloth; do what you see long-headed men like the Americans do; they begin making a rough road, a corderoy road, without bridges; then they make it better, and improve it by degrees. Now take that line from Kotri to Mooltan, say that you save 1,000*l.* per mile for 20 years, and at the end of 20 or 30 years, when the country is developed, and a trade has grown up, you can then well afford to change your rails.

4787. Do you know whether the system is of that character that has been adopted by the Government, or whether they have not determined to make a complete and perfect railway, though it may be a narrow gauge one?—Assuming that many of the arguments in favour of the broad gauge, as compared with the narrow gauge, are true (though I do not say that they are true, for I think engineers say that the narrow gauge is as efficient as the broad gauge), and bearing in mind one great objection to it, an obvious one, the break of gauge, I say that it would be far better for the next 20 or 30 years to accept the inconveniences which would arise from a break of gauge, rather than to spend a thousand pounds a mile for the above time on a broad gauge; I would sooner accept the liability arising from the dangers of the one, than I would accept the certain loss of a considerable sum of money from the other, which we must borrow, and which we have not to spend; if I had plenty of money I would go in for the liberal system.

4788. Do you think it will lead much to increased expenditure in working the railways in India if the gauge is different, for instance, in the Punjaub?—I think it will lead to very little difference. I think people are blinded by the circumstances of a country like England, a country with small area, enormous wealth, enormous traffic, high prices, high rate of labour, which render it important to have one gauge throughout the country. But here is India, a continent; the distances so enormous, and the poverty of the people so great, that money is really an immense consideration. That is my feeling.

4789. Do you consider it expedient, in undertaking these works, that there should be a separate fund created for them, and that they should be entirely separate from the ordinary administration of the receipt and expenditure of the revenue, or that they should be carried on out of the revenue generally, and that the deficit that they create should be made up by loans?—As far as the accounts go, it seems to me that, though originally sufficient care was not bestowed in keeping the accounts of the profit and loss of each enterprise sufficiently distinct, yet of late years they have been kept distinct, and that the system, as now in force, is sufficiently good; that is to say, the system by which you bring into the general year's income and expenditure, everything that is spent and received in that year, but keeping a distinct account of profit and loss of every enterprise; I think that is, perhaps, the best system. But as regards the question whether I would go in for a limitation of public works to surplus income, I would not do it, because if you do that, I think you delay the development of the country and the improvement of the people indefinitely. But neither would I go in, on the other side, for very extravagant works. I would limit my expenditure to the most necessary and the most important works, and even in those, I would only go to a moderate extent, and then all that I could get out of the country I would devote to that, and the margin I would borrow. Wherever I had an increment from a successful year's financial administration, I would devote that to paying off debt; and, on the other hand, where there was a deficit, I would then borrow. I would make the income go as far as I could, and limit the undertakings to the most important works. But having begun a work, I would always go on, and complete it to the full extent; I think it would be more economical to press it on than to starve it for the sake of not borrowing.

4790. You think it better to borrow in order to complete any work, rather than dawdling through a number of years?—I think you lose a great deal of money by dawdling, in the one item of establishments. If you are continually increasing your establishments in one cycle of years, and then diminishing them in another cycle of years, you lose a great deal of money in establishments, and in one year your officers are doing little, and in another year they are overpressed.

4791. Do you think any advantage would arise from making the distinction between capital and revenue which would be made by merchants in their affairs, in dealing with the affairs of India, or that it is better to have one general system of receipt and expenditure?—I think it is better to have one general system. If you have got a surplus income, and are not pressed by public works to expend all of it, then pay off debt; if you happen to get a large sum of money from the sale of waste lands, or anything of the

Lord *Lawrence.*

13 June 1873.

kind, devote it to the same purpose; but if you must borrow in the year, it is no use paying off a portion of the debt with one hand, if you have to take up a larger sum with the other.

4792. Your operation would be, if there was any surplus, to spend it in paying off debt, and if there was a deficiency, to borrow?—Yes.

4793. So that you operate, in point of fact, upon the public debt, as representing a capital?—Yes; in point of fact, if you look carefully into the accounts, you would find that one year with the other there was as much laid out that might be called capital, and, therefore, might be deducted from the expenditure, as there was of capital which was used as income, that one would very nearly balance the other. Now, for instance, in these late years a considerable sum of money has been derived from the disposal of ships and stores, and a large increment from the sale of land; but on the other hand there were large items of expenditure, such as paying for the transport ships, the payment of the ironclads to defend the Bombay Harbour, and in various ways you could trace considerable sums of money for which reasonable arguments might be adduced for debiting the amount against capital.

4794. Your argument is, that it would lead to considerable complication of accounts and mystification, if the other plan were adopted?—With a set of men not very conscientious, it might lead to cooking the accounts, I think.

4795. Have you considered the nature of the Home charges against the revenues of India?—Yes; I have not gone into them.

4796. Do you think that the mode in which they are now dealt with is satisfactory?—I do not.

4797. In what respect?—I think that India is overcharged.

4798. And for what?—Overcharged in various ways. I think the great item in which it is overcharged is regarding the recruiting of the English army. That has become very expensive, and that system is a system adopted for English objects, for English policy; and it seems to me unfair, that because it costs a large sum to recruit under those conditions, therefore India should be charged with it all. I think India ought only to be charged a reasonable cost for recruits, and that England ought to pay the balance. I may be prejudiced on the subject, but that seems to me only a reasonable conclusion.

4799. Have you gone through the papers which were prepared on the discussion of that question?—I was in the Council at the time when there was a great deal of discussion on the subject, and I heard all that was said on the other side; and I have since looked over the papers which were drawn up when Mr. Seccombe and General Jamieson were employed on the part of the India Office, and it struck me that India was not fairly dealt with.

4800. But I do not see in what respect India pays more than is the actual cost of the recruit, beginning with the first operations, and supposing that the recruit is kept a certain time in this country fashioning?—Under the old East India Company's system they had one depôt, and kept recruits there a certain time and sent them out; they may have kept them too short a time; it may have been necessary in order thoroughly to drill them to have kept them a longer time; but still keeping them a longer time would not in itself have caused such an enormous difference in the amount of recruiting now charged against India. An infantry soldier now costs something like 140 *l.*, and in the time of the company he cost something like 30 *l.* to 40 *l.*, and if you double that it would only have been 60 *l.* At one time you had a number of depôts, which were in my mind quite unnecessary, but they were maintained, I presume, for reasons good to the War Minister of the day. That being the case, why should not England pay the difference? If India was very rich and had plenty of money, and could afford it, I would say nothing about it; but when we are struggling in all ways to keep things going, and to do what we are bound to do in the way of developing the resources of the country itself, and trying to make the people less poor than they are, it does seem to me very hard lines to make India pay.

4801. But was the amount assessed upon what was calculated in the mode of recruiting to be the actual cost to the Government in this country of placing the recruit on board?—Yes, that is quite true; but it is an expensive system.

4802. Then is not the question, not whether the payment is right upon the system, but whether the system is right which leads to the payment?—It is the same thing to India, either way.

4803. It is the same as a matter of justice; because you ought to pay what the cost is; but it is another question whether the mode of recruiting is a right one?—That is quite true; but if my partner in a commercial concern introduces a system which costs the concern double or treble what it needs to pay, I should be the complainer, and should try to get rid of him.

4804. You might have a great complaint against the intelligence of your partner, but you would not be entitled to complain of injustice on his part?—I would say to him that I paid because I must pay, but that for the future we would separate. But we cannot do that in India, and therefore I think we, being subordinate to the authorities at home, and they having us practically in their hands, they ought to deal with us very tenderly.

4805. Would it not be very unjust to the people of this country that a bad system or an expensive system of recruiting should be kept up for India, and that they should pay the cost of the bad system, and only charge the revenues of India with the cost of a good system?—If the people of England will not do what they ought to do through Parliament and the Ministry, then they must bear the consequences, and India ought not to bear them.

4806. Do you know whether the Secretary of State for India has made any definite proposition for any other system of recruiting?—It seems to me that the Secretaries of State apparently did their best. What they actually did in the Cabinet I do not know.

4807. I am speaking of the Secretary of State, not in the Cabinet, but in Council?—The Secretary of State in Council seemed to me to have done what he could to defend India, as far as I could judge; but what he said in the Cabinet of course I cannot judge.

4808. But what is the essential difference between the system formerly pursued by the Company, by which they were enabled to put their recruit on board at a certain sum per head, and the

the present system, which costs double, or whatever it is?—The essential difference was, that then there was one depôt, with few officers, and here you have many depôts, with a large number of officers; I believe they have changed it lately to a system of recruiting by means of the Home battalions, but still they keep the cadres of two companies per regiment to recruit for India, and the effect of that is, to make it very costly. That seems to me the main reason. I think, if they really tried, they could alter it. If we were in such a position in India as to refuse to pay them, as the colonies refused, they would very soon find out a way of doing it. I think there is another thing which I may mention, I think, as regards the Indo-European Telegraph; as far as I understand, India has had to pay the whole cost of that, and it is a line which can never really pay; and in its construction, and ever since, we have had to pay the whole cost of it. It seems to me, that in the case of two nations undertaking to make a telegraph line through a long distance of country, neither of them would consent to bear the whole cost; if they did it together at all, they would say, "Let us bear the cost equally."

4809. Was not that undertaking wholly devised and carried out by the Indian Government?—I think not.

4810. Or by the Secretary of State in connection with the Indian Government?—I may be in error, but my impression is that it came from the mercantile community at Home.

4811. Although it may have originated in English enterprise, still was not the undertaking one entirely in the hands of the Secretary of State for India and the Goverument of India?—It may have been executively and administratively in their hands.

4812. And I mean politically, also?—I may be wrong, but it seems to me that it was a joint undertaking. At any rate, England gets an equal share of the benefits of that line; it is as important to England and English interests, as it is to India and Indian interests; therefore, I say, that justice demands that it should be paid for equally by both sides.

4813. What I mean is, that the Treasury were not in any way invited to participate in that undertaking in the same way as in the case of a joint enterprise, still less successful between the two Governments, the case of the Red Sea Telegraph?—The case may be as you say, but still I do not think that it would alter the condition of things.

4814. Then, in fact, if certain parties at home pressed the matter on the Secretary of State and the Government of India, it would be an instance of weak administration on their part in giving in to an unprofitable enterprise?—It may be stigmatised as weak, but it seems to me tyrannical on the other side. I mean that India is weak and the representatives of India are weak, because they have not political influence; but it is a tyranny to abuse that weakness.

4815. They can hardly be said to have been subject to any tyranny, can they, until there was an actual force brought to bear on the part of this country, in the shape of a resolution in Parliament that they should do it; were they not bound to resist, and are they not bound by the constitution of this country, as well as their own special constitution, to resist any appeal to join that project, if they really believed it ought not to be done?—I think that we are bound to do so; but it seems to me impossible in the nature of things, to oppose an effective resistance in a case like that.

4816. But the Secretary of State for India in Council, having been by Parliament expressly constituted on the footing that no expenditure should be incurred without the sanction of the Council, how is Parliament and the public of England to know that they are not acting within their own free will if they do not resist until there is a resolution of Parliament ordering them to do it?—You see that the Secretary of State for India is part and parcel of the government of the day, and if he cannot induce, or will not induce the government of the day to interfere, I do not see what the Council could do.

4817. We understand that the Council was expressly established by Parliament, to prevent the Secretary of State from spending money, unless they conscientiously believed that it was proper expenditure; it would be no answer to that, therefore, to say that the Secretary of State had not exercised his authority to prevent the Council agreeing to the expenditure?—It seems to me that there is a moral obligation on the part of the people of a country like England to interest themselves in the affairs of India, and that being the case I do not think I go too far if I say that the government ought to have prevented that abuse of opportunity, if I may so call it, if not of authority.

4818. But how are the people of this country ever to know that there is any such illegitimate influence if the Council do not take any part to render it apparent, even so much as by entering a dissent against the proceedings?—Perhaps the word "blameable" would have been better than "tyrannical," but it seems to me that with regard to a body like the Council, with no political power, no following of any kind or description, it is practically impossible for them in a matter in which the public do not take an interest to maintain an effective opposition to what they think is wrong. They may be to blame for not doing their best, but still it seems to me in practice that they cannot resist.

4819. But would there not be reason for supposing that the Council had really acquiesced, whether under influence or not, in the transaction, and accepted the whole responsibility for it?—I think if they did they did it because there was a feeling that they could not help it.

4820. Have you considered whether any economy might be effected by re-arranging the system of employing Europeans and natives in India?—Well, I think there could to a certain extent.

4821. Would you favour the Committee with your views upon that subject?—It is a very difficult subject to know exactly how to work out consistently with the secure maintenance of our power in India, and what I would say were the just rights of the natives; but in a general way, I would say, that we ought to employ the natives in great numbers, and whenever we could do it, with due regard to the efficiency of the service, and to our security as a foreign power, holding India with comparatively small means.

4822. And in doing that, do you consider that there should be a distinction in the scale of remuneration paid to the natives in India and that paid to Europeans sent there?—There would be a great deal of jealousy on that subject, but I would

Lord *Lawrence.*

13 June 1873.

would say that it would be fair to both parties that the native holding a situation similar to those which Englishmen hold in the higher ranks, should be paid less, on the ground that his expenditure and requirements would be less, and that he could live equally well upon less means; but where they were inferior employments and the pay was not considerable, I do not think you ought to make a difference.

4823. Do you think that any plan can be arranged by which the appointments that natives might conveniently hold, could be secured for them, so as to prevent the expense of persons going out to India, if I may use the phrase, as followers of gentlemen in the service of influence, and being put into appointments in India, by patronage, who could not get into appointments in England by merit?—That is a great abuse, I think, but still it is difficult to put a stop to it where a man from his own feelings of right and wrong will abuse his opportunities. But I think that in point of fact, there is a very considerable check. First of all, if it is a local government, there is a council interfering, and where it is the Governor General in Council that does it, there is the Secretary of State interfering. But I would not bar the entrance to the service absolutely against Europeans, because I think it would not be fair, because there are a great number of Englishmen who have been not only for the best part of their lives in India, but from father to son in India, and connected with it; and I think it would be unfair, that to a moderate extent, appointments should not be open to their sons, where they were fit for them, because as it is now, the greater number of their descendants are barred from success for one reason or the other in competition in England; and if you shut absolutely the services in India against them, you will create, I think, a great grievance. But my general view is, that the natives ought to be largely employed.

4824. But has there not been a practice, and a growing practice, of withdrawing appointments from what may be called the regular services in India, and putting into those appointments persons from England, who have come out for patronage?—I cannot say to what extent it has been practised; but within my own cognizance, I think it was rarely done, only exceptionally done, during the time that I was Governor General, which was five years. I really cannot recall any instance under my own knowledge, of that kind.

4825. But are there not a number of minor appointments which are not made by the Governor General himself, but practically, by persons of considerable standing in the public service, and by Governors of Presidencies?—I have heard that there have been cases of that kind, but they were rare; among nearly all what I would call the men of character, who held high positions in India, I think the tendency has been to help the Natives where they could do it.

4826. Do you think there has been a complaint on the part of Europeans at the smallness of their salaries, whereas, if the same offices had been held by Natives, the Natives would have congratulated themselves on the largeness of them?—Yes, I think that is the case; but I think also, that in inferior appointments up to a certain amount, whether it is a Native or a European, though the pay would go further for a Native; still, it is not sufficiently large to let the man do more than fairly live; when you come to high salaries, it is very different.

4827. Do you observe that there has been a great tendency since the increase of communication with England to get leave of absence, entailing a large expense on India?—I think that there is a great disposition to come home oftener than used to be the case. In my day, and in the days antecedent to my time, it was a common thing for the bulk of the officers never to come to England at all, until they finally came home, and retired from the service; but now the facilities are so great, that the desire to come home increases very much.

4828. Do you think that with a view to economy it is necessary to check that desire?—I should hardly say so; I think the great objection to it, is not so much a question of economy or finance, because I think men disposed to come home stint themselves in India in order to make a purse, as they call it, to come home, and when they have spent their money, go back again; but what I think is the objection to it, is, that their minds are turned towards England, and English conveniences and advantages, and English life, and so forth; and that they are rather weaned, or turned from devoting themselves, as much as they used to do, to interests connected with India.

4829. Can you suggest to the Committee any mode by which they could obtain the evidence of Native witnesses in India, and select persons who are really qualified to give the Committee any useful and practical information of the views of the Natives of India upon matters of finance?—I do not know that you will get very much more out of the Natives, however they were selected, than you have already got out of different men. But I think it would be popular in India; leading men in India, Natives, would be very glad if a certain number of individuals were allowed to come home and give evidence. Although objections may be raised to whatever the mode by which you select them, I think you must select them, and I do not think that you could do better than to leave it to the Governor General, say within a certain limit, that he should select men from the different Presidencies who are known to be men of character, and ability, and knowledge, and who themselves were willing to come.

4830. That is that if applications were made to him, he should select out of the applicants those persons most fit for the purpose?—I would rather be inclined not to have applications; I do not think that the best men would apply; such men as, if I had been Governor General, I would have laid my hands upon would have shrunk from applying; but I would rather say, supposing you require six or eight men, or whatever number you think proper, I would suggest that the Governor General be requested to select them himself; he would consult others, and of course feel the pulse of those whom he would be inclined to send home, and ascertain, before he offered it to them, their willingness to come; but I think by no means the best men would apply; I am nearly certain that they would not apply.

4831. It would be probably desirable to have applications and consider them?—I would not do it; I rather think if I had to do it there would be a bias in my mind not to take those who had applied; I would rather mark down myself a number

number of names, and then consult A, B, C, and D, as to these men; consult the Bombay Governor, the Madras Governor, the Lieutenant Governor of the Punjaub, and others, and so make selection, than I would have applications.

4832. Mr. *Fowler.*] You have referred to the evidence which Mr. Thornton gave before this Committee last year; did your Lordship quote that as approving of it; Mr. Thornton's evidence was that it was possible to make an arrangement with the railways which would hand them over to the Government in a hundred years?—I do not know his scheme, but he told me that, and I asked him to show it to me, and he explained that he had mislaid the papers; but I really did not see his scheme. If there was a practical scheme, I think it would be a good thing.

Lord *Lawrence.*

13 June 1873.

Tuesday, 17*th June* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Mr. Beach.	Sir James Elphinstone.
Mr. Birley.	Mr. Fawcett.
Mr. Bourke.	Lord Edmond Fitzmaurice.
Mr. Candlish.	Mr. Robert Fowler.
Mr. Stephen Cave.	Mr. Hermon.
Mr. Baillie Cochrane.	Mr. Lyttelton.
Mr. Cross.	Mr. M'Clure.
Mr. Charles Dalrymple.	Sir Stafford Northcote.
Mr. Beckett Denison.	Mr. John Benjamin Smith.
Mr. Dickinson.	Sir David Wedderburn.
Mr. Grant Duff.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE, called in; and Examined.

Mr. *Nowrozjee Furdoonjee.* 17 June 1873.

4833. *Chairman.*] WILL you be good enough to state what your occupation has been in India?—I have been employed in the Government Educational Department for about six years, in the Elphinstone Institution, and subsequently as Assistant Professor in the Elphinstone College at Bombay; I was attached to the British mission to Cabul under the late Sir Alexander Burnes; I was employed as third translator and interpreter to the Supreme and High Court of Bombay for 19 years; I am justice of the peace and a member of the municipal corporation of Bombay; and I have been secretary to the Bombay Association, and have been deputed by the Bombay Association and the Poona Sarvajanik Sabha to give evidence before this Committee.

4834. And what is the purpose of those Associations?—The purpose of both these Associations is to represent the wants and requirements of the natives of the Bombay Presidency in particular, and of the natives of India in General; to watch the course of legislation, to make representations to the local government, to the local legislature, and to the Supreme Legislature of India, and the Supreme Government of India, on measures affecting the rights and interests of the people, and also to make similar representations, with the same object, to the governing authorities in England and to the Imperial Parliament.

4835. And have you, in your position as Secretary to the Bombay Association, been able to inform yourself, to any considerable extent, of the views and feelings of any particular classes of natives?—I have; and I have travelled through many parts of the Bombay Presidency on a great many occasions, and I have made myself acquainted, with political and other matters in India during the last 20 years.

4836. What are the particular class of persons constituting the Bombay Association?—The Bombay Association is composed of the principal native inhabitants of Bombay, including the native members of the local legislature, the principal merchants, brokers, the educated classes, and other native gentlemen of Bombay.

4837. Do you mean the English-speaking classes?—There are several that are not acquainted with English.

4838. And who constitute the Poona Association?—The Poona Association is composed of the chiefs, the sirdars, and the representatives of the inhabitants of Poona, sent into that body by virtue of a power of attorney from the inhabitants of Poona.

4839. The Poona city do you mean, or the Poona district?—The Poona city; and it represents also the inhabitants of the Poona district and the Deccan.

4840. Now, having directed your attention to the administration of the Bombay Presidency by the local governments, do the members of the association raise any objection to the mode in which that Government is administered in operating upon the finances of India?—They have often done so.

4841. What are the particular objections that they feel to the administration?—They feel objection to the manner in which the administration of the Government is carried on, inasmuch as in a good many respects it produces discontent and dissatisfaction with the measures adopted by Government as government, and by the Government and the Legislative Council of Bombay.

4842. But the Legislative Council of Bombay contains different elements from the Council of the Governor?—The predominant element is the Government element. It is composed of all the Members of the Executive Government, namely, his Excellency the Governor, who is President of the Council, and the Commander-in-Chief, and the two members of the Council, making five; then there are two secretaries of the Bombay Government, who are also generally

generally members of the Legislative Council. The Commander-in-Chief, as one of the members of the Legislative Council, takes no part in the civil business of the Executive Council, nor does he take any active or prominent part in the business of the Legislative Council; and then there are non-official members; one or two of them are selected from the European mercantile community; the Advocate-General is an *ex officio* member of the Council, and besides one or two European non-official members there are about three or four native members.

4843. Mr. *J. B. Smith.*] Do you know how many members there are in the whole Council?—There are thirteen members at present.

4844. Does that include the three natives?—It includes the four natives.

4845. Then there are eight Europeans, and three natives?—There are at present nine Europeans and four natives.

4846. *Chairman.*] Now what is the grievance which the natives feel in regard to this constitution of the Council?—One great matter of complaint and dissatisfaction, so far as the native community is concerned with regard to the constitution of the Legislative Council is this, that the non-official element is in a minority. It is composed, as I have already stated, of two European members, and with regard to the four native members, who are nominated to the Council with the object of giving a sort of representation to the native community, one or two of those gentlemen who are selected are usually Sirdars, or chiefs of the Deccan or Goojerat, who are utterly unacquainted with the English language, in which the proceedings of the Council are conducted. It is necessary to employ an interpreter, who explains a little of what is going on here and there; but the chief explanation is confined to asking those members on which side they would like to vote; and therefore the natives feel that they have not got an adequate representation of their wants, wishes, and interests in the Legislative Council, in which measures affecting their welfare are introduced. Important laws have been introduced, and have been passed, and I will show to the Committee the nature of those laws which have been passed, and how they have affected the interests of the native community.

4847. I am afraid that we are branching very much now out of our sphere. What we are looking to is the purely financial administration of India, and what I want you to explain is how that is affected by what you refer to?—I will put it in a financial point of view. The Legislative Council costs the State a sum of money in expenditure, and in order to justify that expenditure, and in order to its being properly laid out, I submit that it ought to be a properly constituted and efficient body of legislators.

4848. But are the native members paid?—The non-official members, I believe, are paid for their travelling allowances; but the native members, actuated by magnanimity, do not draw that allowance.

4849. Then the only financial question that could arise really is, whether in enlarging the constitution of the Council we should to any considerable extent enlarge the expenditure?—Even if it be necessary to enlarge the expenditure (which I do not think will be the necessary result of enlarging the Legislative Council, because native gentlemen may be found to accept office as a matter of distinction and honour, and therefore it will not entail any additional expenditure), I would submit to the Committee that for the interests of good government it is necessary to enlarge the Council.

4850. Do you know whether the natives understand that the Legislative Council of Bombay controls the expenditure of the Government of Bombay?—At present they do not control the expenditure.

4851. But is it their wish that the Legislative Council should undertake that duty?—Yes; it would be, I think, for the interests of the inhabitants of the Bombay Presidency if the Legislative Council of Bombay were enlarged and reconstituted, and representatives of different classes of the inhabitants of the Bombay Presidency were admitted into the Council, and the provincial budget were introduced into the Council, and all the items of the provincial revenue and expenditure were carefully and thoroughly discussed and resolved upon, item by item, in the same way as it is done in the House of Commons. Then the force of public opinion and public criticism, and the wishes and wants of the native community, would be carried into the Council through their representatives, and a good and efficient check would be provided over the expenditure, which I submit there is not now under the present constitution of the Council. Under the decentralisation scheme a budget was once submitted to the Council, namely, in the year 1871, when it was inaugurated under the late Governor, who submitted a financial statement; but the details of the revenue and accounts of the provincial services were not laid before the Council, nor were they gone into and examined, nor were they voted upon; and the submission of such a budget took place only once in the year 1871. Last year even this form was done away with, and there was no financial statement made.

4852. When the financial statement was made that you have described, did the native members of the Council concur in the Bills that were passed to levy the taxes put before them?—They strenuously objected to the three proposals of fresh taxation that were brought before the Council.

4853. All the native members?—All the native members.

4854. And did any other members also object?—Yes, with regard to some matters of detail some of the other members also objected.

4855. But not to the general principle of the taxes?—With regard to one of the taxes, and the general principle of it, they did.

4856. Mr. *J. B. Smith.*] Which was that?—The tax proposed to be levied on feasts.

4857. *Chairman.*] But was that, nevertheless, carried by a majority and passed?—It was rejected and abandoned.

4858. Mr. *Bourke.*] Was that a new tax?—Quite a new one. There were three taxes brought forward by the Government for the purpose of raising funds to supply the deficit which was stated to exist in the amount set apart by the Government of India for the provincial services of the Bombay Presidency. That deficit was not met by reduction. In my humble opinion, it could have been met by reduction in the costs of the provincial services; but there was no attempt, I believe, made to make reductions, and the

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

Government resolved upon adopting the other alternative that was open to them, to raise money by additional taxation, and they proposed three taxes; first, the tax for levying a contribution on the municipalities of the large towns for the expenditure of the police; secondly, a tax on the non-agricultural classes.

4859. Mr. *Fawcett.*] Was that an income tax on the non-agricultural class, ?—Yes; that is a tax that is called the non-agricultural cess. Petitions were sent urging the Council not to pass these measures, as they would be productive of very great hardship and annoyance to the people. With regard to the contribution which was proposed to be levied for police purposes, it was represented to the Council that the municipalities of the towns in the Mofussil were obliged to impose taxation for municipal purposes, which was felt to be very large, and that this might have the effect of adding to the burdens of the inhabitants of the cities. It was represented that the police expenditure of the Presidency admitted of a reduction; that it had been enhanced during the last six or eight years by some four or five lacs of rupees; and that if reductions were made, there would be no occasion for levying this tax and the other taxes. In the same way with regard to several of the other provincial services, they fully admitted of reduction, inasmuch as each service had been increased by several lacs during the last six or eight years. With regard to the tax that was proposed to be imposed on the non-agricultural classes, it was urged by Government that those classes were not subject to taxation, that they escaped scot-free, and that, therefore, it would be a just and proper measure to bring them under taxation. But in reply it was represented that they did not escape taxation; that they were subject, both directly and indirectly, to a number of taxes, and paid their fair share of taxes; and that with regard to the agricultural classes, although it was represented that this tax would not fall upon them, it was apprehended that it would really fall upon the agricultural classes, and, in fact, the limits of the tax were fixed so low, that it would take in all classes of the people including the agricultural classes, who already paid their share of the indirect and other taxes; and not only that, but paid very heavy land revenue to Government. And the non-agricultural tax, as proposed and as passed, was to be divided into three classes or grades; the lowest class I believe was 1½ rupees, the second was three rupees, and the third was five or seven rupees.

4860. Mr. *J. B. Smith.*] Do you mean that it was a poll-tax or what?—Six rupees per annum, and 3 rupees, and 1½ rupees, to be levied on each householder every year. When the Bills were introduced the amounts were lower, but eventually the schedule was altered, and the maximum rates to be charged on the first and second classes were enhanced from 5 and 2½ rupees to 6 rupees and 3 rupees per annum, and on the first class it was left at 1½ rupees. But after this Act was passed, Government, in pursuance of the authority that was vested by the Act in it, authorising it to fix and promulgate rules for the levy of that tax, created an additional class, and that class was assessed so low as 1 *s.* for each individual on incomes ranging from 50 rupees to 100 rupees; that was not contemplated by the Bill as it was brought into the Council, nor was it contemplated at the time it was passed, otherwise the very oppressive manner in which this new class was created and enforced, which produced so much suffering and hardship, would have been brought particularly to the notice of the Council; but this was not mentioned to the Council, and it was not contemplated by the Council; and this new class was created to enhance the produce of the tax, which was estimated by Government to realise 4½ lacs; but by taking in and creating this additional class, one lac more was realised, and the amount realised amounted to 5½ lacs; and the hardship of this was this, that every person, the paupers and mendicants, and every person who was the head of a family, was assessed, and this tax was levied from them all. In vain they remonstrated. They appealed, but the appeal was obliged to be made upon stamped paper of the value of 1 *s.*; so that to get off the tax of 1 *s.* they had to have recourse to a writer, and to pay him for engrossing an appeal on stamped paper of the value of 1 *s.*; and they were put to more cost than the amount for which they were liable, namely, 1 *s.* This hardship was represented to Government, and they were good enough to reduce the stamp fee for applications for remission from 1 *s.* to 2 *d.*, but still they were not allowed to present their appeals on plain paper.

4861. *Chairman.*] That was after the Act was passed?—Yes.

4862. But we were considering the position of the natives in passing the Act; can you state to the Committee whether when this Budget with the scheme of taxation was made public in the newspapers, the native inhabitants generally took any means to represent their views to the Government or to the Legislative Council?—They did; they petitioned the Legislative Council, stating their objections, and the hardship of these additional burdens which were proposed to be devolved on them. They urged that already taxation was severe enough, and that this would be felt more, and that it would press heavily on the poorer classes of the people. But against their petitions, and against their remonstrances, those Bills were passed.

4863. Were these petitions signed by any considerable number of natives?—Yes; a petition was sent by the Bombay Association; petitions were sent by the Poonah Association, and from Surat and Goojerat.

4864. Therefore, in passing the Act, the Legislative Council were fully aware of the opinions of the natives on the subject?—They were; but owing to the way in which the Council was constituted, the Bills were passed on account of the official element being predominant in the Council. And it was done in this way: these measures of taxation were first determined in the Executive Council of his Excellency the Governor, and they resolved to carry it through the Legislative Council. Then they publicly brought forward these proposals, and they had an official majority in their favour, and there was no difficulty therefore in passing them; with the exception of only one measure, to which there was very great opposition, because it interfered with the religious usages and customs of the people, namely, a measure to tax all their marriage and religious feasts, and therefore that was abandoned.

4865. They are like the usages of people in this country to eat and drink on important occasions, I suppose?—Pardon me, they are more than that.

In

In regard to these religious usages, the people are obliged to conform to them; a man when his father or mother, or any relative dies, is obliged on certain days to give a sort of religious feast; this is incumbent on him; if he does not do it, he in fact loses his caste and becomes almost an excommunicated individual; it is, therefore, obligatory on him to conform to these usages.

4866. The result was, that the European members of the Legislative Council sympathised with that view and did not pass the Bill?—That Bill was not passed.

4867. Mr. *J. B. Smith.*] Was it proposed that Europeans should be taxed for these feasts as well as natives?—Everybody.

4868. *Chairman.*] Do you mean that if a European gave a dinner on his marriage he would be taxed?—Yes, if he invited more than 100 gentlemen, he would be taxed.

4869. That is a limit which Europeans do not come up to, I think?—No; they would have escaped therefore.

4870. Are there any other measures of taxation in which the local Legislative Council has concerned itself, in which you think that the natives have not been sufficiently consulted?—Yes, of late, and for a considerable time past, Government have promoted most mischievous and unjust legislation by withdrawing from the courts of justice the jurisdiction which they possessed for a great many years, to take cognisance of cases of the undermentioned description: first, cases relating to alienated lands wholly or partially exempt from payment of land revenue to Government, under Act XI. of 1852, and Acts II. & VII. of 1863. Second, cases relating to lands held under treaty, or lands held as surinjam, or on similar tenure, or lands held for service under Bombay Act VII. of 1863, section 2. Third, cases relating to pensions, cash allowances, and grants by Government, of money or land revenue under the Pensions Act, No. XXIII. of 1871. In all these cases, although the Government, one of the interested parties are liable to the people, yet they have promoted the above-mentioned legislation with no other object than that of repudiating their just liability to private individuals, by removing from the jurisdiction of the ordinary courts, such large and most important classes of cases, involving the property, income, and fortunes of numerous individuals, a large majority of whom have been ruined and reduced to beggary by the arbitrary confiscation of their property. Speaking of the operations of that "great confiscatory tribunal known as the Inam Commission of Bombay" established for carrying out Act XI. of 1852, Sir John Kaye, Secretary in the Political and Secret Department of the India Office, who has been examined before this Committee, describes the effect and result of the operations of that tribunal in these terms in his History of the Sepoy War. "But the Inam Commission was established. The fame of it went abroad through the Southern Mahratta country. From one village to another passed the appalling news that the Commission had appeared, had called for titles that could not be produced, and that nothing but a general confiscation of property was likely to result from the operations of this mysterious tribunal." "Each day," it has been said, "produced its lists of victims; and the good fortune of those who escaped, but added to the pangs of the crowd who came forth from the shearing house, shorn to the skin, unable to work, ashamed to beg, condemned to penury." The titles of no less than 35,000 estates, great and small, were called for by the Commission, and, during the first five years of its operations, three-fifths of these were confiscated. Speaking of the same tribunal, Mr. John Warden, who was a Member of the Government of Bombay, and filled some of the highest judicial posts in that Presidency, in the evidence which he gave before the Parliamentary Select Committee on Colonization and Settlement of India in 1858, condemned the conduct of the Government in having departed from that principle of justice by which the *onus probandi* in such cases is thrown on him who seeks to oust another; in having taken away the privilege of succession to an adopted son; in having altered the law of prescription in their own favour; in having constituted a court of their own for the hearing of their own claims (a court composed of young captains and subalterns taken from the regiments), to which court they, a party to the suit, have the power of issuing instructions, which instructions are not to be questioned in any court of law. Speaking of the procedure of that tribunal, he said, "Although the unfortunate landowner may have appeared before the Assistant Inam Commissioner on the original trial, the appeal to the Inam Commissioner is probably disposed of in the Inamdar's absence, and most certainly the final appeal before the Governor in Council is done in a corner, and no order or decision of the Government is to be questioned in a court of law." He thus described the consequences resulting from the proceedings of this tribunal: "As these Inams are numerous, and some of them very small, the iron rule of the Inam Commission spreads alarm throughout the country, alienates from the Government the goodwill of its subjects, and carries dismay, distrust, and hatred into every cottage." Latterly, when Government found it impossible to carry on the work of total confiscation any longer, they laid under contribution one-third and one-eighth of the incomes of the rent-free lands that had escaped from the clutches of the "great confiscatory tribunal." The Bombay Government took undue advantage of the powers of local legislation which were conferred on the local Council by Parliament in 1861 and carried out in 1862. In the following year Government introduced and carried through the Council Acts II. and VII. of 1863, with the object of depriving the freeholders of the Bombay Presidency of a large portion of the revenues of their lands. All the remonstrances and protests that were addressed to the Council were disregarded, and the measures proposed by Government were enacted. The result was, partial confiscation of the revenues which were received and enjoyed by the landholders and their ancestors from generation to generation. A few years ago one of these landowners, Premshunker Raghoonathjee, filed a suit against the Collector of Surat, for having wrongfully assessed his land. The case was decided in 1871 by the High Court. In dismissing the suit, the Chief Justice, Sir R. M. Westropp, made the following observations: "The course of legislation on similar subjects in recent times shows a greater and greater contraction of the spirit of liberality, and of confidence in its judicial institutions, which animated the Government in framing the Elphinstone Code of 1827.

Mr. *Nowrozjee Furdoonjee.*
17 June 1873.

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

1827. On the merits or demerits of this policy (of which the effect is to make Government the judge of its own cause) we have nothing to say; but we must note the fact, as throwing light upon the probable intention of the Legislature in passing Bombay Act VII. of 1863. Thus viewing the subject, we do not think it improbable that Government intended to withdraw the whole class of cases, to which our attention has now been directed, from the cognizance of the tribunals to which it was content to leave the adjudication of the subjects' mutual rights and duties where its own interests were not concerned." The Government have so much work, that it is impossible for them to do justice to, and sufficiently to perform, the work which belonged to, and which they have unjustly taken away from, the legal tribunals—work which, to use the words of a member of the Government, is "done in a corner," and behind the back of the unfortunate claimants, who have no right of appeal against the decision of Government (*see* Bombay Act II. of 1863, sec. 13, and Act VII. of 1863, sec. 28). Even supposing the Government have time to investigate such cases, their forms of procedure and mode of doing business are such as to preclude the possibility of doing such justice as could only be obtained from properly qualified judicial officers, conducting trials in open court, in the presence of the parties and their advocates. Under the circumstances which I have submitted to the Committee, it is necessary that measures should be devised for giving redress to the individuals who have suffered so much from the proceedings of the Government and their officers, and removing the evil; and provision should be made for the adjudication of all cases relating to lands wholly or partially alienated, and to land revenue generally, as well as cases relating to pensions, cash allowances, hucks or claims, rights and privileges of every kind, by the ordinary courts of justice, after trial in open court, according to legal procedure, instead of their being disposed of in an arbitrary manner by collectors, revenue and alienation Commissioners, and Government, often on the *ex parte* representations of subordinate officials.

4871. In speaking of the Government doing various things, do you understand that it is the duty of the Government in levying taxation upon the people to take care that all persons are taxed, and that no person exempts himself from taxation by any improper means?—Yes; it would be the duty of the Government to take care of that.

4872. Then, if it were a matter of ordinary notoriety that owing to the dreadful state in which the country was before the British Government took possession, a vast number of persons by every conceivable means of wrong and fraud, and crime, had exempted themselves from taxation, do you think that it would be the duty of the British Government in administering affairs to investigate those matters, and so far as they found them true to redress the evils that had taken place, and for the benefit of those who paid their taxes, to bring to justice those who were exempting themselves?—If it was some tax, such as the income tax, or the salt tax, and the people escaped, it would have been the duty of the Government to do so; but this is taking possession of revenues of lands which people from generation to generation enjoyed and possessed rent free. If they did so through any fraud, Government would have got the benefit of that by initiating legal proceedings against them, or by leaving those parties to take proceeding against Government in case it was within the competence and province of Government to seize and take possession of the lands and revenues of these persons; but I submit that it was not a judicious proceeding on the part of Government to deprive people by legislation of their legal remedies, to assume the functions of a judicial tribunal themselves, and to decide their own cases themselves.

4873. Mr. *J. B. Smith.*] These Inam lands are free from taxation?—Yes.

4874. *Chairman.*] When you speak of the Government being interested in these cases, was not the only interest of the Government to hold the scales truly between those who paid the taxes and those who did not; Government could have no other interest, I presume, in the matter?—The Government not being a judicial tribunal, might be carried a little too far in holding the scales; they might wish to increase revenue, and actuated by that motive, they might resume, and they have resumed, the lands, and incomes and revenues of the people.

4875. But then the Government appointed a special tribunal for the purpose of investigating all these cases of claims of exemption from revenue, did they not?—They did appoint a tribunal, but it was a tribunal composed, as Mr. John Warden has said, of officers from the regiments, who were not in a position to enter into judicial investigation, and were not competent to examine the claims, and decide on them in the same way as experienced and trained judges, the judges of the ordinary courts established by the Government, are.

4876. The objection is, therefore, to the mode of procedure of the special tribunal in investigating these claims?—Yes; but they might have been left to the ordinary courts for adjudication, and then there would have been no ground of complaint on the part of the people.

4877. But are you aware of the fact, or whether it is the fact, that the ordinary courts, from the special circumstances of the case, could not have carried on the investigations that were necessary into the affairs of the Government which preceded the occupation of this part of India by the British Government?—I do not think that there was anything which would have prevented the Courts from deciding all such cases; nothing whatever.

4878. Did not the decision of these cases very much depend upon what course the Government thought fit to pursue, after the conquest of the country, in performing its duty to all classes of the community; was not that a question that could not be entered upon in the courts of justice?—The courts of justice, as you are aware, enter into all questions that are legitimate to the issue, and have any bearing whatever upon the case; and, if this question had an important bearing, they would have entered into it.

4879. Are the Inam Commissioners still in existence?—No; that tribunal, as I have just mentioned, could not be maintained any longer, the disaffection in the Bombay Presidency was so great, and in the Southern Mahratta country in fact, it led to rebellion; and, in consequence of that, Government were obliged to abolish that tribunal; but, latterly, in doing so, they passed legislation such as I have mentioned, by which the

revenues

revenues of the remaining lands that had escaped seizure by the Inam Commission tribunal were laid under contribution, and one-third or one-eighth of the revenues of all those estates were taken possession of.

4880. The matter was disposed of legislatively at last by taxation?—Yes; by Government, in their legislative capacity, with the aid of a few non-official members going through the form that I mentioned before.

4881. Do you know whether it has been the practice, in the repeated subversions of government that have been always going on in India, for every new government not to investigate these matters at all, but to sweep away the whole of the transactions of the character that you have been describing, on the part of their predecessors, and put the whole land again under regular assessment?—You are speaking of former governments. I submit that the former governments would not form a good analogy of procedure on the part of the British Government. The British Government is a perfectly just government, and it would be a shame to resort to any of the confiscatory measures that had been adopted by the previous governments; it would be a disgrace to the British Government to do so.

4882. You would not hold, then, that the British Government would equally disgrace itself, if it had confirmed, without adequate investigation, the transactions of its predecessor in the Deccan, for some considerable period of time before the subversion of the Deccan Government?—Confirmation was given to the rights, lands, and possessions of the people when the country was conquered. It was publicly proclaimed that all the rights, the lands, and privileges of the people would be respected and confirmed; and, that being so, Government were bound to act up to their proclamation, and not to depart from it, and not to institute a special tribunal which seized and took possession of people's lands without full judicial inquiry and investigation.

4883. Did you ever see any such proclamation, or do you know whether that proclamation was attended with several reservations to meet the deplorable circumstances of the country at the time that it was taken by the British Government?—It was subject to reservations; but what I have stated was the general tenor and scope and purport of the proclamation.

4884. Can you state the reservations?—I forget at this moment exactly what they were.

4885. Do you know that the reservation was exactly to leave open an investigation into the acts of the preceding Government, and only to confirm the regular revenue and the possession of the lands subject to the regular revenue?—I submit that when once the territory was conquered, the conquered people became British subjects.

4886. But I am asking you whether you remember whether the nature and effect of the reservation was to leave open for further consideration the position of those who were not in the condition of ordinary occupants paying the ordinary revenue?—I do not remember that just now; but very likely there was such a reservation. Moreover, I wanted to bring to the notice of the Committee the fact that the Government of Bombay have sanctioned and carried out several important measures, although they had no legal power or authority to do so. For example, Mr. Warden, the able and impartial officer to whom I have already referred, has stated before the Colonization Committee that the Government established the Inam Commission, and that this tribunal, "carried on its proceedings most rigorously for nine years, namely, from 1843 to 1852, even without the sanction of an Act of the Indian legislature." In 1863 the Government sanctioned the levy of a local cess of one-sixteenth in the rupee, or a little over 6 per cent. on land assessment for such local improvements as the construction of local roads, Dhurmsales, the promotion of education in the rural districts, &c.

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

4887. Was that done by an Act of the local legislature?—Yes; it appears from the speech of the Government member of Council, who introduced the Local Funds Bill in 1869, that about 15 lacs of rupees were raised from the agricultural classes without legislative sanction; and he declared that as some persons "from a spirit of opposition, or if the term were preferred, of independence," would not pay the cess, it was apprehended that many others would follow their example; he therefore said that "it was necessary that legislation should ratify what had been commenced;" accordingly an *ex post facto* law was passed in 1869, legalising the unauthorised levy. In the same way the city survey operations, into which I propose hereafter to enter more fully, were sanctioned by Government in Ahmedabad in 1863, and in Surat in 1867, and were carried out by the executive officers for several years; but when the people offered opposition, and questioned the authority under which oppressions were practised, Government introduced a Bill and passed it in 1868, legalising the measure against the remonstrances of the people. Then there is another matter, which is a subject of great complaint, which I wish to bring to the notice of the Committee, and that is the system of secrecy which pervades all the Government officers from the highest to the lowest; no access is allowed to the public records in the Secretariat, the offices of the Accountant General, the revenue commissioners, alienation, survey and settlement officers, collectors, and magistrates, city survey, high and district judges' courts, &c.; having occasion to refer to the detailed budget estimates of Public Income and Expenditure, the annual reports of the revenue commissioners, alienation officers, survey and settlement reports, and the annual returns showing the income, expenditure, and work of the judicial courts for the purpose of verifying the information I had collected for being laid before the Select Committee, I applied to the Government of Bombay, the Registrar of the High Court, the Judge of Ahmedabad, and the city survey officer of Surat, who declined to allow me access to these records; farmers and cultivators who apply to the revenue survey officers for information regarding the grounds and data on which the assessment of their lands is enhanced or fixed are repulsed with flat refusals; the survey and settlement reports are not made public until long after they are confirmed by Government, and carried out by the executive officers, when their publication is of no practical use or advantage.

4888. Are the natives satisfied with the Imperial taxes that are levied, or have they any cause of dissatisfaction with them?—They are dissatisfied

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

dissatisfied with several of the Imperial taxes, and the way in which they are levied; before I leave the subject of the Bombay Legislative Council, perhaps the Committee would be good enough to allow me to bring to their notice some further points which I wish to bring before them. I have stated that the Government brought forward, and carried through the Legislative Council several measures, of which the inhabitants of the Bombay Presidency feel aggrieved; besides those that I have mentioned in connection with the seizure of lands and the income of rent-free lands, there is one measure that has created very great dissatisfaction in the principal towns of the Bombay Presidency, in which that measure has been introduced; I refer to the City Survey Act; there was no necessity for that measure. It has, moreover, proved a failure in a financial point of view.

4889. What did it do financially, or what did it profess to do financially?—It was represented to Government by their officials that it would be advantageous to Government and to the municipalities of the large cities in the Bombay Presidency. It was alleged that people's houses were built on lands that belonged to the Government, to which the people had no right, and that such lands would be assessed, and the proceeds of the seizure, or assessment of such land, would be appropriated in certain proportions between Government and the municipalities of the large towns, and that both of them should share the expenditure connected with the operations of the City Survey Officers. Accordingly, an Act was introduced in the Legislative Council, and it was passed. It has proved a failure in a financial point of view, and has, moreover, been productive of hardship, injury, and suffering amongst the inhabitants of the towns in which it has been enforced. This position I hope to be able to make good and establish. This measure was proposed by Mr. Hope, when he was collector of Ahmedabad, in 1863, and he brought to the notice of Government that the rights of Government, and of individuals to land not built upon in that city "were in a most undefined condition, and that there were no means of checking encroachments on the land belonging to Government, or of preventing fraudulent transfers and appropriations of such land. It was pointed out that an accurate survey and registration of properties would settle definitely the title to all land; if private, secure it from interference, and if public, lay an adequate assessment on it. On Mr. Hope's report a survey establishment was sanctioned, the cost being defrayed by the municipality, who in return were to enjoy the proceeds of the sales of occupancy rights, while the levy of the annual assessment was to be reserved to Government. All land, however, which was either then or seemed likely in future to be required for Government purposes, was reserved, under Government Resolution, No. 3044, September 9th, 1863. In 1867, Mr. Hope, being then collector of Surat, proposed a similar survey of that city, on the same general principles as those sanctioned for Ahmedabad. This was sanctioned by Government Resolution, No. 862, February 28th, 1867, and the rules for assessment and inquiries into titles then laid down have been adopted with slight modifications in all other towns to which Bombay Act IV. of 1868 has been applied." The city survey was sanctioned by Government, and carried out in the city of Ahmedabad from the year 1863, and in Surat from February, 1867, without legislative sanction or authority, and when the powers of the authorities charged with the practical operation of the measure were openly questioned and their authority defied by several public-spirited individuals in Guzerat, Government were under the necessity of bringing in a Bill into the Legislative Council of Bombay to legalise the rules which they were unable to enforce. This Bill was introduced into the Council in August 1868, for the purpose of inquiring into the titles on which lands situated in towns and cities are held, and to resume and assess them if exemption was not proved. No less than eight petitions were addressed to the Council against the measure, showing the injustice of the Bill, and soliciting the Council to refrain from enacting it. In support of their prayer, the petitioners submitted the following facts and considerations: it is an acknowledged fact that all lands used for dwelling-houses, whether situated in towns or cities, or in villages, have always enjoyed total exemption from taxation under the former Governments, and that the British Government has hitherto continued such exemption, and had not made any attempt to tax such lands up to the present time. It was now proposed to depart from that salutary practice. In fact, it is clearly to be gathered from the language of Regulation 17 of 1827, the earliest law now in force on this subject, that lands used for agricultural or like purposes alone are liable to assessment. This view is borne out by the fact that no attempt has hitherto been made to tax lands used for dwelling houses in villages as well as towns and cities. The attempt proposed for the first time to assess lands situated in towns and cities created widespread alarm and dissatisfaction in those parts of the Presidency where the intentions of the Government had been made known and understood. The proceedings of the Revenue Survey and Assessment Officers, who have carried on their operations in several large towns in Guzerat during the last two or three years without legislative sanction or authority, have been productive of considerable annoyance and discontent. In a petition presented by the inhabitants of Ahmedabad to the municipal committee and Collector of that city, the petitioners complained bitterly against the arbitrary proceedings and oppressive acts of the Survey Officers, and declared that these officers were actuated with the desire of resuming private lands situated in the city, which had been exempt from assessment; that they harassed and annoyed the people, and were often guilty of illegal acts; that there was no necessity for a survey; and that it was a great hardship to compel all owners of lands and houses in the city to prove their titles and to take out and pay for sunnuds which conferred no title and were not acknowledged by legal tribunals. In Surat the arbitrary acts of the revenue surveyor and the vexatious, violent, and illegal measures adopted by him, created great excitement and dissatisfaction in the city, almost amounting to a "popular rising." There have been many instances of hardship, oppression, and tyranny practised by the survey officers on the people, who were compelled to neglect their avocation, and subjected to heavy losses, to dance attendance on the surveyor. Threats have been held

held out to many persons, and from a number of them recognisances have been taken to ensure their attendance whenever required. The advent of the head officer in charge of the Survey Department had spread terror, confusion, and dismay among peaceful people, whose hatred was so intense as to make their "blood boil" at the sufferings they had endured, and had produced great indignation and feelings of disaffection; people were called upon to produce their title-deeds within a certain time for being registered, and were threatened with punishment if they neglected to do so; the people could not endure these evils and excesses any longer; a public meeting of the inhabitants of the city was held in September 1866 for the purpose of representing their grievances to the Government authorities. The petitioners further represented the following instances of oppression practised on the people by the officers of the city survey in Broach and Surat:—1. Bhugtudass Bhugwandass, a respectable banker of Broach, was unjustly prosecuted and fined for not having immediately complied with the surveyor's demand to enter his house. The sentence was reversed by the High Court on appeal. 2. Casojee Sooleiman, a shopkeeper of Surat, was prosecuted, convicted, and fined by the Mamlutdar, on the 23rd of October 1866, because, being engaged with his customers he did not immediately comply with the demand of the surveyor's karkoon (clerk) to allow his shop to be surveyed. This innocent man appealed to Mr. Hope, as the magistrate of the district, but failed to obtain the redress he sought. 3. Another illegal prosecution and conviction which took place in Surat in 1868, under the following circumstances, produced great alarm and discontent in that city: Some time after the completion of the survey, in a lane called "Higpole," in Kellapit, the surveyor repeated his visit for some purpose, when a slight quarrel took place between some men belonging to the surveyor's party and a number of boys, who would not let the former have a portion of the fruit picked from a tree in the lane. This quarrel excited the wrath of the surveyor, who complained to his superior and preferred a charge of assaulting a public officer in the execution of his duty, whereupon the Mamlutdar sent some sepoys with the surveyor to apprehend the persons accused. At the instance of the surveyor, eight innocent men who were found in the lane were pointed out, and were at once taken into custody though they were not present at the quarrel. The city Mamlutdar disbelieved the evidence adduced by the accused, and, relying upon the word of the surveyor's servant, convicted all the eight persons on the 2nd of March 1868, and fined them 150 rupees. It was urged that, judging from past experience, the provisions of the Bill were calculated to prove a fruitful source of annoyance and oppression to the people. The hardship, expense, and loss to which the people in the Mofussil towns and cities would of necessity be subjected by the proposed Bill, would be so great as to outweigh the best advantages expected from it, even if it be carried out with great caution, and with due regard to the feelings and interests of the people. These apprehensions have been fully realised during the short time that has elapsed since the City Survey Act was passed in 1868, against the remonstrances of the people residing in different parts of the presidency. I will submit to the Committee the following authentic instances of hardship and oppression inflicted on the people in carrying out the City Survey Act. The generality of the inhabitants of the city of Broach complain bitterly against oppression practised by Mr. W. Waite, one of the city survey officers entrusted with the enforcement of the Act; he has been in the habit of summoning a great many persons from day to day for the purpose of inquiring into their titles; he often does not adjudicate a case for six or 12 months, during which time he remands the case from week to week, or fortnight to fortnight; the parties are obliged to leave their business and dance attendance on him from morning to eve. If they neglect to attend on any day, or if they go out even for a short time, Mr. Waite commits them for contempt, and the Mamlutdar punishes them with fines ranging from two to 20 rupees each. For example, Furdoonjee Sorabjee Ghandee was summoned on 11th May 1872 and subsequent days to attend before Mr. Waite on pain of imprisonment and fine, under Section 174 of the Penal Code; he attended on the 16th and 25th May; 4th and 10th June; 1st, 15th, and 31st July; 15th and 25th August; 9th and 30th September; 15th October; 4th and 29th November; 14th December; and 6th and 15th January, to which days his case was adjourned from time to time. The land which he holds was recently obtained from the municipality, and his title is so clear that it could have been proved in five minutes, and yet he has been harassed and detained from his work for days; being a shopkeeper, he has suffered a heavy loss, there being no other person to attend to his business. The other inquiring officer, Mr. Choonibal Venilal, affords a marked contrast; besides attending to his magisterial duties he has decided titles to more than 1,000 holdings in four and a-half months since his appointment, during which time he has not fined a single individual for neglecting to attend; Hafiz Peer Mahomed, Goolam Peer Mahomed and Oomer Mahomed have been harassed in the same manner. In January last year, Mr. Waite prosecuted Hargovundass Mucundass, Damodhur Purshotumdass, Fukeerbhoy, Purshotumdass and Bhookundass Doolubdass, under Section 168 of the Penal Code, for voluntarily obstructing a public servant in the discharge of his public duties, and for abetment of the said offence; their real offence was refusal to open an old back gate of a khirkee, or enclosed private street, at the bidding of the city survey officer, a gate which had long been closed and which was seldom used. In order to secure conviction, the case was transferred from the Court of the Native Deputy Collector and Magistrate to the Court of Mr. Wilson, the district full power magistrate, who sentenced two of the unfortunate men to imprisonment for four and eight days, and fined the other persons 10 rupees each.

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

4890. Who is Mr. Waite?—He is the officer appointed by the Government to carry out the City Survey Act.

4891. Is he in the permanent public service?—He belongs to the Revenue Survey Department, and has been appointed for carrying out this Act in Broach.

4892. Is he in the covenanted service?—He is in the uncovenanted service. Last year Mr. Waite sent a summons to a native of Broach, desiring him to attend the Survey Office on a

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

certain day, for the purpose of receiving back the documents relating to his title, which he had deposited there. He failed to attend on the appointed day, whereupon Mr. Waite prosecuted him before the Hoozoor Deputy Magistrate, under Section 174 of the Penal Code, for intentionally omitting to attend before a public servant before whom he was bound to attend. The accused was convicted and fined; on appeal the conviction was quashed, and the fine remitted. If this man had not had the means of appealing to an expensive tribunal like the High Court, he would not have obtained any redress. At the instance of Mr. Waite a large number of the householders of Broach have, on frivolous pretences, been prosecuted and fined, and his proceedings have produced general discontent throughout the city.

4893. Has any representation been made to the Government of the conduct of Mr. Waite, of the nature that you have stated to us?—I believe that representations have been made, but not attended to, and those representations were made through the collector of the district.

4894. No general investigation has taken place into the conduct of Mr. Waite?—No.

4895. Do you know whether any appeal has been made against the decisions of which you complain except the one you stated, which was made to the High Court, where the decision was reversed?—It only happens that a few wealthy individuals who are prosecuted and convicted are able to go up to the High Court, and to retain barristers to advocate their cause; but the poor people have no means of prosecuting their appeals at the presidency town before such an expensive tribunal.

4896. Practically, is not their remedy to present a petition to the collector to inquire into their grievances?—If they do so, the collector generally does not inquire into it; it is only by resorting to a court of law that they are able to get any redress; that is, if something appears from the proceedings, and when the High Court considers it to be its duty in the exercise of its extraordinary jurisdiction to interfere and quash the decision, but not on the merits. In Ahmedabad, also, the city survey operations have produced great alarm and dissatisfaction, and unsettled the rights of the people. "Contrary decisions have been made with regard to the ownership of the same piece of land, and much confusion and fear have arisen with regard to the ownership of estates. Inquiries have been prolonged much to the annoyance of the people." A widow, named Baee Dev, whose property was resumed lately, filed a suit against the Collector, and recovered judgment, which was upheld in appeal. The Assistant Judge states in his decree that, "it appears from a great many cases, that the city survey officers have committed many blunders, and that their maps cannot therefore be relied on." In many other cases the decisions of the Survey officers were reversed by the Court. It was represented to Government that the operations of the City Survey would result in pecuniary advantage to the Government, as well as the municipalities of the towns and cities in the Mofussil, and therefore it was resolved that the expenditure, as well as the income, should be shared by both. The survey operations were therefore conducted with the twofold object of realising additional revenue for Imperial as well as municipal purposes. Notwithstanding the excess of zeal with which the officers of the City Survey Department were actuated with the object of benefiting their employers, the expectations held out to Government and the municipalities have not been realised. After three years' experience of the working of the department, the Government recorded a resolution in July last, in which they declare that the city survey and inquiry into titles was financially a failure in Surat, both as regards Government and the municipality. Government therefore offered to make over the entire concern and its profits to the Surat Municipality if that body would take charge of it altogether. Up to the year 1870 the municipality of Ahmedabad was made to contribute a moiety of the expenses of the City Survey; but in July 1870 the contributions were discontinued. After deducting the receipts, 2,551 rupees, the nett loss to the municipality amounted to 63,000 rupees. In 1863 the said municipality spent about 50,000 rupees in buying land, opening a new road, and making improvements in the city of Ahmedabad. A portion of the land was resold, and realized about 20,000 rupees, and the rest remained in the possession of the municipality. Subsequently the Bombay Government recorded a resolution to the effect that five-sixths of the lands resumed should be the property of the municipality, if the latter undertook to defray the entire cost of the City Survey. The Supreme Government, who were led to expect that a very large amount would be realized by the sale of the land, refused to sanction the proposal, on the ground that it was not competent for the Bombay Government to make such an arrangement. The municipality thereupon expressed their willingness to give up all the land to Government, on the expenses which had been incurred by the municipality being repaid. Owing to the decline in the value of landed property, the Government of India were informed that the land would not fetch a high price, whereupon the Supreme Government expressed their willingness to allow the municipality to hold five-sixths of the land. From the official report made in 1871, by Mr. F. De Sonza, the officer in charge of the Surat City Survey, it appears that the aggregate expenditure of the survey in Surat amounted to 108,238 rupees, of which Government contributed 36,104 rupees, and the municipality contributed 72,134 rupees; whilst the proceeds realised amounted to 60,376 rupees, of which Government received 3,979 rupees, besides an annual income of 432 rupees; and the municipality realised 56,397 rupees, showing a loss of 47,862 rupees.

4897. Did they not realise any income?—No, I believe not, and I do not think that they are allowed to have the income; the income goes to Government. From the report of Mr. Waite, the officer in charge of the Broach City Survey, dated 5th April, 1872, it appears that the total cost of the survey from its commencement amounted to 61,440 rupees, of which sum the municipality paid 37,545 rupees, and Government 23,895 rupees, whilst the total realizations amounted to 31,543 rupees, of which sum Government have received 8,516 rupees, and the municipality 23,027 rupees, showing an aggregate loss of 29,897 rupees, which is barely covered by the gain to the Government of an annual rental of 1,976 rupees, and to the municipality of 450 rupees. I have no access to the

Report

Report of Bulsar, the fourth town in which the City Survey has been introduced; but I find from the accounts of the municipality of that town for the year 1871-72, that the expenditure amounted to 825 rupees, and the income was 530 rupees. I have thus placed before the Committee the results of the City Survey operations in Ahmedabad, Surat, Broach, and Bulsar, the towns in which the measure has been introduced experimentally. As the experiment has proved an utter failure in a financial point of view, and as the inhabitants of these large towns have suffered grievous wrongs and injuries, of which I have given several instances, I beg to submit to the Select Committee the advisability of their recommending the expediency of putting a stop to the operations of the City Survey, and repealing the Act, which has produced intense dissatisfaction in the chief towns of Guzerat.

4898. Can you explain why the cost of the operation was so great, and the return comparatively so small?—On account of the high salaries given to the officers employed in the City Survey Department, and there being scarcely any property that has been encroached upon by the people. Most of the houses are houses that have been built and existed for many years, and the Act only authorises the resumption of lands on which parties failed to prove occupation for five years previous to the passing of the Act.

4899. Is there any other local tax or expenditure that you wish to bring under consideration?—There is another piece of legislation which has been productive of very great dissatisfaction amongst the inhabitants of the cities of Bombay, the capital of Western India, to which I solicit the attention of the Committee. I mean the Acts passed by the Local Legislative Council for the conduct, regulation, and management of the affairs of the municipality of that great city. Three Acts have been passed: Act II. of 1865, the Municipal Loan Act of 1869, and the Bombay Municipal Act of last year. By Act II. of 1865 the Legislature made it compulsory on the municipality to employ very highly-paid officers for the conduct and management of the municipality, namely, a municipal commissioner, whose minimum salary was fixed at 3,000 rupees a month; a controller of accounts, whose minimum salary was fixed at 1,500 rupees a month; and an executive engineer, whose salary was fixed at 2,000 rupees a month; besides a health officer. The municipality, therefore, had no other alternative but to pay these officers, whose nomination did not rest with them but with Government. By that Act Government had the right of nominating and appointing those high officers, and the municipality were made liable for such very high and extravagant salaries. The result was that they had to keep up and maintain a large and very highly paid establishment, and that added to the burthens and liabilities of the municipality of Bombay; and the management of the affairs of the municipality under these highly paid officers appointed by Government, resulted in a disastrous failure. When that Act came into operation the debts of the municipality amounted to only about 30 or 40 lacs of rupees. In the course of about six years after the enactment and operation of that law, the debts increased to very nearly a crore of rupees, and in a great measure these debts were incurred by the municipal commissioner appointed by Government; the large portion of them, amounting to 30 lacs of rupees, were incurred by the municipal commissioner without the sanction and authority of the municipal corporation. The consequence was that the affairs of the municipality were at a dead lock, and could not be carried on. In the year 1868 a large deficit was discovered in the finances of the municipality, and in order to supply that deficit the Legislative Council were asked to grant a loan of eight lacs to the municipality. On that occasion a Bill was introduced for granting that loan, and it was referred to a Select Committee for inquiry. The Report of the Select Committee showed that the deficit was much larger than the amount of the loan which was at first applied for, namely, eight lacs, and that it was caused by the Municipal Commissioner having spent more monies than the amounts authorised and sanctioned by the corporation in the annual Budgets, that the officer who had been appointed by Government to supervise the municipal accounts, and to check and control the Commissioner, had neglected to do his duty as required by the Bombay Act II. of 1865, and that a loan of 15 lacs would be needed to clear the municipality of all over-due debts, and leave a suitable working balance. (*See* Proceedings of the Legislative Council for 1869, Vol. VIII., pp. 2 and 3.) In order to prevent a recurrence of these evils, it was the duty of the Government in the exercise of the authority vested in them by the Act to remove the Municipal Commissioner, who had incurred these debts without the knowledge of the Bench of Justices, and also to dismiss the Controller for having connived at the unlawful dealings of the Commissioner, and neglected to report the same to the Bench; but Government did not remove these functionaries. In February 1869 the Bench solicited Government to appoint a Commission to inquire into the management of the affairs of the municipality, with the view of adopting the most effective means of placing the municipality on a proper basis with the least possible delay; but the Government did not comply with this application, though repeated in April following. The result of this neglect on the part of Government was highly detrimental to the interests of the municipality. The Municipal Commissioner, Mr. Crawford, a member of the Civil Service, and a man of great influence, persevered in his course of reckless extravagance to such an extent as to incur fresh debts to the amount of about 19 lacs, to pay off which it was necessary to raise a fresh loan of 15 lacs in 1872. Thus, owing to the neglect of Government, the Municipality suffered a fresh loss of this large amount, which would in a great measure have been obviated had Government appointed the Commission of inquiry asked for in 1869. When the gross mismanagement of the affairs of the Municipality was brought to light by the Committee which was appointed by Government in 1871, when the ruin of the municipality had been completed by the nominee of Government, who suddenly left Bombay under a cloud in October 1871 (I mean Mr. Crawford), Government were compelled to introduce a new Municipal Bill in March last year.

4900. Have you a copy of that Report?—I have.

4901. Can you hand it in to the Committee?—I will. As I said, Government were compelled to introduce a new Municipal Bill in March last year;

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

year; many modifications were subsequently made, and it was enacted against the remonstrances of the people. Several petitions were addressed against the objectionable provisions embodied in the Bill, but Government persistently declined to amend the objectionable clauses. I will give the Committee a few instances of the injustice and wrongs inflicted by Government on the Bombay municipality.

4902. Mr. *B. Denison.*] Have you any copy of the discussion that took place in the Council about these proceedings?—I have.

4903. *Chairman.*] Do we rightly understand you, that throughout these proceedings, beginning with the Act appointing the officers at high salaries, the municipal body has been objecting and protesting against them?—They have repeatedly protested, not only the municipal body but the ratepayers of Bombay, in several public meetings which they held, and several petitions which they addressed. The great increase of taxation which has taken place in the City of Bombay, and the enhancement of the debts of the municipality, are in a great measure attributable to the heavy burthens and liabilities imposed by Government on the municipality in the year 1865, under Act. II. of that year, and also subsequently. In 1864 the rates, taxes, fines, and fees amounted to 12,44,769 rupees, and miscellaneous receipts to 1,10,212 rupees, total receipts 13,54,981 rupees. The expenditure amounted to 8,89,603 rupees, inclusive of contribution of 2½ lacs of rupees to the drainage fund, which was not spent, showing an excess of income over expenditure of 4,65,378 rupees.

4904. Was that surplus of 4 lacs applied in payment of the then existing debts?—It was subsequently applied. In that year the municipality contributed to Government 88,540 rupees towards the expenses of the city police; under Act IV. of 1867, the Municipality was made liable for the entire police expenditure, and to meet this expenditure a heavy police rate was imposed on the inhabitants of Bombay. When that Act was passed the cost of the city police amounted to 2½ lacs; Government has enhanced this expenditure from time to time, and it has amounted to 4 lacs a year for several years past.

4905. Then the Government has entirely administered the police, and made the municipality pay the whole expenses?—Yes, just so. For several years government contributed one-fourth of the police expenses, in conformity to the Resolution of the Government of India, dated 31st August 1864, admitting the claims of the large seaport towns in India to a contribution towards the police expenditure from Government. This contribution was granted, but it was suddenly withdrawn in 1871. In the city of Madras the police expenses are defrayed by Government, and that municipality does not contribute a farthing. In Calcutta, Government still contribute one-fourth of the police expense. Under Bengal Act, No. 11 of 1867, the expenses of the police are completely under the control of the Calcutta Municipality; but under the late, as well as the new Municipal Act, the Bombay Municipality have no control whatever over the police expenditure, which can be increased by Government to any amount, and the municipality is bound to pay any sum which the Government might fix. By the Bengal Act, there is such a complete control given to the municipality of Calcutta over the police expenditure, that it is directed by that Act that the budget for the expenses of the police should be submitted to the members of the municipality, and they have the right of cutting down the police expenses to any amount, and exercising the fullest control over the police expenses. But, under the late Municipal Act for Bombay, as well as the present, there is not the least control given to the municipality of Bombay; and the result is that Government has been enabled, without check or control, to enhance the police expenditure, as I have shown, from 2½ lacs to 4 lacs; and they may, under the present Act, enhance it to any amount, and compel the municipality to levy a high rate for the purpose of paying that.

4906. Have you finished with regard to the police?—I have one important fact, which I wish to point out to the Committee in regard to the police, and it is this. In proof that the municipality is not allowed to have the least voice in, or the least control over, the police expenditure for which they are made liable, I will give to the Committee a remarkable instance that occurred during the municipal administration in which I have taken an active part during the last five or six years. The municipality, when they thought that they were in good and flourishing circumstances in the earlier days, and that their finances were in a good condition, were prevailed upon by the influential municipal commissioner of the time, Mr. Crawford, to give a personal allowance of, I think, 250 rupees a month to the police commissioner, the nominee of Government, beyond the amount of the salary which Government had fixed, and which, of course, the municipality was bound to pay. When the deficits were discovered in the finances of the municipality, the municipality took every step to curtail their expenditure, and one of the first steps they took was to take away the personal allowance which they had given of 200 rupees a month to the police commissioner. As all the proceedings of the municipal commissioners in this matter are subject to the confirmation of Government, this resolution, when it was submitted to Government, was negatived, and the municipality were told that they had no right to take away the personal allowance which they had given before, and they were desired to continue it, although they were not in a condition to do so.

4907. Can you state the amount of the police rate?—It is two to three per cent. on the valuation of landed property.

4908. Mr. *Beckett Denison.*] On the letting value?—Yes; there is some little deduction allowed; it is on the letting value.

4909. Mr. *J. B. Smith.*] Is that on houses as well?—Lands and houses. Since the year 1864 Government have, with the aid of the Bombay Legislative Council, enhanced municipal taxation besides imposing the undermentioned new taxes; first, the police rate; second, the lighting rate; third, the water rate.

4910. *Chairman.*] Can you state the amount of those rates?—I will give you the amounts later. Fourth, the halalkhore cess; that is a compulsory cess levied from the owners of all houses for sewerage; fifth, the license tax; sixth, market fees; seventh, tobacco duty; eighth, tax on fire insurance companies. These eight new

new rates and taxes have been legalised and enforced since 1864.

4911. Mr. *Candlish.*] For local, or imperial purposes?—For local municipal purposes. Although the license tax has been lately abolished, the town duties, the wheel tax, the tax on labour-carts (which have latterly been enhanced, some of them 50 per cent.) remain. The result of this enhancement of taxation is the prevalence of general discontent throughout the community. The people cannot bear the load of the heavy taxation imposed on them.

4912. Mr. *J. B. Smith.*] What is the aggregate amount of all these taxes?—On an average they come to from 15 to 18 or 20 per cent. on the rental of their landed property. I speak of the municipal taxation in the town and city of Bombay.

4913. *Chairman.*] Do you mean that the aggregate of the tax upon houses and lands in Bombay amounts to 20 per cent. of the rental?—Including the direct tax on houses as well as the other rates that I have mentioned.

4914. But have you estimated the indirect taxation of tobacco, and other taxes in that figure?—No; tobacco is the only indirect taxation, and, the town duties; the others are all direct taxation.

4915. You have a wheel tax?—Yes.

4916. When you speak of 18 or 20 per cent., you mean that the tax on the houses amounts to 18 or 20 per cent.?—I include all the direct taxes I have enumerated. I may take the wheel tax also, because as a householder I might keep up a carriage and horse.

4917. Mr. *Fowler.*] Is that on the rateable value?—Not in the case of carriages, but on each horse and carriage of four wheels, or two wheels. I will give the Committee the scale of the different taxes. The people cannot bear the load of the excessively heavy taxation imposed on them, which amounts to nearly 30 lacs of rupees, a year, showing an enhancement of close upon 250 per cent. in municipal taxation in the city of Bombay since 1864. In 1871 the late Governor, Sir Seymour Fitzerald, in the financial statement which he made, publicly condemned the enhancement of taxation, which he declared was "almost crushing"; these are his words: The pressure of taxation is so great that it falls with crushing severity on houseowners, who are obliged to pay from 15 to 18 and 20 per cent. on the assessed value of their landed property. There was another unjust provision that has been introduced by Government in these Municipal Bills, to which I wish to direct the attention of the Select Committee, and that is, the exemption of lands and buildings owned and occupied by Government. In both the Acts to which I have been inviting the Committee's attention, all the lands owned and occupied by Government have been totally exempted from municipal taxation.

4918. Mr. *J. B. Smith.*] Do you know that that is the case in this country?—I am not well acquainted with the state of things in this country It may be the case, but I think I saw some proposal when I was lately in Bombay for rating even Government property, and bringing it under municipal taxation. I do not know whether that measure has been brought into Parliament, or how far it has progressed, but I know that it is in contemplation. But I want to show how unfairly the municipality of Bombay has been treated, not only in regard to the police, but in regard to this matter also, compared with the treatment accorded to the other sister municipalities of Calcutta and Madras. In those cities, all Government property is rated, and is not exempted from municipal taxation; even the Government House of Calcutta is rated, and pays municipal rates and taxes. This is a subject which has been reported upon by two Committees which were appointed by Government; first, when the Municipal Bill of 1865 was brought into the Council, a Select Committee appointed by that Council reported the inadvisability of making any such exemption; and, preparatory to the introduction of this new Municipal Bill of last year, the Government appointed a Committee for the purpose of preparing an amended draft law for introduction into the Legislative Council, and that Committee in their report have at length shown reasons and arguments proving the justice of bringing all Government property under municipal taxation. They urged that Government have the benefit of all the municipal improvements, and all the advantages of the large expenditure which the municipality incurs, and that they should contribute their fair share. The Committee appointed by Government and composed entirely I believe of Government officers, reported on the inexpediency and injustice of exempting Government property from municipal taxation. I can give, if necessary, an extract from the report. During the progress of the new Municipal Bill, which was introduced into the Bombay Legislative Council in March last year, many petitions were addressed by the inhabitants of Bombay, and earnest appeals were made to the Council to reduce the taxation, and induce Government to bear their fair share and liability, and to modify and remove the objectionable provisions of the Bill.

4919. Mr. *Candlish.*] "Their fair share and liability," would mean by rating Government property?—By rating Government property, by contributing towards the police expenditure, and in a variety of other ways, which they adopt with regard to other municipalities; a few concessions were made which were insufficient to meet the just demands of the people, and the Bill was passed in October last. I will give the Committee a brief summary of the objectional features of the new law passed for regulating the conduct and management of the affairs of the municipality; first of all, although the Government for the first time made a concession which I consider important, giving a direct voice and representation (by the new Bill they have given to the ratepayers of Bombay the right of nominating and appointing by election half the number of the members of the corporation), the basis of this representation which is conceded, is circumscribed and limited so as to exclude several large classes of ratepayers, not only from the exercise of the municipal franchise, but also from admission into the proposed corporation; the qualification fixed is such, that those only who contribute 50 rupees in three of the direct rates, are allowed the privilege of electing members of the municipality; the qualification for members of the corporation is also fixed in such a manner as to exclude other large and educated classes, and other classes of the community.

4920. Mr. *J. B. Smith.*] What is the qualification?—The qualification is that they must contribute

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

tribute 50 rupees in the shape of three of the rates and taxes that are imposed by the Bill, namely, the house-tax, the police-tax, and the lighting-rate; that is the qualification of voters. And the same is the qualification for the members of the corporation, with the addition that fellows of the university are also eligible to act as members of the corporation.

4921. Do you consider that a high qualification?—The qualification is such that those who do not possess landed property, and do not pay these three taxes (and there are many who live in hired houses and do not pay these rates and taxes) would be excluded, not only from voting but from acting as members of the corporation; if I, for instance, had not any landed property there, and if my landlord paid the rates and taxes which I have mentioned, I should be disqualified from acting as a municipal commissioner under the new law, and I should have no vote even for electing anybody. Then another objectionable feature is, that the Bill confers extensive powers of interference and control on the Government, and these are inimical to the interests of the corporation, and subversive of its independence and freedom of action. There are provisions in the Bill by which it authorises the Government to interfere and compel the municipal corporation to do such-and-such things that are mentioned in the Act. Further, the Bill, instead of giving any relief in the shape of a reduction of taxes, imposes additional burdens and liabilities on the corporation, and tends to increase the existing heavy and oppressive pressure of taxation in the city; then there are the exemptions that I mentioned before.

4922. Mr. *Candlish.*] How does the Bill increase the pressure; is it by conferring further powers upon the corporation?—By putting no limit at all to the police expenditure. If the Government were to double its police expenditure, the municipality would be under the necessity of raising, by enhanced rates and taxes, money sufficient to meet it.

4923. Was not that so before 1872?—The rate was fixed; it was limited, I believe, to 3 per cent.

[MR. AYRTON LEFT THE CHAIR, WHICH WAS TAKEN BY MR. BECKETT DENISON.]

4924. *Chairman.*] Have you got to the end of your objections?—No; there is the further objection that it vests the entire executive power and responsibility in a Commissioner appointed and removable by the Government, who is in a great measure independent of the Corporation, and is armed with extensive authority and arbitrary powers. It gives little or no power to the Corporation and Town Council to supervise and manage municipal affairs, and it imposes heavy and extortionate penalties on the people for infringement of municipal regulations; it imposes on the corporation fresh obligations, such as those of erecting and maintaining hospitals, lunatic asylums, public halls, offices, and other buildings, and giving contributions towards the erection and maintenance of public libraries and museums, liabilities from which the municipality ought to be exempted.

4925. Mr. *Candlish.*] Have you a copy of that Act with you?—I believe I have one, and I will bring it with me on the next occasion.

4926. *Chairman.*] Is there anything more that you wish to add on this head?—No.

4927. Then I would ask you this question: the whole of these objections that you have now detailed to the Committee were embodied in a petition to the Council of Bombay, were they not?—In several petitions.

4928. And they were discussed at length in the Council of Bombay, were they not?—They were.

4929. And all that you have stated to the Committee is on record in the proceedings of the Legislative Council?—Yes.

4930. The objectionable Act has now been in force since when?—It has passed, but Government have not yet framed and promulgated the rules for the conduct of the election, and for other matters which the Act authorises the Government to do; and until they do that it will not be in force, and the old Act continues in operation.

4931. Mr. *J. B. Smith.*] By whom is the Municipal Council elected?—A third of the Council is appointed by Government, and the remainder by the members of the Corporation.

4932. *Chairman.*] The next tax that I find mentioned on the paper before me is the non-agricultural tax; you have already referred to that?—Yes, I have; but first, I would exhaust the head under which I propose to give the first part of my evidence, and that is the nature and character of the laws passed by the Bombay Legislative Council, and how they press on the people, and how they affect the people. I have mentioned the municipal laws; I have mentioned the laws relating to land; and with the permission of the Committee I will mention some other laws. There is another measure that was passed by the Bombay Legislative Council in 1869, called the Bombay Local Funds Act; it was for the purpose of raising money for making local roads, and for establishing schools in the agricultural districts, and for the erection of dispensaries, dhurumsalas or travellers' bungalows, tanks, wells, and such other works of public utility; and it was to be applied for purely local purposes; but this cess has been exacted from all the ryots with whom fixed settlements had been made for a term of 30 years, and also from holders of the rent-free lands, which I submit ought not to have been done, because in the case of the ryots with whom fixed settlements had been made, their profits from culture were taken into consideration; their means were taken into consideration, and the assessment was fixed at the amount which it was thought they could bear, and afford to pay to Government as the share of Government; now that assessment fixed for 30 years is affected, and ryots, beyond what they undertook to pay under the fixed settlement, are made to pay one-sixteenth more of the produce of their fields.

4933. Where you make use of the word "ryots," there you mean the actual cultivators of the soil, I suppose?—Yes, cultivators of the soil; and freeholders are also made to pay this cess, which is considered a great hardship; their lands being free, and free from payment of all revenue,

revenue, they ought not to be laid under contribution for local purposes and local improvements.

4934. Will you state to the Committee for how many distinct purposes these local funds are levied, in order that we may have a better idea of what you are alluding to. There are roads, education, and one or two other things, are there not?—For roads, education, water supply, dispensaries, and dhurumsalas or travellers' bungalows.

4935. You are speaking also now on these local funds of the province of Bombay, outside the municipality of Bombay?—I am speaking of the whole of the Presidency of Bombay.

4936. Including Bombay?—The Local Funds Act does not apply to the city of Bombay, because the municipality takes the place of the local funds administration. Instead of the money raised for local funds being devoted to merely local roads, it is devoted, in many parts of the country, to Imperial purposes, for the purpose of constructing important roads to act as feeders of railways. I submit that that is an object of Imperial or provincial expenditure, but not of local funds expenditure.

4937. But what greater benefit could be conferred upon a country than bringing it into direct communication with the railway stations?—It would benefit the country no doubt; I do not deny that; but if they go on charging for the construction of these important railway feeders, perhaps they will make the local funds contribute also to Imperial roads and to railways, which, I submit, is not a charge that was contemplated, and did not come within the proper scope and province of the Local Funds Act. And I will show what large sums of money have been drawn from the local funds for the purpose of meeting what I consider to be an Imperial charge. What I say is, that if it was contemplated to make a charge for the construction of main lines, that would have been explained at the time that that measure was introduced in to the Council, and then the people would have been prepared, and would have known exactly what the purposes were for which this cess was imposed.

4938. How are these local funds administered in Bombay; under what authority; the district officer, or several officers?—They are administered by the collector of the district, who is the president of the local funds committee, and under him is the Talooka committee, which is composed of two or three landholders and two or three of the executive officers of Government.

4939. Then, in point of fact, except in rare instances where some gentlemen have very great influence, the collector is the man who decides how the funds shall be spent?—The expenditure is chiefly in the hands of the collector; he has a potential voice in fixing and determining the local works budget, and the native members are placed in such a position towards the collector and the other executive authorities of the district, that they dare not offer any opposition to any schemes of expenditure that may be proposed by the collector and magistrate, or by his assistant or deputy; they have dealings and transactions as subjects, as ryots or as landholders with the executive officers of Government, and if they dared to offer any opposition to them they would feel the consequences; hence, the assertion of any independence of opinion is always checked and suppressed, and even if they wished they could not offer any opposition; and then, moreover, these district Committees make it a rule, or rather the President of the committee, the Collector and Magistrate, in almost all the districts throughout the Bombay Presidency make it a rule not to enter any application or any item into the budget for local improvements unless the applicants, the ryots, or the people, consent to contribute a moiety of the amount; a verbal consent is often deemed insufficient; in some cases they are made to give a written undertaking that they will supply half the amount of the funds requisite for the works; and then only they are put in the budget and carried out. I travelled extensively throughout the Bombay Presidency, and in Goojerat, and in all the districts I have been credibly informed that that is the rule on which the Collectors act. The result is, that the ryots are made in the first instance to contribute a cess according to the rate specified in the law, namely, one-sixteenth of their incomes, and then they are again made to pay half the amount of the work.

4940. You are secretary to the Bombay Association?—Yes.

4941. Have you ever had instances reported to you in which public officers have visited with resentment gentlemen who have made suggestions to them for local improvements?—I have had instances of members of the municipal committee who, on account of the opposition which they made to the wishes of the collector and magistrate, the president of the municipality, have been removed.

4942. In the country districts?—I will mention the districts. I will lay before the Committee the names and facts, as given to me from what I consider a most reliable authority. At the recommendation of the collector and president, the undermentioned Municipal Commissioners were removed because they opposed several motions: Bhugoobhoy Premchund, Pranabhoy Juggabhoy, and Manickchund Moteechund. I have also been informed that several native members of the Municipal Committee of Broach, who offered opposition to the acts of the President, were also removed.

4943. Were those gentlemen removed by the mere order of the collector of the district, or had he to refer to higher authorities for their removal?—I do not know whether he did it from his own motion, or after having proposed it to Government.

4944. You merely state the bare fact; you know nothing of the reasons?—The bare fact is what I state.

4945. Mr. *Bourke.*] Can you state the year?—I have not got the exact year, but it has all taken place within the last six years.

4946. Sir *D. Wedderburn.*] Do you know who were the collector and president in those two places?—The collector of Ahmedabad is Mr. Borradaile; and of Broach, Mr. Waite.

4947. *Chairman.*] You do not know whether this removal was on account of some particular act of these gentlemen, or whether it was from systematic opposition to the president of the committee?—So far as I have been informed, it is owing to opposition to certain measures proposed and carried by the Collector.

4948. I suppose that in the administration of these local funds, under this local committee, no detailed record of their proceedings is kept beyond a simple resolution probably of certain moneys to be spent on a particular work?—I do not know if detailed records of the proceedings are kept. In some places perhaps they are kept;

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

but I will give authentic instances in which the acts of the municipal committee have been negatived and set aside, and disallowed by the Government; and the presumption is, that in many of those cases it was at the recommendation of the Collector of the district, who is the President of the municipality.

4949. But the Collector is not in direct correspondence with the Governor, is he?—He corresponds through the Revenue Commissioner.

4950. And does the Revenue Commissioner correspond through the Board of Revenue, or direct with the Government?—He corresponds direct with the Government. Three years ago the Managing Committee of the Ahmedabad municipality appointed a maistry, a native engineer, to superintend the waterworks on a salary of 50 rupees per month; but Mr. Borradaile, the collector, who is *ex officio* president, refused to allow the appointment to take effect. About the same time the committee unanimously resolved and appointed Miss Chamberlain, Lady Superintendent of the female school at Ahmedabad, on a salary of 150 rupees; but Mr. Borradaile, the Collector and Magistrate, declined to carry out this resolution, and directed the Secretary not to pay her anything. She continued at her post for eight months without receiving her salary, and then left the school in disgust. The present incumbent, Miss Williams, having been appointed by Mr. Borradaile to succeed her to that post, receives a salary of 230 rupees.

4951. Mr. *J. B. Smith.*] Was the first lady that you mentioned an English lady?—Yes; she went out from this country, and was taken to India by Miss Carpenter, who takes a very great interest in the promotion of female education. About four years ago the same municipal committee of Ahmedabad appointed a gentleman of high integrity and superior ability, Mr. Bhogeelal Pranvullubdass, Secretary to the Municipality, on a salary of 300 rupees per month. The president, Mr. Borradaile, refused to sanction the appointment, on the ground that he was not satisfied of Mr. Bhogeelal's fitness.

4952. Sir *D. Wedderburn.*] You said just now that the municipality appointed this lady and this gentleman; I should like to know what that means; is it a majority, or in what way is it done?—A majority of the committee; almost all the members were agreed with regard to that appointment, with the exception of the president, I believe.

4953. *Chairman.*] Ahmedabad is an important place; will you tell the Committee of whom the municipal committee was composed; how many native members were on it, and how many Europeans?—I have got the names of the members, but I have not brought that paper here.

4954. The only object of this Committee in taking all this in detail is to have one well-authenticated instance of the way in which these local Committees are over-ridden by the collector in the district. We do not want a multiplication of instances, but only one well-authenticated instance, if you can furnish it?—I will, at the next sitting, give the names of the municipal committees of Broach and Ahmedabad, to which instances these facts refer.

4955. Perhaps you will discontinue that part of the subject which regards the administration of the funds, and give the committee some information as to the amount of these funds, and the mode in which they were assessed, and the objections that have been taken to them?—Will you allow me to give you a few instances, showing how the managing committee's acts have been treated and disallowed in regard to municipal management.

4956. But I think you have already referred to Ahmedabad; we cannot go on taking a great quantity of detailed evidence of this kind; it is sufficient for the Committee to be assured that these local committees are from time to time overruled by the collector, either for good or bad reasons; we do not take upon ourselves to decide?—Well, I have got instances of that, and will trouble the Committee with a few more. They show how the acts of the majority of the municipal committee have been disregarded and disallowed, and no effect given to them by the President, who is only one member. Mr. Borradaile's predecessor, Mr. Shepherd, refused to convene meetings of the managing committee of the municipality of Ahmedabad, although requisitions signed by 10 members were sent to him in conformity to the rules. He also neglected to lay before the municipal commissioners propositions, of which due notice had previously been given by members who wished to bring them forward at meetings.

4957. Were representations made on this subject to the Government of Bombay and objections taken?—I do not know whether they were made or not; but if not made, I think that the people would be deterred by the treatment which they had met with from the President; and all such representations would have to go through the channel of that gentleman himself.

4958. But ordinarily speaking, there is a very swift and ready mode of bringing to notice any act of a collector which meets with the displeasure of the people over whom he has authority?—Only through that collector himself, and in no other way.

4959. But a petition to the Revenue Commissioner would immediately cause inquiry, would it not?—I think that the Revenue Commissioner would object to receive a petition direct, unless through the collector and magistrate, who is usually the channel of communication between the people and the Revenue Commissioner.

4960. But surely (this is a point of considerable importance) if any subject, no matter who, presents a petition to the Commissioner, the Commissioner calls upon the collector for a report upon that petition, and then he takes his further measures according as he sees fit, does he not?—I think that a direct complaint to the Revenue Commissioner must be referred back, if sent direct, to the collector for report.

4961. Exactly; it is referred back to him for report?—And people have not the courage to complain against the acts of such powerful and influential local authorities as the collector and the assistant collector.

4962. Then it would seem that the people of Bombay must be very differently constituted from what they are in other parts of India?—I am speaking of the people in the Mofussil, the interior of the Bombay Presidency, who are very timid, and it would be a most extreme case of grievous hardship that would induce them to complain against the acts and doings of the authorities; they have so many dealings with the collector and magistrate, and the subordinates of the collector and magistrate, that they think they would be visited with the consequences of their

temerity if they were to complain against the acts of the collector and magistrate.

4963. Mr. *Candlish.*] What would be your own suggestion for avoiding such tyranny as seems to be implied in the facts which you have related?—Not to make the collector and magistrate of the district the president of the Local Funds and Municipal Committees.

4964. Mr. *Bourke.*] But you do not know of any attempt to make a representation to the superior authorities upon the conduct of any of the collectors for acting in this way, do you?—No, I do not know whether any have been made or not.

4965. *Chairman.*] Your information, as I take it, has been gathered lately, has it not, in an extensive tour that you have made through the provinces?—Some lately and some previously.

4966. And you have taken the facts as they have been stated to you; you have not had an opportunity of testing them yourself, or of pursuing them to the end?—The only way in which I could have tested them would have been by an application to the Collector himself, for an inspection of the documents and papers, which application would surely have been immediately refused. As I have already stated to the Committee, no access is allowed to the public records of any of the public offices throughout the Bombay Presidency.

4967. As there are all these higher authorities, the Commissioners and members of the Government, open at any time to be petitioned in the regular way, it would be an inaccurate statement to say that there were not means of bringing to notice any grievance in the Bombay Presidency?—Grievances, even if they were brought forward, would have to go through the channel of, and the reports to be submitted by, the high authorities against whom these complaints are made, and people are in such a dread of gentlemen in that position, such as the collector and magistrate of the district, lest they should be punished some day or other for complaining against the acts, that they are deterred by that very fact and circumstance, in a great many instances, from going up to the Government with complaints.

4968. Mr. *Bourke.*] Do you know of any instance, in your own experience, of anybody being punished for doing a thing of that kind?—I do not know exactly; not directly punished, but indirectly perhaps they have been.

4969. *Chairman.*] You mean, visited with the displeasure of the collector for all future time?—Yes.

4970. Mr. *Cave.*] Do you mean that the complaints are referred back to the collector for report invariably?—Invariably.

4971. And that there is no way of getting the collector's conduct investigated except by report from the collector himself?—No other way; and that the parties have no opportunity of seeing or knowing the contents of the report, with a view to rebut any assertion contained in that report.

4972. *Chairman.*] Have you never known complaints carried right up to the Governor himself, against the conduct of district officers?—Complaints may have been made to the Governor, but I do not know special instances just now.

4973. Have you never known instances of collectors, or whatever you call them in that part of the world, being removed from one district to another, owing to their arbitrary acts?—No, not collectors.

4974. Mr. *Candlish.*] Do you want to convey to the Committee now, that there is practically no redress for any wrong-doing on the part of the officials in the Bombay Presidency?—I do not want to convey that there is practically no redress, but I want to convey that there are circumstances and difficulties which I have mentioned, which prevent the people from seeking such redress; they are in dread of being visited with displeasure by the collector and magistrate, and such other authorities against whose acts they complain, and that deters them from complaining, especially when their complaints are to be referred to the very parties against whom the complaints are lodged and disposed of on the reports of those parties, without the complainant having any opportunity of submitting any other explanation to the superior authority.

4975. *Chairman.*] You have known several Governors of Bombay, have you not, previous to Sir Seymour Fitzgerald; you knew Sir Bartle Frere and others before him, I dare say?—Yes. About four years ago a sub-committee of the Municipal Commissioners of Ahmedabad was appointed by the Committee, for the purpose of revising the rules of the municipality; they made a report revising the rules. This report was never submitted by the President to a general meeting of the Municipal Commission; one of these rules provided, that the Commissioners should select and appoint their own President. The General Municipal Committee recently reduced the heavy tolls levied on the Ellis Bridge at Ahmedabad, but the Government did not confirm the reduction. Government recorded a resolution in December last, sanctioning the reduction for only six months as an experimental measure, because the reduction was not approved of by the President, Mr. Borrodaile. In 1869 the General Municipal Committee of Ahmedabad sanctioned an expenditure of 19 rupees a month as a contribution towards the expenses of the leper hospital; but the Revenue Commissioner refused to sanction this small outlay. Mr. Borrodaile, Collector of Ahmedabad, and *ex-officio* President of the Municipality, has prevented ratepayers from attending general meetings of the municipality contrary to the express terms of Rule 6, which directs that "all parties being ratepayers shall have a right to appear at general meetings, and bring forward any complaint they may have to make."

4976. Is Mr. Borradaile still Collector of Ahmedabad?—He is.

4977. And who is the present Revenue Commissioner over him now?—Mr. Ashburnar, the gentleman who gave evidence before this Committee.

4978. And these acts which you give evidence about are continuing to the present time, are they?—Yes; in fact, when I was at Amedabad in January last, a large body of the inhabitants of Ahmedabad presented a petition complaining of their grievances in regard to municipal and other affairs to the Governor; at least, they wished to present it to the Governor when he visited Ahmedabad in January last; but the Governor declined to see a deputation from the inhabitants of Ahmedabad who wanted to go, and present that petition in person. They were afterwards obliged to send it to him by a messenger.

Mr. *Nowrozjee Furdoonjee*

17 June 1873.

4979. Was that Governor Sir Philip Wodehouse?—Yes; and this petition I can hand to the Committee; it represents their complaints and grievances in regard to their municipal management and other affairs (*producing it*). At first, the Governor declined to receive it from the hand of the deputation. It was a deputation from a public meeting that was held for the purpose of adopting that petition; a large influential public meeting held at Ahmedabad just at the time of the Governor's visit.

4980. Mr. *Bourke.*] What is date of that petition?—The 20th of January last, and immediately afterwards it was sent to him. This is the petition: "To His Excellency, Sir *Philip Wodehouse*, K.C.B., Governor of Bombay. The humble Petition of the Inhabitants of Ahmedabad. May it please your Excellency. 1. We the undersigned loyal subjects of Her Majesty, while heartily welcoming your Excellency's arrival among us, beg to approach your Excellency with this humble and brief statement of our wants and grievances, as similar representation made before to your Excellency and the local authorities by post proved fruitless. 2. We firmly believe it to be the desire of Her Gracious Majesty Queen Victoria to keep her subjects in India contented and happy, and we are sure your Excellency will fully share in this desire; but diverse circumstances have interfered with our enjoyment of the blessings of contentment. 3. Foremost among these is the rapid decline and decay of the indigenous industrial arts pursued in this town. We would not trouble your Excellency in Council with the causes of these sad facts which are beyond control, but would entreat your Excellency to give due weight to them in the apportionment of local and general taxes. Our poor and half desolated town is obliged to pay more than a lac and a half every year towards municipal improvement alone. This burden is excessive for the poor income of the town. We would earnestly entreat your Excellency to consider whether it be not possible to remit a portion of the current municipal taxes. 4. The heavy item of contribution towards the police charges of the town is another source of impoverishment. The Police Act (I of 1871) was a counter-part, in effect, of the non-agricultural cess. Government have found it practical to remit the latter; we humbly submit that in justice the former be remitted also. There are three towns now paying for their police, and the Police Contribution Act is therefore become very limited and unjust in its incidence. Ahmedabad, your Excellency will find on inquiry, is not well off, and we trust that the prosperous state of the local finances will enable your Excellency to relieve this declining town of its police burdens. 5. The management of our municipal affairs is another source of great and constant discontent amongst us. This institution is become now utterly distasteful to your Excellency's subjects. In their zeal to carry out favourite schemes of sanitation and reform, the municipal authorities utterly set at nought the feelings, the ability, and the circumstances of the people. This is done in various ways: (*a.*) The municipal subordinates intrude upon the privacy of households. At the present day no man, unless he is rich and has leisure for litigation, can dare empty a potful of pure water or keep logs of wood in front of his house, for a day or two, without incurring legal liability. The municipal inspector takes down his name and reports it to the magistrate, who invariably disbelieves the testimony against the inspector and his peon, of even the respectable people of the neighbourhood, who are regarded as interested parties. It is needless to say that this leaves room for the inspector very frequently to abuse his power by making trivial and vexatious complaints. (*b.*) The executive, by imposing heavy fines, although within limits, for light and trivial offences, add to the evil. It may convey to your Excellency some faint notion of the oppressive nature of the punishments, to be informed that in a single day the sum of 1,000 rupees was paid into the Treasury on account of fines inflicted for municipal offences alone. No appeal lies against such decisions, as they are passed generally by F. P. magistrates. (*c.*) The people of this town had from time immemorial been left to make their own arrangements regarding the removal of nightsoil, subject only to the orders of the magistrates regarding its place of deposit. No disorder had been proved to prevail under that system, and the town was as clean as it is now, since the people could withhold payment from the bhungies if they did not work properly. The municipality, however, in imitation of the sister institution at Surat, where circumstances are quite different, undertook, against the wishes of the people and the bhungies, the cleaning of private privies, and imposed a cess which, though light in itself, is too heavy for the incomes of the many poor inhabitants of this place, besides being highly obnoxious as a direct tax. (*d.*) In the matter of expending the income the municipality is far from being considerate; 50,000 rupees were paid towards the Ellis Bridge, which is very useful to the people of the neighbouring towns, but not so, in any great degree, to the inhabitants of this city. The repairs ought, in propriety, to be borne by the local cess fund and the revenue from tolls; but a similar want of caution and foresight has led the municipality to undertake the repairs of the same bridge, which cost annually more than 3,000 rupees. The tolls do not amount to a tenth of the expenses. (*e.*) In the matter of road improvements, the convenience of the majority of the people is not at all consulted. Roads not much frequented, or frequented principally by the ruling leading classes of the inhabitants, are kept in good repair, while those daily used by thousands of people are allowed to remain almost in a primæval state. 6. We are humbly for believing that many of the evils above complained of must continue to disturb and oppress your Excellency's petitioners until the constitution of the municipal body is altered. (*a.*) Many of the non-official commissioners at present are men of little or no education, and less independence of thought or action. Nay, some of them have hardly a tolerable conception of their duties as commissioners, or of the use and purposes of the institution. (*b.*) We, your Excellency's subjects, therefore most earnestly entreat your Excellency to allow us the privilege of electing some number of the commissioners. The steady loyalty of this town to the Crown, and the industrial and peaceful habits of the people, will be a guarantee that any privilege of the kind above requested will be, if granted, respected as a great boon, and that the happiness and contentment of the people will be alone studied in the exercise of it. We would leave the question of arranging the details to your Excellency in Council. (*c.*) Much of the discontent at present existing among all classes,

classes, is due to the local affairs not being managed consistently with the wants and circumstances of the people. They are generally unable to distinguish local and municipal grievances from the acts and orders of Her Majesty, and her representatives in India ignorantly ascribe the shortcomings of the former to Her Majesty's Government. We trust, therefore, that the boon we seek for will be granted to us, if only to prevent the rise of such false and mischievous impressions. 7. The city survey operations have caused great alarm as having unsettled all rights in landed property. Though the act was designed to define and settle the boundaries of houses and lands, it has been so loosely executed, that it has been the means of unsettling the same. Contrary decisions have been passed with regard to the ownership of the same piece of land, and much confusion and fear have arisen with regard to the ownership of estates. A possession of even many years has counted for nothing; inquiries have been prolonged, much to the annoyance of your subjects. A report from the Collector will satisfy your Excellency that it neither benefits the State nor the people, but forms an item of annual loss to Government. 8. Next to the municipal and city survey grievances, we would humbly point to one in the administration of justice. Till within the last few years the Zillah Court of highest original jurisdiction was located in this city. Its location now at Kaira involves the litigants of this Zillah in much additional expense, and indirectly leads to a frustration of justice. A reference to the records of the court at Kaira will show that there are very few claims filed that require at Kaira a first class first grade judge. The orders of the Government of India to re-establish the assistant judge's court at Kaira have removed the only ground on which the first class sub-judge's court was taken to Kaira. We humbly trust these facts will induce your Excellency to order a transfer of the court to this Zillah again. 9. On the side of the river where Hindoos and Jains resort, fishermen were not allowed to spread their nets. This was done by order of Government, but of late these orders are disobeyed much to the annoyance of your subjects. Attention of the authorities may be called to it. 10. The police here force cartmen to leave their occupations and go with officers who require carts on their journey. This, besides being a violation of individual rights, produces a great obstacle to trade. 11. Not to trespass at great length on the limited time your Excellency can have to afford from your Excellency's short stay among us, we have confined ourselves to a bare statement of severely felt grievances, in the hope of redress being obtained, in accordance with your Excellency's high sense of justice, and we, in duty bound, shall ever pray, &c. &c. (Here follow the signatures of the members of the committee, and about 700 others.) Ahmedabad, 20th January 1873.—*N. B.* The address presented to your Excellency on the 20th, by the Municipal Commissioners and others, purported, we understand, to emanate from 'the inhabitants of Ahmedabad;' but we beg leave respectfully to assure your Excellency that the few who delivered it are alone responsible for it, whereas this memorial faithfully represents the feelings of the masses. We, who approach you in the cause of suffering humanity, have the same status and influence as those who presented the said address, and are numerically greater by hundreds."

This petition contained complaints against the acts of the local authority, the Collector of Ahmedabad, who acted as the guest and guide of his Excellency during his visit to that city; and it is signed by 700 of the inhabitants of Ahmedabad, and I have not yet heard of any inquiry having been instituted by the Government into all the different complaints that have been urged in it, in regard to the acts of the collector and magistrate, the municipal government, the municipal oppression, and other matters that are urged in this petition. I was informed that the people were not allowed to have access to the Governor, who wished to reach him, except through the collector or other local authority, and that the Governor held a levee at Ahmedabad on the 20th of January last, to which no one was admitted, except a select number of persons, who were invited by the Collector and his deputy.

4981. *Chairman.*] Let me caution you; can you give these statements to the Committee as actual facts; they may be your impression of things as they occurred, but you must bear in mind what you give here in the way of evidence before this Committee will go back to Bombay, and is certain to be taken up by those whose conduct is impugned?—I have no apprehensions of that, because the information which I have laid before the Committee I have derived from the best sources, sources on which I place implicit reliance, and the fact of invitations having been issued to a select number of the natives of Ahmedabad, who alone could go to that levee, is undeniable.

4982. Is that custom quite contrary to anything which you have hitherto known of a Governor of Bombay when making tours?—When the Governor holds levees in Bombay they are open to the public, and all respectable gentlemen have only to send in their cards, and they are admitted without any selection or prohibition from attending the levee. The proceedings which took place on the occasion when the Governor visited Ahmedabad, and when the levee was held there, were all pre-arranged by the Government officials. An address of congratulation, which had been prepared by the deputy collector and magistrate, and signed by seven members of the municipality and four other natives, was presented to the governor in the name of the inhabitants of Ahmedabad. The bulk of the community, who were anxious for an interview, for the purpose of presenting a memorial prepared by them and adopted at a large public meeting, representing the wants and grievances of the people, were refused all access. These are facts.

4983. Was the Commissioner of Revenue present on that occasion, the one who has authority in that district of Ahmedabad, because, generally speaking, when the Governor goes on a tour, all the officers of the district are present?—He was at Ahmedabad, but I am not sure whether he was present and visited with the Governor, or whether he came there afterwards. The petition which I have handed in is a most important document, and is signed by 700 of the most influential inhabitants.

4984. And your statement also is most important, which is this, that the inhabitants of a great town like Ahmedabad had a distinct grievance embodied in a petition, which they were anxious to lay before the Governor, and that they were not permitted to do so by the intervention of the district officers?—That is what the people concluded,

Mr. *Nowrozjee Furdoonjee.*

17 June 1873.

concluded, that it was owing to that, because the Governor was the guest of the very officer against whom they desired to complain, and was always near him and with him.

4985. Have you anything further that you wish to say about Broach?—No; but about another place called Punderpoor, I have an instance to give.

4986. In what part of Bombay is that?—That is in the Deccan.

4987. Is it called by that name?—Yes. In July last the municipal committee of Punderpoor, with the concurrence of their Chairman, the Assistant Collector, resolved that 15 cisterns or reservoirs of water should be constructed in different parts of the city for the use of the inhabitants, but Government refused to sanction the outlay; without the sanction of Government no disbursements can be made. In Almedabad most oppressive fines were inflicted upon the people, and on one day the collection of fines amounted to 1,000 rupees for infringing petty municipal regulations; there were fines inflicted on the people for walking in the middle of the road, or on the wrong side of the road, and some of these people, with the assistance of some liberal gentlemen, appealed against these unjust decisions to the High Court, and the Court interfered in the exercise of its extraordinary jurisdiction, and reversed those decisions.

4988. Were those fines all inflicted in one day by the collector?—It is asserted in that petition, I believe, that they were on one day, and I think they amounted to 1,000 rupees.

4989. Sir *D. Wedderburn.*] When you spoke just now of the outlay for cisterns at Punderpoor being disallowed, you said that the Government disallowed it; do you mean the Government of Bombay?—Yes, through their executive officer in such case, namely, the Revenue Commissioner.

4990. Then it was not against the President of the municipality committee, that that complaint was made?—No; some of the complaints bear on the acts of the President, and others on the acts of the Government themselves, interfering with petty matters of expenditure connected with the cities, and of which expenditure the municipal committee ought to be the best judges.

4991. *Chairman.*] If you have done, as regards the statement of grievances from the administration of local funds, I would point out to you that there is one thing that you have omitted to tell us; you have omitted to tell us how the Municipal Council, or the Local Committee, I should, perhaps, call it, of Ahmedabad is composed, of what persons it is composed?—I have not got their names here; but I will give their names on another occasion, showing how many are official members and how many are non-official.

4992. Have you anything to say about the cesses for dispensaries or for education?—No; I have nothing particular to say of cesses appropriated for those purposes; but, with regard to a large portion of the local funds administered under the Local Funds Act, I have to say that it is felt to be a subject of very great complaint by the inhabitants of the rural districts of the interior, from whom the cess is collected, that, instead of erecting suitable accommodation for native travellers, who are the bulk of the travellers in the districts, a large portion of the funds raised from the local cess is appropriated for the purpose of building large bungalows for the accommodation of European gentlemen.

4993. Then when you tell the Committee that a portion of the funds are devoted to travellers' dhurumsalas, what are we to understand by that?—That is the expression; that was the object and purpose for which the local cess was raised.

4994. But the dhurumsalas are essentially for native travellers?—Yes, that was the original intention; but it has been appropriated, and a large portion of these funds have been devoted to the purpose of erecting costly bungalows for the Europeans.

4995. Did not the Bombay Post Office Department erect bungalows on the main lines of communication?—I am not aware of that.

4996. Do you mean that the expenses of erecting European bungalows has been in a large measure thrown on the local funds of the districts?—Yes.

4997. Do you state that generally, or have you some particular districts in your mind at the time?—That is a subject of general complaint, and I could produce at the next meeting the local funds expenditure, showing what large sums have been spent for these bungalows during the last two or three years.

4998. Mr. *Bourke.*] Can you state the income which these bungalows brought in?—I think the income will very likely appear in the Returns, which have been sent by order of the Committee, of the product of all the local taxes, and that, I am sure, will present a very small amount.

4999. *Chairman.*] Are not the local committees of the Bombay districts, called upon to furnish annual Budgets of their proposed expenditure, and of the objects on which they propose to spend money?—Yes.

5000. Therefore every object on which money is proposed to be spent in the forthcoming year has to be reviewed by the Commissioner of Revenue, and also by the Government?—I believe so.

5001. Therefore nothing that is proposed in these district budgets can be spent, except with the sanction of the highest authority?—Just so.

5002. Do the rural districts of Bombay think it a great grievance to have a light cess imposed upon them for educational purposes?—With regard to the schools which are established from the proceeds of that fund, the majority of attendants at the schools are not the children of the cultivators, but of other classes.

5003. The lower classes, do you mean?—Yes, and the middle classes too.

5004. Do you mean that the schools are of too high an order for the children of the rural population?—No, not that they are of too high an order, but that the advantages are reaped by all the different classes, although the cess is contributed by the agricultural class only.

5005. You mean that the children of the inhabitants of towns, the children of the trading classes, benefit by these schools?—Yes.

5006. They are purely vernacular schools, I presume?—They are vernacular.

5007. Do the inhabitants of the towns contribute in no other way directly to the support of the schools; you know what we understand in England by school pence; do not the children pay anything at all in these schools?—There are some fees levied like school fees.

5008. Then do the children of the rural population pay school fees, besides their parents contributing

tributing to the school fund?—I forget whether they pay some small fee or not.

5009. Has this grievance also about the educational cess ever found its way into a petition?—I do not know.

5010. Do you know what the amount of it is per rupee of rental?—The cess for all purposes is one-sixteenth on the revenue paid by the agricultural classes.

5011. But how is that estimated?—On the Government assessment.

5012. It is an anna in the rupee on the Government assessment?—Yes.

5013. For all purposes?—Yes, for all purposes.

5014. For roads, education, dispensaries, and dhurumsalas?—Yes.

5015. Mr. *M'Clure.*] Who appoints the municipal committee?—They are appointed on the recommendation of the Collector and Magistrate of the district; he selects them and officially recommends Government to appoint them, and on his recommendation they are appointed.

5016. *Chairman.*] And the names are published in the Government Gazette, are they not?—Yes.

5017. Mr. *Candlish.*] Are a certain number elected?—No; the rule is that the municipal committees should be composed of official and non-official members, the official members not to exceed one-third of the total number; but in practice a number of gentlemen holding different offices under Government, who strictly do not come within the description of official members, are appointed. In that way there is a larger number of what I should call Government members in the municipal committees than one-third.

5018. Are the Committee to understand you to mean appointed or elected members?—Appointed.

5019. Are there not a proportion elected?—Not one; that is only the case in the town of Bombay, and there it has only recently been conceded, and has not come into operation yet.

5020. Sir *D. Wedderburn.*] For what period do the members of the municipal committee hold their appointments?—I do not think that there is any fixed period for which they hold office.

5021. Then the same authority that has appointed them has apparently the power of deposing them?—Yes.

5022. At any given time; is there no limit?—There is no limit.

5023. Mr. *M'Clure.*] There is no right of election, as I understand you?—No right of election whatever.

5024. Mr. *Beach.*] And who recommended these names?—The collector and magistrate, the chief Government executive authority of the district.

5025. *Chairman.*] No member of the committee, I presume, can at the mere word of the collector be turned off the committee; but his name must be gazetted out of the committee, in the same way as it was gazetted into it?—Yes.

Friday, 20th June 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Mr. Beach.
Mr. Birley.
Mr. Bourke.
Mr. Candlish.
Mr. Crawford.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. J. B. Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE, re-called; and further Examined.

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

5026. *Chairman.*] ARE you enabled to produce to the Committee the Papers referred to in your Evidence on the last occasion?—Yes; the Committee wanted the new Bombay Municipal Act, which was passed on the 17th of October last, and I will put it in (*handing in the same*). They also wanted the proceedings of the Legislative Council of Bombay, in relation to the introduction and passing of that Act; these are those proceedings (*handing in the same*). I will also put in the memorials that were addressed by the Bombay Association on behalf of the inhabitants of Bombay, in regard to the Bombay Municipal Act (*handing in the same*); and the petitions addressed by the ratepayers of the City and Island of Bombayto the same authority (*handing in the same*). I will also put in the Report, which the Committee wanted, of the Committee appointed by Government, just before the introduction of the new Municipal Act, to ascertain the present financial condition of the municapility of Bombay, and the action of the Controller; I put that in, together with the resolution recorded thereon by the Bombay Government (*handing in the same*). Then the Committee wanted the names of the municipal commissioners of Ahmedabad and Broach. Of Ahmedabad, I am sorry that I have not been able to get them; but of Broach I have got. The municipal commissioners of Broach consist of 25 gentlemen, whose names are given in this list (*producing it*), from which it appears that 11 members are Government officials, three non-official Europeans, and 11 non-official natives. Under the Bombay Act IX. of 1862, s. 2, all collectors, subcollectors, assistant and deputy collectors, mamlutdars, and mahalkurees (these are revenue officers) are *ex officio* commissioners of every municipality within the limits of their local jurisdiction. Besides these, the following officers are also *ex officio* commissioners when resident in the town or city, namely, the executive engineer, the civil surgeon, the superintendent of police, the deputy collector, and the city foujdar (that is executive police officer). In Broach also, several independent municipal commissioners have been removed on account of their opposition. The removal is effected in a manner which is not likely to attract the notice of Government. The Collector and Magistrate from time to time sends to Government a list of the municipal commissioners whom he selects, recommending their appointment. From this list he omits the names of such commissioners as he wishes to exclude, and the nomination of the gentlemen whom he recommends is confirmed by Government and is gazetted.

5027. Will you be good enough to explain what you meant by saying that the names are omitted from the list of municipal councillors?—The collector and magistrate, who is the head of the municipality of every town and district, has the privilege of selecting from time to time, whenever he thinks fit and necessary so to do, and recommending the appointment of municipal commissioners for any particular city or district, and there is no limit as to the duration for which the municipal commissioners are to hold office. Whenever he likes he sends in a new list of gentlemen whom he recommends at any indefinite intervals of time just when he considers it advisable so to do; and when he does that, he, as I am credibly informed, omits the names of such members as have offered opposition either to his views or to the views of the Government members, and they are thus omitted. That is the feeling amongst the people.

5028. Sir *D. Wedderburn.*] He does not assign reasons for removing them?—No, nor does he say that he has removed any particular individual from the list formerly sent in; but, compared with the previous list, it would turn out that three, four, or five names are omitted and the rest are all there, and perhaps two or three others are substituted in the place of the gentlemen whose names are omitted, and then they are gazetted, and then people know who have been removed and not until then.

5029. *Chairman.*] Have you any further information to give the Committee respecting the administration of local funds?—I have, and that evidence is not very long, but of a most important character. With regard to the administration of the local funds, this is the information that I wish

to

to lay before the Committee. The annual income from the local funds in the talooka of Unkleser amounts to about 30,000 rupees. Very little of this money is spent in the construction of public works for the benefit of the people; there are no roads except the road to Hansote and a Kutcha road between Unkleser and Sarangpore. The rivulets, creeks, and nullahs are not bridged. There is a ferry between Bore Bhatta and Broach, which yields about 2,000 rupees a year; but there is no pier and landing-place at Bore Bhatta. There is no made road between Unkleser and Broach, though the traffic is large. There is no road between Oodwara and the railway station. The local funds committee, though frequently applied to, have refused to construct it. No money has for several years been appropriated out of the local funds for the benefit of the people of Oodwara. Four years ago the tank at that place was repaired by a private individual, the late Mr. Rustomjee Jamsetjee. The school and dispensary there, are maintained at the cost of private benefactors. Complaints have been frequently made to Government by the Collector of Surat and other local authorities regarding the inadequacy of the allowance granted out of the Imperial and provincial funds for public works and improvements. The bulk of the outlay is borne by the local funds. Railway feeders are constructed out of local funds with small contributions granted by Government. Works constructed through the agency of the Public Works Department are very costly; 20 per cent. is charged extra for the support of Imperial public works establishments. Roads in the military cantonment of Surat have been constructed and repaired from local funds, and yet these roads are under the control of the military authorities, who sometimes prevent people and carriages from passing along the road. There is a public band stand at Surat, in the locality I am describing, the approaches to which are repaired, and the road watered, out of the municipal funds, and yet native gentleman are prevented from going to that band stand in their carriages, or even on foot. I attempted to go, and was prevented by the commanding officer, and when I remonstrated he threatened to send me into custody.

5030. Is not the ground on which the band plays, the parade ground of the troops that are quartered there?—It is on one side of it, the river side, close by the river, not in the middle of the parade ground.

5031. It is in the midst of the officers' lines?—It is in what they call the cantonment.

5032. I am not speaking of the propriety of the thing, but of the fact; the military, therefore, consider that they have a right to regulate the use of their ground. Your grievance would be that they have no right to ask the people of Surat to keep up and repair the road?—And then to prevent their making use of it. The railway feeder roads from Olpar to Scion, Randeer to Olpar, and Keem to Turkeser, have been constructed by the Public Works Department, and the local funds have been compelled to contribute two-thirds of the entire expenditure, Government contributing only one-third; 20 per cent. is contributed from the local funds for the Imperial public works establishments. The undermentioned disbursements have been made for these feeders from local funds; from old local fund, balance, 1,16,000 rupees; from new local funds, 1,24,000 rupees; total, 2,40,000 rupees; add 20 per cent. for the support of Imperial public works establishments, 24,800 rupees; total, 2,64,800 rupees paid out of the local funds.

5033. Are not these roads, of which you have been speaking, on the western side of the city, towards the sea?—They lead between the railway line into the interior of the country, not on the sea side.

5034. And how about the band?—That is not exactly the sea side, about nine miles from the sea; it is on the river side.

5035. It is on the western side, which is the side where the sea is?—Yes, about 10 miles from the coast.

5036. Do you know whether there are any roads on the eastern side of Surat up the river?—There is no road between Surat and several large towns on the eastern side of Surat.

5037. Do you know the road to the native burial ground, on the eastern side?—No, I do not remember that, but I am speaking of the roads and communications between Surat and the towns situated on the east of it.

5038. Is there any tax paid, do you know, upon funerals?—I do not know. Now I wish to solicit the attention of the Committee to another important subject, namely, the misappropriation of local funds. The Honourable Mr. Ellis, a member of the Bombay Government, in introducing the Local Funds Bill in the Bombay Local Council on the 15th February 1869, explained the objects of the measure. On that occasion he especially requested that (I am using his own words) "care be taken not to consider it in any sense as a Government assessment. It was a local rate imposed for local purposes, and not with the view of appropriating any portion to Imperial purposes. It was also one essential feature in the scheme that, in thus providing for local taxation, the proceeds of the taxation would be devoted purely to local objects, and that the people should receive, by reason of the payment, something which they had not before, and which, but for the payment, they would not receive at all." Such was the pledge given when the Local Funds Bill was enacted into law. I will now show instances in which it has been violated in the Bombay Presidency. The local fund of the Talooka, or sub-district of Chowrasee, in the Surat Collectorate, is charged with 11,101 rupees in 1869 and 1870, for machinery purchased from the Broach Exhibition, and 5,000 rupees as contribution towards the public park of Surat in 1870, and 1,000 rupees more in 1871, and 30,000 rupees towards the construction of the high school at Surat in the year 1868-69.

5039. How many scholars are there in that school?—The number of scholars in that school is between 200 and 300.

5040. I am afraid education would be very expensive at that rate?—This is only a contribution towards the erection of that school. That school has been constructed by a public benefactor, Mr. Soraljie Jamsetjie, and the bulk of the funds were provided by him; and to supply the deficiency, allotments were made from different directions, and amongst others, from the district of Chowrasee, comprising a number of villages, from the district fund of that district, which, according to the terms of the Act, and according to the objects of the Act as explained by Mr. Ellis in the quotation that I gave to the Committee, and as laid down in the rules that have been framed by the Government, ought to be appropriated in that

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

district and in no other district; but they have been diverted to such purposes as I have mentioned, and in other districts.

5041. Are there any other illustrations which you wish to give?—Yes. Whilst on this subject, I wish to draw the attention of the Committee to the rules that have been laid down by Government, in pursuance of the Bombay Local Funds Act III. of 1869. The first rule relates to the removal of any member of the District Local Funds Committee by Government. Rule 2nd says that "the local fund revenues shall include the proceeds of the one anna cess, the levy of which has been authorised by Bombay Act III. of 1869, and such other funds as Government have either already made over, or may hereafter be pleased to make over to the local fund Committees." Rule 3rd says, that "a third of the proceeds of the one anna cess leviable under Bombay Act III. of 1869 shall be held to belong to the Educational Department, for expenditure in the talooka in which it is levied, and the annual accounts of this portion of the local fund cess shall be incorporated with the annual general local fund accounts of the district." Rule 4th says that "the remaining two-thirds of the one anna cess shall be expended wholly in the talooka, in which it is levied, exclusively on roads and communications, and works subordinate thereto, namely, on dhurrumsalas, or rest-houses, on water supply, and on the plantation of avenues of trees. The only exception that shall be permitted to this rule is in the case of communications connecting adjacent Talookas." The local funds of the Surat Collectorate have been charged 4,800 rupees as a contribution towards the Broach Exhibition in 1868-69, and 1,149 rupees and 1,908 rupees for exhibitions in the Government High School in the city of Surat. The local funds of the Ahmednugger Collectorate have been charged 18,182 rupees for completing the Government High School in the town of Ahmednugger in 1871-72. In 1871-72 the local funds of the Sattara Collectorate have been charged 22,545 rupees for the Mahableshwer Ghaut road, constructed for the convenience chiefly of Europeans visiting that cool hilly station, and 72,936 rupees for the repairs to Imperial roads, and 8,575 rupees on account of Imperial establishments in the Public Works Department. In the Canara district the dhurrumsala establishment cost 397 rupees in 1871-72, whilst the European travellers' bungalow establishment cost 2,196 rupees.

5042. Do you mean gross or net after deducting the fees that are paid by the travellers?—I am not quite sure whether the net amount is given, or the gross, but even if it be gross the receipts are so few and small that they would not materially affect the amount. In the Administration Report of the Local Funds of the Colaba district for the year 1871-72, the President of the Local Funds Committee, Mr. Salmon, states, that (I use his words) "the cause of the local funds of the district being at a debt is chiefly attributable to the heavy expenditure incurred in past years on the Nagotna and Dharamter road, which was unjustly debited to this fund by Government Resolution dated 31st of March 1870." That is a quotation from the Report made by the President of the Local Funds Committee of the Colaba district, which is published in the Bombay Government Gazette; and also the other instances to which I have previously referred, are taken from the Reports of the Administration by the Local Funds Committee, rendered to Government and published in the Government Gazette. I find that the Canara district local fund is charged 11,873 rupees for contribution for Imperial road repairs. The acting collector, Mr. Grant, in his report of the Khandeish local funds for 1871-72, says: "Considerable irregularities were brought to light which resulted in the dismissal of the engineer, three overseers, and a number of the subordinates." In the educational expenditure I find an item paid from this district local fund for the support of the female normal school at Poonah, which is maintained from Imperial funds, and is situated in a different district altogether. Thus it clearly appears that in this case, and in the case of the Colaba district, local funds raised in one district have been appropriated in another contrary to Rule 4 laid down by the Government, which directs that the amount of the cess "shall be expended wholly in the talooka in which it is levied." In the year 1871 grave irregularities and defalcations were discovered in the Local Fund Engineering Department of the Tanna district (which is near Bombay). Government appointed Captain Maunsel to inquire and report on the subject. This officer has made a report which I have before me, from which it appears that he has investigated a great many cases of irregularities and defalcations that were brought to light, and has officially reported to that local funds committee; and there are a number of such cases and instances. For each case there is a separate report; but I will not trouble the Committee with any further details beyond mentioning that this is the general character of the irregularities which he has brought to light and reported. This is the result in almost each case. As a sample I will mention this:—"The following irregularities are noted. Exemption of fees on pre-sanction; non-submission of revised estimate on altered line; transfer of work from Rowjee Dadaram to Nanabhoy Nowrojee without contract; payment of bills to different persons; alteration of design; allowing Nanabhoy Nowrojee to be contractor after distinct orders to contrary, but making no contract, &c.; unauthorisedly ordering work; permitting contractor to evade work; inferior workmanship in large metal and masonry." That is a sample of the reports that he has made after a careful and patient inquiry in a number of cases. This Report is dated the 18th November 1871.

5043. Do you know whether the person whose proceedings were thus reported upon, was appointed by the local authority or how was he appointed?—By the Local Funds Committee; Mr. Addis is the engineer, who was appointed by the Local Funds Committee, and it was in the engineering department of that district of which he was the head, that these irregularities were brought to light, and reported upon.

5044. Do you know whether Mr. Addis was appointed by what I may call a free election of the Local Funds Committee, or was he nominated by any officer of the Government?—I think generally the collector and magistrate of the district, who is the President of the district committee, makes all the important nominations. They are, of course, made at a meeting of the Committee of the local funds.

5045. I wanted to know, as a matter of fact, in this particular case, whether you knew how Mr. Addis had been appointed?—I do not know particularly how he was appointed; but the appointment

appointment of the local funds engineer rests with the district Committee, of which the Collector is the President. It is subject to the confirmation of the Revenue Commissioner.

5046. That Committee being, as far as you know, nominated under the general provisions of the Act?—Yes.

5047. Are you going on with some further illustrations?—I have done with regard to this sort of local funds. Oppressively heavy and vexatious tolls are levied on roads and bridges throughout the Bombay Presidency.

5048. Are those levied, do you mean, by the direct authority of the Presidency Government?—Yes.

5049. And by local Acts?—Yes.

5050. That is, Acts passed recently, or some considerable period of years back?—Yes.

5051. Mr. *J. B. Smith.*] Is there any account rendered to Government of the receipt of the tolls?—Yes.

5052. *Chairman.*] Are these tolls part of the general revenue of the Government?—They are incorporated with the district local funds, and appropriated to local purposes under the rules which I put in.

5053. Have you any illustrations of what you consider the vexatious character of these tolls?—Yes.

5054. Will you be good enough to state them?—A toll of four annas is levied on each cart crossing the Sion causeway from Salsetta, near Bombay, besides another toll of two annas charged by the Bombay municipality; on a four wheeled carriage, the toll at Sion is half a rupee; the same toll is exacted on carriages and carts crossing the Bandora causeway; I will not trouble the Committee with details of these tolls which are imposed in all the different districts, but their heaviness, and their oppressive character, is a matter of universal complaint throughout the Presidency.

5055. Can you tell us generally the rate of those tolls which are oppressive?—The tolls are very nearly the same rates as I have mentioned as being in operation at Sion, near Salsette.

5056. Do you mean tolls of the same amount are levied in various places?—Nearly the same amount for various places.

5057. Do you know, as a rule, whether these tolls which you pay for the particular work for which they have been imposed, more than pay the interest on the outlay and the cost of maintenance of the particular work for which they have been imposed?—I find from the accounts of the District Funds Committee that very large sums are realised on account of these tolls, showing the heaviness of the rate.

5058. But do you know whether these tolls were originally levied to cover the interest of the expenditure upon the public works, and the cost of maintenance?—I believe that was the object for which they were originally imposed.

5059. Do you know whether they have produced more than was necessary for those purposes?—I think many of them have.

5060. But have you seen any accounts showing that?—I have not been able to lay my hand on any account framed in that way; there is none that has been accessible to me of that nature.

5061. When you say that the tolls are vexatious, do you mean that they are vexatious merely in the sense that they are more than the people like to pay?—Not only in that sense, but people

at the toll bars are sto
they are subjected to a
ances by the officers in ch

5062. Since you have
you informed yourself of th
people pay here for the use
No, I have not. I forgot to m
instance of the irregular manner
local funds. It appears from the
ministration Report of the Public
partment that a riding path, 3¾ miles
30 feet broad, had recently been built
cantonment of Poonah at a cost of 19,970
"which has been met nearly equally from
perial and from local funds." This work
described in the Administration Report in these terms, "as one of the most useful and most highly appreciated improvements that have been made in the station of Poonah." I need scarcely say that it is of no use so far as the native inhabitants of the district are concerned, from whom half the amount has been obtained for the construction of this riding path, and that it was constructed almost exclusively for the benefit and enjoyment of the European visitors of Poonah. It is a sort of Rotten-row that has been constructed in the cantonment of Poonah.

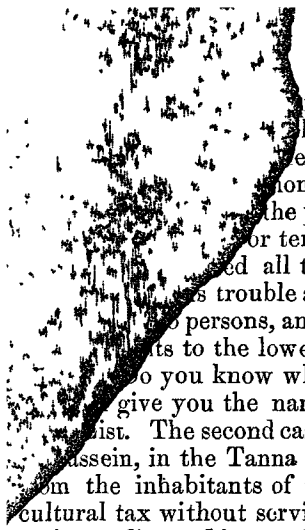
5063. Mr. *J. B. Smith.*] Are natives excluded from the use of that road?—I have not seen natives riding and taking advantage of it. I do not think that any respectable native would be excluded; perhaps some may be found occasionally to take advantage of it; but so far as the natives are concerned there was no need for it, and it is not a common thing that the natives like to ride on fine horses in a sort of Rotten-row road.

5064. But there is nothing to prevent them from doing so if they choose?—No.

5065. Mr. *Hermon.*] And they choose not to do so?—Some few might do so; but what I complain of is this, that a large contribution from the local funds, raised from the villagers of the district, was devoted for this work, and villagers do not ride on horseback on that sort of road.

5066. *Chairman.*] Do you know whether the cantonment houses and barracks are brought under assessment to the local funds in Poonah?—I do not know.

5067. Are there any other cases which you would like to bring before the Committee in dealing with the local funds?—No. I have here before me a statement of six classes of authentic cases showing the injustice to which people have been subjected in the course of carrying out the non-agricultural tax, which I will submit to the Committee. In February of last year the mamlutdar of Rajapoor assessed more than 100 heads of families residing in the small village of Kashalee Talooka Rajapoor, in the Rutnagherry Collectorate. He served them with notices calling upon them to pay the tax within one month at different rates, namely, 6 rupees, 3 rupees, 1½ rupees and 8 annas. In default he threatened to exact double the said amounts. This village is inhabited chiefly by cultivators, who have no other calling, excepting the heads of 10 or 15 families who follow other trades. Many of the persons assessed being too poor to incur the expense of appeal, a benevolent visitor who happened to be present, was moved with compassion; he advocated their cause, and defrayed from his own pocket the cost of lodging formal appeals on stamped paper. Thirty per-



ption on the ground that
he tax, and that they did
ession, trade, or calling
ion of land. On the day
he petitions, the mamlutdar
or ten of the cases only, and
d all the other appeals. The
s trouble and expense was the ex-
persons, and the transfer of eight of
ts to the lowest class.

o you know who the mamlutdar was?
give you the name afterwards from the
ist. The second case is this; the mamlutdar
ssein, in the Tanna Collectorate, has levied
m the inhabitants of that town the non-agri-
cultural tax without serving on them one month's notice as directed by section 9 of Act II. of 1871, thereby depriving the people of the right reserved to them by sections 12 and 13. Thirdly, in the Indapoor talooka of the Poonah Collectorate, where the poor people had suffered exceedingly from bad harvests and drought, many of the indigent villagers were mulcted, and compelled to pay double the amount at which they were assessed, on the ground that they had failed to pay the tax within one month after the date of the notice, although in several instances the notices were not served until after the lapse of two weeks. The result of such proceedings was disastrous. The unfortunate victims were compelled even to sell their clothes and cooking utensils to enable them to pay the amount of the tax and fine. Fourthly, in another district the Collector having requested Government to authorise him to grant remissions to persons who had suffered heavily from drought and other causes, was informed by Government that no exemption or remission should be granted, except for special reasons, after the most careful investigation.

5069. Sir *D. Wedderburn.*] What district was that?—I have not the name of the district here; but I believe it refers to one of the districts of the Deccan. Fifthly, last year 500 inhabitants of the Duskroee talooka, in the Ahmedabad district, who were assessed and required to pay the non-agricultural tax by the mamlutdar, appealed on stamped paper; but that officer did not inquire into their appeals which he referred to the supernumerary assistant collector and magistrate, who referred them back to the mamlutdar. The applicants did not get any redress. Sixthly, more than one-half of the number of appeals preferred against this tax in the city and district of Broach had not been disposed of up to the commencement of this year.

5070. Mr. *Crawford.*] Upon what authority are these statements made?—Upon information which I received in some cases from the parties themselves and in others from the most reliable sources.

5071. *Ex parte* statements?—I was not sitting in judgment when I collected this information, and I had no right to call up and hear the Government high and other functionaries, so as to be put in possession of their reasons, and their defence.

5072. But they are statements made in the nature of complaints addressed to you with reference to the matters which you speak of?—Yes.

5073. By the parties themselves?—Yes.

5074. Not corroborated by any other statement?—Several of those aggrieved parties in their own name made petitions and representations to Government in which these complaints have been urged; I could give to the Committee one of those petitions, which I have brought with me, at the next sitting.

5075. Are the complaints, when they are made to the Government, heard publicly?—No, never; they are disposed of in the Council Chamber, to which the public have no access.

5076. But are they not referred by the Government to the parties against whom the representations are directed?—They are referred to the local authorities, and their reports are invited; but they are not shown to the aggrieved parties.

5077. The parties are never heard in support of their statement?—No, nor have they the opportunity of knowing what sort of report has been made on the subject of their complaints by the authorities against whom those complaints have been urged; the complainants have no opportunity of knowing in what way the authorities have answered or met their complaints.

5078. *Chairman.*] Have you any further information to give respecting the administration of local funds?—Not at present. If you will allow me, I have some further representations to make on the subject and nature of local legislation as affecting the people. Two of the Acts, to which I wish to draw attention, refer to funds drawn from the city of Bombay. As an instance of the high-handed manner in which Government have carried several projects of law through the local Legislative Council, I will cite the instance of the Cotton Frauds Bill, which was passed in 1869, against the remonstrances of all classes of the community, Native as well as European, amongst whom it produced universal discontent.

5079. In what way does that bear upon the question of local taxation?—It bears upon it in this way, that Government imposes a tax on the trade, a tax on every bale of cotton exported from Bombay, for the purpose of keeping up, supporting, and maintaining the Cotton Frauds Establishment. If the Committee will allow me, I will put in the petitions addressed to the local council and the Viceroy, objecting to the principle and provisions of the Bill, showing the injustice and oppression practised upon the people in enforcing the existing Act, No. IX., of 1863, which is milder and much less stringent than the proposed Bill, citing many cases, decided by the High Court, in proof of the justice of their complaints, and soliciting the Viceroy to withhold his assent to the Bill (*handing in the petitions*). Owing to the complaints of the people of Bombay having been supported by the Bombay Chamber of Commerce, the Manchester Cotton Supply Association, and other commercial associations of England, several of whom memorialised the Secretary of State against the measure, the Viceroy was induced to veto the Bill. With regard to the inutility of keeping up the Cotton Frauds Department, and taxing the trade to support a very large and highly paid establishment, which is maintained by Government for the purpose of carrying out the Cotton Frauds Act, the Chamber of Commerce of Bombay makes the following important declaration in their last report: "Every year of the existence of this Act impresses merchants more strongly than ever regarding its utter uselessness for the purpose of putting down fraud, and with the fact that the large sum of money spent by the department is utterly wasted. Your Committee are of opinion that the time has come when

when this subject can be no longer left in the stage of 'consideration,' but must now be actively dealt with." This statement is contained in the Chamber's Report for 1871, which is dated 28th September last.

5080. Can you state about the amount of expenditure on that account?—Yes. There is an Inspector in chief for the Presidency of Bombay, on a salary of 1,833 rupees a month, and 125 rupees for travelling allowances; two inspectors on 800 rupees a month with travelling allowance in one case of 150 rupees, and in the other of 100 rupees; the inspector for Goojerat is maintained on a salary of 1,000 rupees a month, with 200 rupees for travelling allowance; the inspector for Khandeish, 700 rupees a month, and 200 rupees travelling allowance; the inspector for the Southern Mahratta country, 700 rupees a month, with 200 rupees for travelling allowance; the inspector for Scinde, 500 rupees a month, and 200 rupees travelling allowances; preventive inspector (for the Hubshee's territory), 250 rupees a month, and 100 rupees travelling allowance. These are the heads of establishments, but I believe that I can give at the next meeting of the Committee the total amount, including the subordinate establishment.

5081. Mr. *Hermon.*] The inspection, I suppose, only occurs when the crop is being picked?—The salaries are drawn permanently; but the travelling allowances are drawn for eight months of the year during the fair season, and not for the four months when they are stationed at particular places.

5082. *Chairman.*] Have you any particular statement there of the number of convictions in the course of the year?—In our petitions which I have put in, I think the number of convictions is given, and how they were disposed of.

5083. I do not see a statement of the total convictions?—They are given in the reports of the Chamber of Commerce.

5084. Do they give the total convictions for the year?—Yes. "Out of 33 cases prosecuted under the Cotton Frauds Act by the Cotton Department, in 1870–71, eight ended in acquittals of the accused parties, and convictions were procured in 13, of which two were reversed on appeal; and of the remainder, six cases were dismissed, and as many were pending the completion of the trial at the date of the report under consideration. Besides the above, there were 11 cases prosecuted by the Preventive Inspector of Surat and Broach, under Act VI. of 1863."

5085. Can you state at whose instance this Act was passed?—I believe it was at the instance of some mercantile men at an unusual period, when the merchants were much injured in consequence of frauds that had been practised by adulterating cotton.

5086. Did the Chamber of Commerce petition for it, do you know?—I do not remember.

5087. Do you know whether the frauds have been repressed which were complained of by the operation of the Act, or do the same frauds occur still?—The Chamber has reported from time to time that this Act, and the establishment of this department, have had no effect in the suppression of the adulteration and frauds.

5088. Mr. *J. B. Smith.*] But was not the passing of the Act rendered necessary by the enormous frauds that were committed by the growers of cotton?—When the Bill was introduced, there was a great cry raised to that effect, and that led to the enactment of the law.

5089. Was there not a great outcry from Manchester, who are the consumers of the cotton, that they were cheated by these frauds?—I believe there was.

5090. And was it not necessary therefore for the Government to take some means of repressing those frauds?—Yes, if those means could be effectual.

5091. But was it not necessary for the Government to take means to repress the fraud?—I will give a qualified answer to your question, if you will permit me. If it be necessary to suppress frauds in trade, I think that, on principle, there should be a general measure for the suppression of frauds practised in trade, with regard to every kind of commodity. For instance, there are frauds practised in this country in connection with piece goods, which are sized and mixed largely with clay, and mildewed goods, and in seeds, and in a number of cases frauds are practised; and if it is necessary, and advisable, and feasible by legislation to suppress these frauds, it is a fair thing for Government to pass a general measure for the suppression of frauds of every kind, and in trade of every kind, and not to select a particular article of trade like cotton; but in this case, even the attempt to suppress the frauds and mixture of cotton has, by the admission of the Chamber of Commerce, and other mercantile bodies, failed. The Chamber of Commerce of Bombay has memorialised Government to repeal the Cotton Frauds Act; but the subject, I believe, is under consideration, and a reference has, I believe, been made to the commercial bodies in this country.

5092. *Chairman.*] Is not the objection rather of a different kind, namely, not that the Government ought not to legislate to make penal frauds in any branch of trade which is particularly liable to fraud, but that they ought not to have an establishment at the public expense for the purpose of assisting the merchants in the way of precautionary inspection, but that they ought to leave the merchant to conduct his own business, and when he is defrauded to prosecute the person who defrauds him, and then to have a proper law for punishing him?—Just so; the penal code would be sufficient for the purpose of convicting in the case of legitimate fraud in reference to any trade.

5093. The objection is to spending the public money in having highly paid officers to assist merchants in dealing with cotton?—Just so; that is the objection.

5094. Mr. *Crawford.*] Can you tell me at whose instance these prosecutions, which resulted in conviction, were made?—By the inspectors employed by Government in the Cotton Frauds Department.

5095. Do you mean that the inspectors viewing the cotton form their opinion that the cotton is adulterated, and bring the presumed offender before the authorities?—Yes.

5096. Were any of those prosecutions on this footing, that some of the purchasers when purchasing cotton of a certain quality found on the delivery of it that inferior cotton had been passed upon them, and then went to the magistrates to complain?—I do not think that it was at the instance of the purchasers. All these prosecutions were initiated by the heads of the Cotton Frauds Department,

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

Department, and employées of the Government of their own motion.

5097. Has the cotton inspector the power of going round the district and of looking at any cotton that he finds, whether for sale or not for sale, in a man's private warehouse, or in the open market, just as he pleases?—He has that power.

5098. And if he thinks that cotton is adulterated, he then brings the presumed offender before the magistrate?—Yes; he can do so.

5099. Then it is a question of judgment on his part whether the cotton is adulterated or not?—Yes; and the case is decided by the court on questions of law and of evidence.

5100. Does the law go the length of preventing a man from selling inferior cotton?—No, it does not. All that the law says is this, that if a party is guilty knowingly of adulterating cotton he shall be punished.

5101. But supposing he adulterates inferior cotton with good cotton?—I think that the judge would hold that this is not adulteration.

5102. *Chairman.*] He would hold that that was an improvement, you think?—Yes.

5103. Mr. *Fawcett.*] What I understood you to wish to convey to the Committee in the answer you gave just now is this, that one reason of your complaint against the Act is that you allege that there are quite as great frauds committed with reference to cotton goods which are imported into India from England as there are with reference to the raw cotton exported from India to England, and that the refore you think it is unfair that any special Act should be passed applying to the raw cotton exported from India which does not equally apply to the manufactured cotton goods imported from England?—Yes, and to other commodities.

5104. Lord *E. Fitzmaurice.*] Your objection is also, as I understand, that the Act cannot be carried out?—Yes, the mercantile body and the Chamber have often reported that it is ineffectual in preventing the adulteration of cotton.

5105. *Chairman.*] Are there any other special proceedings that you would wish to bring under notice of this local character?—Yes, one more. It is a measure that was promoted by the Government and enacted by the Legislative Council recently, namely, in the year 1870, the Bunder Fees Act. By the Bunder Fees Act, which was passed in 1870, the traffic and trade of the port of Bombay, which were free, have been taxed, and fees ranging from 6 pies to 1½ rupees have been imposed with the view of raising a revenue to pay for the heavy amount of interest payable for the Elphinstone Company's property purchased by Government and the Moody Bay reclamation works made over to the Port Trust.

5106. These bunder fees are a wharfage due paid for putting the goods on to the wharf?—Yes, not only is merchandise taxed, but fees are also charged on the personal effects and every description of package in the hands of passengers going to and from. The imposition of these new burdens has caused great dissatisfaction in Bombay.

5107. Mr. *Candlish.*] What is the rate of this charge?—In certain cases it is on packages; in certain cases it is for a ton or so many maunds, according to the nature and quality of the articles. Negotiations were carried on with the Government of India for a long time regarding the proposed formation of the Port Trust, and no information was laid before the mercantile community until a remonstrance was addressed to the Supreme Government by the Bombay Chamber of Commerce. These bunder fees have been imposed on the people and the trade without affording any facilities, such as deep-water piers, basins, or docks, for which a large outlay will be necessary, and which will add to the existing burdens and liabilities of the port.

5108. *Chairman.*] Has one of the effects of making these new wharves projecting further into the harbour been, that the vessels can get to the wharf at a much later period of the tide, so that a great deal of time is saved?—I am not aware of any such works having been constructed; vessels cannot get alongside there.

5109. I am speaking now of the harbour boats, what are called the cargo boats; do you know that the cargo boats could formerly only get to be unloaded almost at high tides, and that by projecting these wharves very much into the harbour, they can now come to be laden and unladen at some different parts of the tide, say half tide or any other period of the tide?—These boats do not require any large draught of water, and they could come up to any place, irrespective of the state of the tide.

5110. When you say that no result has come from this expenditure to the mercantile community, I want to see if you are quite clear upon that point; supposing it were correct, that in former times, before these wharves were made projecting considerably into the harbour, the water at the side of the old wharves, and at the side of the harbour, was so shallow, that the cargo boats could only come on the top of the tide to unload, and that now, by the wharf walls being run a good way into the harbour, they can come at half tide, would not that be a very great gain, in point of time, and also a very considerable reduction of expense in the use of harbour boats, if they could do the work in half a tide, which before they could only do in one tide, in consequence of their being able only to come up and get off at full tide?—I am not aware of these advantages which you speak of, being afforded.

5111. Have you informed yourself sufficiently of the relative state of things before those wharves were built into the harbour, and now that they have been built and brought into use?—I do not know exactly as to that; but with regard to the Custom House, there has been no facility afforded.

5112. I am speaking, not of the Custom House, but of the economy to the merchant, and the reduction of the expense of unloading vessels, in being able to bring vessels at half tide, instead of only on the top of the tide?—I do not know that.

5113. Mr. *Crawford.*] Is it not a fact within your recollection, as it is within mine, that there was a time when the whole of the trade of Bombay had to pass over the Custom House bunder within the fort, and the bunder outside?—Yes.

5114. And is it not a fact, now, that the number of landing places for goods has been very much increased by the construction of the Elphinstone wharves, and the bunder, and a variety of other bunders, and that consequently the trade have now the enjoyment of very great advantages and facilities in the shape of landing the goods?—Yes.

5115. Is it not reasonable that the trade should pay for that in the form of a tax upon the goods?—The fact is this, that it was fair, or would have

have been fair, for the Elphinstone Company, for such improvements as they made, and for the facilities that they afforded on their wharves and bunders to impose a certain charge, but the people have now to pay charges and fees for all the Government bunders, and all the bunders which hitherto had been free, and on which no such facilities have been provided.

5116. But those wharves or bunders have many of them been constructed of late years, have they not, and are in point of fact additions to the facilities which the mercantile public had former days in Bombay?—Not the Government bunders.

5117. *Chairman.*] They are all Government bunders now?—Yes, now; but I mean up to the time when they took over the Elphinstone Company's property.

5117. Mr. *Crawford.*] What I was referring to just now is the fact that 25 or 30 years ago the whole of the trade of Bombay passed over the Custom-house bunder, and over those two other bunders I was mentioning, the Chinch bunder and the Boree bunder?—Yes.

5119. Now there are greater advantages given to the public by the extension of these facilities, is it not reasonable that people should pay for the use of these facilities?—Yes, it is reasonable that they should pay for resorting to any particular bunders where facilities are afforded; but I submit that it is not fair, as regards the people who hitherto landed their goods and passengers and others at the Government bunders free of charge, to impose vexatious fees and charges for landing goods and passengers without providing any additional facilities, such, for instance, as that of directly stepping into the ships without having to go to them by means of a boat.

5120. *Chairman.*] We want to know the exact point that you are putting before the Committee. If you are putting before the Committee that assuming the services, the rate of the charges is vexatiously heavy, that is one proposition; but if you are putting before the Committee that to make any charge is improper, you can hardly be in a position to do that unless you know exactly the true character, commercially speaking, of the conveniences that have been afforded; for instance, unless you know whether, before these large works were undertaken, vessels through loss of time were kept waiting because the accommodation was so small and could not unload; and now in consequence of the increase of accommodation they can save time and come up when they want to load and unload; all those are questions which it is necessary for you to explain to the Committee, if you intend to go into the matter?—I have not personally investigated that, but from the representations that were made by the mercantile body, the Chamber of Commerce, to the Bombay Government, and to the Supreme Government, it appears that they feel the levy of these duties and charges at all as a hardship, and they, throughout, in their correspondence complain of it, I believe, on the assumption that without any facilities to the trade having been provided, these burdens have been imposed; in fact a large outlay has to be incurred to provide facilities for the landing of goods and passengers.

5121. Further facilities, you mean; but to say that there are none at all provided by these wharves, and so forth, is rather a strong proposition. Do you know whether the craneage of the goods on the wharves is included in the charge, that is, whether taking the goods from the boat and putting them on to the wharf, is included in the charge that is made?—I do not think that is included.

5122. But do you know exactly?—I do not know; I will not undertake to say that.

5123. Mr. *Candlish.*] Do you know that in the Port of London, and in every port of this country, bunder dues are charged?—I do not know the state of matters with regard to this country.

5124. Mr. *J. B. Smith.*] In the last 25 years the trade of Bombay has enormously increased, has it not?—Yes.

5125. Do you think that it would have been possible to carry on the present trade of Bombay, unless greater facilities had been afforded for that purpose, and a great outlay had been incurred?—Perhaps not.

5126. *Chairman.*] I think we had better not pursue this any more, because without having all the facts, one cannot form any judgment on the matter. Will you go to some other illustration?—There is one circumstance connected with the question of local legislation in Bombay, which I wish to bring to the notice of the Committee, namely, the great dissatisfaction which has been produced in the Bombay Presidency, in consequence of sufficient publicity not having been given by the Council to the new measures of additional taxation which were introduced and pushed through the Council with undue haste in 1871. The Standing Orders were suspended when the Bills were introduced and referred to Select Committees. The time given to report on them, within a fortnight, was too short and insufficient for the purpose. The Bills were published in the Government "Gazette" only, in English, a day before they were introduced, and translations in the vernacular languages were not published at all for the information of the eleven millions of people residing in the Bombay Presidency, whose interests were deeply affected by these measures, and who were therefore utterly ignorant of the nature and character of the taxes proposed to be levied from them, and therefore had no opportunity of expressing their views and representing their objections to the Council. Both the Police Bill and the Non-Agricultural Tax Bill were hurried through the Council and passed into law within the short interval of three weeks after their first introduction.

5127. Mr. *Crawford.*] What is the ordinary method used for promulgating a new law in India among the Natives?—It is made known by promulgation in the "Gazette," of the Act in English and vernacular translations.

5128. But in some village up the country, how can the native who does not read the Government Gazette know what law has been made?—Copies of the Government Gazette in the vernacular languages are posted at the cutcherries, and people have the opportunity of coming and reading or getting them read there.

5129. *Chairman.*] Have we come to an end of what you wish to say about the local matters?—There is one other subject which I wish to bring to the notice of the Committee, namely, the necessity of giving adequate representation to the natives, and enlarging the local Legislative Council. To remedy the grievance which I have brought to the notice of the Committee, namely, want of adequate representation, it is necessary to remodel the present defective constitution of

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

the Council with a view to the giving to the natives an effective voice, and a real and true representation, instead of the semblance which they now possess, and which is of no practical advantage; I submit to the Committee the advisability of recommending a suitable extension of the Council, by admitting a greater number of properly qualified natives, elected by the inhabitants of the principal towns and districts of the Bombay Presidency, as proposed by Sir Bartle Frere, late Governor of Bombay, or any other well-considered scheme. Under the present faulty system, laws are passed for which no necessity exists, and which injuriously affect the interests of the people, as I have endeavoured to show to the Committee; and the Budget of the Provincial Services which have been made over to the local government is not submitted to, nor discussed by, the Council. There is, therefore little or no check upon the public expenditure, which has gone on increasing from year to year. In order to consult the feelings and opinions of the people through properly qualified representatives elected by them, and to bring public opinion to bear on their deliberations, I humbly submit that the Budget should be framed by a duly qualified functionary, and submitted to and fully discussed by a properly constituted local Council, who should sanction, reject, or modify each item of the expenditure, very nearly in the same way as is done by the House of Commons sitting in Committee. If necessary, the Governor in Council might have the right of vetoing any Resolution of the Council, for reasons to be publicly assigned.

5130. Then supposing the Council and the Governor in Council differed, what would be the result?—If the Executive Government differed, and did not consider it in the interests of Government and the interests of the State to carry out the vote of the Council, against which they might have strong reasons, as I have already stated, they might veto such resolution for reasons to be assigned, and which would be known to the public and to the Supreme Government.

5131. But who would decide?—The Governor might on his own responsibility.

5132. You use the term "veto," in a sense in which we do not understand it quite?—I mean cancel any particular vote with regard to any item.

5133. Supposing the Legislative Council declined to sanction expenditure to carry out something that the Governor wished to be done, they would be the party vetoing, and the Governor the party proposing. Supposing that state of things to arise, who would decide between them what was to be done?—The Governor, for reasons to be publicly assigned.

5134. Then you would leave the executive authority in the Governor in Council, to the same extent that he possesses it at present; but you would allow his acts, before they were carried into effect, to be canvassed in the Legislative Council?—To be canvassed and fully discussed, and each item to be voted upon after a careful scrutiny of the expenditure.

5135. Mr. *Crawford.*] A sort of Presidency Parliament?—Yes, on a small scale.

5136. *Chairman.*] But not having absolute powers, because the Government might find it necessary to act independently of the Council on their own responsibility?—Not having absolute powers.

5137. Do you think that it would be easy to carry out elections satisfactorily in the way suggested by you?—I think it would be easy; I do not see any insuperable difficulty in the way of it. They have already made a commencement; the inhabitants of the town and island of Bombay have hitherto had no right to elect the members of their own municipal corporation; that right has, to a certain extent, been recently conceded, and I hope will be properly exercised, and beneficially exercised, and that it will be the harbinger of extending this still further.

5138. Mr. *J. B. Smith.*] Who are to be the electors of the Council according to your notion?—The inhabitants of the large towns throughout the Bombay Presidency.

5139. Is it to be universal suffrage?—No, a limited suffrage; some such suffrage as has been laid down for municipal elections by the Act that was passed last year. I would make it general with respect to rates of every kind, so as to bring in a larger body within the franchise than those to whom it is given under that Bill.

5140. *Chairman.*] Is there anything further that you wish to add on this head?—That is all on this subject.

5141. You did not state the nature of your objection to the Executive Council of the Governor; can you do so?—My objections will be gleaned from a short statement which, with your permission, I will make with regard to the manner in which the Council conducts the business, the general routine, and the expense of the service. The Executive Government of Bombay is composed of the Governor and President, and a Council consisting of the Commander in Chief and two other members. They have a large staff of four highly-paid secretaries and four under secretaries, besides five uncovenanted assistant secretaries. The Governor receives a salary of 1,28,000 rupees; his staff and household expenses amount to 1,67,000 rupees; and his tour expenses to 1,00,000 rupees; total, 4,00,000 rupees per annum. These figures are taken from the Civil Budget Estimate of Bombay, page 512. In 1856-7, the Governor's staff and household expenses amounted to 66,020 rupees, and his tour expenses to 11,720 rupees only. In these two items alone there has been an increase of nearly two lacs since the transfer of the Government from the East India Company to the Crown. The Commander in Chief receives a salary of 66,000 rupees a year, which, together with the salaries of his personal staff, and travelling expenses, amounts to one lac and a quarter.

5142. He does not receive all that; you mean that he and his staff receive that?—He and his staff taken together. He takes little or no part in the transaction of civil business. Each member of the Council receives a salary of 64,000 rupees per annum. There are four secretaries to Government in different departments, each receiving from 30,000 rupees to 40,000 rupees a year, and four under secretaries, each on 15,000 rupees to 27,000 rupees per year, and four assistant secretaries, on 7,200 rupees to 7,800 rupees a year. Natives are eligible for employment in the lowest grade of the Secretariat Department. There is only one Hindoo and one Portuguese employed in this lowest grade. The rest are all civil servants and military officers, and a few uncovenanted Europeans. In 1856-7, there were no under secretaries. In the Secretariat Department there has been a great increase of expenditure.

ture. In the time of the former Governors, such as Lord Clive, Lord Elphinstone, Sir George Russell Clerk, and others, meetings of the Council were held regularly every week, public business was transacted, after full discussion, and a record of the proceedings of each meeting was kept by the Secretary, which was read and confirmed in due course at each subsequent meeting. Latterly the system has been changed; council meetings are seldom held, and business is disposed of by putting the papers in circulation amongst the members of the Government, and the Under Secretary writes out a statement of the case, which usually forms the basis on which one of the members of the Council records his Minute, and on the authority of this document, orders are issued by the Secretary or Under Secretary in the name of the Governor in Council. Two or three departments are assigned to each Councillor, whose instructions are carried out without reference to the other members of the Government unless an express intimation is given to circulate particular papers to the other members, which is seldom the case. The Governor at present disposes of business in the Military, Political, and Public Works Departments; the honourable Mr. Tucker in the judicial and educational: and the honourable Mr. Rogers in the Revenue, Police, Financial, and General Departments. Notwithstanding this sub-division of the work, there is a great delay in the transaction of public business. Many persons do not receive replies and decisions from Government, for months and even years. For example, the honourable Mr. Tucker has not yet had time to write out and give to the parties, judgments in several cases which he decided about four years ago, when he was Judge of the High Court; whilst one native judge was lately dismissed from the public service because he neglected to write out his judgment shortly after pronouncing his decision. The proceedings of Government are kept secret in every department, and people have not the full opportunity of their cases being represented to Government when they come up before that body. I will not say more than what I have stated with regard to the injurious effects of the secrecy system that is carried on in all the Government departments; but the short account that I have given of the very high expenditure that is incurred, and which has increased a great deal during the last 10 or 12 years, and the mode of conducting business, will show that the manner in which the public business is disposed of by Government, at the very heavy cost that I have described, does not give satisfaction. It promotes delay, and it is time that measures should be devised for placing the management and the conduct of business by Government on a better footing. At the present, although there are several members of the Council, I have already shown that one does not take any part at all in the transaction of civil business, namely, the Commander in Chief; in the Legislative Council, of which he is a member, he never takes a part in that branch of the Public Department; and whereas the business ought to be disposed of by the Board, after full and matnre discussion and consideration, and giving the parties full opportunity to be heard before the Council previous to their coming to a decision, they are not allowed that opportunity, and business is disposed of in the way that I have described by the Minute recorded by one member only of the Government, who, so far as the public are concerned, issues his orders on the statement of the case as laid before him by the Secretary or Under Secretary, and that goes before the public as the act of his Excellency the Governor in Council. Therefore, I would submit to the Committee the advisability of recommending a change in the constitution of the Government. The Committee after hearing all the facts and the evidence, will perhaps form an opinion whether a Council is necessary, and whether the large staff of secretaries, under secretaries, and assistant secretaries, is or is not advisable; whether it is necessary to make a reduction in the large staff of the Secretariat, and whether it is necessary to give to the Governor the benefit of a Council, and under what circumstances; but if a Council is to be kept up, in justice to the public it is necessary that all the members should hold regular meetings, and deliberate and have the cases fully laid before them, giving parties whose interests are affected by the decision full opportunity of being heard, and they should be allowed to be present when their cases come up before the Council, either themselves or by their representatives, and, after careful discussion, the ordinary business should be disposed of, excepting, of course, matters relating to the Political and Secret Department, in which a different procedure might perhaps be thought advisable and the Commander in Chief might be relieved of all his duties as a member of the Civil Government. In fact, I submit that it is not necessary to have a separate Commander in Chief for each Presidency; one Commander in Chief for the whole of the Indian Army would be quite sufficient; and, so far as the Presidencies and Provinces are concerned, subordinate officers may, on smaller salaries, be appointed to take charge of, and conduct the supervision of, the local army of each Presidency and Province, and in that way a great reduction could be made in the public expenditure, and the public might be relieved of a portion of their burthens.

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

5143. Do you think that the opinion of the Natives in Bombay, in the town and in the districts of the country which you have visited, is, that it would be better to have a Lieutenant Governor taken from the public service in India without any Council to administer the Government of Bombay at a very much less cost, or that they would rather have the Governor with his Council, kept within the reasonable cost of former Governors of Bombay?—I think that it is an open question whether there should be a Council or not; but if it be advisable that the Governor should have the assistance and benefit of a Council, it should be given in such a manner that the people might have the benefit and advantage of the whole Board, including all the councillors.

5144. But I am asking you whether you know generally, whether there is a feeling amongst the Natives of the town and the Provinces in Bombay on that subject, one way or the other?—I am not exactly able to say that there is any feeling; there are different opinions, and therefore I would not venture to say what is the prevailing opinion.

5145. Mr. *J. B. Smith.*] You merely give your own opinion?—Yes.

5146. Mr. *Fowler.*] Do you advocate the amalgamation of the Native army?—I would advocate the amalgamation, and the whole army to be placed under one command and

Mr. *Nowrozjee Fnrdoonjee.*

20 June 1873.

one inspectorial and superintending staff; and, further, that it should be a purely local army, subject to the orders of the Supreme Government, and not be subject to the orders and jurisdiction of the Horse Guards in this country, which entails a very great expenditure, and which fetters the reduction of military expenditure, on account of all proposals for such reduction having to be submitted to the Commander in Chief in this country, and being negatived by him.

5147. *Chairman.*] Do you know that that is the case?—I have been informed that that is the case; and one reason why I state it is this, that a proposition was made by the Supreme Government some short time ago for the reduction of some regiments, which, I believe, was negatived by the authorities in this country.

5148. That is not the Commander in Chief. To what subject do you now propose to proceed?—If there is no objection, I would enter to-day on the subject of the Engineering Department and the Public Works Department.

5149. Are you conversant with the organisation of the Engineering and Public Works Departments in India, or in the Presidency of Bombay?—I have made myself acquainted with the organisation in the Presidency of Bombay, and taken some pains to do so.

5150. Have you any objection to make it as leading to unnecessary expenditure of the public finances?—I have. With regard to the civil engineering colleges of India, evidence has been given before this Select Committee by several high officers of Government, for whom I have the greatest respect, to the effect that Government has offered very high attractions to the natives, which they have not at all responded to, and that they do not take kindly to the work of engineering at present; that it would not have been possible to get a sufficient supply of engineers from the natives of India; that the Government has done all it can do quite in advance of the feeling of the people; that India has produced only one man who has made a mark in that country as a distinguished engineer; that native engineers have not undertaken works involving a large responsibility; that only some have reached the grade of executive engineer, and none have become superintending officers, and this result is attributed to want of talent and qualification; that natives have not exhibited remarkable qualifications as students of engineering, and that the native mind leans more towards sedentary employment; that the course of studies in the Indian colleges is very much shorter, and lasts only a year and a half; that Government tried the experiment of admitting the natives to perfect equality with Europeans for several years, and gave it up upon finding it a failure; that the natives who do best in examinations are perfectly useless with their hands, and unfit for practical work; and that in their own country they are found, for hard work, almost useless; that they go about in palanquins, and see somebody else do the work, instead of doing it themselves; that it is very rarely that young native engineers have been found fit for the higher posts; and that they cannot qualify themselves for the duties that are required of the various grades of the Engineering Department. Such is, in the words of the Government functionaries that have been examined before the Select Committee, the evidence that has been placed before the Committee regarding the natives in justification of their exclusion, and their not being promoted and admitted into the higher grades of the Engineering service. With due respect to the high authorities (one of them is General Strachey, and the other is the superintendent of the engineering college at Cooper's Hill, Colonel Chesney), I submit that these opinions are utterly baseless and unfounded. That is an assertion which I hope to make good, and to establish before the Committee by indisputable facts.

5151. Will you be good enough to state, then, what the facts are which lead you to the opposite opinion to that which we have just quoted?—With regard to the specific allegation and instance that was specified, that for some years the entire number of appointments guaranteed to Roorkee College, namely, eight annually, were not filled up, I beg to state that the failure attending the eight appointments that were guaranteed to Roorkee is to be accounted for by this circumstance, that very few natives join the upper department in that college, and they do not form an important element in the Roorkee College. From the calendar of the Roorkee College for 1871-72, it appears that the college is not a college established for the express purpose of training and qualifying natives of India. Its engineering or first department consists almost entirely of military officers, men from various regiments, and from the Royal Artillery. Its second department is almost entirely confined to serjeants, corporals, and privates, selected from British regiments. Therefore it cannot be expected that natives will join a college where they will be subject to the various slights which British serjeants and privates are in the habit always of offering them; Roorkee Engineering College, for all the good it does to the natives of India, might as well not have existed. There is a magnificent and highly paid European staff employed in the college, consisting of four Royal Engineer officers, a Fellow of Cambridge, a Doctor, and F.R.S.E., and a host of inferior European teachers, all engaged, not in teaching natives, but in teaching officers of European regiments, and serjeants, corporals, and privates of the same. There is a third department in that college which is a native department, but there are none of these highly paid instructors in that department to teach the natives. There are only a few native teachers, and the instruction conveyed is only in the vernacular. The Roorkee College is merely a military institution. It instructs natives only in name, and by no means acts up to the policy ascribed to it by the Court of Directors. The encouragement which is stated as being given to Roorkee is given, in fact, to European officers chiefly, and such encouragement has not been extended to the Engineering College established in the Bombay Presidency, I mean the Civil Engineering College of Poona. In the Civil Engineering College at Poona, the teaching staff is small, and inadequate compared with the staff of the Roorkee College. In October 1867 Government appointed special visitors to the Poona Civil Engineering College, who have made their reports, in which they show the inadequacy of the staff that is employed in the Civil Engineering College. They conclude their Report with this remark: "Through the liberality of Mr. Cowasjee Jehanghier Readymoney, the engineering college will soon possess a local habitation of its own, and become one of the acknowledged and permanent institutions of the country.

country. It struggled through the first years of its existence amid much conflict of opinion on the part of the officers of the Public Works Department; but by its regular annual production of a most useful body of public servants, its value to the State and to the public has become recognised. Its growth has been slow, but steady; and we would recommend that the same policy of gradual development which has marked its history during the last 12 years should still be continued." The Report is signed by Mr. Coke, M.A., and C. T. Haig, Captain of the Royal Engineers.

5152. Does it describe what the "useful body of Government servants" is?—Yes; with regard to the encouragement which Government was pleased to give to the training of the natives in civil engineering, on which stress has been laid by one of the witnesses that were examined by the Committee, I desire to bring to the notice of the Committee the fact that in Bombay the encouragement from Government consisted of one appointment in the upper department of the engineering service, which was given to the best qualified student of the college.

5153. Mr. *J. B. Smith.*] How many appointments were given in the whole; what proportion does that bear to the total number employed?—I will show you presently. Now that one appointment which was given every year to natives who had passed the required test and examination, and qualified themselves, was subsequently withdrawn by Government, because too many natives passed.

5154. *Chairman.*] Do we rightly understand you to state that there were a number of qualified natives to take up the appointments?—Yes.

5155. And that they were not appointed?—Yes; they were not appointed, and one appointment that had previous been guaranteed was practically taken away by the restriction which Government imposed, limiting the appointment to licentiates of the first class.

5156. Do you know the reason why they were not appointed; was it merely because they were natives, or from any other ground?—I do not know any other ground.

5157. Why was the appointment taken away then?—I do not know the reason that actuated the Government in taking away the appointment, and it has afforded a subject of complaint and remonstrance to the Head Government Educational officer, who has remonstrated against this proceeding of the Government in his Report on Public Instruction for 1870-71, at page 70, paragraph 65, and also in his Report for the subsequent year. It appears from the report of the Director of Public instruction at Madras, that no encouragement is offered to natives at Madras who desire to qualify themselves for the Engineering Department, and that statement will be found in the Report of the Director of Public Instruction in Madras for 1870-71, There is a passage in paragraph 16, at page 269 of the Roorkee Calendar, which I wish to bring to the notice of the Committee, regarding the capabilities of the natives for qualifying themselves in the Engineering Service. The Principal of the Engineering College at Roorkee, in his annual report for the year 1870-71, at paragraph 16, makes these observations: "Unless, then, more appointments are guaranteed to the passed civil engineer students I cannot see with unmixed satisfaction any further expansion of this particular class; nor can I hope to see many natives join it, although I consider that they have perhaps the first claims upon the college, and should be more encouraged to enter the higher grades of the Public Works Department. The necessity for employing an experienced European agency in the public works, as in other departments of the public services, was originally forced upon the rulers of India because the necessary material was not procurable in this country. Meanwhile, however, we have been improving the native article; had we failed to do so we should have manifestly neglected our duty; and now, in many branches of education, a standard of culture has been reached quite sufficient for the requirements of the public service in several departments of Government. The time should be approaching when all the subordinate, and many of the engineer, appointments in the Public Works Department could be efficiently filled by natives of this country, who, while in ability quite equal to their European rivals, and nearly, if not quite as competent to discharge the duties of a civil engineer, would cost the State far less."

5158. That is if they were paid a less remuneration?—He thus explains what he means: "A sub-overseer, as turned out of this college, is in many particulars a more highly trained subordinate after his two years' curriculum than the overseer who leaves after one session in the college; and I am by no means prepared to assert that he is not, on 35 rupees a month, quite as useful a man in most cases as the European overseer on 100 rupees. In the lower grades the natives have quite established a footing in the Public Works Department, and the country is full of men trained in our colleges and on our works capable of carrying out all the simpler operations of surveying, building, road-making, &c. . . . . That the natives of this country, under favourable conditions, are capable of excellence, both as architects and builders, the beauty and solidity of many of the historical monuments of the country fully testify; and that they can compete with European skill in the choice and composition of building materials may be proved by comparing an old terrace roof at Delhi or Lahore with an Allahabad gun-shed or many a recent barrack."

5159. Mr. *J. B. Smith.*] That is the report of a European?—The report of the principal of the Thomason College at Roorkee, and the principal is an engineer of very great eminence in the public service.

5160. *Chairman.*] Before you pass from this Report from which you have previously quoted on the Poona Civil Engineering College for 1866 (that is some time ago), it would seem that the class of servants adverted to in this Report is called the Maistry Class or subordinate officers of the Public Works Department, not the superior directing officers?—That is only one department referred to.

5161. The only officers referred to in this college are in what is called the subordinate department, the maistry, and superintending class, not what are called the executive engineer officers?—I will show presently how the engineer officers have been trained and turned out.

5162. I will call your attention to these two paragraphs: "We would strongly support Mr. Cooke's recommendation that an appointment to the engineering branch of the Public Works Department be awarded annually to the first licentiate in civil engineering at the university." Then it

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

goes on to say, "We have seen the standard of the competitive examination of candidates for appointments in the engineer establishment of the Public Works Department in India, as laid down by the India Office in 1863, and after comparing it with that for the degree of licentiate of civil engineering, we are satisfied that the latter standard is very much higher than the former." Then you say that after that Report the Government declined to nominate?—No; at first they gave one appointment, and afterwards they took it away when a larger number passed the required examination, and qualified themselves for admission into the Government service.

5163. Did they withdraw that nomination before or after the establishment of the Engineering College in England?—I think it was about that time.

5164. The same Report goes on to say, "It will be for the Government to determine whether it will be desirable to encourage the profession of civil engineering among the natives by gradually admitting them to the higher appointments of the service, or to leave them unencouraged to establish independent offices for themselves; without encouragement, we fear it will be long before they take full advantage of the university course"?—Just so; and the suggestion was taken up, and further representations were made to the same effect by the Director of Public Instruction in two of his successive reports. Then with regard to that part of the evidence that has been given, that no natives have been elevated to the post of superintending engineers, I submit that that is not the fault of native talent or capability, but the fault of Government. They have not even offered sufficient inducement for their admission into the lower grade, and they have not promoted any one to the superior grade of superintending engineer, except only lately, when there has been a solitary instance of an acting appointment of superintending engineer being conferred upon a native in Bengal.

5165. Would it surprise you to be told, that the Government has never afforded any encouragement in this country to the education of civil engineers, and yet that engineers have grown up to eminence, and conducted all the public works in this country without any such assistance from Government; and that the first effort that we have heard of its being necessary to make to teach civil engineers in this country, is for the purpose of qualifying civil engineers to go out to India?—I submit that the circumstances of India, and the requirements of India, are quite different from those of England; there are in England very remunerative openings for engineers in the railways, and in a great many other capacities, and there is a great demand for them, and there are very great facilities for qualifying themselves; and, therefore, it may not be necessary for the Government here to give any such encouragement or inducement; but I submit that the circumstances of India are quite different; and that, unless inducements are given, it is futile to expect that natives should spend some years of the best part of their time in acquiring the necessary training and proficiency, without expecting an appointment, after qualifying themselves in the public service; moreover, it has been the policy of Government, that natives should be trained and educated, and qualified for all the different departments of the public service; and when they are so qualified that they should be freely admitted.

5166. Do you know that the railway companies who have constructed works, exceeding in magnitude all the public works of the Government of India, in India have been able to provide themselves with engineers ready made, without any assistance whatever from the Government?—They bring their engineers from this country, because there are engineering colleges and private establishments, and every facility exists for that purpose, and there is a great demand, and the supply is created by the demand.

5167. Do you know whether, notwithstanding the fact that the railway companies have been operating in India for the last 20 years, and they would have been glad, on account of economy, to employ natives as engineers, they have never been able to find any native who could accept a responsible engineering post?—I do not know that.

5168. Do you know as a matter of fact that they never have found any native qualified to accept a responsible employment during the 20 years that they have been carrying on their operations?—I do not know that.

5169. Do you know whether any native ever offered himself as qualified?—I know one instance in which the railway authorities have employed and promoted a native to one of the highest posts in their employment, namely, that of engineer, and that is Mr. Harrichund Sudasewjee, who is employed in Bombay at the head-quarters office as an engineer in the employment of the Great Indian Peninsular Railway Company.

5170. In what particular employment?—He is employed in the head office, and he was so highly qualified and so efficient, and gave that company so much satisfaction, that they would not allow him to leave their service and go to another, although there was an opening. For want of adequate support and promotion in the Public Works Department, this gentleman left the Government service, and was better off in the service of the railway company.

5171. Do you know whether he is employed as the head of the official establishment of natives under the chief engineer, or whether he has ever been employed as an executive field engineer in the service?—He is employed, I know, in the head office, and occupies one of the highest and most responsible posts in that office.

5172. But do you know whether his employment is that of being the head of a considerable establishment which the chief engineer has in Bombay, to carry on his business as superintendent, or whether he has ever been employed in what may be called the engineering staff, as an executive officer in charge of works, or in the construction of works?—No; not in the construction of works.

5173. But I was asking whether any of the railway companies, within your knowledge, had ever been able to find any native during these 20 years who proposed himself as qualified for taking the post of an executive engineer, designing or constructing works?—I believe there was no opening in the service of the Government for that native whom I have mentioned; but his services were secured the company for the head office, and they would not allow him to go.

5174. But still there are establishments by which the natives for many years past, in fact during the last 20 years, could have pursued their

their education for all the qualifications necessary for engineers; there have been educational establishments in Bombay and Calcutta, and Madras, in which natives could have acquired all the learning, scientific and otherwise, that is necessary to qualify a person to be an engineer?—Yes, and the Poona Engineering College is one of them.

5175. Do you know whether any native of India, having a sufficient basis of education, has ever applied to any of the engineer officers to take him as a pupil to teach engineering, civil engineers in India being at liberty to take pupils if they had offered themselves?—I do not know. Then it should further be borne in mind that the post of superintending engineer, that high post to which it has been alleged no native has yet risen, is rarely attained before 20 years' service in the employment of the Government, and it is not 20 years since colleges have been established for the training and education of natives in the engineering department. It is only lately that that has been done, and therefore there has not been sufficient time for them, even by showing their usefulness and talent, to rise to the high post of superintending engineer, to which it is alleged, as a matter of blame to them, that they have not yet risen.

5176. Are you aware that in this country no necessity has ever been discovered yet for having engineering colleges, but all that is required is to have schools where certain branches of science are taught to qualify young men to become pupils of engineers, in order to make them, in the end, competent, practical engineers; that this is a new discovery that an engineering college is necessary at all for this purpose. Until this establishment of Cooper's Hill College, in the profession of civil engineering in this country, are you aware that the necesssity of having an engineering college has never been discovered, but all that has been considered necessary has been that they should be grounded in certain branches of scientific education, and then become the pupils of civil engineers and learn their business?—It may be so.

5177. And have not those opportunities been open to the natives of India during the last 20 years as completely, and perhaps, having regard to economical and gratuitous education, more completely in India than in this country?—I do not think so.

5178. Mr. *Fowler.*] Would not a native naturally have a preference over an Englishman, on the ground of their being a good deal exposed to the Indian climate?—Certainly; but that is a fault that is attributed to them as if they were fond of remaining in sedentary habits, of remaining at home or going about the country continually in palanquins and conveyances, and not going out for out-door work; it is utterly unfounded, as I will further show.

5179. *Chairman.*] Will you proceed with the illustration of your view?—As regards what the Honourable Member has just said, I beg to state that it is a well-known and undeniable fact that all the actual out-door engineering work is now done by the natives. The European engineer rarely visits the works, say only once in 10 days. He sits in his office preparing his reports, and writing reams of foolscap, whilst all the work is carried on by the native supervisors; that is corroborated in the quotation which I gave from the Roorkee College calendar to the effect that "in the lower grades the natives have quite established a footing in the Public Works Department, and the country is full of men trained in our colleges and on our works, capable of carrying out all the simple operations of surveying, building, road-making, &c."

5180. Upon what do you ground your statement that the superintending officers only visit the works once a fortnight?—That is usually the practice.

5181. What works are you speaking of?—Works that are being constructed throughout the Presidency by the Public Works Department.

5182. Do you mean ordinary roads, or do you mean great works like bridges or barracks?—My remark applies to almost all kinds of works.

5183. But there is a great distinction, perhaps you are aware, between what are called the current services of the department which are called minor works, and great new works requiring skilful supervision; does your remark apply to works of that kind?—To important structures as well as to other works.

5184. Could you give an illustration of any great work that has been carried on upon that principle?—I cannot cite names and instances of such; but this is a matter of notoriety, and well-known in the Bombay Presidency.

5185. Have you heard that it has been made a matter of very exceptional and great complaint, that in the construction of the works of the Great Indian Peninsula Railway Company, many of which failed, the subordinate officer did not, on this occasion, visit the works every day, and constantly, and that they were left in the charge of natives from whose negligence the works all failed?—I do not know that.

5186. Did you ever hear it stated that one of the causes of the failure of those works was that some of them being placed in the charge of subordinate Europeans not immediately and constantly under the eye of superior Europeans, the natives took means to prevent the Europeans constantly seeing the works, and the consequence was that the work was very bad, and the result was that it tumbled down?—I do not know that, but I shall be able to show instances in which several important works which were left to be carried on under the immediate supervision and conduct of European subordinates, and the direct superintendence of European engineers broke down and failed. With regard to that part of the evidence given to the Committee, that the course of study in the engineering colleges in India is short, and does not extend over more than a year and a half, so far as the Poona Civil Engineering College is concerned, I am able to contradict that evidence altogether, because the course of study in the Civil Engineering College at Poona is full three years, the same as in the Cooper's Hill College. And then with regard to the allegation that the natives who do best in examination, are perfectly useless with their hands, and that in their own country they are found for hard work almost useless, Colonel Chesney himself admits, in his evidence, that the natives do the work in the sun, and bear the burden and heat of the day. With regard to the way in which Europeans are admitted into the engineering service, the fact is that Europeans who come out from this country without having undergone a thorough engineering training and education have been admitted (by undergoing a

Mr. *Nowrozjee Furdoonjee.*

20 June 1873.

sort of superficial examination in India) at once into the upper grade of the engineering service, and yet natives have, after going through the required test of examination, and going through a course of engineering studies extending over three years, not been admitted, as I will show further on. Therefore the injustice done in that respect to the natives is very great; and with regard to the test to which the natives are subjected at the time of their undergoing the final examination to obtain the degree of a Licentiate of Civil Engineering from the University of Bombay, the test is very high and severe, and I am informed by engineers themselves, who are intimately acquainted with the matter, that the course of examination prescribed by the Bombay University for giving a diploma for a licentiateship of civil engineering is far superior to that laid down by the Stanley examiners selected by competitive examination in this country, and a comparison of the question papers of the two examinations held here and held in the Bombay University for the last five years will bear out my assertion; and, if necessary, I will produce the questions which are prescribed in the Poona Civil Engineering College for the examination of the students, and those papers will show that the test is very severe. Then, in addition to that, the natives have the advantage, not only of attaining that high degree of proficiency, but they have the additional advantage that they are quite conversant with the language of the country, and with the habits and customs of their countrymen with whom they have to deal.

5187. Sir *G. Balfour.*] Have those highly qualified natives ever undertaken any public works?—I will show that they have, and that they have constructed them in a highly satisfactory and creditable manner.

5188. *Chairman.*] Would you, by next time, make out a list of works undertaken and carried out by native engineers and builders, without the assistance of Europeans, entirely on their own account?—I will give such a list; and I will also give another list of works undertaken and erected by Europeans and under European supervision, which have broken down.

Wednesday, 25th June 1873.

MEMBERS PRESENT:

Sir George Balfour.	Mr. Grant Duff.
Mr. Birley.	Sir James Elphinstone.
Mr. Campbell-Bannerman.	Mr. Fawcett.
Mr. Charles Dalrymple.	Lord Edmond Fitzmaurice.
Mr. Beckett Denison.	Mr. Robert Fowler.
Mr. Dickinson.	Mr. M'Clure.

CHRISTOPHER BECKETT DENISON, Esq., IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE, re-called; and further Examined.

Mr. *Nowrozjee Furdoonjee.* 25 June 1873.

5189. *Chairman.*] I THINK at the termination of your last day's evidence, the Chairman asked you if next time you would make out a list of works undertaken and carried out by native engineers and builders, without the assistance of Europeans entirely on their own account, and you said, "I will give such a list, and I will also give another list of works undertaken and performed by Europeans, and under their supervision which have broken down." Have you brought those?—Yes, before I put in those lists, however, there is one list which the Committee wanted me to put in, and which owing to certain figures which I had not collected, I was not able to put in the last time, and which I have since prepared with as much care as I was able to bestow on it, and which I will now put in, and that is a Return of the municipal rates and taxes imposed in the City of Bombay. I have made this list a comparative one, showing in one column the rates levied under Act 2 of 1865, and in another column those levied under the New Act No. 3 of 1872.

5190. From what document has that been compiled?—It has been compiled from the Acts of the Legislative Council passed in these two respective years and other official documents (*handing in the Return*, vide Appendix).

5191. Is there any observation that you wish to make upon this Return?—No, I made my observation when I gave evidence on the subject of the municipal taxation in Bombay, and this Return will corroborate what I stated. With reference to the house rate, which according to this Return shows an apparent reduction in the Act of last year from the rate of 6 to 10 per cent. to the rate of 4 to 7 per cent., so far as the practical operation of the Act is concerned it will not be a real reduction, inasmuch as although the limits were greater, the minimum 6 per cent. and the maximum 10 per cent. laid down in the Act of 1865, yet the 10 per cent. was never levied, and the usual amount of house rate that was levied by the municipality was 6 per cent., and only in extreme cases 7 per cent. Therefore, the reduction of the minimum and maximum limit in the new Act will not practically make any reduction of taxation.

5192. It is an apparent diminution, in fact, not a real one?—Yes.

5193. The police rate in 1865, according to this Return, was from two to three per cent., and under the new Act also it is from two to three per cent.; there is nothing to be said upon that, I suppose?—With this exception, that it is laid down in the new Act, that if the proceeds of the higher rate, three per cent., are not sufficient to defray the expenses of the police, the deficiency should be supplied from the general revenues of the municipality.

5194. I suppose that the police go on increasing in numbers according to the increase in the dwellings and population of Bombay?—I think the increase of the police force in Bombay has not been quite in proportion to the increase in population; it has been made in a much greater ratio. I stated on a previous occasion that the police expenses were 2¼ lacs before the Act of 1865 came into operation, and since that they have been enhanced, and they now amount to about four lacs of rupees per annum.

5195. Taking the Government buildings in Bombay, which are very extensive, I think you said on a former occasion that the police had the guardianship of all the Government property; are not soldiers of the line employed in very many cases as sentries over Government property?—In two or three buildings only, such as to guard the Government Treasury, or the Treasury of the Bank of Bombay and Government House.

5196. And the arsenals?—And the arsenals; but all the civil buildings are looked after in the same way as the other buildings in the city of Bombay.

5197. Is the civil police also within the cantonment of Bombay?—There is no police in the cantonment; the civil police supervises the police arrangements of the whole of the town and island of Bombay, including the military cantonment.

Mr. *Nowrozjee Furdoonjee.*

25 June 1873

5198. Next in your Return we come to the lighting rate, which is two per cent. under both Acts; have you anything to say about that?—No, nothing in particular about that.

5199. Then comes the sewage cess, which is three per cent. in both cases?—Yes; that presses very heavily on the people; tenants who used to pay a quarter of a rupee or half a rupee per month, are now obliged to pay one rupee and two rupees, and three rupees a month.

5200. Then there is the water rate, five per cent. on 100 rupees of monthly rental, or 2½ per cent. on 200 rupees of rental. Under the former Act it was six per cent., and under the last Act of 1872 it is four per cent.?—That, too, is felt to be a very high rate, and the inequality is felt by the people, inasmuch as it falls upon the owners and occupiers of houses only.

5201. Is the management of the supply of water in Bombay in the hands of the Government engineers now?—In the hands of the municipality, and the engineers of the municipality, with the right to Government of supervision, checking and controlling to a certain extent.

5202. But you told the Committee on a former occasion that certain sums of money were claimed by the Government in each year for the extension of the waterworks, did you not?—When the Vehar Waterworks were originally constructed, the municipality of Bombay had stipulated that they should pay 25 lacs of rupees for the construction of those works; but these works were taken into hand by Government; the contracts were given by Government, and there was a want of supervision on the part of the Government in regard to the construction of the Vehar Waterworks, which led to a very large excess of expenditure, and a moiety of that large excess of expenditure the municipality of Bombay was compelled to pay; and a contribution in reduction and repayment of that debt is being paid by the municipality, which is a very large item, and ought to have been a smaller item if the municipality had been only asked to pay the amount of 25 lacs of rupees, which they had undertaken to pay for the construction of those waterworks.

5203. But there were grave engineering defects, were there not, in the original design of the works; did not the iron conduits all blow up, from being too small a dimension, and have to be replaced?—It was not defects in the original design, but the character of the pipes laid down and supplied was inferior, and the dam was not constructed strongly, and it gave way several times, and the municipality was obliged to spend large sums of money to repair it, and also for replacing pipes that gave way; and in that way a heavy outlay for the maintenance and repair of the waterworks was imposed on the municipality, which would not have been the case had the Government exercised supervision over the construction of those works in such a manner as to obviate those defects and faults.

5204. But at the time that those waterworks were constructed in Bombay, I think they were quite new, were they not, to the experience of Indian officers?—Yes, they were the first of the kind erected in the Island of Bombay.

5205. The engineer officer was Colonel Rivers, was he not?—He was, I think, the Government officer; but the gentleman who obtained a contract from Government was Mr. Conybeare; but the municipality had nothing to do with the engineer into whose hands the contract for the construction of those works was given; he was under the orders and supervision of Government alone.

5206. Is the water supply now good and sufficient?—It is very good, and has been very beneficial in promoting the health of the inhabitants of the city of Bombay; but it is apprehended that in case the dam gives way, the supply might be cut off, and to obviate that apprehended contingency, a fresh reservoir has been constructed, called the Toolsee Reservoir, to serve as a sort of feeder to the Vehar Lake, and to afford a larger supply of water, and to prevent any catastrophe occurring in case of the Vehar Lake giving way altogether.

5207. But passing on from the question of the great expense (and it no doubt has been very large), is there any general complaint now amongst the inhabitants of Bombay as to the way in which the water is distributed, or as to the collection of the water rate?—No, there are no great complaints with regard to the distribution of the water.

5208. Or with regard to the water cess?—The water cess is felt to be heavy, and presses on two particular classes of the people, namely, the landlord and the occupiers.

5209. Then, I suppose the landlords recoup themselves in the rent which they get for their houses, do they not?—Rents have been falling so much in Bombay latterly, that they are unable to do that.

5210. To what do you attribute the general falling of house rents in Bombay?—To the crisis that overtook Bombay in 1866.

5211. Then the whole of these cesses to which you have been referring, house rate, police rate, lighting rate, sewage rate, and water rate, make up a total of from 19 to 21 per cent on the assessed rental under the old Act, and from 15 to 18 per cent. under the new Act?—Yes, the diminution to be accounted for in the manner which I have mentioned before, that the reduction is apparent, but not real.

5212. I think that you told the Committee on one occasion, that the Act of 1872, although it had passed, and become law, had not yet been put into operation?—No, but it is expected that in the course of this year, as soon as the rules are laid down and promulgated for conducting the elections under the Act, it will come immediately into operation; it has received the sanction of the Viceroy. I will now put in a Return showing the produce of the municipal rates and taxes in the Bombay Presidency, exclusive of the city of Bombay. The city of Bombay I have given before, and this Return shows the income of all the municipalities in the interior; showing a total of municipal taxation in 1856-57, of 2,08,987 rupees, and in 1871-72, of 18,14,368 rupees, being an enhancement of 900 per cent. (*handing in the Return*, vide *Appendix*).

5213. But there probably is some special explanation to be given of this statement, which is a very remarkable one?—I have compiled the statement from a Return of all the different kinds of rates and taxes levied in the Bombay Presidency, compiled by the Accountant General of Bombay, and transmitted to Government on the 11th of January last.

5214. Are

5214. Are you pretty sure that there is no Imperial taxation transferred from Imperial taxes to the head of local taxation included by you in this Return?—I believe there has been no such transfer.

5215. I will take a few instances from your Return; in Surat the increase is from 28,000 rupees to 280,000 rupees in round numbers; in Hydrabad the increase is from 20,000 rupees to 118,000 rupees; in Khandesh from 600 to 55,000 rupees; in Tanna from 800 to 83,000 rupees; in Shikarpoor from 38,000 to 184,000 rupees; in Kurrachee from 35,000 to 218,000 rupees; in the Ahmedabad district there is nothing in the former year, and 185,000 rupees in the latter?—The last case is accounted for, perhaps, in this manner that the Municipal Act had not been introduced in 1856-7 in that district.

5216. Then in Broach the increase has been from 10,000 to 83,000 rupees?—In Broach the inhabitants complain very much of the very large increase of municipal taxation.

5217. In Dharwar from 10,000 to 49,000 rupees; in Poona nothing formerly, and 126,000 rupees in 1871-72; will you tell the Committee what are the new heads of taxation which have brought about this enormous increase?—In several places owing to the municipalities being required to contribute towards the police expenses, the expenses have been very much enhanced, and roads have been constructed, and in many towns the complaint is that large outlays have been made on roads which are constructed, and which are not in the heart of the town, but in such parts of the town as are frequented by Europeans.

5218. That was increased taxation; but is there any tax on the transit of cotton in some of these places?—Yes, taxes are levied on cotton, so much for each cart entering, and in other places on the export of cotton from these cities.

5219. Mr. *Dickinson.*] For consumption in the town?—I do not think it is merely for consumption in the town; the duty is levied on all carts that enter the city laden with cotton.

5220. Mr. *Fawcett.*] But suppose a cart goes out of the town, is the tax simply levied on a cart entering the town laden with cotton, or upon a cart entering the town as well as one leaving it?—Not on a cart leaving as well as entering it.

5221. Then, it is simply an octroi duty?—Yes, and in other places it is export duty. I was going to draw the attention of the Committee to the fact that in the town of Sukkur, in Scinde, town duties are levied at different rates, on no less than 158 articles; in Kurrachee, on 49 different articles; and in Shikarpoor, on 32 different articles of consumption, trade, and merchandise, besides very heavy wheel tax and tolls. I understood the Committee to wish to have the amount of the local rates and taxes that are levied. I have got here an official statement, which gives in these three pages all the information with regard to local rates and taxes existing in 1856-57, and since. It is the same Return to which I referred, compiled by the Accountant General of Bombay, last year.

5222. *Chairman.*] I think the feeling of the Committee is that you should confine your statement, as much as you possibly can, to those salient points which are looked upon as grievances?—It is only because some member of the Committee wished to know what they were that I mentioned them, otherwise I should not have mentioned them to the Committee. I have also brought the amount, which the Committee at the last meeting wanted to know, of the total expenditure of the cotton frauds establishment, with reference to which I gave evidence on the last occasion; I was not able to get that item from the Civil Budget Estimate, in which it does not appear; but I have got it from a small pamphlet, which has been compiled by Mr. W. W. Burn, of the Accountant General's Office, of Bombay, in 1871, giving "A succinct history of the local funds of the Bombay Presidency." In this pamphlet these are the figures with reference to the income and expenditure of the Cotton Frauds Department. On the 1st of April 1868, the balance to the credit of that fund was 1,88,555 rupees; in the year 1868-69, the receipts amounted to 2,95,023 rupees, and the total charges to 2,49,787 rupees, leaving a balance on the 1st of March 1869 of 2,33,790 rupees. In the year 1869-70, the receipts were 2,11,437 rupees, and the charges 2,56,130 rupees, and the balance on the 31st March 1870, was 1,89,118 rupees. All the charges debited to this fund come out of a fund established by levying a duty not exceeding four annas per bale on the export of cotton from Bombay, under Section 13 of Act 9 of 1863, which rate has been somewhat reduced since, and is now, I think, three annas per bale. In March last Government made a reduction of about 20,000 rupees per year in the establishment, chiefly by cutting down the salaries of the clerks and reducing the sepoys, leaving the bulk of the establishment almost untouched.

5223. And the feeling of the mercantile community of Bombay, I understand you to say, is that this department is wholly useless?—Yes.

5224. What is the next subject on which you wish to give evidence?—I also wish to bring to the notice of the Committee the fact that all travellers' bungalows situated on Imperial lines of roads are maintained and repaired out of local funds.

5225. From which I suppose the Committee are to gather that the fees are not adequate to the support of the bungalows?—No, they are not; the income comes to about one-third of the expenses of keeping them.

5226. Then there are dhurumsalas kept up from the local funds equally, are there not?—Yes, there are; but the expense of their maintenance, compared with the expense of the travellers' bungalow, is very small and insignificant. And there is another fact, which is this, surplus net receipts, over and above the amount of contributions levied from local funds, are credited to provincial and not to local funds.

5227. Passing to the head of local funds generally, there is a very large fund, called the Cotton Improvement Fund; from whence is that derived?—That is the fund regarding which I have just been speaking, and the figures are those which I quoted.

5228. Will you tell us something about this Cotton Improvement Fund?—It is a fund for the purpose of carrying out the Cotton Frauds Act.

5229. Then it is put in the book before me simply under another name?—Yes. Besides the municipality of Bombay, which stands in the

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

town and city of Bombay as a local fund, there is another local fund raised in Bombay, called the Esplanade Fee Funds, of which the object is the general care and conservancy, and improvement of the Bombay esplanade. Its income was was 1,40,000 rupees in 1868–69. It was represented to the Legislative Council, when the new Municipal Bill went through the Council, that it would be advisable not to have a smaller municipality within a larger municipality in the city of Bombay, and that this esplanade fee fund should be incorporated and amalgamated with the municipal fund of Bombay; but the Government declined to give effect to that proposal.

5230. Do you know the special reason of that refusal; had it anything to do with military reasons?—I believe not.

5231. The officers' quarters are actually on the esplanade of Bombay are they not?—The officers' quarters are there no doubt.

5232. Perhaps you will now go to the subject of public works?—To the Engineering College. In continuation of my evidence on that subject, in refutation of the evidence recorded by the Select Committee, that Government have offered very high attractions to which natives have not at all responded in the Engineering Department, I will cite the following indisputable facts. Four students of the Civil Engineering School passed the prescribed examination on the 4th of September 1861, and were declared qualified for admission into the higher grade of the Engineering Establishment. The notification declaring their eligibility for employment did not appear in the Government Gazette till after the lapse of nearly five years, namely, on the 31st of January 1866. It was to the following effect: "The undermentioned members of the upper subordinate establishment of the Public Works Departments passed the examination laid down in the Public Works Code, paragraph 4, chapter 6, on the 4th September 1861, Mr. Dajee Nilkant Nugarker, Mr. Laloobhoy Keshowlal, Mr. Chanbusapa, and Mr. Gungundhur Venayeck Mehdale." Of these, Daju Nilkant is now employed as professor of mathematics in the Poonah Civil Engineering College, and is classed third grade. Sub-engineer, Mr. Laloobhoy, was not appointed assistant engineer till the year 1869, namely, after the lapse of eight years, and the rest are still excluded from the upper grade of the Engineering Establishment, whilst 70 or 80 Europeans have been freely admitted. Another native student passed the examination in 1867. The following notification appeared in the Government Gazette of the 19th of September 1867: "Overseer Bomanjee Sorabjee has passed the examination for employment as assistant engineer, according to the test laid down in article 4, chapter 5, of the Public Works Code." In 1867 he volunteered for active field service; served in Abyssinia during the war, and obtained distinction. This young man waited for three years in the expectation of getting employment as assistant engineer, to which he was entitled; but finding that there was no chance for him, he was obliged to make a heavy pecuniary sacrifice of 5,400 rupees to gain admission into the upper grade of the service. With this view he procured three years' leave, without pay (his pay was 150 rupees per mensem), in November 1870, for the purpose of rejoining the college and going through a regular course, extending over three years, in order to obtain the degree of licentiate of civil engineering, which renders it obligatory on Government to provide an appointment to the first successful candidate. Several other natives who have passed the examination of licentiate of civil engineering have not yet been admitted into the service. In order to satisfy the Select Committee regarding the aptitude of the natives for engineering pursuits, and to place beyond controversy the position which I seek to maintain, that natives of India possess knowledge and abilities, and display talents in no way inferior to Englishmen, I will put in a list of important public works constructed by or under the supervision of my fellow countrymen. This is the list which the Committee wanted on the last occasion (*producing the same,* vide Appendix).

5233. When you speak of the "construction" of certain works by these gentlemen, whom you mention in that list, do you mean that they have designed them from the commencement and carried out their own works, or that they have merely erected the designs of other officers?—In several cases they have been designed by the superior European engineering officers, and they have been constructed under the supervision of those officers by the natives that are there mentioned. In other cases they have been designed and constructed by the natives themselves.

5234. But do you mean by the word "constructed," that they have been the superintending engineers of the works whilst under construction?—Yes.

5235. Mr. *Dickinson.*] Under the European head?—Yes, and in some cases as assistants in the Public Works Departments the designs also were, I am informed, prepared by them, and submitted to their superiors. There are some peculiar circumstances connected with the construction of the Victoria and Albert Museum, which is mentioned in this statement, and which I wish to bring to the notice of the Committee. The Victoria and Albert Museum was commenced by the contractor Mr. Johnstone, under the superintendence of Messrs. Scott, M'Cleland & Co., civil engineers, in 1869, and was nearly completed except the roofing. The funds at the disposal of the Committee (about 1½ lacs) having been exhausted, they were obliged to apply to Government for assistance. Eventually Government took charge of the work, and undertook to complete the building which was accordingly made over to the Public Works Department. On examining the structure, it was found that the east and west main walls were leaning inside out of plumb, 15 inches and 8 inches respectively. The former had been propped up by a large wooden support to prevent it from falling down; the walls having been examined by a Government Committee, were condemned and pulled down; the edifice was commenced *de novo*, the walls were rebuilt by the Government executive architectural engineer at a cost of 42,000 rupees; the bad stones had to be replaced at a further cost of 5,500 rupees; the museum was built by Mr. Muccoond Ramchunder, assistant to the executive engineer, under the supervision of that officer. Messrs. Scott, M'Cleland & Co. estimated painting, gilding, and decorating the interior of the building at 45,000 rupees; but the work was done most creditably by Mr. Muccoond and native artists at a cost of 9,570 rupees only. There are also waterworks,

masonry

masonry dam, and aqueducts constructed by native architects and engineers at Aurungabad, Ahmednuggur, and at Katruj, near Poonah, under the former Government, displaying great engineering skill and talent.

5236. Mr. *Fawcett.*] Then those were not only constructed, but designed by natives?—Yes, designed and constructed. These works, though from 150 to 200 years old, are still in good working order, and they are works of an extensive nature and character, and the works at Katruj provide the town of Poonah to this day with a good supply of water.

5237. *Chairman.*] What is the point that you wish to bring out before the Committee; is it that native gentlemen who have qualified themselves for the degree of licentiate at these colleges have been kept out of employment, or have failed to receive appointments in accordance with the promises which have been held out?—Both; and not only that, I want to show that natives are as fully qualified to construct public works and edifices as Europeans. Their qualifications, talents, and abilities, have been denied in the evidence that has been recorded before the Committee.

5238. I do not think that anybody denied the capability of natives to carry out works under the superintendence of European engineers; what has been denied, I think, is their capability to design great works?—Both, I believe, have been flatly denied, and by officers of the highest rank. It has been asserted that native engineers have not undertaken works involving a large responsibility (that is the evidence of Colonel Chesney I believe) that only some have reached the grade of executive engineer, and none have become superintending officers; that natives have not exhibited remarkable qualification as students of engineering, and that the native mind leans more towards sedentary employment.

5239. Do not you think that there might be a difficulty in attempting to place European military officers under the orders of native civil engineers as superintendents?—I do not think that there could be any difficulty.

5240. You think that whatever difficulty there might be, would be a difficulty owing to prejudice more than anything else?—Yes; now by way of contrast to the statement which I have put in of works that have been constructed by native engineers in the service of Government, and private native engineers, I will put in a list of public works which have proved failures—works constructed by Europeans and under the supervision of Europeans.

5241. We all know that there are hundreds of such works which, owing to one cause or another, have proved failures; in fact, some of the great railway works in the Bombay Presidency have proved failures?—Yes, they, too, are mentioned in this statement.

5242. Will you pick out one or two of the largest examples from your statement?—There is one remarkable instance; the Mhowke Mulla Viaduct, on the Great Indian Peninsula Railway line, over the Bore Ghaut, was reported by the native mamlutdar of the district to be unsafe. The Government appointed a committee of European engineers, who, after inspection, reported that the work was perfectly stable. In a few days the viaduct fell down, and had to be re-constructed. The Great Indian Peninsula Railway bridges, viaducts, culverts, and other large and costly works, which were constructed under the double supervision of Government engineers and of European engineers in the service of the railway company, which fell down in 1867, cost nearly a million sterling to replace. This heavy loss which the company sustained has been ascribed by Mr. Berkeley (the gentleman who was sent out to India to examine and report on the disaster) to a simple error of judgment, although he gives a great many instances which betray serious defects in design as well as execution, and culpable negligence in permitting the use of inferior materials, to the construction of low culverts, insufficiency of waterway afforded by the viaducts or bridges, their piers not having sufficiently deep foundations, or not being strong enough to resist the floods, absence of effective supervision, &c., &c. With a view to place the company's engineering staff on a satisfactory footing it was deemed necessary to dismiss seven engineers, and to engage and send out 12 engineers from England.

5243. I am afraid that what you have just now been stating with reference to the Great Indian Peninsula Railway is a very common story all over India, is it not, that bridges and viaducts have been constructed, in the first instance, without sufficient waterway and without sufficient reference to the possible maximum height of sudden floods?—They had data as to the rise of water, which had been taken into consideration, and there was no unusual or extraordinary rise beyond the highest rise, which is well known, and which is marked in those localities, and these works were designed and constructed by European engineers; and again, the construction was not only supervised by the engineers of the company, the resident engineers and the assistant engineers, but also by Government engineers; there was a double set of supervision, it was all European supervision and inspection; and yet the works were open to all the faults and objections which I have mentioned as brought to light.

5244. You alluded to one very considerable cause of damage to public works, and that is the inferior nature of the masonry that is used, but all engineers, and contractors too, are subject to great frauds, both in the preparation of the masonry, and that of the bricks, are they not?—Efficient and good engineers can easily detect by careful supervision any such frauds that may be attempted to be practised; it is the easiest thing possible to find that out, and to remove and fine those contractors, and employ others instead.

5245. You see that the time for working on any great public work in India, is limited to about eight months in the year; for four months in the year, during the heavy rains, nothing can be done; and the consequence is, that before the rainy season sets in, a great deal of work has to be done in a very hurried manner, in order to prevent the whole structure being washed away; that is very commonly the case, is it not?—It is only a few works that are on the river side that could not be prosecuted and conducted in the rains; there are intervals of fair weather, and works go on, and it is not on account of any peculiarity of the weather in that part of the country; but I submit that these failures were caused by culpable negligence on the part of the

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

staff of European engineers. I would not have said this, but the nature and effect of the damaging evidence, that has been given before the Committee, is such as to compel me to say it. It has been asserted that natives are incompetent, that they cannot conduct any works of great importance, or involving any responsibility, that they have no talent, and that they are not fit for out door work; and all sorts of damaging insinuations and charges have been cast against them, solely with the object of justifying their exclusion from employment in the higher grade in the engineering service. I have shown that those who have been employed in high and responsible posts have given the highest satisfaction. Mr. Kahandass Muncharam, a very competent man, who is the only man who has been promoted to the post of Executive Engineer in Bombay, has served Government in that capacity with the highest satisfaction to Government; and I will give some more remarkable instances.

5246. But do you think that the Government are slow to appreciate the services of a gentleman like him?—He is the only one that has been promoted to that post; and not only is it the case that no other native has been promoted to that post, but qualified natives, as I have already shown, who have passed the test, and the highest test laid down by the University, have not been admitted into the higher grade of the engineering service, whilst Europeans, finding their way into India, and not having received any special training in engineering, were employed for a few months, in several cases, under native engineers to learn engineering, and were pitchforked into the higher grade of the engineering service in the course of a few months, of which I will give two instances: Mr. J. Adams was employed for a short period, about eight months, in the temporary establishment of one of the engineering offices at the Presidency, and was then admitted at once, on the 7th of November 1871, as second-grade assistant engineer without passing any examination; and on the 12th of November 1872 he was promoted to the first grade, superseding a great number of Europeans and natives of longer service. A European named Mr. H. E. Palliser, who did not possess any engineering knowledge whatever (he could not even handle a theodolite), was placed in the office of an Executive Engineer for prosecuting engineering studies in 1867. In a few months, namely, in October 1867, he was at once appointed assistant engineer of the third grade, and was rapidly promoted, and on the 12th of November 1872 was appointed Executive Engineer of the fourth grade; whilst Mr. Lulloobhoy, who was until recently employed in the upper subordinate establishment as sub-engineer, second grade, on 300 rupees, and passed the examination for entering the engineering grade 13 years ago, has only recently been promoted to the post of third-grade assistant engineer. By this promotion he will lose 50 rupees a month. Although the rules of the Public Works Department authorise the promotion of upper subordinates to the engineering establishment of such grades as would not inflict any loss, Mr. Lulloobhoy was not promoted to a higher grade.

5247. Whom do you consider to be immediately responsible, then, for the neglect of these gentlemen's claims; is it the superintending engineers?—The executive engineers, the superintending engineers, and the head of the Public Works Department in the Secretariat, as the advisers of Government.

5248. Who is, at this present moment, the head of the Public Works Department as Secretary?—Colonel Kennedy is the head.

5249. Have representations been made to the Government on this subject by these gentlemen who feel themselves aggrieved?—Often and often.

5250. And what answer have they received?—Refusal to admit and promote them. I will place before the Committee the case of the native subordinates of the engineering department, which is one of great hardship.

5251. Do you mean the clerks on small salaries?—No, I mean the overseers and assistant overseers, and other subordinates of what is called the subordinate establishment of the Public Works Department, who supervise the actual work of construction. A native, who passes the examination for admission in the upper subordinate branch of the Public Works Department, is appointed overseer of the third grade, on a salary of 60 rupees per mensem. He is promoted to the second and first grades according to seniority, when vacancies occur. He gets into the second grade generally after three years' service, but under the existing arrangements it takes 15 years before he is promoted to the first grade. On the other hand, non-commissioned European officers are, on passing the same examination (which is reputed to be more easy for their benefit), at once admitted to the first grade, on 100 rupees. Thus Government have systematically withheld promotion from the natives, and Europeans have been rapidly promoted. The native employées of the upper subordinate branch of the Public Works Department presented a memorial to the Bombay Government, and sought redress of their grievances; but, although three years have elapsed, Government have not instituted any inquiry into the complaints that have been made, nor have they vouchsafed any reply to the memorialists. The Committee will be pleased to allow me to put in this important document, showing the injustice with which a most deserving class of public servants have been treated. (*Vide* Appendix.)

5252. You know, no doubt, something of the expense of European life in India; should you not say that a native officer on 60 rupees a month was financially in as good a position as a European on 100 rupees a month, looking at the difference of clothing, and so on?—Looking to the position and class of life of the natives as well as of the Europeans, I do not think that the difference is anything worth mentioning. But what I contend is this, that the salaries of the different grades have been fixed, and rules have been laid down for promotion, and promotion should not, I submit, in a public department like the Government engineering department, be given without stint to one class of subordinates, and withheld from another; they are all placed on the same footing and ought to be treated alike, which they have not been.

5253. In fact, your argument goes to this, that you would, without making any distinction, make native agency just as expensive as European agency?—What I say is this, that when the scale of salaries of different offices in any particular

cular department is fixed, which is done after careful consideration of the financial aspect of the question, whether natives or Europeans, whoever are qualified, and whoever desire to be admitted or have a claim to be promoted, ought to be admitted and promoted without any distinction of race.

5254. To take the case of a European overseer, who may perhaps be drawing 100 or 120 rupees a month; he is in some out district we will say, and is a married man with three or four children; what opportunity has he of bringing up his family, or educating his children, as compared with the native gentleman?—There are English schools in the Bombay Presidency, maintained at a very heavy cost by Government, to which he can easily send his children, and their education would not cost him anything worth mentioning; it is only a very small fee which is paid by the pupils attending the school.

5255. Mr. *Dickinson.*] Do you contend that European and native agency should be paid equally for the same work?—Yes. With regard to supporting a family, the natives not only support their families, but they support their relatives and dependants, and on that account, and on other accounts, they have a number of expenses to which they are subjected which are not entailed on Europeans.

5256. *Chairman.*] Your argument goes to this, that it is not more difficult for a European to maintain himself and his family in a country like India than it is for a native of that country?—It does. I have known Europeans on very small salaries live in the country and maintain and support themselves on salaries ranging from 100 rupees to 200 and 300 rupees a month.

5257. Family men?—Family men.

5258. Mr. *Fawcett.*] But there is also another contention which you wish to raise, which is this, that those appointments to which natives are freely admitted are paid at a very low rate; whereas, with regard to those appointments to which Europeans are admitted, and which are paid at a high rate, every obstacle is thrown in the way of natives getting those appointments?—Just so.

5259. And your contention is this, you would be prepared to say that there are a great many low-pay appointments which probably no European would ever take, but that if there is an appointment which is paid on a sufficiently high scale to attract a European, if a qualified native can be found for that appointment, he ought to be admitted, and to receive the same salary as is given to a European?—Just so; otherwise there is no incentive for natives to fill the lowest grades on very small salaries if, when they prove themselves capable, they are not promoted.

5260. *Chairman.*] This memorial which you have just handed in is not signed by anybody?—It was signed by all the employées of Government in the upper subordinate establishment of the Engineering Department; that is a copy of the original document. With regard to my contention that natives are capable of occupying and filling the highest posts in the engineering service, I will give two instances of the manner in which natives have served Government in the Public Works Department, and show what distinctions have been conferred on them. In 1840 the Court of Directors invited candidates, by public advertisement in this country, for the post of chief engineer and inspector of machinery of the East India Company's Steam Factory at Bombay. Out of more than 14 candidates, the majority being Europeans, they selected Mr. Ardaseer Cursitjee Wadia, a native, and appointed him to the post on a salary of 600 rupees. He served Government in that capacity for 16 years (altogether 35 years), and on his retirement in 1857, Government granted him a special pension of two-thirds of his salary, on account of his meritorious services. He had under him upwards of 100 European engineers and mechanics. All the steamers belonging to the Indian Navy were placed under his inspection. He holds the highest testimonials from Mr. E. Peter, of Her Majesty's Dockyard at Woolwich, Mr. Taplin, of Her Majesty's Dockyard at Portsmouth, Messrs. Seaward, Capel & Company, of Limehouse Factory, Messrs. Mawdslay & Field, of Lambeth, Mr. Robert Napier, of Glasgow, and Mr. James Walker, Chairman of the Civil Engineers Institution, certifying his competency as a first-class engineer.

5261. Had he ever studied in England?—Yes.

5262. In the early part of his career?—In the middle part of his career. The first steam engine and boiler, and gas-works, made in Bombay, were made by him, and by native workmen under his superintendence, in 1832 and 1834. For the construction of the gas-works, Lord Clare, the then Governor, presented him with a pair of shawls, as a honorary distinction. He introduced native apprentices in the steam factory in Bombay for the first time. On his retirement fom the public service, the Court of Directors conferred on him a special pension of two-thirds of his salary for his abilities, efficiency, and merit. The Government Naval Dockyard in Bombay has, for more than a century and a quarter, been under the exclusive superintendence and management of natives, who have built several noble ships for Government. Many years ago, the Lords Commissioners of the Admiralty presented a silver cup to the head builder, a native, "in testimony of their sense" (these are the words engraved on the cup) "of his diligence and skill in building for the service of his Britannic Majesty's navy, the 'Minden' of 74 guns." Successive superintendents of the Indian Navy, and other high functionaries of the Government, have repeatedly borne high testimony to the ability, skill, and zeal displayed by the head and assistant builders, all natives, employed in the Bombay dockyard, who have constructed several ships for the Royal Navy, equal, if not superior, to those that have been launched in the Government or private docks in England. In order to show the unfounded nature of the statement made before the Select Committee, that the course of studies in the Indian College is too short and inferior, I will put in the examination papers given to the various classes of the Civil Engineering College at Poona, and the papers given by the University examiners during the year 1871-72.

5263. Whose evidence are you referring to now?—To the evidence of Colonel Chesney. I attach great importance to this; these papers will, I am assured, show that the course of studies pursued in the Poona College is far superior to the test laid down by the Bombay Government in chapter 4 of the Public Works Code for admission

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

mission into the upper grade of the engineering department, and that it is also higher than the test laid down for the Stanley engineers, who have been selected by competitive examination, and sent out to India from this country. As to the relative qualifications and character of the European and native subordinates of the Public Works Department, I wish to lay before the Committee the estimate formed by an eminent engineering officer in the Bombay Government, Colonel Wilkins, who, in the able minute which he has recorded in the proceedings of the Public Works Conference, in 1864, says, "The subordinate establishment of the Public Works Department", (and he is most intimately acquainted with the character and qualifications of both the Europeans and natives employed in the subordinate as well as in the higher departments of engineering), "is at present recruited from two sources; it consists of both Europeans and natives of the country; the corps of sappers and miners provides the former; and the latter have for the last few years been taken from the engineering school. The custom has hitherto prevailed of considering sappers and miners in the country as eligible for the Department of Public Works; in fact, they have been forced into the department, whether or not their inclinations led to that employment. It is true that in some cases these men have been examined, but the examinations have been of a very flimsy character, and curiously enough, civil engineering, excepting, perhaps, drawing a room, and estimating it in an absurd manner, has had no place in these examinations. Then, in support of the assertion that sappers have been forced into the department, within the last six months men rejected by a committee have been sent up again for examination after the lapse of a week or two. The result of this system of compulsory entrance of a certain class in the Deparment of Public Works has been most unfortunate. No doubt Government have been much straitened for want of subordinates, but the difficulty cannot be met by the method adopted. These Europeans, as a body, are a constant source of trouble and annoyance to executive officers, who continually state that they would rather be without them. They fail to be of use for the following reasons: 1st. They are unable to express themselves intelligibly in the native language, and are utterly unable to manage workmen. 2nd. They are totally ignorant of masonry work and building, as also of carpentry. When placed over a work, they know not whether the work people are executing their work well or ill. They cannot discriminate between different kinds of stone, and do not know whether lime be good or bad. For these reasons they are unfit for employment on works. They are unfitted as a body for office work, for preparing plans and estimates, and keeping accounts, for the reasons below: 1st. They cannot design even simple buildings, because they know nothing of construction. 2nd. They cannot make estimates of any value for want of familiarity with figures. 3rd. They cannot keep accounts, having no rudimentary knowledge of the subject. 4th. They cannot keep office hours, unless the office happens to be close to where they live. These are the disqualifications of the men who should be able to superintend works carefully, and make all working drawings for the same. On the other hand, their qualifications are that, when they do understand a little of building, and are temperate, they are far more practical than the native overseer. Why is it not considered necessary that Europeans should have the amount of training required from natives who enter the department? The native subordinates who have entered the department of late years have been required to pass a pretty stringent theoretical examination: 1st. They have a good knowledge of mathematics and mechanics. 2nd. They understand the principles of trigonometrical surveying, and have been practically engaged in producing such a survey. 3rd. They have a fair knowledge of civil engineering, as applied to the construction of simple buildings, road making, and proportions of the several parts of bridges, and drains." Then follows this paragraph: "Let us consider in what respect these men are below the standard required by executive officers. 1st. Their knowledge is purely theoretical. 2nd. The native mind is eminently unpractical; when in charge of works they allow the work-people to make the most absurd mistakes." (I want to put the whole case fairly, lest the Committee should think that I have mentioned only the excellencies and suppressed the defects). "Men capable of solving with ease difficult problems in geometry and mechanics, will see arch stones put in upside down, that is, thickest edge of the wedge lowermost, without the thought entering their heads that there was anything wrong in such an arrangement; and a question as to the object to be obtained in different situations by breaking bond, or placing stones or bricks in a wall or arch, so that one point shall not coincide with another, but too often elicits no response; they build works according to plan, without a thought as to the object of each portion of the building. These men, on the other hand, are good surveyors; many of them are very good draughtsmen, and their accuracy in estimating and calculating is surprising; they keep accounts well, and are soon capable of turning out a plan and estimate complete; they are well educated and most industrious. It is clear then that the native subordinate is by far the most useful of the two classes; what they require is practical knowledge, and this is half the battle." I will now give a remarkable instance of ability and skill displayed by a native who had received a good training and had qualified himself as an engineer, who had served Government for 15 years with great credit, and resigned the public service under the circumstances which I am going to mention. There being a great demand for trained men in the subordinate branch of the Public Works Department, Mr. Nusserwanjee Chandabhoy was employed by Government to form and instruct a class of natives several years ago; by his peculiar aptitude for teaching he successfully trained, in the course of only about three years and a half, three successive classes of more than 30 useful young men, who, with a very few exceptions, acquitted themselves very creditably at their final examination, and were admitted into the Public Works Department. As a teacher, Mr. Nusserwanjee's merits were, on several occasions, recognised by the Bombay Government, and also by the late Honourable Court of Directors. The former, on one occasion, considered that "they would be justified in bestowing some special token of approbation on the instructor of the class, in the case of each pupil brought by him to a comparatively high standard

standard of proficiency." The latter (the Honourable Court of Directors), in alluding to the examination of a class of 15 youths, who, with only one exception, had passed successfully for admission into the Public Works Department, said, in their Despatch No. 13, dated 28th October 1857: "The result of the examination of these young men was very creditable to their instructor, Assistant Engineer Nusserwanjee Chandabhoy." On the amalgamation of his school with the engineering school at Poona, which took place in the year 1858, he was transferred to Poona. It was about the same time that Mr. Nusserwanjee Chandabhoy, and two other natives, Messrs. Kahandass Muncharam and Juggonnath Sadasewjee, were promoted to the engineering establishment of the Public Works Department, as second-class assistant engineers. Mr. Nusserwanjee Chandabhoy remained as instructor in the Poona Engineering School for more than five years, that is, till November 1863. During this period he taught three successive classes of upwards of 30 native students, a class of eight European non-commissioned officers of the Sappers and Miners, and a class of eight European civil engineers, who came from England, and who perfected under him their studies in several branches, and were, on finishing their course, chiefly examined by him for employment in the Public Works Department. Mr. Nussurwanjee Chandabhoy had been a Government servant of nearly 14 years' standing and experience when the eight young European civil engineers were admitted into the service. It was not, however, long after their admission that two of them, namely, Messrs. W. S. Howard and E. Compton, having been appointed by Government to a higher grade, superseded their tutor, Mr. Nusserwanjee, in October 1862. Mr. Nusserwanjee applied to Government several times for promotion, to which his long career and meritorious services entitled him; but his application was refused. He and another deserving native, Mr. Juggonath Sudasew, therefore, resigned the service in disgust. The establishment of the Civil Engineering College at Cooper's Hill will have the effect of giving to Englishmen a monopoly of the appointments in the higher grade of the service, and excluding the natives of India; because it cannot fairly be expected that natives will undertake a long and expensive journey and residence in a country like England to enter the college at Cooper's Hill, and prosecute their studies there for three years. The governing authorities have established three close services in this country, from which natives must practically be excluded, namely, the Civil, Forest, and Engineering Services.

5264. Mr. *Fowler.*] May I ask by whom it was that that refusal was made; you state that the two gentlemen of whom you have been speaking applied for promotion; to whom did they apply, and who refused them?—Government.

5265. What Department of Government?—Through the Public Works Department.

5266. Was it the Government of Bombay, or the Governor General, who refused?—The Government of Bombay through the Public Works Department of Bombay.

5267. Is that in the time of Sir Seymour Fitzgerald?—No, it was some years before that; the 200,000,000 of Her Majesty's native subjects have just grounds of complaint against the exclusion of their fellow countrymen from all the higher grades of the public service. The Government of Bombay, who have admitted large numbers of Europeans every year in the engineering establishment of the higher grade, have in February last recorded a resolution, giving only one appointment in the Bombay Presidency to 11,000,000 of native subjects, and reserving all the other appointments for the governing race; I will put in that resolution of Government, which is dated "Bombay Castle, 1st of February 1863" (vide *Appendix*). I hope that I have established my position by producing before the Select Committee irrefragable evidence and facts, rebutting the damaging testimony that has been given by government officers of high rank against the natives; I have adduced proofs of the skill, ability, and competence of my countrymen for filling posts of the higher grade in the engineering department; I have given instances, not only of want of encouragement, but exclusion of qualified natives from the public service of their country, and of promotion being withheld from them. I now solicit the Committee to recommend the adoption of suitable measures for remedying the grievance, and giving to the natives a fair share of employment in the Public Works Department, I mean the upper grade, from which they have, in a great measure, been practically excluded, and also for placing the native subordinate establishments on a footing of equalty with the European subordinates.

5268. *Chairman.*] What is the next head of examination that you propose to take up?—I will now proceed to the subject of the nature and character of Public Works and the outlay incurred on them, whether it has been profitable or otherwise.

5269. Are you referring to civil works, or to military works?—Works civil as well as military, but chiefly civil. First of all, I will take an important work that has been undertaken and constructed in Bombay, about eight miles from the Island of Bombay, in the harbour of Bombay; I mean the Hydraulic-lift Dock. With regard to that work, it is the prevailing opinion and subject of complaint that this work was undertaken without there being any necessity for laying out the large sum of money that has been spent on it. It is erected in the harbour of Bombay exposed to the weather, on Hog Island, at a distance of seven miles from the Fort of Bombay. Her Majesty's dockyard authorities were kept in utter ignorance of the project. The design was conceived and matured, I believe, by the Secretary of State in this country, who gave a contract to Mr. Emerson for that work. It was planned and intended for docking and repairing long and flat-bottomed troop ships. Since the formation of the Transport Service the troop ships have been docked and repaired for four years, in a most satisfactory and economical manner, in Her Majesty's Dockyard at Bombay. At present an establishment consisting of one superintending officer, two engineers, and 18 men, is employed on the Lift at a cost of about 20,000 rupees a year. It is believed that this establishment will not suffice, and that it will be necessary to increase it. The Lift is believed to have cost about 36 lacs of rupees. The troop ships, for which the Lift was built, are now docked and repaired at Portsmouth by the Admiralty. The

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

Lift is not adapted at present for mercantile vessels; it will be necessary to provide a new pontoon, at a cost of about two lacs, to accommodate merchant vessels, and a long time has elapsed since the Lift has been constructed and finished, and yet on a recent occasion when, to test the Lift, a ship was taken there in order to be docked, it was found impracticable to do so. Owing to the exposed situation in which the dock has been constructed, and the state of the tide, and weather, and winds, that first trial failed, and injury was done to the work, and the experiment could not be conducted; and some months previous to that a large iron vessel of war was proposed to be hauled up in the pontoon on this dock, but the representative of the contractor refused to undertake the responsibility with regard to the safety of the vessel, and therefore it was abandoned. And the second experiment which was tried also proved a failure, and it is considered extremely doubtful if it will be of any advantage either to the Government or to the public.

5270. Who was the engineer who set up that?—The contractor, Mr. Emerson; the contract for this work was, I am credibly informed, given to this gentleman without inviting any public tenders or competition. The original amount that was contemplated to be spent has been increased and enhanced, and the total outlay up to the present time cannot exactly be ascertained, but is believed to be not less than about 36 lacs of rupees; so that here is an important public work, undertaken without any requisition from the local authorities in Bombay; I mean the local department; there was no representation made by the Superintendent of the Indian Navy, or the Head Engineer of the Dockyard, that the Bombay Dockyard would not be able to dock and repair Her Majesty's troop ships; in fact, they had been successfully docked and repaired in the dockyard, and there was no want and no need for undertaking quite a new scheme, and trying a sort of experiment in Bombay at the expense of the taxpayers.

5271. And you cite this as an instance of the way in which the local government has been overridden by the Government at home?—Yes; and of the way in which works have been constructed without previous public discussion, or without the knowledge of the public, so as to bring public opinion to bear on the necessity or otherwise of the heavy outlay which was proposed to be incurred, and resulting, as I fear it will result, in a total failure, in the sinking of a large sum of money out of the revenues of India.

5272. What is the next instance?—Then, again, there is the Transport Service, a new service that has been organised and is maintained for the conveyance of troops from India to England, and from England to India; a number of large ships have been constructed at a very heavy cost, and the whole establishment is kept up at a very heavy expense, and if the Committee get the full figures and statistics from the India Office they will find that the cost of the maintenance of that service on the number of troops that are conveyed, comes up to a very large amount, about 500 rupees or more for each soldier, which I submit is a very large amount; troops used to be conveyed before this special service was organised, at a much lower rate, and there was no necessity for organising and keeping up this large and expensive service and establishment; and the conveyance of troops could be done by the private steamers (and there are many such available) at a much less cost.

5273. I do not think that it is necessary for you to pursue this particular head; we have already had evidence on that, and the whole question is involved in military considerations on which you are hardly competent to give an opinion?—It is only as bearing upon the finances that I wanted to allude to the subject. There is another instance which I wish to mention to the Committee; it does not involve a very large amount of expenditure; but, small as it is, it goes to confirm the position that outlay for public expenditure has been incurred from Imperial and provincial funds without there being an absolute necessity for it. I refer to a sum of about 15,000 rupees that was spent a few years ago in Bombay, for the widening of a private road which was already in existence, leading from the fort to the Government House, situated on Malabar Hill. There was a private road; it might have been a little narrow in some part or other, but it was a private road that had been constructed a good many years before for the private use of the Governor whenever he went to reside at the small Government House at Malabar Hill. There is another large public road, leading by another direction, to the same Government House, which is open and available to the public as well as to the Governor's establishment. Notwithstanding that, 15,000 rupees were spent out of the public revenues for the purpose of widening that private road; and that is an instance of the way in which public funds have been devoted, whilst many needed works which were urgently required were not attended to.

5274. Who was Governor at the time that that was done?—I think the late Governor, Sir Seymour Fitzgerald. The Committee will, no doubt, have before them all the papers relating to the failure of the barracks at Saugur, Allahabad, and other places, and the causes of it. That is a subject on which the Committee will take evidence from the military and other witnesses.

5275. Have there been any similar buildings in the Bombay Presidency which have been great failures?—Not in the shape of barracks, but I know that in Poona there were some temporary buildings erected for barrack accommodation at a very large expense, and they were sold off for a mere trifle in a short time, and the money was sunk without any advantage. There is another instance of money wasted and misspent for the construction of public works out of the public revenues, which I will quote from the Administrative Report of the Bombay Presidency for the year 1865-66. "A wooden building purchased in Bombay, of American design, and composed of American pine and deal wood, has been put up at Carwar; but the material is not well suited for a locality abounding in white ants; its original cost has been excessive, and before it is ready for occupation the expenditure will equal what would have been needed for a permanent bungalow." Then there was a large sum of money spent in Bombay for the purpose of reclaiming a site situated between the dockyard and the Apollo bunder, for the erection of the new Post Office and Telegraph Office. A large outlay was incurred for reclaiming the ground, and preparing

preparing it for the erection of these offices. There was a contract given for the reclamation of the ground for the purpose I have mentioned, and the contractor did not proceed satisfactorily with the work, and it has been recommended to Government that the contract should be broken; moreover a sum of over 1,28,250 rupees was spent in reclaiming this ground, and it was afterwards decided that the purpose for which this expenditure was incurred, namely, the erection of the new Post Office and Telegraph Office, should not be carried out on this site, but on another site; the idea was given up and another site was selected, and fresh outlay was incurred for that purpose. Then, again, the foundations for the proposed European General Hospital were put in 1864; the work which had cost nearly half a lac of rupees was abandoned in a few months; the preparation of the designs cost a large sum of money, but the site was given up and the idea of constructing it there was given up, showing a heavy loss incurred without full previous consideration and determination. And with regard to the works that have been constructed by, and under the management of, the Public Works Department, it is notorious in the Presidency from which I come that works constructed by that department cost at least 25 or 50 per cent. more than what the cost would be if built under proper and economical management. For instance, there are instances of public buildings like dispensaries and others, and bridges constructed by the Public Works Department, and similar buildings constructed by private agency, showing the difference that I have mentioned, as the excess of expenditure. In fact, the Public Works Department is conducted and kept up on such a scale, that it is necessary that some radical change should be made in its construction and organisation, so that the full benefit of anyo utlay that may be incurred for the construction of public works, may be secured to the public, and large sums be saved thereby. I will not detain the Committee by entering into any details; but whenever instances have been brought to the notice of the Government, and have been investigated, they have shown the culpable manner in which the public works have been estimated and constructed. First of all, the estimates are much smaller; and then it is said that through some mistake or oversight matters were overlooked, and then the expenditure is enhanced very greatly. There is a fresh instance of the nature that I have just described in the construction of the storage reservoir on the Mooktee Nullah, near Dhoolia, in the Bombay Presidency. I will give only a short quotation from the Government resolution which has been recently recorded by the Governor General: "The Governor General in Council cannot but regard the proceedings connected with this work from beginning to end as most unsatisfactory; and further considers, that not only has the conduct of the Executive Engineers been deserving of blame, but that the officers, under whose supervision the original estimates must have passed, did not exercise that careful scrutiny which the Government has a right to expect, and by the results of which the decision of this Government must in a great measure be guided."

5276. What is the date of that?—This resolution of the Government is published and promulgated on the 24th of January last.

5277. It was Lord Mayo's, probably?—Yes; the papers on which it is based are dated in 1870, and the last letter from the Government of Bombay referred to in this resolution is dated 23rd of October 1871; so that this resolution must have been at the end of 1871 or the beginning of 1872. With regard to the accommodation provided for European soldiers, and the accommodation provided for native soldiers, I wish to point out to the Committee the contrast. The cost of the accommodation for European soldiers amounts to between 3,000 and 5,000 rupees per man. The Committee would, perhaps, like to know what sort of accommodation the native soldiers get. The pendalls, or lines, occupied by the native soldiers (the barracks for the European soldiers are palatial and the Committee know their character) are low mud hovels, without any ventilation, with thatched or hay roofs and mud floor, with no furniture whatsoever, no lamp at night, and the places wet and damp in the rains. They have been built by the soldiers themselves, the materials, namely, sun-dried bricks and mud for the walls, being also prepared by them. The soldiers received a paltry remuneration for their labour at the rate of three annas (about 4 *d.*) a day. Several such lines are now being constructed at Kirkee, near Holkar's Bridge, by the native sappers, for the last two years. The native soldiers have no such conveniences and luxuries provided for them; nothing approaching to any that are provided for the European soldiers, such as schools, libraries, reading rooms, bowling alleys, racket courts, baths, gymnasia, canteens, and matters of that sort.

5278. Looking at what would be the condition of these same native soldiers if they were at home in their own villages, are you prepared to tell the Committee that they are worse off in the cantonments than they would be in their own native homes?—I think if they were not serving in the army, but living in their own villages they would be able to provide better accommodation than the sort of low wretched hovels in which they are accommodated at present.

5279. But it is a voluntary service; there is no forced conscription, but the army of India is manned by volunteers; if therefore the condition of the soldiers is disagreable to him, he would cease to recruit, would he not?—It is voluntary, no doubt; but then I want to show the marked difference of the treatment that is accorded in regard to lodgings to Europeans and natives.

5280. Mr. *R. Fowler.*] How does his present condition compare with that under the former rulers of India; were the Mahratta soldiery better housed?—I have not lived long enough to tell the Committee how they were housed under the former Government.

5281. *Chairman.*] But referring to the European soldiers, has not the sole aim and object of the Government been to preserve the health and the life of the soldier?—Yes.

5282. Any expense that has been incurred has not been with the intention or object of surrounding the soldier with luxuries, but simply with those things indispensable to the preservation of health and life?—I am afraid that they have been provided with every luxury, not merely necessaries; there is a great deal of luxury which would not have interfered with their health, and

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

their healthy accommodation, but it is indulgence and luxury.

5283. But it is a matter of great importance, it has been found to be so by experience, to keep the mind of a soldier occupied when he is serving in a bad climate, a climate to which he has been very little accustomed, and with which he is not at all so well able to cope as the native of the country?—If the climate is bad for the soldiers, it is bad for all the civil servants, and all the European officers of Government, not more bad for the soldiers than for the others; but I think that the badness of the climate is exaggerated; many of the Europeans who have lived in India for a very long period, do not complain of the badness of the climate.

5284. But then those Europeans that you are alluding to have a great deal of mental occupation which the ordinary soldier has not, except when he is actually on duty; what is the next point that you wish to refer to?—The European non-commissioned and warrant officers and soldiers on the pension list receive grain compensation, ranging from 10 to 25 per cent.; whilst native non-commissioned officers and soldiers do not get such compensation allowance.

5285. Has that rule of the army then been abolished by which they receive money when the grain goes up beyond a certain figure?—The non-commissioned officers do not get any. Passing to another subject, in the Bombay Presidency there is a medical department, and that medical department consists of two distinct services or departments, namely, one for the British army, and the other for the native army. The latter has also the supervision and management of civil hospitals and dispensaries. The administrative or supervising officers of these services are the following: in the Indian army, one inspector general, with a salary of 2,500 rupees per month; one secretary, at 1,400 rupees; and four deputy inspectors, the salary of each being 1,800 rupees; for the British army, one inspector general, on a salary of 2,500 rupees; one secretary, on 1,000 rupees, and three deputy inspectors, each on 1,800 rupees. Thus there are two distinct services, one for the British army and one for the Indian army. Now the duties of deputy inspectors are generally of a very light nature. During three months in the year they proceed on tours of inspection in their respective circles, and during the rest of the year they locate themselves at the principal station, and serve as media for the transmission of official correspondence, documents, and returns, from the several hospitals under their charge to the inspector general, and the audit, or examining offices. They have also the sanctioning of the supply of medicines, the dietary of patients, and other hospital requisites drawn from the supply departments. Besides these, they have hardly any other onerous duties devolving on them. Previous to the year 1865, or 1866, the supervision of the hospitals of both the British and native army devolved on the deputy inspectors of the Indian army; there were no two distinct establishments. Whatever may have been the causes, it is certainly not on account of any overwork or ineffectual supervision that a separation was effected; and if the old arrangement of one general supervising department, instead of the present two, be reverted to, it would not only be economical, but would be beneficial in many respects. That a separate British medical service is hardly required would be apparent from the following facts. At present the four deputy inspectors of the Indian services have to visit 70 principal stations, and, perhaps, as many smaller stations, for the purpose of inspecting the hospitals and dispensaries located in those places; whereas, the three deputy inspectors of the British service have to visit only 27 stations. At most of these 27 stations, excepting, perhaps, two or three large ones, there are barely one or two companies of foot and a battery of artillery, each consisting of about 100 men. There being the native army also at most of these stations where the British army is stationed, the deputy inspectors of the Indian service likewise visit these stations; 18 out of 27 stations are thus visited by the deputy inspectors of the Indian service; the remaining 10 stations are principally sanitaria and rest houses, with very small detachments of troops; and most of these are situated within short distances of the principal stations inspected by the deputy inspectors of the Indian army. Therefore, two of the deputy inspectors of the British service have not more than eight or nine hospitals to superintend, and the third about a dozen only. They may almost be said to hold sinecure appointments in comparison with the work devolving on the officers of other departments; it will, therefore, be seen that the maintenance of a separate department for the superintendence of British army hospitals is anything but economical, and can be transferred to the Indian department without impairing in the least the efficiency of the inspection. If the separate and distinct British medical service be dispensed with there will be a saving to the Government in the salaries of four of the supervising officers alone of 106,800 rupees, besides travelling and office allowances of nearly half a lac more.

5286. Is what you are speaking of quite a new arrangement with regard to the medical service?—Yes, quite a new arrangement, adopted only recently, namely, in the year 1865 or 1866. Then, again, there is another expensive service that has been newly organised, which costs the State a large amount, and for which I submit there is no necessity, I mean the sanitary commission that has been recently instituted. This commission was formed under orders from the Government of India in March 1864; it consisted of one president, two members, and a secretary; the members not being full time men, an adequate office establishment was also allowed. It was reconstructed in 1869, a commissioner being substituted for the commission, assisted by a secretary, and adequate office establishment. Later on in 1871 the secretary's services were also dispensed with. Previously this work was done by the medical department, and there was no well-founded complaint that it was not well done. The old order of things, if reverted to, would be productive of economy and a saving of expense; then there is another appointment that has been recently instituted which has enhanced the public expenditure, I mean the Superintendent General of Vaccination; this appointment was created recently, in 1867; before that, all the superintendents of vaccination were under the direct control of the deputy inspectors general of hospitals of their respective circles; now they are all under the superintendent general.

The

The cost of this new appointment has been as follows: pay of superintendent general, 1,050 rupees per mensem; office establishment, 154 rupees per mensem, and travelling allowances to the superintendent general at eight rupees per day, and to the clerks, &c., besides.

5287. Has there been a great extension of the system of vaccination in the Bombay Presidency since the appointment?—Yes, there has been a great extension of it.

5288. And is it considered by the people in that part of the country a benefit?—Yes, the benefits of vaccination are appreciated; then, again, the establishment in medical charge of European regiments, is excessive; there are three medical officers, namely, one surgeon and two assistant surgeons on salaries ranging from 450 rupees to 1,000 rupees per month for each, besides apothecaries and assistant apothecaries in charge of each European regiment, whilst there is only one officer, usually an assistant surgeon to a native regiment on 450 rupees, or 600 rupees per month.

5289. But the surgeon and his two assistants in the European regiments have charge of from 800 to 1,000 men, have they not?—Yes, about 800.

5290. And the assistant surgeon in the native regiment has the assistance of some native subordinates, has he not?—No, only an apothecary.

5291. Mr. *Fowler.*] But you have regularly educated native medical men, have you not?—Yes; and who, if extensively employed, would cost much less than the surgeons and assistant surgeons that are employed; they are regularly qualified, they undergo a training for five years in one of the best colleges established in India, the Grant Medical College, and are, in the estimation of competent persons, as well qualified as the assistant surgeons that are sent out from this country.

5292. At one time there was a difficulty, because some of the Brahmins objected to dissecting, did not they?—At first there was some little prejudice; that only lasted for a very short time, and then it disappeared, and now the natives have not the least prejudice; but they enter upon every dissecting operation as if they were Englishmen, and accustomed to the work.

5293. Do the adherents of none of the religions among the natives, object to dissecting?—None of the religionists object.

5294. There is no religious scruple on the part of any class of natives on that matter?—None whatever. I submit that the expense of the medical establishment can be further reduced by appointing sub-assistant surgeons to native regiments. There can be no objection to this, because native assistant surgeons and native sub-assistant surgeons are occasionally placed in charge of native regiments. There are four natives, namely, one surgeon and three assistant surgeons in the Bombay Medical Establishment, besides many sub-assistant surgeons. The latter are employed chiefly in charge of charitable dispensaries on salaries ranging from 200 rupees to 300 rupees.

5295. *Chairman.*] In the irregular regiments, what is the medical establishment allowed; a native sub-assistant surgeon?—Yes, I believe that is it; but they have only to extend the employment of regularly qualified sub-assistant surgeons in the regiments, and great economy will be the result; and it would also be effected by the reduction of these double establishments which I have pointed out, and which have been recently instituted for the British army, as well as in the native army. There was formerly one set of inspection, and it was quite sufficient.

5296. What is the next department that you propose to give evidence on?—Before I leave the Medical Department, I wish to invite the attention of the Committee to the treatment with regard to the sub-assistant surgeons. When the Grant Medical College was established by Government in Bombay, and provision was made for the admission of a certain number of qualified graduates into the medical establishment of the Bombay Presidency, as sub-assistant surgeons, Government laid down the following rule: "Sub-assistant surgeons are to be selected exclusively from the most meritorious and highly qualified graduates of the Grant Medical College." It was necessary to go through a course of studies extending over five years, and pass the prescribed examination to be admitted into the medical service. Government servants employed in the subordinate medical department were admitted into the college as student apprentices. After going through a course of studies for two or three years, and passing the departmental examination, they were promoted to higher ranks in the same service. All classes of the people, Europeans, Eurasians, and natives, were admitted as student apprentices; but since the transfer of the Government to the Crown, natives are not allowed to join the said class. The result is, that the higher grades of the medical subordinate service are entirely monopolised by Europeans and Eurasians, who, on distinguishing themselves, are further raised to the rank of honorary assistant surgeons with large salaries. Native sub-assistant surgeons are not raised to this rank under any circumstances. The lowest grade of the subordinate medical service, namely, hospital assistant, is recruited from the vernacular class, which has lately been instituted. By these arrangements natives are practically excluded from admission, not only into the upper grade of the subordinate medical establishment, but also from the grade of sub-assistant surgeons originally created expressly for them, whilst Europeans and Eurasians are considered eligible for admission into the covenanted medical service as honorary assistant surgeons without passing the competitive examination in England. One of the chief objects for which the Grant Medical College, was established, namely, that of qualifying natives for the Government medical service of the lower grade, is thus virtually frustrated. On vacancies occurring one or two natives are occasionally appointed sub-assistant surgeons; but as a rule, the service is recruited from the ranks of upper subordinates, consisting exclusively of Europeans and Eurasians.

5297. What subject do you propose to refer to now?—To the Registration Department; that department which has been recently instituted is maintained on a very large scale.

5298. Is this under a new Act of the Legislature?—Yes; it was passed, I believe, in 1866, and came into operation, and the department was organised about that time. The Inspector General and his clerks have cost the large sum of 41,083 rupees per annum, and the cost of the department last year amounted to 2,50,580 rupees, and the total income of the department was 2,73,236 rupees.

Mr. *Nowrozjee Furdoonjee.*

25 June 1873.

5299. The cost of the registration department is not covered by the fees, as I understand you?—In some years it has been covered, and in other years it has not been. And the salary of the registrar general is fixed at a very high figure, 2,000 rupees a month, which goes far to swell the cost of the department. It is an uncovenanted appointment, and many uncovenanted officers could be had fully competent to serve at the head of the department at a much lower scale of salary than the salary which is allowed.

5300. Is there any reference to this department in the administration report?—Yes.

5301. Have you anything more to say on this particular subject?—This is a department which if economically conducted, and if the establishment were kept within proper bounds, and fixed on an economical scale, would not only pay its expenses but would leave a large surplus; but on account of giving a very high salary to the registrar, and very high travelling allowance, and maintaining a very large and highly paid establishment, the large sum that is raised by the fees of registration, as prescribed in the Act, is swamped almost entirely by the department, and very little surplus left.

Friday, 27th June 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Beckett Denison.

Mr. Cross.	Sir David Wedderburn.
Mr. Charles Dalrymple.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

The Right Honourable JOHN LAIRD MAIR Lord LAWRENCE (attending by special permission of the House of Lords); further Examined.

Lord *Lawrence.*

27 June 1873.

5302. *Chairman.*] I THINK you wish to add some further explanation on the question of the extension of the permanent settlement in India to other provinces than Bengal?—When I was examined regarding the advantages and disadvantages of the permanent settlement, the nature of the questions which were put led me to omit one important point; and that is, that while in Bengal proper the great majority of the landholders are not cultivators, on the other hand, in the North West Provinces, in the Punjaub, in Central India, in Madras, in Bombay, and, in fact, in nearly all other parts of India, the proprietor is the cultivator; he and his sons, or his brothers, hold the plough and manage their own lands, sometimes solely, but at any rate with no more than one or perhaps two labourers attached to them, where the farm is rather large. This seems to me an important matter, as connected with the permanent settlement, inasmuch as all the advantages of permanency would accrue to those cultivators, who may be numbered by tens of thousands and hundreds of thousands. In fact, as I said on a previous occasion, they consist of the flower of the population. From them all the native soldiers and the native officers come; and they are the men on whose conduct and loyalty, and general contentment with our rule, so much depends; and therefore, in my mind, to conciliate them by a permanent settlement would be a matter of the very highest importance.

5303. I should like to ask you whether you think that any policy could be introduced, and steadily pursued, of localising Europeans in the hills?—On a previous occasion I mentioned that, as regards localising them in the way of placing them on the land, and enabling them to cultivate little farms, and so forth, I think that an experiment of that kind would never answer. But there is another way in which you localise the Englishman in the hills, and that is in a military point of view. For many years, we have kept depôts of sick and convalescent English soldiers in the hills; and of late years we have not only done that, but we have placed whole regiments in the hills; and latterly we have increased the number of these regiments; at this time we have in the different mountains, six entire regiments of British infantry, and eight depôts of convalescents. Since I left India I have understood that they are increasing the number of regiments in the hills by one, or one and a half more; so that when those arrangements are completed, there will then be, in round numbers, about one-sixth of the English army, or say 10,000 men in the hills.

5304. And are they in permanent barracks with all the permanent arrangements?—Yes, they are in permanent barracks, not quite so large, not giving them quite so much space in the plains, but still they are buildings of an expensive character, and giving very considerable room to the soldiers.

5305. Have there been sufficient inquiries yet into the relative health and mortality of the troops for an opinion to be formed on that matter?—Yes; I think there are returns showing that there is a considerable saving of life by putting them in the hills. I should say, myself, that there was a greater saving of life in sending sickly men and weekly men to the hills than there is in sending entire regiments there, because, while some men's constitutions are very much better for being in the hills, on the other hand, there are many men to whom, especially, in their youth, the plains are as good as the hills.

5306. Do the men get as completely recovered and set up in health again in the hills as they would if they came to Europe?—I think not. I think that they get a great deal better; where they have not been very seriously ill, where the constitution is not a good deal broken, then I think

Lord *Lawrence.*

27 June 1873.

think in all those cases they get very much better; but I should say that, on the whole, the hills saved men more from sickness than that they restored them, especially when they are far gone in sickness. A man, who has a tendency to liver complaint, and so forth, would benefit immensely by the hills, but when he got broken down by chronic disease, then I do not think that he would recover in the hills.

5307. Sir *J. Elphinstone.*] What height do you consider the best?—For soldiers, I think 5,000 or 6,000 feet high is the best. There is one point as regards the soldier, in the hills, which I should like to notice, and that is, the financial bearing of it. It is said that the expense of their rations, their beer, their rum, and their different supplies does not make the cost very much more than in the plains; but I incline to think that there must be a considerable extra expenditure in that way which, however, might perhaps be met, by having less expensive buildings. But, on the other hand, there is one serious point connected with soldiers in the hills, and I should like to mention my view on that, because their is a tendency, I think, more and more to put English troops in the hills, which I think ought to be resisted, and that is this; that while it is quite undeniable that they are better there as regards health, they are not strategically well placed in the event of an emergency. In case of trouble in the plains, and of a sudden necessity for the presence of the troops, you would have considerable difficulty and expense in getting them down to the plains. In the first place, the railroads do not run up close to the foot of the hills; and secondly, the localities in which the troops are placed are a considerable distance within the hills, so that in an emergency, you must either maintain carriage for the transport of these hill troops down to the head of the railways, or else you lose so much valuable time. When the mutiny broke out, we had three regiments in the hills about Simla; these regiments were from 10 to 15 or 16 miles from the foot of the hills; and more than 40 miles from the railway; they had to be sent down in the greatest hurry, and there was immense confusion and trouble about it; and they scattered very much in going down, so that if they had had anything to do when they got to Umbeyla, it would have been a very serious matter. We had to send out every elephant, bullock, and camel, and every animal that could be got hold of to bring up the men who had lagged behind; and I should say that hardly half of each regiment arrived at Umbeyla till a day or two days had elapsed, and the hindermost men did not come up perhaps till the third day; and this is a very serious matter, because you never know in India what a day may bring forth. But as long as we only keep a moderate number of troops in the hills, then we have the means to take proper precautions for holding the plains, and the whole country is fairly safe; but if we were led away by the cry that the troops might be more healthy in the hills, and that it would save life to put a large number in the hills, that might lose the plains, while they were in the hills, and then it would take a great many more men to recover that which, comparatively speaking, very few men will hold. I think that is a point that statesmen ought to bear in mind.

5308. *Chairman.*] You do not anticipate therefore any economy from the new arrangement, except so far as health is concerned?—No; you save life, and therefore you save the cost of recruiting; but I do not think that there is any economy by the system that you could calculate upon.

5309. Have you considered whether any arrangement might be made for regulating the employment of the native-born inhabitants of India in the Public Service upon a standard expressly adapted to them, without reference to the claims of Europeans?—Yes, I think that could be effected. I think that in laying down a standard which would be fairly applicable to the native, that standard ought to embrace the European gentleman who was not in the service.

5310. But when you speak of the European gentleman, do you mean a person who is accidentally in India, and wishes to be employed?—Yes, such as the son of a gentleman in the service, or a man who had raised himself in the service, and whose son had received a good education, and was a candidate for employment in the uncovenanted service.

5311. But if he became a candidate for such employment, ought the standard of remuneration to be raised to embrace him, or ought he to accept the standard of remuneration which is sufficient for the natives of India?—I think that he ought to accept the standard which is sufficient for the native, but I think that ought to be a fairly liberal standard. I would not advocate a standard which stinted either the one or the other. I think it should be a fairly reasonable standard; but it ought to be fixed mainly with reference to the native, and then the European, if he took service, ought to accept that standard.

5312. Do you not think that if that is steadily pursued, there is room for considerable economy in the establishments for the public service?—I certainly think there would be a certain economy if that could be effected; it would be a gradual one.

5313. Do not you think it is a primary duty of the Government in creating any appointments and fixing their standard of pay, to consider whether the appointments can, with advantage to the country, be held by natives?—I certainly think that we ought to do all that we fairly could to employ the natives.

5314. Take the case, for example, which we have had brought under our notice, of the Forest Establishment; do you think that there is anything so extraordinary in looking after trees in India that the natives could not very well be employed in that?—Well, I used to think so; I used to think that such work only required a certain amount of intelligence, and activity, and energy; but I do not know very much about the subject; I do not know it as a scientific profession; gentlemen, who have studied these subjects, like Dr. Brandis, and others, say that there is a great deal to be learned, so much so, that they have been very much disinclined in India to select either Englishmen in India, or natives, for an appointment in that department, and have desired to get them from Europe, and have insisted upon a previous training in forest science.

5315. But why should not that knowledge have been imparted to natives of India in India, and considering the enormous quantity of the forests in India, and the fact of those forests being tropical forests, why should not that experience have been acquired in India?—I suppose, in point of fact, that it could be acquired where there

there were a certain number of men at the head of the department who thoroughly understood the work; they might, to a considerable extent, train their men.

5316. But might not the same effort, applied to natives of India, that has been going on here, of training people, and in the same period of time, or something very like it, have produced a trained body of natives to be employed upon a scale of native remuneration in that department?—Well, these gentlemen who have scientific knowledge of the subject seemed to think that it was very difficult to get such men. I think, as regards natives for that kind of employment, *primâ facie*, the idea would be, that they would be eminently qualified for it; but though many of them would be well qualified for it under instruction, still you would have to make a very careful selection, because a great many intelligent, well-educated natives would not, from their habits, be fitted for that kind of work; it is hard work; it requires a good deal of exposure, and a good deal of knocking about; and I should say that many young men, particularly in Southern India and Bengal, who are well educated, would make bad foresters.

5317. What do you say to Rajpoots and other classes like them?—As far as courage and endurance, and bearing fatigue goes, they would be very good; but the Rajpoot is often a lazy fellow, unless he has something to stir him up and excite him. I think men of the North West Provinces, of the Punjaub, and Oude, and men of that kind, among the younger sons of the gentry, would be better suited to such work than the Rajpoots.

5318. Do you happen to know whether forestry has been very much cultivated and studied among the natives?—No, I think not; I think that they would usually waste their forests very much, or else utterly neglect the whole business. Many of the rajahs of the hills have very large forests, particularly in the Simla Hills; and the way in which they allowed them to be wasted and spoiled was very sad. I think if a few more years had passed after the time when the subject was taken up by us, the whole of their forests would have been denuded. If a man gave them a few thousand rupees, they would let him do what he liked.

5319. I meant to ask whether the natives of Oude have not very much cultivated the science of the growth of trees, and the grouping of them?—I do not think that the landed proprietors study that kind of subject.

5320. I mean not the proprietors, but people who are engaged in cultivation; whether the art does not flourish there to a degree not known in other parts of India?—No, I think not. I know that in the hills about Simla, if the cultivators were let alone, they would every year fire the dry grass in order to save themselves the trouble of cutting it down. In firing this grass, they destroy all the young trees, and they seemed to be quite unaware of the injury caused by this practice, and they thought it a great hardship when we stopped them.

5321. Have you observed any tendency on the part of scientific and highly-educated civilians in India, belonging to what may be called the Covenanted Service, or the English Service, to think that, whenever anything is to be done, and an establishment is to be organised, it ought always to be by Europeans employed and paid like themselves, rather than by setting to work at home to cultivate native service to supply the wants of the country?—I think that, as far as civilians go, and military men who have been trained in civil employment (whom I look upon as being much the same as civilians), they are not inclined to organise European establishments; but that, as a body, they prefer the natives. But I think, when you come to special departments then, there is a greater bias that way. For instance, in the Forest Department, I think they would very much prefer, as a whole, to have young Englishmen, or young Germans, or other young Europeans, who are trained in that science, than they would have natives, and in that way I think there is a bias more or less in different departments to prefer the European or the Englishman to the native; but I think those who have been connected with the administration, particularly the Revenue Administration, would rather prefer natives; I think that, on the the whole, the line officers would prefer natives; but there are some departments connected with the administration in which an uncovenanted Englishman of a good stamp is a very valuable man. Where there are treasuries, for instance, a well educated young Englishman is very valuable; he is very reliable; you can trust him well.

5322. As a rule, have not the natives shown considerable trustworthiness in the treasuries where they have been paid a fair native salary, or do you think that there has been an excess of defalcations on their part?—I think our system of managing the treasuries in my time when I was a collector was a very good one; and to a certain extent it prevails still, though there has been a considerable modification in the way of making over the local treasuries to the banks. In my day there was a native treasurer as well as an English officer connected with the treasury, and the native was generally a representative of one of the banking houses of the adjacent town, and of course he thoroughly understood all his part of the business, namely, the keeping of the cash and looking after it, and the banking part, and so forth, and he did it exceedingly well; but every now and then there was even under that system a little anxiety about the Treasury. I do not mean that the treasurer embezzled the money, but every now and then money was taken with a view of a speculation, and so forth; and thus where there was a carelessness on the part of the collector, and there was not time to replace what had been taken away, and you suddenly went and counted your money, there might be a defalcation. I knew two or three cases within my own cognisance of that kind.

5323. In those cases, was there generally found a certain slackness on the part of the collector?—It could not happen without slackness on the part of the collector. If he had done his duty in looking after the treasurer it could not have happened.

5324. In this regard, do you think it is practicable to draw a clear line as to the nature and class of employments that it is expedient for the Public Service that Englishmen as such should hold in India?—You are alluding now to the Covenanted Service, I presume.

5325. The English Service proper, both civil and military?—I think of course that you could lay down a very distinct and clear line. In

Lord *Lawrence.*

27 June 1873.

former days there was such a line, but in course of time that arrangement was relaxed. There were various men in the Uncovenanted Service, and in some cases, natives also who, from the time they had been in the service and the way in which they had behaved, felt it a grievance that they were not promoted into higher positions; and little by little, in exceptional cases the rule was relaxed, and after the mutiny it was more considerably relaxed.

5326. But do you think that it is desirable that whilst very great care is taken with respect to the admission into the English service proper, persons, who perhaps could not get admission into that service by the recognised channels, should be allowed to go out to India, and then, by means of influence which they possess, get into the Uncovenanted Service, and then raise these questions as to their getting better employment?—I would not prevent that class of Englishmen and natives absolutely from rising into superior positions; at the same time I would make it exceptional. I think if you made a very decided line, in course of time it would be found inconvenient in particular cases, and that there would be a very considerable grievance on the subject, do what you would; and that, on the whole, that the public service gains by allowing in special cases, in well selected cases, men who have passed some years in the lower ranks, and have distinguished themselves; to rise into the higher. Now, I saw that particularly in the mutiny. There were various men in the Uncovenanted Service who had distinguished themselves, and there were no other means of rewarding these men except at a great and undue cost to the State; there was no valid reason for giving them pensions or free grants of land; whereas, by giving them a step above that, as I might call forbidden line, you amply rewarded them; you did all that they could have hoped for, and wished for, and you did the service a great deal of good, because they were good men, very picked men. Of course, that kind of system may be abused very much; but if you have a proper governor or chief commissioner, I do not think that he would abuse it; it would be only in very rare cases; and then, of course, the Central Government ought to look after that kind of thing, and check every such abuse. But I can recall five or six cases in which I should have been very greatly vexed if I could not have done something for men who had behaved extremely well during the mutiny; I am talking of my own Province.

5327. Do you think that difficulties have commenced, and have been rather on the increase as regards the English employed in the local service, in consequence of their entering it under the influence of patronage, and then being connected with the higher public servants in India in the Covenanted Service, and then feeling themselves aggrieved that they do not get more pay and better positions?—Doubtless there is something in that; I think the general feeling of every man is, that he has a right to rise to anything that he is fit for; and of course men estimate their own qualifications very often higher than perhaps others would.

5328. Has it not become necessary to interpose some check, considering the position of things, to the young men who go out there, and who do not get into the Public Service through the regular channel in this country, but go out there under the influence of patronage, and join the Public Service, and thus the relation of *protégé* and patron comes into play against what may be called the legitimate claims of the native inhabitants of the country to employments for which they are qualified?—I think, to some extent, that is the case; but in my own personal cognisance I do not know of many such cases.

5329. Of course it is extremely difficult to fix instances of that kind, although society may be very conscious that they are going on?—I think natives do complain of that; but, on the other hand, looking round about me in the days in which I was connected with the service, it did not seem to me that there were many cases of the kind.

5330. Is it not necessary to take some precaution in consequence of the civilians and higher officials being perpetually moved about the country, and having no personal relations with the Native Service, whilst they readily fall into personal relations by private letters of introduction with the English of the class that I have described, who belong to their own families?—I, myself, would greatly prefer natives who had been trained under me, and were connected with me, and would look much more after their interests than in the case of a man who brought me a letter of introduction; and I would suppose that most other men would do the same. I do not think that the officers connected with our administration, whether civilians or military men, neglect the natives in that way; I think they are very earnest to bring them forward and help them; within my own cognisance, I should say that they would very much desire to get a good native who had been under them for some years, rather than a young Englishman from outside; but of course there would be exceptions; I think it would be very difficult, when you came to practice, to lay down a distinct rule upon the subject.

5331. But if a distinct rule cannot be laid down, is it not desirable that some check should be interposed greater than now exists?—I think that it would be very desirable to look after the system carefully, and to see that it was not abused. I would take care, for instance, that under no circumstances more than a certain proportion of appointments of the higher class of uncovenanted appointments were held by Englishmen as compared with natives. In that way, I think, you would have a very considerable check.

5332. Have you any further observations to make?—Under the head of the Home Charges you pressed me a good deal on the subject of the Indo-European Telegraph Line. I said I thought it very hard that India was charged with the whole expenses; and I understood you to think that I had not altogether looked at the case with sufficient carefulness. Since that I have looked at the case. I had not seen the papers, but I had a general knowledge on the subject, and I knew that all the charges had been put against the revenues of India. On looking over the papers, I see that the Court of Directors in 1856, the year before the mutiny, promised that India should bear all the expenditure for that object, so that when the line came in 1861 to be made on that promise, it was arranged that India should bear the expenses. I was not aware of what had happened in 1856, and, of course, that makes the case a very much more difficult one; but still my own view is, that

on

on broad principles of justice, when you come to arrange a matter of that kind between one great country and another great country, you ought always to bear in mind the interests, particularly of the weaker one, and the distant one, and not put upon the country, no matter who agreed to it, or how it came to pass, more than a fair charge. That is the general view that I take of the case. I would put it in this way: that supposing a contract had been made between England and India, as regards any expenditure which turned out in practice to be disadvantageous to England, I think there should be no scruple on the part of the English Treasury in asking for a reconsideration and re-adjustment of those charges; so I think on the same principle, India has a fair claim to ask for a re-adjustment of the Indo-European telegraph charges.

5333. Carrying out that principle, might we not ask who should pay the cost of those operations during the Crimean War in the Black Sea, the shore of which was supposed to be an outpost of India?—Yes, if you had given India notice, and asked her opinion whether she was willing to pay part of it; but if you had asked India whether you should have undertaken the Crimean War, you would have had a great deal of dissent. I am now putting myself in the position of an advocate for India. Having lived so long in the country, and owing so much to it, I feel it a kind of duty to put forward what I consider a fair claim on the part of India. I am also a taxpayer in England, and thus interested on the English side, still I feel, on the other side, for India.

5334. Mr. *Eastwick.*] If you will allow me, I will ask you with reference, first of all, to your answer to Question 4686. You said: "In respect to the native troops, all the rough work of the country is done by the native troops. The English troops in India, I would say, are like the Guards to the English army; the English troops are the reserve, and for various reasons you would never employ them where you could do the work with the native troops;" and then you said, "That being the case, we must have a considerable native army." I want to ask what is the sort of work that necessitates the employment of native troops now?—To begin, you only place your European troops at stratagetical points in the country. All the other places you occupy with native troops. Then everything connected with escorts, everything connected with sentry duties, and with the guards upon your magazines and your stores, is performed by the natives.

5335. But, I would ask, could not many of those duties be done away with; has not the duty of escorts been immensely reduced by the introduction of railways, and could not many of those duties be performed by the police?—We must have a certain number of native troops for service in time of war; and therefore there is no economy in having some other body of men to do duties of that kind in times of peace. In that way there would be a double expense. But assuming that you have not more troops than are ordinarily required for holding the country, in what I call a military point of view; that is to say, without guards, and so forth, then your best economy is to use those troops; but as far as guards go, they have been largely reduced since the mutiny. Our native army is something like 100,000 men less now than it was in those days; besides, there were a number of police corps that did also a great deal of that kind of duty. We not only reduced the army by 100,000 men, in round numbers, but we reduced the number of these police regiments; so that we had to economise largely, in the way of guards. Still with all that economy, and continually pressing the military chiefs to reduce guards, the necessities of the country require considerable guards of one kind or the other.

5336. Is it not the fact that we have now 180,000 police, and that in the old day we used to employ the native police, the village police, to do the things for which we have now regularly trained men, armed to a certain degree as soldiers. Why should we not resort to the old system of having the village police, and make use of these trained police for the duties of sentries, and so on, and then reduce our native army?—What you call the village police are not Government police; they are not Government *employés*; they are the village *employés*; they are the servants of the proprietors of the village, and they have, in their own villages, plenty to do, and more than they can fairly do. They are employed in all kinds of matters connected with the village constitution. If a thief, or a murderer, or a dacoit, or anyone of the kind is to be arrested, when the Government police come on the spot or pursue these men, the village police have to go in and help them. If thieves or delinquents are seized in the villages or small towns, these village police have to help to escort them to the central points. They have an enormous amount of work to do. Any man who has much knowledge of the state of things in India will see that the village police, so far from having any extra time whereby they could take the duties of the regular police, are really themselves overworked, and very ill-paid into the bargain. Therefore it is out of the question their doing the duty of what I call the Governmental police. Then, on the other hand, the Government police have a great deal to do, especially under the new system. They have to look after all the general arrangements of the country; they have to scour the roads, to patrol here and there, and a great deal to do in the way of escort; a great deal of the escort duty formerly done by the army is done by the police, and that was one of the means by which we were able to reduce the native army. I think, whether it is the village police, or the civil police, or the native army, they have abundance to do.

5337. But you said that you must have a large native army in case of a war breaking out, that you may have such an army to resist, I suppose, a foreign enemy?—Yes, or to resist insurrection, or a hundred things. Look at the subject in this kind of way: you have 230,000,000 of British subjects, and something like 30,000,000 more, the subjects of native chiefs, all in the interior of India; then you have got a frontier of several thousand miles; divide your police, and divide your native military troops over all that area and and over all those numbers, and you can judge whether, relatively to similar arrangements in Europe, you have a large number of men for the administration of India.

5338. Now in case of a foreign war, could we entirely rely upon our 130,000 native troops; is it not just possible that we might have a mutiny or a rebellion amongst them, and in that case, what would be our position; should we not be

Lord *Lawrence.*

27 June 1873.

better without them?—If you ask me, could we entirely rely upon them, I do not know anybody in the world that you can entirely rely upon; can you entirely rely upon your own countrymen. I think you can entirely rely upon the native army if you keep it in good order, and manage it well, and give it enough work to do, but do not overwork it. I am quite certain of this, that you cannot hold India without a native army, and a considerable native army, but I am no advocate for having an excess. If you ask me whether the native army in India, bearing all things in mind, is too large, I think that it is not, with the exception of what I said about Madras. When you ask a man in my position to tell you all the duties of the native army, I should have to think over it for days before I could give you an adequate idea of what they have to do; but send to the military department for half a dozen returns of military cantonments and see the duties the troops have to perform, and you will be astonished at how much they have to perform. Now Calcutta is a place which is very distasteful to our native troops for many reasons. There used to be formerly there and at Barrackpore, something like seven or eight native regiments, and now they have three regiments for Calcutta and its suburbs, and I did everything I could to bring it down to two, and I could not. The military authorities convinced me that I could not. I give that as an instance.

5339. The general direction of my questions is, with reference to this subject, to find out whether you do not think that by disarming the country generally, and by directing the disbandment of the troops of the native chiefs, we might then be able to reduce this enormous expense of the army, relying upon the European soldiers for the defence of the country against any foreign enemy, and for putting down any insurrection, and relying upon the police for keeping down any native *émeute*?—Well, I do not think so, indeed, I have no doubt whatever that you could not do it; I think it would be quite out of the question. It seems to me, if I might say so without offence, astonishing, that you, who have been in India for years, and know India so well, could conceive that what you suggest, could be carried out. As regards the native army, I assure you that in Northern India if you wanted to collect 7,000 or 8,000 native troops for any particular object, you would have the greatest difficulty in doing it. You would have to make movements and changes for 1,000 miles, perhaps; I do not exaggerate when I say that; I will give you an instance, when that little *contretemps*, I will call it, occurred in the Peshawur Valley at Umbeyla, at the time that Lord Elgin died, and they wanted additional troops in the valley, they had to warn the troops down in the Bombay Presidency, they had to warn the troops in the confines of Scinde, the Scinde horse were warned, they had to remove troops from Benares, which is 1,000 miles away; just conceive the political commotion and the excitement that all that involved, not only amongst the natives, but also among the English; and all that re-echoes in England, and all over the Continent. It seems to me the greatest delusion to say that the native army is too large. Then there is another point. You talk of disarming the natives of India. They are disarmed; ever since the mutiny, with the exception of certain border districts, they have all been disarmed; but you cannot so disarm a people that under special circumstances they would not get a certain amount of arms, and be able to do a certain amount of mischief. Take that aboriginal race not more than 300 miles from Calcutta, the Sonthals; they are a poor kind of people, living in a semi-barbarous state of things, very inoffensive under ordinary circumstances; the native bankers plundered them, and in our courts ill-treated them and spoiled them, and it went to such a pitch that at last these men rose in insurrection; and they laid waste and plundered the country, and destroyed life, and there was a great alarm even in Calcutta, In no case, perhaps, is any one class, or race, or people, in themselves very dangerous, but when you come to put all the elements of danger together, and do not know where you may have mischief arise, and when you may at any time require 2,000 or 3,000 native soldiers to take the field, you must have certain means and appliances at hand to enable the authorities to do that. Then you said, "Why do we not disarm the native chiefs?" How can you disarm the native chiefs and their troops? You are under treaty with all these chiefs. Supposing that you said you would disarm Scindiah; on what principle would you disarm Scindiah? Under treaty he is allowed to keep up so many troops, and he not only keeps them up, but in a highly efficient state, batteries, infantry, and cavalry, a thoroughly organised army; I should say that they were very nearly as good as our own. How can you, under treaty, disarm those troops? and so on with other people. Why, you would excite a general discontent and general suspicion all over India that you were doing this for some ulterior object. I do not think that you could do it for one moment.

5340. If that could not be done, could we not, at all events, make some use of these troops; could we not confide the task of keeping order in that part of India to Scindiah and his troops, rather than keep up a great body of our own troops in order to overawe him?—But Scindiah and Holkar, and such chiefs, have troops for their own purposes, to maintain their own dignity, and to keep order among their own people; Scindiah and Holkar are, to a certain extent, foreigners in their own country; it is only two or three generations ago since they acquired that territory, and they think that they have many enemies in their country, and they like to have their own troops. We do not keep many troops of our own in their territory, but we keep a certain number of troops, because common-sense dictates it. I do not like to go very much into these things; but without suspecting Scindiah, or Holkar, or anybody, I say the statesman's duty is to be prepared for all circumstances, and, without overdoing the thing, to have a certain means of opposing anything like mischief that may arise in any part of the country.

5341. I suppose you would admit that the enormous expense of our army is the one thing which has to be dealt with?—Yes; I admit that the military expenditure is very seriously large.

5342. I am endeavouring to find some way from your Lordship by which we might reduce our enormous military expenses, and it certainly seems to me that the only two ways in which it can be done are, first of all, by reducing our native army, and secondly, by reducing the number and expenses of our officers?—I do not think that

that you can reduce the native army in numbers, with the exception that I gave before; and I almost think that when I said that 9,000 or 10,000 might be reduced in Madras, I went beyond the mark rather than below the mark; but I am certain that in the Bengal Presidency you could not fairly reduce that army by 1,000 men, and that it would be unwise to do it. But there are many ways in which you might gradually reduce expenditure if a man had full authority to do it; but you must bear in mind (and nobody knows that better than yourself) that no man or no one interest is predominant on these questions: it is a compromise between different interests, and different influences, and different opinions, all of which are very sincere, and honest, and genuine; and that being the case, supposing I was in such a position that I could set to work to do it, I must carry all the other influences with me, or else I should fail; and that is a practical difficulty which every administrator and every statesman must find in daily life. But I have no doubt that you could make some savings, in fact some considerable savings; I do not know, however, that they would be accepted. For instance, you have a double system of medical men for the army in India; you have one medical staff for the Royal army, and another medical staff for the native army. You could do very well with one staff, but you cannot get the authorities to think so, and to agree with you, and unless you do, you cannot carry out that view. Then the system that they have of "seconding" every officer, taken from regimental duty, seems to me a most ridiculous system; that is to say, you take an officer for a particular duty from his regiment or his battery, and you immediately put in another officer to do his work; I think that is carried to a very absurd extent. Take the artillery particularly; in the old days of the Court of Directors, there were a great many of the artillery officers away on different duties, and you did not supply their places; perhaps you went to the other extreme in those days; but here you "second" every one of these officers. Then, again, you want various officers for the staff of the infantry and cavalry, and in many cases, you "second" them also. I do not think all this is necessary; but that is a matter in which, unless you carry the military authorities with you in England, it is no use for you to move. I think those are the kind of ways in which you might save money, but not in cutting down the native army, and overworking the native army in India. I think it is a most valuable army, and that people in England greatly depreciate the importance of the native troops. If I were a general I would sooner take the field in India against an enemy with an army composed of half Englishmen and half of natives, than with an army of all Englishmen; I do not mean that the fighting force of the Englishmen would not be superior, but if you came to their general efficiency, to their general power of doing all that has to be done, which of course is a great deal more than mere fighting, I think that a mixed army would be far superior for every purpose but that of mere fighting, to an army solely English.

5343. We have, I think, on our north-west frontier 24,000 Pathans, as they call them; those regiments there are made up partly of Affghans, and partly of Sikhs?—I am talking now, of course, from memory; but I should not think that there were more than 8,000, perhaps 8,500, of those troops; nothing like 24,000. There were somewhat more before the mutiny than now; but there is not much difference. I know so much about that force, and everything connected with it, that I am able to speak within hundreds.

5344. With respect to those troops now, I am told that they are equally good with Europeans; that they are first-rate soldiers; but is it not the fact that they are recruited very much from the Affghans, and that when they leave our service they go back into Affghanistan, and there drill the Affghans; and is there not some danger in that?—I should think not; I think that is quite imagination. But now supposing that they did do that, and I dare say there are some of them that do, what harm would they do, more especially now that we are on friendly terms with the Affghans? Here we are with one hand giving the Affghans money, trying to consolidate their power, trying to help them to put down insurrection and sedition in their country, trying to get their chiefs to be reconciled to one ruler, and so forth. Then, on the other hand, supposing that the view which you indicate was carried out, we should be afraid of their having a few men to train their soldiers; surely this would be a great inconsistency! But supposing that they have got in their country 50 or 100, or 200 men who have been in our service, we might say, under the present policy, that that was a good, and not an evil. But I think you are under a mistake altogether about that frontier force. That force has a large mixture of Pathans, no doubt, in it; that is to say, men belonging to the tribes beyond the frontier, and to the tribes within the frontier, but the two combined, speaking in a rough way, would not exceed more than a third of the whole force; the rest of the force are Punjaub Mahomedans, men of quite a different lineage, men descended from reformed Hindoos, men whose ancestors, in Arungzebe's times, and those conquering times of the Mahomedans, for the sake of holding their possessions and retaining their lands, became Mahomedans; though Mahomedans, they have a great deal of the Hindoo feeling among them, and their feelings and views are generally different from those of the Pathans. Then, again, another third are Sikhs. Then there are a certain number of Hindoostanees among them. You could get from the India Office the actual composition of those regiments, and you would find that they are greatly mixed.

5345. What is the number of officers employed with each of those regiments; it is only seven, is it not?—All the infantry and cavalry regiments have seven officers now. Before the mutiny, they had three and four; that is to say, the infantry had four; and I think the cavalry had only three officers.

5346. I want to know if these regiments are so efficient with seven officers, why should we have other regiments with three times that number of officers; why should we not have our European regiments in India officered with the same number of officers?—That is going into a very great subject, and I presume that nobody would think that I am a competent judge on such a subject.

5347. But, as this affects the finances of India so very seriously, and has reference to a question which I think ought not to be quite overlooked

Lord *Lawrence.*

27 June 1873.

in this inquiry, that is, whether we should not, for financial reasons, re-establish the local European troops. I should like an answer respecting that?—If you were to ask me, as an English gentleman, what I think on the subject, I, too, would say that they have too many officers in the English regiments; but then, I do not mean in saying that to indicate that I would bring them down to anything like the number of officers that I think are sufficient in a native regiment. That is quite a different thing. In a native regiment you must bear in mind that there are two sets of officers, a set of native officers and a set of English officers; and in the old regular system we had 25 English officers, plus a certain number of native officers; therefore, you had two complete sets of officers.

5348. *Chairman.*] Does not every native soldier, whether regular or irregular, take care of himself; whilst every English soldier does not take care of himself, but is treated like an infant?—No doubt that is so; but independently of that there was this great distinction, that there were in the native regiments two sets of officers. Under this system, under which we work the native army, now we give, or profess to give, and ought to give, the native officer that position which is commensurate with his responsibilities; under the other system you let him really do a great deal of the duty that pertained to the English officer; under the old system you did something of that kind; but in the English army you know there is no such separate body of officers as there is in the native army; that makes an immense difference.

5349. Mr. *Eastwick.*] I am not looking to the reduction in the number of officers in the Queen's troops, but I should like to ask whether it is not advisable, and in fact necessary, to have local European regiments, which would cost comparatively very little, because we might supply a small number of officers to them?—You know that under the old local system you did not do it; whatever was the standard of the Royal regiments was the standard of the local English regiments; you had every man, from the colonel down, in the local English regiments, exactly the same as in the Royal regiments.

5350. In the Prussian army the number of officers is very considerably less than in ours, and therefore, I think, that we need not consider the number of officers in the Queen's regiments now as a fixed standard to which we must always refer. I want to know whether, as economy is so absolutely necessary for us, we might not have some local troops, such as I have suggested; we must have the least number of officers that we can afford, and we cannot afford the present number? — Having mixed a great deal with officers in my day, and knowing their feelings and sentiments, I should say that the officers and men of an English regiment in India would look to have the same body of officers as were kept up in a Royal regiment; I think you would immediately have an agitation in these regiments to be put upon the same footing as the Royal regiments. In fact, it was the case before. I recollect that in my time whenever there was anything done in a Royal regiment at home, or in India, the same argument was applied to the local regiments, and you had to do the same thing for them. I think they would loose in public estimation if you had, say 10 regiments of English local infantry, and you had only 20 officers in them, while you had 30 officers in the Royal regiments; or if the local regiments had 30 officers when you had 40 in the Royal regiments. I think you would have to apply the standard of officers in the Royal regiments to the local regiments; and if you look back you will find that it was the case.

5351-2. Then you see no means of reducing expenses in that direction?—I have indicated to you what I think is the way in which they might be reduced. I think, in the course of time, a man bent upon economy, and with the power of carrying out his views, would make considerable savings of various kinds; but even then he would excite a great deal of dissatisfaction and discontent among the bodies on which he was operating, and he would have a good deal of influence from home against him; so that, unless the man were a dictator, he would be powerless to carry out such reforms.

5353-4. Do you really think that, because it would be resisted by the authorities at home, and because the feeling of the local regiments would be to have as many officers as the Royal regiments, therefore we are to incur this enormous expense, which is crippling the resources of India, and throwing it into difficulties every year?—I am clearly of opinion, that whatever is the standard of the Royal English regiments should be the standard of the local English regiments as regards officers. That is my position; whether the present number of officers in a Royal English regiment is too many or too few, I cannot give an opinion unless I had the number before me exactly and thought well over it; but I am quite certain that there might be considerable reductions made in the way that has been described. I know in the days when I was in the Council it was a continued fight upon that subject. We were always beaten on the ground that we must accept the English establishment. I think the feeling of the officers would be in favour of what I have said, and you must not ignore that fact.

5355. Then I would like to ask some questions with respect to the location of the European troops; you have stated that you think that there are about 10,000 troops now in the hills?—That there will be when the authorities have made up the number that they have arranged for.

5356. Now I wish to ask you, whether there are not certain places, such for instance as Campbellpore, not in the hills, and where of course the expenses of carrying provisions and other supplies to the hills would not be incurred where the European troops would be quite as healthy, perhaps even more so, than in the hills, and which are not yet used to the extent to which they might be used? — Looking at it in a general way, I would say that the troops were more healthy in the hills than in the plains; and that, with the exception of Poona in the Bombay Presidency, and Bangalore in the Madras Presidency, there were no stations, generally speaking, where the troops would be so healthy as in the hills.

5357. You do not think, then, that the climate of Campbellpore is equal to that of the hills?—As regards Campbellpore, I know Campbellpore quite well; I know every inch of the ground there; I do not think that it is in any way an exceptionally

exceptionally healthy place; I should say that Rawul Pindee, on the line of the railroad, is a far more healthy place. I recollect seeing a return saying that it was the most healthy place in Her Majesty's dominions; I think that was an exceptional state of things, perhaps; but the fact is, that we have had to give up Campbellpore; it was an old station, with temporary buildings which had fallen into decay, and it had to be decided whether it was to be maintained, and in that case build new barracks or transfer the troops elsewhere; and I was very strongly of opinion that we should give it up because another place would be a far better position, and was on the railway. The idea was simply to give up Campbellpore, and to come on the railway at about a similar distance from Attack. On all that left bank of the Indus, up towards Attack, there is no place there that is anything like as healthy as the hills.

5358. It has been stated by one of the gentlemen examined before the Committee, that the European soldiers do not like the stations in the hills, and that they object to them; is that your experience?—My impression always was that they preferred the plains to the hills, but that has been controverted by military men, and on the whole, I should think, with the exception that prices are dearer, and that, therefore, the pay of the soldiers would not go quite so far, and their wives would not be quite so well off, they would like the hills.

5359. It has been stated that they do not like the isolation of the hills, and that they do not like the difficulty of getting spirits?—As far as the spirits go, it would be a good thing, you know; but I think, on the whole, they would like the hills, for this reason, that they can ramble about, and enjoy themselves very much; whereas in the plains, though they do ramble about, they suffer very much from doing so in the hot months of the year. I will give you an instance, and this is one of the reasons that made me doubt my own original conclusions on that subject. The authorities put one or two regiments to make roads in the hills, and the practice became very popular with the men; they get a little extra pay for the work they do, and they live in huts, and rough it a good deal. But the men liked the employment and the general life they led, which of course is a strong argument in favour of the system.

5360. *Chairman.*] Do you recollect whether the question of making soldiers useful, and enabling them to earn money in India, has ever been considered, with a view to economy?—It has been constantly considered, and attempts have been made to utilise them in that way; but I do not think it would answer, myself. The only way is, employing them in making new roads in the hills. Of course, when those roads are wanted, it is a very good way of employing them; I do not think it is more expensive, at any rate not much more expensive, than doing the work with natives, and it keeps the troops in good health, and employs them on a duty for which in the hills it is often very difficult to get natives. The natives do not come to that work in the hills as readily as they do in the plains; it is obnoxious rather to the feelings of the natives in the hills.

5361. Mr. *Eastwick.*] You have seen regiments that were stationed in the hills brought down for campaigns in the plains; in the case of Delhi, for instance?—Yes.

5362. I want to know whether you think that regiments stationed in the hills for a considerable period, when brought down into the plains, might not suffer more than regiments stationed in the plains, and accustomed to move in that extreme heat?—I think what medical men say is the fact, that an Englishman never becomes really acclimatised in India. He becomes more careful of himself, and more able to suit himself to the circumstances in which he is placed, and he becomes wiser in avoiding exposure, and so forth; but really his constitution is decaying every year; and he is less able to bear the heat every year he remains in a hot climate. That is what the medical men say; there is no dissentient opinion, I think, among them on that point; and it seems to me that that opinion is a sound one; and that, therefore, there is an economy even in that view in keeping the troops up in the hills, that when they came down they would be stronger and more robust, and when they had great efforts to make you would have a more powerful machine in the regiment that had been in the hills, than in the one that had been in the plains.

5363. If that is so, why not carry out the location of the Europeans in the hills to a far greater extent?—For the reasons that I gave in answer to the Chairman. You must hold the plains. What use is it for you to have all your troops in the hills when your enemies and the influences that you have to provide against are in the plains? You might lose the plains while your soldiers were in the hills; and then you would have to reconquer the country. If we had had one wing of an English regiment at Delhi, perhaps if we had had two companies, we should not have lost Delhi. When the mutiny broke out, we very nearly lost India before we could bring our power to bear against our enemies. It taxed our utmost efforts to reconquer Delhi. It was the turning point of the whole thing. Then I will take another instance; Cawnpore, you may say, is the gate of Oude; formerly, they kept an English regiment at Cawnpore; after they annexed Oude they kept a wing there, and then took it away and left an English battery of artillery there, without any infantry; a wing of infantry would have kept Cawnpore safe in the mutiny, and then the chances were that Oude had not gone.

5364. Has not the face of things changed very much since the mutiny; at that time we had, of course, an immense Bengal army, and we had places where our arsenals were; for instance, Delhi, denuded of European troops; but now, is not the state of things different in this respect, that we have got our arsenals in hand, and all the artillery is European; would there be the same risk, therefore, now, if we were to withdraw European troops from such hot places?—As regards the places you mention there would not be much risk; but my position is, that India is such an enormous country that the elements of danger in it are very considerable, and you do not know where the mischief will burst out, but you must be prepared to meet all comers and all accidents; and you cannot do that if you put the great bulk of your English troops in the hills. With the people of India seeing is believing. If they see your English troops in proper position, ready to turn out at a moment's warning, nobody has any disposition to rise in

Lord *Lawrence.*

27 June 1873.

insurrection. You may have a regiment or a brigade at a place and not fire a shot for 20 years, but it does not follow that they are not valuable there; take them away, and circumstances may show you that it is important to hold that post. You have not fired a shot in Gibraltar or Malta for many years. Would you argue, on that account, that you might take away the garrisons from those places on the chance that nothing might happen? Would you take the English troops from Ireland, and keep them all in England on the principle that you could pour them into Ireland when disturbance took place? I think you would not do that; at least I would not.

5365. Then the fact remains, does it not, that although we have reduced our native army 100,000 men, and made other reductions, yet notwithstanding the expense is even greater than it was some years ago?—It is as much, I think, or nearly as much; but when you make reductions, for two or three years after those reductions, the effect of them is not quite apparent; at any rate, you do not get the full value of your reductions in that period; but when you have got what I may call the value of all your reductions which have been lately made, say in Lord Mayo's time, I think the likelihood is, that it would be rather below than above what the old cost of the army was. And I think, if you went on carefully looking about, and pruning, and watching, and cutting off every unnecessary expense, at the same time doing the thing properly and thoroughly as regards the comfort and health of the troops, you would still save a little money.

5366. I should like to know whether you think that when the same office may be held by a European, or may be held by a native, we ought to give the same pay in both cases; if, for instance, a native is appointed assistant magistrate, must he, do you think, necessarily get the same pay as a European in that position?—Well, if you put him into the same position to discharge the same duties as the Englishman you have hitherto paid him in the same way, just as you pay a military man exactly the same as you pay a civilian when you put him to do the duties of the civilian. But I think the way to arrange the pay is to lay down a rule showing what appointments could be held by the natives, and what appointments were to be held by the covenanted service, and then to regulate the pay according to the posts that were to be filled, and the duties of those posts. I think that that is the way to do it; I do not think that it would do to say, "Here is the appointment of Assistant Magistrate of Cawnpore or Delhi;" if held by an Englishman, he shall receive 500 rupees a month, and if by a native he shall only have 200 rupees a month. I think that would create a great deal of discontent.

5367. I am speaking from my own experience; I was appointed to an appointment that had been held by a civilian on 800 rupees a month, and I received my pay as an ensign, which was 200 rupees a month; is there any reason why I, as a military man, should receive 200 rupees a month, and a civilian should receive 800 rupees?—But that has not been the case in India now for many years. The last case in which something like that occurred in India was in the Sang and Nerbuda territory, which is now part of the Central Provinces; the appointments there were nearly all held by military men, and the pay of the appointments there was lower than the pay of the relative appointments held by civilians in other parts of the Presidency; that system has been long done away with, in the Punjaub from the very day of the annexation, and in Oude, and in the present Central Provinces; whenever the two services come together the pay of the civilian and that of the military man in civil employment, are exactly the same, and if you come to political appointments, which are more of them held by military men than by civilians, the pay of those is relatively better in many cases than the pay of the civilians.

5368. Does not that close another door to economy, because if we are bound according to this new rule to pay the natives according to the Europeans, does not that preclude you from using native officers cheaply which we might otherwise do?—You might in the case of a native have a different salary, but I think there is a great difficulty in that if you are giving him the same kind of appointment; all the military men were discontented under that system which you have been describing; I never knew a military man under it that was not discontented, and I think there was reason in that discontent; I know that I used all my influence to have the military men and the civilians put upon the same footing.

5369. But are not the expenses of native gentlemen very much less than those of European gentlemen?—They are very much less no doubt.

5370. Would not that be a reason then for giving them less pay?—You could do it, but I think there would be a great deal of discontent caused by it; in talking to natives on the subject they would say, "we can live cheaper than the European gentlemen can live no doubt, but on the other hand look at our followers; everybody lives on us; all our poor kinsmen live on us; you have not these expenses."

5371. I see that in answer to Question 4672, you said, "The lieutenant governors have no councils, and the governorships have councils; the difference really is this in my mind; the governors are nearly always or very often men of, however considerable their ability, not much knowledge of India, and many of them of no knowledge," and so on?—Yes.

5372. Is not that an argument for not employing gentlemen who have no knowledge of India, because it leads to a great additional expense, does it not?—In my view, it is an argument in that direction, but then there are others who think that there are reasons for employing men who are not acquainted with India, but who have a certain reputation in Europe or in England, which they consider overbalance those disadvantages; I only stated what were my own views on the matter.

5373. But then supposing that you had as governors men of Indian experience, you think that councils would not be required?—Well, I should not like to do away with the councils on the broad ground that it would be considered a retrograde step, and that there are in the Presidency, and near about the Presidency towns, many natives trained up in the same views and ideas as Englishmen. I think that, on the whole, it would be an unpopular measure among the natives to do away with the councils in Madras and Bombay; it is one thing, you know, to make councils where you

you have not them; and it is another thing to do away with them where you have them; that makes a great deal of difference.

5374. Sir *G. Balfour.*] I will commence with the military expenditure; could you give the Committee any idea of what the amount of military expenditure ought to be, or how to regulate the expenditure of the army, so as not to allow it to press heavily upon the finances of India?—I could not lay down a cut-and-dried scheme, whereby the expenditure should be so much and no more. My view would be to always pitch it on as economical a scale as was consistent with holding the country well; I never would compromise our tenure of the country by unduly economising; that is my view.

5375. That is to say, you consider that it is for the good of India that the several governments should be able to carry on their administration under the general protection of the army, free from all anxiety?—Yes.

5376. Have you ever been able, from your great experience, to see how you could fix the numbers of that army with reference to that object?—From the circumstances connected with the mutiny we had, after that event, a larger native army than we required; and we have gone on paring down the numbers, until I think we have got it to pretty much what is sufficient, and not much more.

5377. Still, within your own experience as Governor General of India, it has been very difficult to prevent the military authorities from obtaining larger armies than what they have now obtained?—I would not say that of the military authorities, generally speaking in India. The present Lord Sandhurst, then Sir William Mansfield, helped me very much to put the case before the authorities at home with a view to reduction; he was by no means wasteful in that way; I think he took an economical line; we differed on certain points regarding reductions; but as a whole, he was economically disposed.

5378. He proposed various reductions, and assisted in a large degree in that?—Yes.

5379. Sill he hesitated even then to reduce the European force, did he not?—When I was Governor General, and he was Commander in Chief, with the exception that he wished to reduce the artillery in a different way from that in which I thought it might be reduced, I think on all the other points we were agreed; and, as a whole, I should say, that he helped me very much in advocating reduction.

5380. Still by degrees we have been reducing the army from a strength of 73,577 European troops, at which Lord Canning fixed it down to the present number of 60,000; and from 136,000 native troops, down to about 126,000, including the Hydrabad contingent?—From 1861 to 1872–73, the reduction has been from 136,369, to 100,646, according to this return which you have put into my hand; but the great reduction took place previously to 1861; if you take the native army, as it was in 1856, and compare it with what it is now, or was at the end of last year, I think you would find that it was very little short of a reduction of 100,000 in the native army.

5381. You will see by this return that the native army, on the 1st of April 1857, was 268,413?—Yes.

5382. And the force in 1861 was 136,000?—Yes. Now, assuming that this is correct, that would be 126,000 natives in 1872, we will say, against 268,000 in 1857. According to that, it would be very considerably more than 100,000 of reduction; it would be 138,000. When you consider that, it is a large reduction.

5383. Then in 1857 we had 42,139 European troops, against 73,577 in 1861, and against 60,900 in 1872-73?—Yes.

5384. With that great reduction, how can your Lordship account for the large increase of military expenditure; we have it in evidence that the expenditure in 1856–57 was 13¼ millions, against 15½ millions at the present time?—Every kind of thing has increased in price, and the establishments have increased; the expense of transport has increased; there are many things which have been done in India for the comfort and convenience of the soldier, which are by no means in excess, which have cost very large sums of money. Then, again, there are many things connected with the administration of the country which bore hard upon the people, and which now have been remedied. Now I recollect in my time, ever since I went to India, on the question of transport the owners' carriage was never properly paid for, the carriage with which they supplied the army. I know it myself, for I used, as a magistrate and collector at Delhi, to have to supply the army in times of emergency, and I know this, that the owners did not get paid within 40 or 50 per cent. of what they ought to have been paid. Now all that has been changed; they are paid properly for their carriage, and that adds very much to the expense of the army. Now look again to the commissariat, the various expenses of rationing the troops are very much larger than they used to be in former days. I have got a little printed book which I had drawn up connected with the changes which were made in the army when I was in India in the Military Department, showing the improvements, and reforms, and changes that were made all conducive to the public interest, and to the comfort of the troops, and none of them were unreasonable, and none of them were unnecessary, and all of these cost a great deal of money. But referring to that one question of transport, one of the first things that I tried to introduce was the proper payment for the use of carriage. It was a perfect curse in the country whenever an army moved in India in former days; every owner of a cart used to levant, and was not to be found; you had to bring all kinds of pressure upon the head men of villages to get carts. I have known men carry off their bullocks, and go away, and forfeit their carts, rather than stay, and perform that duty. I have known circumstances in which it required all the influence of the magistrate and collector to supply carriage, especially if there was any emergency. I recollect when the first Sikh War broke out, after the war had gone on some time, and we were not getting on quite as well as we ought to have done, the late Lord Hardinge, the Governor General, writing to me as magistrate and collector at Delhi, saying that the very existence of the army depended upon their getting up a sufficiency of ammunition; he said that I must somehow or other get this carriage. Delhi was a great entrepôt. If I had gone about it in the usual way I should not have succeeded; but I

Lord *Lawrence.*

27 June 1873.

sent for all the leading men of villages with whom I had influence, from having made their settlements, and I said, "We must have the carriage, and the only question is really the question of payment. What is the rate which will satisfy your people?" They said, "Nobody likes taking their carts to the army; there are a great many inconveniences and hardships attending the service of the troops; but if you pay well, we have no doubt that you will get the carriage which is required." I said, "What do you say should be allowed?" They said, "Double the usual rates." I replied, "I want 5,000 waggons, and four bullocks in each waggon, and I want them within three days." They said, "We engage to have them for you, and you will look to the payment?" I said, "Yes." I went to the commissariat officer, and I said, "Now, are you satisfied that you will have these stores ready; you know what the Governor General has written?" He assented. I said, "I have promised to look after the interests of the owners of the carriage, which has been engaged; and you must take care that none of these people are wronged." He replied, "You may depend upon me and my department doing everything we can. I will do my part with my own department." The consequence was that we got 5,000 carts and sent them off in four days to the army, heavily laden. That was in December 1845. I only give this story as an illustration of the state of the carriage question in those days. What was that expense compared with the importance of the occasion? Supposing that the troops had had to fall back, or any great misfortune had happened, it would have been a question of our very rule in India. The condition of things in those days was that the owners of carriage were badly treated, and badly paid. We had to change all that, and it costs a great deal of money to do so.

5385. When you went back to India in 1863 you did not find any of that pressing system in existence then, did you?—It was in existence, but of course we were not moving troops at that moment to any extent, as there was no emergency, but whenever you moved troops in any numbers you had practically to get carriage by force, through the police, and to coerce the people.

5386. Still with the facts before us, the fact which I want your Lordship's opinion upon is that with 18,000 European troops more than we had in 1856–57, and nearly 136,000 native troops less, we are now 2¼ millions in military expenditure above what we were in 1856-57?—The whole matter is this, that the European troops cost very much more per man, or per regiment, than the native troops, and the consequence is that what with the original cost of the troops, and what with the extra expense consequent upon the different changes it represents, in spite of that large reduction of native troops, you find that the military expenses are greater, perhaps, than they were in those days.

5387. I have in my hand a minute written by Sir Henry Durant, the year after you left, wherein he suggests that the expense of the European soldier is four times greater than that ef the native soldier, and that therefore, having 18,000 European soldiers more, that is equal to 72,000 native troops, against 136,000 natives to be reduced?—That would not include, for instance, all those abnormal expenses connected with the officers, and it would not include, probably, all the extra expense of covering the troops, barracks and things of that kind. We had not in former days many of the expenses which have come upon India; now, for instance, this double medical staff, all these improvements connected with instructing men in rifle shooting, all these arrangements for giving them excellent baths and these kind of things, add very much to the expenditure. I recollect an order coming out when I was Governor General that the European troops should be instructed in gymnastic exercises, I think the head of the Public Works Department told me that that one order for troops would cost 200,000 *l.* more per annum.

5388. That is the point I want to show; taking the medical establishment which you have now referred to, you are quite right that it is more than doubled since 1856–57?—You added to the pay of the men 2 *d.* per diem; it is a small sum, but on all the English troops it comes to a considerable sum in the year. During my time the European troops used to drink a considerable proportion more of rum than they did of beer. The Commander in Chief represented that the medical men said that beer was very much better than rum, and we made a change, which was an extra cost.

5389. When I mentioned that the beer actually costs less now than it did in 1862–63, what do you say to that fact?—In those days they drank say three-fourths of rum in proportion to one-fourth of beer; now they drink perhaps three-fourths of beer to one-fourth of rum; I went into the subject with the Commissary General.

5389.* In 1862-63 the average consumption per man was one pint and an eighth, and the allowance is now one quart, but in spite of that increase, in 1862-63 the military expenditure was, I think, nearly 1,000,000 *l.* less than it is now, and the actual cost of beer is now considerably less than it was in 1862–63?—I am surprised at that.

5390. When your Lordship looks at the Commissariat charges on account of the rations for the soldier, they are certainly not increased, or rather they are below what they were ten years ago?—But that was not the case when I was in India; prices may have come down within the last four or five years, but when I was there rations were costing a good deal more, at least that was what the Commissariat reported, and I had no reason to doubt what they said; but there were a hundred things in which there had been an increased expenditure. Now I will tell you one item that has just come into my mind; the women and children of the English soldiers were so poorly maintained, that they were in a state of semi-starvation in the time of those high prices; we increased the pay of the women and children; it seemed to me a simple question of humanity whether we should do that or not; but it added very much to the expense.

5391. Could your Lordship give any idea of the amount of the expense added by that cause?—I could not, from memory.

5392. Your Lordship would, perhaps, be surprised to learn that in 1868 it was only a few thousand pounds; your Lordship will find that these additions to the military expenditure have not been greater?—That is quite contrary to my own impression.

5393. Your

5393. Your Lordship is under the impression that the 2 *d.* a day is a large increase?—About 200,000 *l.*

5394. Would your Lordship be surprised to find that in consequence of the change in the organisation, it is almost entirely nullified?—But if all these different things are, as you state, it is to me a very extraordinary thing, that the expenditure is so great.

5395. You are aware that there has been an enormous increase in the medical establishment of the British Army?—Yes, the great point in expenditure which has been complained of in India with reference to the medical establishment, was keeping up the double medical staff.

5396. But that has been largely increased during your Lordship's time; are you aware of that?—It was done in my time, but it was not done by me in the sense that I had freedom of action in the business; it was done because instructions came from home to do it.

5397. That is the point which I want the Committee to understand, that the British Medical Establishment was largely increased in spite of your Lordship's wishes?—I do not think that the medical establishment of the regiments was increased in spite of our wishes, because we went into that subject, and notwithstanding that it was increased, I think we agreed on the whole after hearing all that the medical men had to say that it was necessary. The point which I simply adverted to was, the keeping up of a separate medical staff; that seemed to me an expense which might be reduced.

5398. But when I mention to your Lordship that the deputy inspectors general of this medical establishment are now four times as numerous as they were in 1862-63; that is one point upon which the Committee would be glad to have your Lordship's opinion as to the necessity of such a large increase?—Unless I took up the subject and studied it, I would not like to give an opinion adverse to what has been done, because the impression on my mind was, that if it was absolutely necessary that we should keep up a separate establishment for a medical staff, then in detail it was not excessive; the supervising staff must be of that strength that would enable them to exercise an effective supervision.

5399. Still the causes of the increase in the military expenditure should be clearly brought out, and that is one of the points on which information is desirable, as to whether, taking the staff now as compared with the staff in 1862-63, or even 1856-57, it is justifiable to have such a very large increase in that portion of the expenditure?—I would not like to give an opinion on that subject, unless I had it in all its details before me, and I went into it very carefully, and with the help of medical advisers and men of judgment on the subject.

5400. Then there is another branch of the military expenditure to which I beg your Lordship's attention, and I will use the words that Sir Henry Durand used in a Minute, dated 7th of September 1869; speaking of the staff corps, he says, "I must reiterate that as the staff corps system was imposed upon the Government of India contrary to the late Lord Canning's views, the Government of India, which will have to contend against this source of military financial embarrassment, is in no degree responsible for its creation as an incubus calculated to be an effective counterpoise to military economy, it is a difficulty which, though it will weigh heavily upon, did certainly not originate with, the Government of India or its advisers, but was forced upon them by the Home authorities"?—In the way that Sir Henry Durand viewed it, he is probably correct; but I think that Sir Henry Durand was greatly against the new system of officering the army with few officers per regiment and, therefore, all that his intelligence and his experience suggested to him, he brought to bear upon the subject; but I do not think myself that he altogether made fair allowance for the peculiar circumstances which, as a temporary matter, inflated that expenditure.

5401. But I will read to you another portion of his Minute written six weeks afterwards, namely, on the 16th of October 1869: "The result is that the 3,312 officers at present actually cost 60,60,960 rupees, or 606,096 *l.* more than the same number would have cost in 1856"?—But that is not surprising; it seems to me but only natural if you are changing a system in which you have large numbers of officers to deal with, and part of that system is to pay the fewer officers better than you paid each officer under the system of many officers, the necessary effect of it would be, for the time, to increase your expenditure, and particularly when the change was carried out in the way in which it was done at home, that is to say, you gave very large promotion, you allowed every officer, irrespective of their numbers, to qualify for the higher ranks; and at the same time, in order to reduce the number of officers, you ceased for a time to employ young officers; the effect of this would be that the increased cost of the officers per head would become very much larger. Supposing, for instance, you had taken 500 young officers, and added them at once to the establishment, you would not have benefited yourself at all by the change, the aggregate cost would have been so much greater, but the expense per head of the officers would have been very much less; we must bear the expense of the change of circumstances, and of the rules which have been laid down for good or for evil, and when you come to the turning point, and the officers begin to fall off in numbers, the reduction of expense will then tell.

5402. If it be the case in the present time that there is a necessity of paying officers better, then it follows that whereas we were content with 176 lieutenant colonels in 1856-57, now we have 664 lieutenant colonels?—Because you made rules with the view of contenting the officers, whereas under the old system you had a certain number of officers in the higher ranks of the service, and no more.

5403. Your Lordship was at home here in Council at the time that that staff corps was formed?—I was.

5404. It went out from this country?—It did.

5405. And Sir Henry Durand says, writing that which was the notorious fact, "the staff corps system was imposed upon the Government of India, contrary to the late Lord Canning's views; the Government of India which will have to contend against this source of military financial embarrassment, is in no degree responsible for its creation"?—My position, with the greatest

Lord *Lawrence.*

7 June 1873.

deference to the authority of Sir Henry Durand, is this, that this great expenditure was not necessarily entailed by the introduction of the staff corps system; and that if rules such as have been laid down, had been sanctioned, irrespective of the staff corps, you would have incurred a similar large expenditure.

5406. Mr. *Fawcett.*] Who laid down the rules to which you refer?—They were laid down some, by one Secretary of State, and some by another.

5407. They were laid down not by the Government of India, but by the Government at home?—The Government at home had undertaken to deal with this question of the amalgamation of the army, and the reduction of the officers, and so forth.

5408. Sir *G. Balfour.*] Did not the staff corps originate with Sir Charles Wood?—In one sense it did; that is to say, Sir Charles Wood elaborated the system, and put it forward; but the idea came from India. I think I mentioned on a former occasion, that, at the beginning of 1858, Lord Canning apparently employed Sir Henry Durand, who, at that time, apparently had no substantive appointment, but was attached to Lord Canning (I say this, partly from knowledge and partly from surmise) in drawing up a number of questions connected with the reorganisation of the native army, and the occupation of India generally, and these questions were sent round to various military men and civilians by the Government of India, and among others I was asked for my opinion. I did not think that I had knowledge enough and weight enough to deal with this question satisfactorily alone, and I formed a Committee, consisting of Sir Neville Chamberlain, who commanded the Punjaub frontier force, and Sir Herbert Edwardes, who was the Commissioner at Peshawur, and myself, and we went into these questions *seriatim*; and we drew up a very elaborate report, which was printed by Parliament subsequently, and we sent this as our reply. In those papers we embodied a scheme for a staff corps, which General John Jacob, who had commanded the Scinde frontier force, and was an officer of very great experience on the subject, had put forward; our scheme had some slight modifications of his, but in essentials, it was his scheme, and we put it forward in the way that approved itself to our judgment; and I think that report very likely had something to do with the scheme, that was eventually elaborated by Sir Charles Wood, and put before the Council. I am in favour of that scheme now. That scheme has been in various ways modified, more particularly by these changes which have been introduced with a view of contenting the officers of the army; but that scheme, as put forward by ourselves, and in essentials put forward eventually by Sir Charles Wood, is a scheme that approved itself to my judgment, and I see no reason to alter my view on any part of it.

5409. *Chairman.*] Was it a basis of your proposals that the offices and the duties for which they were established should regulate the salaries, and should regulate also the number of officers to be employed and their status, or that they were to be appointed, and to have salaries increasing with the length of service, and rising in magnitude without reference to their employment?—That was not part of our scheme.

5410. Did you adopt the other view, namely, that the officers and the employments should regulate the establishment?—Yes.

5411. You recollect that in the old native army, the employments in the army entirely regulated the establishment; that is to say, there were no more colonels or lieutenant colonels, and so forth, than there were regiments?—No, there were not. Independently of the different changes or modifications which you have made, in order to improve the status of the officer, there is one important difference; under the old irregular system, as I have said to-day, there were only four officers in a regiment of infantry, and three in a regiment of cavalry; now, they have put seven officers into each regiment, and that makes a very considerable change. It is not only the pay of the excess of officers, but their substantive pay plus their staff allowances; the two together make a very considerable difference in the general military expenditure, particularly when the number of officers in each regiment is increased. This was a compromise; there was a great deal of influence brought to bear to maintain the old system, to reorganise the regiments on that system, and the general military view was, that three and four officers per regiment were too few; and the consequence was that, as is often the case where there is a great deal of discussion and where influence is brought to bear, there was a compromise; and instead of having the old system of 25 officers for each regiment, a kind of mean was adopted. My general idea is, that six officers should be attached to a regiment where no especial reserve of the kind is available, and then one more was added, so as to supply a margin for sickness and home furlough, and so on; the idea was that six officers in time of service would be present with the regiment; but that change made a considerable difference in the general expenditure.

5412. Sir *G. Balfour.*] Your Lordship's plan only provided for three officers, if I remember rightly, for each irregular regiment?—Three or four.

5413. And the staff corps system gradually increased the number from five up to seven?—Yes; whilst you are on that subject I may mention that there was one argument which the advocates for a large number of officers brought to bear, in which there was considerable force, though at the same time it had not so much weight as to have made me make any considerable change; certainly it would not have induced me to advocate the old regular system. That argument was, that under the old system we had a certain number of regiments on the irregular footing, and a large number of regiments on the regular footing; and under those circumstances we were readily able to make up casualties in irregular regiments by taking officers from the regular regiments; but now that you have put all native regiments on the same footing there will not be the same supply of officers available in case of serious casualties. I think there is considerable force in that, and to the extent of adding a certain margin I do object; but it would not influence me so as to make me think that the old system was the best or the most economical system. We have a margin of officers in Royal regiments, and certainly we ought not to provide constantly for such a convulsion, as a general mutiny. Under ordinary circumstances, even

in

in war, the whole Royal army in India would not be in the field, and we could always take one or two or three young officers from regiments in different parts not on actual service, and in that way provide for any reasonable number of casualties.

5414. Then your Lordship considers that the Royal regiments would be a reserve to fall back upon to supply the native regiments in the same way that the irregular regiments were formerly supplied from the regular regiments?—Yes.

5415. I will read to you an extract from a paper which I think your Lordship saw in Simla, written in 1865, with regard to Her Majesty's regiments forming a reserve for the native regiments (this was from General Adye); "Officers of Her Majesty's forces have no ties in the country; service in India is unpopular with them, and has always been so; and, therefore, they never will willingly embrace an Indian career." From this your Lordship will see the unwillingness of the officers of the British regiments to join the native service?—I think there is a certain degree of truth in that observation, but that the feeling alluded to is greatly over-estimated; for instance, a young officer who was well to do in the world would say, "I would sooner stay with my regiment, I am more comfortable, and it is a much pleasanter life than serving with native troops, of whom I have no knowledge, and with whom I have little sympathy," and so forth; that would be the view of the wealthy man, or the man with good prospects; but if he was a poor man, his views would be very much changed; his views would be something of this sort: "Here I am in my regiment, and it may be 10 or 15 years before I get my company; what prospects have I in such a service?" If he was a man of enterprise and ambition he would probably decide to do so; he would say to himself, "I will go into this service; it is not difficult to qualify for it; I see young officers who were at school with me, and in short, a similar class as myself, who are happy and contented in this service, and I find that after a time they adapt themselves to the circumstances, and I know that at once I shall get 20 per cent. better pay with these troops than in my own regiment;" in short, he accepts his improved position, and after a time he likes it very much.

5416. I would remind your Lordship that that was the theory from the first, that the British regiments would form an ample resource from whence we could draw officers; but that during your Lordship's administration, so far from that being realised, we were obliged to pay officers the price of their commission to induce them to come into this service?—Yes; and I mentioned that in my previous examination as somewhat of a grievance on the part of the Indian Financier; but as the Chairman said, all that is passed and gone. I have inquired since I gave that evidence, and I was told by authorities, of whose ability to give an opinion on the subject there could be no doubt, that there had been latterly a flow of officers for such employment, and that there is now no difficulty at all in getting them. General Piers showed me a paper a few days ago, from which it appeared that 240 officers within a certain number of years had gone from Royal regiments into the staff corps, and that there had been quite a success in that way, for the Government of India had obtained a good set of officers, and he was not aware of any failure in any one of them.

5417. Still that is the case, that we have been obliged to hold out additional inducement for officers to join the staff corps?—That is past and gone.

5418. *Chairman.*] Do you think that that inducement was offered in the first instance, before sufficient time had elapsed for the system to be understood?—I think there was a great deal in that.

5419. Do you think there could be any deficiency of supply of young officers if it were understood that any person of proper education who joined the British army, could, by his own merit, make a career for himself in this service?—I am sure you could have any number of them; but more than that, I have known young men come to me, and ask me about entering the Royal army with the view of subsequent transfer to staff corps, saying, that that was their intention and that of their friends; no doubt whatever, at first there was a kind of feeling against it in the Royal army.

5420. They had not then entered the Royal army with that view?—No, not then; but as those who refused in India to take such opportunities, found that those who did go into native regiments did get on well, and liked it, that kind of prejudice lessened.

5421. And at first no kind of guarantee was held out to them that they would have a career by their own merit?—Just so; and then they had got the idea that if they once committed any little trivial fault, they would be at once *chassed* back to their regiment; when they saw that it was not so, their feelings changed.

5422. Sir *G. Balfour.*] Then you think that that payment of money on account of their commission need not have been made?—At that time the Commander in Chief said, that it was a most serious impediment; otherwise I should have resisted consenting to the payment, so far as I could have done so.

5423. Under your proposed system of a staff corps, did you contemplate that officers should rise up to rank by rank of the service without limitation of the numbers in those ranks?—That was no part of my plan.

5424. Therefore the system now in operation was different from that which your Lordship considered was desirable?—I have not looked at the scheme, on which I assume that in some degree Sir Charles Wood based the arrangements of the staff corps, for the last 8 or 10 years, and therefore perhaps my memory may fail me in some points; but my impression is that the original scheme had nothing to do with the officers rising to rank irrespective of numbers.

5425. The first point that came before the Council of India must have been Colonel Norman's letter of the 2nd of February 1860, addressed to Sir Charles Wood, dated Weston-super-Mare, which contains the exact scheme of the staff corps as it now exists?—I must have received that letter, but I do not recollect it.

5426. Your Lordship does not re-call to recollection any other scheme besides this which provides for the officers rising to the rank of captain after 12 years, to the rank of major after 20, and to the rank of lieutenant colonel after 32 years?—No, I cannot call to mind any scheme

Lord *Lawrence.*

27 June 1873.

which had those particular figures in it. But I must say this, that I do not think that that scheme in itself is an unreasonable one, namely, an officer getting his promotion to his company after 12 years, and so forth. If I recollect right, when that was discussed in the Council of India, it turned out that on the average, it was not very much more advantageous for officers than the system then in force. Under the old system there were the extremes of good, and ill luck; you saw lieutenants of 18 and 20 years' service, and you saw men also getting their companies in five or six years. I have an impression that when that part of the scheme was prepared the Secretary of State took a kind of mean, or perhaps a margin of a year or so in each rank, was made in favour of officers going into staff corps.

5427. The old system limited the number in the different ranks?—Yes; what I meant to convey was that if they had limited the number of officers in the staff corps to what was absolutely necessary, and had not given an indefinite amount of colonel's allowances, and so forth, the scheme then would have been carried out with much more economy than it was; but then it would not have met the discontent which existed in the army, and which the Secretary of State was desirous of removing.

5428. I thought that the staff corps was formed specially for the purpose of officering the regiments of infantry?—Not merely to do that; it was formed to supply all the officers who were wanted, both for the army and for all the different departments connected with the army; and indeed embraced officers in civil and political employment.

5429. Then how could your Lordship have limited the number of the staff corps; if the infantry of the army were to be officered by the staff corps, and all appointments filled by officers of that staff corps, they must necessarily be equal to the number required for that purpose; how could you have prevented the number rising to the number of 1,154?—You would still have had a great many officers for the reason which you gave; but you would not have had so many officers as you now have in it. For instance, under one of the modifications of the scheme, you allowed every officer of the old cadres of regiments, whether on staff employment of any kind, or not, to go into the staff corps, and that increased the staff corps very much.

5430. A large number, however, did not join the staff corps?—Those who thought that they would benefit by remaining, remained; and those that thought that they would benefit by going in, went in irrespective of the wants of the service at that time.

5431. When I mention that the old officers of the native infantry have been reduced from 311 field officers to 144, your Lordship will see that they have not increased the number of those officers that we are speaking of?—But a great many officers from those cadres went into the staff corps and there got promotion at once, whereas if they had remained in the cadres of their regiments they would not have got their promotion for many years afterwards.

5432. Did not that necessity of allowing officers to join the staff corps arise from the fact that officers in the staff corps who had been subalterns in their regiments, had become field officers senior to their own lieutenant colonels?—I do not think it followed as a matter of necessity that they should have promotion, but of course had promotion been refused, it would have increased the grievance, and in order to satisfy this feeling, the staff corps was opened time after time for them. I know officers who were captains in their regiments in those days who, if they had remained, would probably have passed 10 years before they had got their majority, and several years longer before they had got their lieutenant colonelships, who, in the course of three or four years, became lieutenant colonels.

5433. I will go back again to the opinion expressed by Sir Henry Durand. He says, "If the financial results had conferred on India an efficient native army, the State might have been regarded as compensated for the non-economic character of the system"; he adds, "The general conviction is, that the present organisation, though it may do in peace, cannot stand the strain of war"?—I say, with deference, that I do not agree with Sir Henry Durand's opinion. I think the experience of the frontier force in the Punjaub, and the experience of the Scinde regiments under General John Jacob and his successors, all leads one to conclude that Sir Henry Durand was in error in that opinion.

5434. These regiments of which you speak were officered by officers selected from the whole service of India?—Yes, they were selected from the whole service of India; but inasmuch as the irregular regiments predominated in the Bengal Presidency, they were mainly from the Bengal army; very few from Madras, and some from Bombay, but as a rule mainly from Bengal.

5435. Still your Lordship did select officers even from Madras?—No doubt, but still we did not get many from Madras.

5436. Your Lordship selected General Sir Thomas Wylde, I think?—My brother selected him.

5437. And these officers were selected from the mass of the native army of India?—Yes.

5438. And you were able to get your choice?—Though there was a considerable amount of *bonâ fide* selection, there were also a good many who got it from patronage, that is to say, from friends having influence.

5439. Still it is an important feature in the frontier force and the Scinde regiments where the officers distinguished themselves?—They distinguished themselves very much, but I attribute a great deal of that to the circumstances in which they were thrown; it arose from the very system of a few officers in a regiment; it put a man into a first rate school; whatever qualities he had in him to constitute a good soldier were thus elicited, whereas the regular system was in practice the very reverse.

5440. The irregular system was objected to, on the ground that it left the officers very uncertain as to remaining with their regiment?—That is one of the objections which ingenuity has devised; but I never heard any officer of an irregular regiment say that it was a grievance in itself, or that it militated against the efficiency of the system. When you want to get rid of any scheme, you set to work to devise reasons and arguments for doing so, and that is one of the arguments that have been brought forward; but it seems to me a perfectly imaginary one.

5441. Does

5441. Does your Lordship consider that officers are now more permanent with the regiment than they were?—I could not say whether they are really more permanent or not, but I do not think myself that that is an element of importance. I mean by that, that if there are three, or four, or five officers in a regiment, and every now and then one or more of those officers are changed, I do not think that it is a matter of any importance to that regiment. Of course if you changed the whole four or five in a limited period, and take away the old officers before the men have got acquainted with the new ones, I think it would be bad; but that is not at all the condition of things. As a rule, every officer in a regiment under the present system is quite willing to stay with that regiment; the officers like the position they are in, and will not leave that position unless they can get something better; and when a man can get something better, such is human nature, that he prefers these advantages to remaining with a regiment.

5442. When I mention that 121 officers out of 522, on the 1st of July 1866, were acting in appointments with regiments, and that 169 out of 500 were acting on the 1st of July 1871, your Lordship will see that this uncertainty still exists?—Well, first of all, that arises from circumstances which, if they were not allowed, would create an enormous grievance; and secondly, I do not think that the fact of an officer acting, by comparison with an officer permanently appointed to a regiment, signifies much. Comparing the furlough system with what it was in former days, officers can get more easily to England than they used; and whether that is good or bad for India it is a feeling that you cannot get over, and if you attempted to stop officers coming home, I think you would fail in doing so; and in trying to make a change, you would create a great deal of discontent, which would act badly in other ways. Then as regards the officers, what does it signify to a regiment whether one or more may be acting or permanent? If a man is a good officer, he discharges his duties irrespective of such considerations; if he is not a good officer, I do not think that the permanent tenure of his appointment will conduce to his efficiency. I never saw any difference as regards myself whether I was in an acting appointment, or in a permanent appointment, and I did not see round about me in those days any difference in the zeal or public spirit of the acting officer, compared with the permanent officer. The young officer knows that if he does his duty, sooner or later he will rise. Should he lose an acting appointment, he will get another one before long. If the officer holding the substantive appointment comes back from leave, he reassumes his position in the regiment, to which he is attached; the acting officer reverts to his own appointment. But as men are generally going home and coming back in pretty much the same ratio, the vacancies created by those going, are filled up by the men returning, and *vice versa*.

5443. Considering that those officers are acting for officers who have been taken away from the regiment, it contravenes the principle on which the staff corps was made, that the old irregular system has been condemned by various high authorities as impairing the efficiency of a regiment; and that arose from the system of withdrawing officers for such employment whilst permanently remaining on the strength of their regiment?—If you go into that subject it will make it a very large one; but in a few words I would say that it did not really impair the qualifications of the officer putting him on staff employment; nor did it injure the regiment. I cannot conceive myself anything more unsatisfactory than the old system, and more deteriorating in its influence on the characters and minds of officers than being kept all the best part of their lives with their regiments, and in time of peace having little or nothing to do; I have heard officers over and over again say that under the old system they had not half an hour's work a day with their regiments; these officers went away into different employments, and more or less distinguished themselves; if there was a want of them in times of emergency they went back to their regiment. That system, no doubt, was unpopular with officers who could not get away from their regiments, but it did not do those who they succeeded any harm. As a rule I would have preferred for any duty the man who had been on staff employment, to him who had remained with his regiment, inasmuch as the probability would be that the former had been exercising his intellect and improving his experience and knowledge more than the other.

5444. I will also mention to you another feature in the system of officering the regiments, that there were 118 officers absent on the 1st of July 1866, and 110 on the 1st July 1871; now these features are very much the features of the old regular system of the Indian army, which was so much objected to, and for which the staff corps was formed as a remedy?—I do not think that the staff corps was formed to remedy that objection; at any rate there were very many other considerations, but I have just said that I do not believe myself that either the officers themselves or the regiments were injured by the system which prevailed. What I think was injurious in that system was a large number of officers practically doing nothing for the best years of their lives; that is what I think deteriorated the system, and not taking a certain number of them away for a time, however long.

5445. Then your system was for the purpose of forming the regiments with three or four officers, whereas you have now seven or eight?—Seven.

5446. Your Lordship added a number of officers to the regiments when they went to China, I think?—I did not do it, and if I had had a voice in it I would not have done it to the extent to which it was done; I might, however, have thought, "These regiments are going on a distant expedition, and the facilities for supplying officers in the event of casualties will not be so great as in India;" and I might have added, on that account, one or two officers, and then when the regiments came back I would gradually have absorbed them. But I would not have added 10, or 12, or 14, as was done in that case. I believe, however, that a great deal of that addition of officers was due to the natural enterprise and spirit of young officers, who all wanted to go on the expedition, and therefore it was a very popular thing in the authorities connected with the expedition to urge the addition of a number of officers as a temporary arrangement.

5447. Mr. *Fawcett.*] I understand you to say in

Lord *Lawrence.*

27 June 1873.

in that answer that you would not have appointed these extra officers, that you objected to it, but that you were overruled?—No, I had no authority in the business; I had nothing to do with the expedition at that time.

5448. Were you not Governor General at that time?—No, it was long before I was Governor General. I would have added one or two officers to each regiment just to supply ordinary casualties.

5449. Mr. *R. Fowler.*] Was your Lordship on the Indian Council at the time?—I do not recollect exactly the year in which the last expedition to China took place; but my impression is that I was then Lieutenant General of the Punjaub, or had come home and was in the Council here. But what was done was done in Calcutta by Lord Canning, at the suggestion of the military authorities.

5450. Mr. *Fawcett.*] Do you mean of the military authorities at home?—No, out there. Sir Hope Grant, I think, commanded the army in the last expedition to China, and Sir Robert Napier was the second in command, and I daresay that they suggested that some additional officers should be attached to regiments forming part of the expedition; and I have no doubt that young officers were anxious to be allowed to join these regiments.

5451. Sir *G. Balfour.*] You sent a brigade from Bengal in the Abyssinian War?—Yes, and my impression is that we did not add more than one or two officers to each regiment.

5452. Still the necessity was felt of adding officers?—I did not feel the necessity; but when men make a great pressure, and you do not quite agree with them, you consent to a compromise, and so a few officers above the complement were allowed to go. But my point is this, that I would not have sent 18 or 20 officers with a native regiment to Abyssinia; and I say that the experience of 20 years on the frontier, where the troops were almost continually in front of the enemy, was that there was no necessity for it; I think in this question of officering the native army, officers of rank in the English army take all their ideas from their experience in that army. They know of course that a great deal depends upon the officers, and that being the case they consider that the more officers the better; but I think when you deal with native troops, and especially when you consider that you have got a body of native officers, and that that system makes the native officer a good officer, you will not see the necessity of having so many English officers in a native regiment in the same way as those do to whom I have just referred.

5453. Your Lordship is aware that regiments were about three times officered during the Delhi campaign?—Yes, and that they perhaps fought 30 battles.

5454. During the Umbeyle campaign they were obliged to send up officers to join them?—They sent up a few; you would be always able to do that. Would you for the sake of exceptional circumstances keep up hundreds of officers who would have nothing to do?

5455. I will now ask your Lordship's views as to the large increase on account of the colonels' allowances; have you formed any opinion on that subject?—I have only formed the opinion that it is an expensive arrangement, that it is a pity it was done; but, that having sanctioned it, you can do nothing but just allow it to work itself out. It only applies to the old officers of the Indian army; at least, I was talking to General Piers on the subject, and I understood that it only applies to the old officers of the three armies, and that with regard to all that went out after a certain date it does not apply to them. I think you will find on referring to the subject that Sir Charles Wood laid down a rule in 1862 or 1863, by which all the young officers who went out formed one list, and all who were in that list are subject to any modifications and changes which might be subsequently introduced; that they could not stand upon their rights under the Henley clause and similar conditions; and that in consequence of this, sometime ago the authorities have modified the system about colonels' allowances.

5456. But you are aware that all those officers who have joined the staff corps in 1861 and subsequently, are now entitled to colonels' allowances?—Yes, but a great many of these young officers have not been appointed to the staff corps, as I understand.

5457. The officers who joined the army in 1858 and subsequently, are under special rules?—Yes.

5458. That is to say, no special rules have yet been formed for them?—I understand from General Piers that some have been laid down.

5459. When your Lordship arrived in India in 1863, you found the transports of the army very efficient; you found a very large quantity of transport provided for the moveable columns of the army, did you not?—The moveable columns of the army were all supplied, but a portion of that was our own establishment, and a portion of it was maintained under contract.

5460. You are aware that the expense of the transport of the army has very largely increased since then?—I believe it has increased to some extent, I do not know to what extent; but a great deal had to be done in that way. I mentioned the other day that the number of elephants that used to be kept up, namely, about 1,000, had fallen down to 850, and that we had actually to form establishments and send them out to catch elephants because we could not buy them except at a fabulous price.

5461. But Lord Canning considered that transport, which he then formed, was sufficient for the exigencies of the military service of India?—I suppose it was tolerably efficient, but still my point is that the expenses connected with those establishments had risen, up to the time that I left India, very considerably.

5462. Mr. *Dickinson.*] I observe that you hesitated in declaring an opinion as to the propriety of continuing the Government of Bombay and Madras in their present form rather than assimilating them to the Governments of the other provinces; you declared yourself in favour of that, but with some hesitation, I think?—I am in favour of maintaining the present system as regards Madras and Bombay.

5463. And also as regards the separate command of the army in Madras and Bombay?—Yes.

5464. Do you see any reasan why it advisable to have the government of those provinces under gentlemen appointed from home, generally with little

little or no Indian experience, whereas all the other provinces are under an Indian officer with Indian experience?—I do not think that it would do to say that these appointments should be held only by gentlemen who had served in India. I think public opinion would go against this view; and there may be some advantages in having men from England; but, as far as my own experience goes, I would prefer men who had served in India, and understood India, and knew the natives of the country.

5465. But the appointments to all the governments, except those of Bombay and Madras, are made by the Governor General in Council, are they not?—Yes; they are subject to the approval of the Secretary of State.

5466. That is the form; it is through the Governor General in Council by the Secretary of State?—Yes, he nominates them.

5467. Is there any reason why a different rule should be applied to Bombay and Madras?—I do not see any special advantage in the different rule; but it has always been the case that the Madras and Bombay Governments were filled from home. Sometimes they have been filled by men who knew India. One of the best governors, perhaps the best we ever had in Madras, was Sir Thomas Munro, who rose as a military man in India.

5468. Sir John Malcolm and Mr. Elphinstone are other instances?—Yes, and Mr. Mountstewart Elphinstone was a remarkable instance. I myself would prefer a man trained in the country; but of course it may be thought that that is a prejudice on my part.

5469. It is not simply the training in the country, but the one is a system of a Governor, assisted by a Council, that Governor being appointed from England, irrespective of any Indian experience, and the other is a system of governing by an individual without a Council. Can you suggest any reason beyond the fact of its being so, and having the tradition of past years to go upon, why that system should be continued which now prevails in Madras and Bombay?—There are other reasons which I mentioned, namely, that there is a large English community in Madras and Bombay, and also that there are large numbers of natives, who have been educated in English schools and colleges, and acquired English knowledge and science; and I think their feelings would all more or less be in favour of a Governor with a Council, rather than a Governor without a Council; and that being the case, I would not like to go against their views.

5470. You think that they would be in favour of a Governor with a nominated Council (for that is the state of things, not a representative Council) rather than a Governor without a nominated Council?—I think so; and I think there is a great deal in that.

5471. Then on the question of expense, do not you think one is a cheaper form of Government than the other?—Of course you save all the allowances of the Council. It is not a very large sum, because although they are all paid, I think there are only two Councillors to each Governor, in addition to the Military Councillor who commands the troops.

5472. But the consequence of that state of things is to have a larger and more expensive staff, is it not?—The Council have no staff; there is one establishment connected with the Governor; there is a departmental staff, that is to say, for each department, the Revenue, and Customs, and other matters there is a staff; but the Governor would require a staff of that kind just as much whether he had a Council or not.

5473. But the expense of the secretariat is larger for instance in Bombay, is it not, than it is in the North Western Provinces and the Punjaub?—It is a great deal larger, but those Governments formed in recent days have been formed on a much more economical basis; the others have come down from old days. I think even giving both parties a sufficient secretariat, a more economical system than that which now prevails might be adopted in Bombay, and possibly, also, in Madras.

5474. You are aware that considerable objection has been made to the very large expenditure on the Governor's house at Poona?—Yes.

5475. Do you think that that would have been possible under a system like that of the North West Provinces; do you think that it would have been possible for the Governor of the North West Provinces to have done that for himself?—It is difficult to say; so much depends on the individual in these cases; but the traditions in the North West Provinces and the Punjaub are much more economical, if I may use such an expression, than they are in Bombay.

5476. But is not the effect of a Council like what we often see in this country to be the effect of a board, to cover profuse expenditure?—I think that the sense of responsibility in an individual is greater than the sense of responsibility in a board; but although I myself was glad that I had not a Council in my day in the Punjaub, nevertheless I cannot deny that there is a certain value in a Council.

5477. Is there not also a tendency in having a Council to increase enormously the amount of writing?—Unless there is something like a collision of opinion, there is not so much writing as you suppose; so far as the writing connected with administration goes, there is no reason why there should be a bit more owing to the Council.

5478. If every member is fond of minuting, there must be more writing, I suppose?—As a rule, they do not minute much; they have too much to do to minute; it is only on special cases where a great deal of feeling and a very strong difference of sentiment has arisen that they minute.

5479. Take another case, that of the expenditure involved in the Governor taking his tour during the hot weather; do you think that that occurs in those districts where there is a Lieutenant Governor, as it does occur in Bombay and Madras?—Yes; I know that the Lieutenant Governor of the Punjaub, or the Lieutenant Governor of the North West Provinces, goes up at certain times to the hills, if you mean that.

5480. But he does not take his staff with him, does he?—Yes, he does; he could not do without his staff; he would leave one secretary behind, and take one with him; and he would take two aides-de-camps, one of whom acts as his private secretary.

5481. Have you at all thought of the expenses connected with the administration of justice at the Presidencies; they are very large, are they not?—They are considerable.

5482. Do you not think that the effect of this arrangement

Lord *Lawrence.*

27 June 1873.

arrangement in Madras and Bombay is to increase that scale of expenditure also, and to make it somewhat on the same scale as at Calcutta?—I do not know that they could do with fewer judges than they have in Madras. In Bombay they might perhaps save one judge; but although I am conversant with the matter, still I have not thought it out of late days by way of seeing whether the exact amount of work which they have now to perform is not commensurate with the number of judges. There was an idea I know that they could save a judge in Bombay when I was Governor General, but it was not so clearly made out that we could press it against the inclination of the local Government. I am talking of the High Court. I think that in Madras there are two barristers and one civilian; and I think in Bombay there are three barristers and one civilian judge.

5483. Take the Commanders in Chief of Bombay and Madras; is it your opinion that it would be better to abolish those separate commands, or to continue them?—I would continue them. I think that any saving that you could effect by the abolition would be equally well effected under the present system, by going into the matter and seeing the amount of work to be done, and reducing the staff in accordance with that.

5484. Can you explain what is the advantage of having a separate Commander in Chief in Bombay and in Madras?—I can explain it from my point of view. Under the present system the Madras Commander in Chief and the Bombay Commander in Chief are connected closely with the civil Governor; they are members of his council, and though they are colleagues in that council, they are in an inferior position to the Governor himself, and if anything occurred connected with the armies of those Presidencies, they would take their view from him, to a considerable extent. Of course the Governor would not interfere in matters of discipline and detail, unless something very serious occurred; but in every matter where the troops came in contact with the administration, and so forth, they would look to the Governor and to the Governor's views, and the Governor would influence them more or less; but if you did away with the position of the present officers as Commanders in Chief, and appointed, we will say, lieutenant generals at the head of *corps d'armée*, in that case they would look to the central authority, the Commander in Chief or Minister of War, or whatever you called the officer with the Governor General. If there was any disposition to resist the views of the Civil Governors of Madras and Bombay, naturally the lieutenant general would then shield himself under the circumstances that he was directly under the central authority; and there would be much more likely to be collision between them in Madras and Bombay under the one condition of things than under the other.

5485. Then I understand you to ascribe the advantage of the present state of things to the fact of the local Commander in Chief having a seat in the Council rather than to his being Commander in Chief?—Partly to that and partly to the knowledge that he is subordinate to the Governor. When men are meeting in every day life in council, and so forth, they are much more likely to get on together than if they were independent authorities running as it were in parallel lines.

5486. But why could not the same relations in respect to his having a seat in the Council exist between the Governor or Lieutenant Governor of Bombay and the chief military officer in the Presidency as exists between the Governor General in Council and the Commander in Chief in India?—There is less likelihood of collision and opposition where the military authority is under the civil authority, than where the military authority is independent of that authority; it seems to me to be only human nature.

5487. I do not understand from your statement why that change in Bombay and Madras should produce the result of making the chief military officer independent of the civil governor?—The change of system would not be limited merely to reducing the status of these military authorities in Madras and Bombay as regards those two provinces, but it would be also attended with these military men being brought more and more under the military authority at the seat of the central Government.

5488. Does any difficulty arise as regards the administration of affairs in the other provinces where the same system now exists as I have been suggesting?—I think difficulties have arisen, and they might have been very serious at times.

5489. In none of the other provinces is there any local commander immediately under the Governor?—There is not; but, first of all, the military men in those other provinces are in a very inferior position relatively; they are only major generals commanding divisions; whereas in Madras and Bombay they are commanding armies. Then there is also this circumstance, that they are nearer the governing authority, and there is more communication with the Governor General, and therefore the civil governor would feel himself stronger, in relation to the military authorities in the local Governments, than he would in Madras or Bombay, if there was a great change of that kind introduced. But I could quite readily understand, under special circumstances, serious differences arising between the civil Government and the military authority.

5490. Is the Commander in Chief of Madras or Bombay under the Commander in Chief in India?—As regards the Queen's troops they are entirely under him; but as regards the native troops they are independent. If the Commander in Chief in India has to interfere with them, as regards the native troops, he must do it through the Governor General in Council; he must come up and convince the Governor General in his Council that what is proposed is right; he could not write down direct to the local Commander in Chief.

5491. I think that the Governor General is himself Commander in Chief by his commission, is he not?—I think he is nominally.

5492. And I think the local Governors of Madras and Bombay are also Commanders in Chief?—I think, now you mention it, that they are, but they do not act as such. They have a commission, which enables them to overrule the military authority if it came to a collision; but the Governor General seldom, if ever, interferes in any details. When he sees that something is going to happen which bears upon the general administration, or even if it were a purely military matter, where he saw that something was going wrong, which was brought to his notice through discussions

discussions in the papers or some other way, in that case he would look into the matter; but otherwise he would not interfere with the discipline of the army.

5493. Mr. *Fowler.*] Has there been any change since you were Governor General in respect of the Governor General being also Commander in Chief?—No; but I had forgotten for the moment that in my commission there was a clause giving me powers as Commander in Chief; but I forget the precise authority it conferred.

5494. Mr. *Dickinson.*] With reference to our relations with native states, I imagine that our present relations with the native states are quite individual with each state?—Yes; under separate treaties with each state.

5495. And there is no general principle, is there, pervading our relations with them, and placing them upon anything like an intelligible footing?—I should say that there was, partly under treaties, and partly under practice. For instance, the general principle is that we do not interfere in the interior administration of any of the large states. That is one great principle. Where we would interfere with them would be where there was likely to be a collision between them and an adjacent state.

5496. But looking at India as a whole, there are of course matters of common interest to ourselves and the native states, such, for instance, as the military defence of the country, the police of the country, the coinage of the country, and the customs. Is there any principle underlying our relations with native states in any degree regulating those matters?—Well, there is no principle which regulates those relations, and, as a matter of practice, the Government of India seldom interferes with them, as long as the peace of the country is maintained; but in individual cases the Government do interfere, but it is done more by influence, than by direct instructions or rules. Now, for instance, in some cases we have interfered as regards the customs; we have induced native states to do away with customs, or to reduce them very much; in some cases native states have done it in order to please the Government; but in other cases, where they have been poor, the Government has made them an allowance for their supposed losses; and partly in one way, and partly in another, the greater part of the restriction on commerce in the native states have been given up, or very much reduced.

5497. Take one department, that of the Military Expenditure; looking at that as affecting the whole of India, is there any arrangement which enables us to ask the native states to bear their share of the general military defence of the country?—No, there is not; on the contrary, we have limited our demands, and we could not, without a breach of faith, ask them to take a share in the military expenditure. You see, in regard to many of these treaties which we have made with native chiefs, we have made them after wars in which we have taken great slices of their country; in some cases we have not taken any, but in many we have taken large slices of their country for various reasons. In many cases they were bound by treaty to keep up large contingents; in course of time we found that these contingents were not efficient, not in good discipline, and so forth, and by degrees we have introduced modifications in such arrangements. Sometimes we have put our officers to them; in other cases we have both put officers to these contingents and also taken further slices of their country from the rulers in order to pay the troops, they having paid them irregularly. For instance, in the case of the Nizam, partly from the circumstance that the regiments were greatly over-officered, and partly owing to the bad administration of his own territories (I am talking of many years ago), we modified the original system, which had been introduced, and reduced the expenditure of the contingent, and arranged to pay the troops from own treasuries. To meet these charges we took over the Berars; these Berars have so much improved under our administration, that they not only pay the Army, but give a large surplus; we pay over that surplus year by year to the Nizam. We could not go to him or another chief, and say, "Our expenses are very great, and you must share in them." We must always look to the treaty; for we should incur great odium if we did otherwise; in fact, we could not do anything of the kind suggested.

5498. Has it ever suggested itself to your mind whether, looking at the present condition of India, and the relations between ourselves and various native chiefs, it is desirable in any way to try and obtain something approaching to the German Diet, where they should all meet and discuss matters in common with ourselves?—I do not think that in the present state of things, it would be advisable. I think that we have not come to that condition of things that the natives would understand it. I think our course is simply to be guided by experience, and where anything turns out to be inconvenient, then to try and get it modified through your representative at that court.

5499. You think it is better to continue our individual relations with each chief, and have no idea of any general policy for the future?—As regards the present time, I think that things in India are more or less ticklish, and you should do nothing which creates a feeling of uncertainty in the minds of the native chiefs; but where there was anything special with regard to certain chiefs, you would instruct the British officers to look at the thing as a matter of public policy to see what modifications could be made, and the British officers of the different courts would consult each other and try and get the chiefs to agree to it; and I think that the chiefs themselves would like that kind of dealing with the Supreme Government rather than any modification of it.

5500. In the relations between our political officers and the various chiefs, occasions occur in which their interests clash with ours if the Government representative passes a decision prejudicial to the chief; at present there is no appeal from such a decision, except to the Governor General or to the Queen?—To the Secretary of State in Council.

5501. Do you think it is advisable, having regard to cases like that of the Nawab of Tonk, to have any different tribunals for investigating those cases than the political officers of the Government?—I am not in favour of referring cases of that kind to the Judicial Committee of the Privy Council; but I think myself that the appeal to the Secretary of State in Council is a very good one. Where anything has occurred which would lead to affecting the personal safety of a chief or his life, or anything of that kind, I think

Lord *Lawrence.*

27 June 1873.

think then that an inquiry by commission, expressly constituted, would be the right course to adopt; but where it did not amount to affecting a man's own person, it seems to me that the political inquiry is a better one in its nature, and more suitable to the chiefs themselves, and our relations with them, than anything like a purely judicial inquiry.

5502. Again, taking a class of cases perhaps not so frequent as they were before, cases of succession by adoption, cases like the Mysore case and the Nawab of Surat, do you think that it is desirable to leave those simply under the control of the Governor General, subject to appeal to the Secretary of State, or to submit them to a different tribunal?—I think it is better to leave them at present under the new rules which have been introduced. They are so clearly defined, that it is a very rare case indeed, I could hardly conceive of any case where there would be necessity for any special inquiry. Under those rules, where a chief has any heirs, however distant, those heirs would succeed, and where he had not heirs of his body, he could adopt one; whether it is a Mahometan dynasty or a Hindoo, they are all provided for.

5503. But a question may arise, may it not, as to how far those rules have been carried out?—That may arise; but supposing it did, my own view is, that the Governor General in Council, subject, of course, to the control of the Secretary of State in Council would, in the long run, come to a better conclusion on the subject than a body of men simply judicially formed, and who had no special knowledge of the natives.

5504. Take the case of the Nawab of Surat, which was a case depending upon the construction of documents, to a great extent?—I would rather have the opinion of such a man as the Governor General with his Council, and the Secretary of State with his Council than the opinion of three or four learned men in the law.

5505. Take the Mysore case; is it your opinion that the ultimate settlement of that case was correct or not?—I think there was a great deal to be said on both sides of the case. I think the simple plan now is to accept what has been done; I think that opening questions of this kind, and eliciting the opinions of men, like myself, who have held high positions in India, is not a good thing; it unsettles men's minds, and may lead them to think that you are going to do what you have no intention of doing.

5506. If you think it undesirable to send these cases to such a tribunal, I suppose you would also consider that interference by Parliament is prejudicial?—Of course cases may occur in which the interference of Parliament may be valuable; but I think myself that in the long run it would not be valuable. There is one modification which I may make; I think the natives of India would not like it to be laid down that Parliament could not interfere, or would not interfere. I think, whether it is for good or for evil, they value that power which Parliament has of interfering.

5507. Sir *D. Wedderburn.*] Is it not the fact that in some of these cases where native princes are concerned, our Government may be called upon to decide, more or less judicially, in a case to which they themselves are really parties?—Of course there are cases which arise which, in some degree, Government are interested in; but I think under the present system, with the present rules which have been laid down, and which have been admitted on all sides to be right and expedient, there is very little chance of any undue bias on that account; and I think, even if there were, there are reasons on the other side which outweigh any inconvenience of that kind.

5508. You spoke just now of the great expense entailed upon India by the present system of recruiting the European force, and you also said that when the Government of India were anxious to reduce the European army, they invariably encountered great disinclination on the part of the Home authorities; do you attribute those results to the amalgamation of the Indian and the European armies?—No, I do not think that that had anything to do with it.

5509. You would not be in favour, supposing it to be possible, of the re-establishment of a local European force?—No, I would not. I was very much against its absorption, but now that it has taken place, I would maintain the existing condition of things.

5510. You consider it an irrevocable step, even though it may have been a mistaken one?—I would not say that it was absolutely irrevocable, but I would not advocate a change; I think all changes have more or less of evil in them, especially in India, and I do not see that there would be any good so clear and so distinct, as would induce me to advocate going back to the old system.

5511. As regards the recruiting of the Indian Staff Corps from the British army, I suppose that the abolition of purchase, so far as it may tend to introduce less wealthy officers into the army, would be favourable to the facility of recruiting the staff corps?—It would.

5512. The native officers in the native army are, I think, in this position, that the senior native officer is junior to the junior European officer?—I suppose if it came to that, if all the officers were killed over the junior officer of the regiment he would take the command; but, in fact, practically no difficulty really arises on that subject.

5513. I was only asking the question as a matter of fact; in that view the native officers are practically in the position of non-commissioned officers, are they not?—No, they are not in the position of non-commissioned officers; they are quite different; there is a separate set of them.

5514. What I mean is, that a native officer, however long he may have been in the service, cannot be placed in such a position that he would command a British ensign or sub-lieutenant?—No, he could not.

5515. Now in Algeria, in officering the native troops, the French employ native officers who take rank along with the European officers, up I think to the rank of field officer, and it is found I believe to work very well; how do you think such a system would work in India?—I do not think that it would work well.

5516. What would be the serious objection to it?—I think pride of race; the feeling of the English would revolt against it, and I do not think it would work at all. I doubt whether it really works well in Algeria. You often hear of things working well, but when you come to test the matter, you find that they do not. We used to hear of the excellence of the general system of the French army, and you see how it broke down under trial.

5517. Is

5517. Is it not desirable as far as possible, to offer a career to young men of spirit and promise among the natives, a career which they might be proud to embrace and where they might look for something like real promotion? — There is a great deal of force in that I admit, but I do not think myself that it would work well practically.

5518. But you are in favour of generally employing the natives as much as possible in the inferior grades of the civil service, in engineering and other departments?—I am, so far as it is consistent with our rule, but I do not think myself that a mixture of English officers and native officers rising by seniority of service such as the present system in the English army, would work well. I have had some experience, not of that kind of system, but of a state of things where native officers were in much higher positions than they are in our regiments, and on the whole it did not work well. In the Punjaub we had several regiments of what we called military police; these regiments stationed on the frontier were more military than police; practically, when there was anything to do they went out into the field just like the others; there was only one English officer to each of these, and sometimes there were two regiments in the interior of the country under one officer, and there were native commandants to these regiments; they were very well selected men, some of them had been tried officers under the Sikh Government, and others had risen in the service of our Government; but there was a great deal of complication now and then among them, and when the mutiny occurred, though they all behaved very well in the sense of loyalty, nevertheless, there was a great deal of difficulty about them.

5519. There are natives now in the Covenanted English Service, and English civilians may be called upon to hold offices under those natives; have any inconveniences resulted from that?—There are no natives in such high positions that they would control and command in the civil administration Englishmen of rank.

5520. But what is to check a native when he has once obtained access to the ranks of the Civil Service, from rising to the very highest position?—It has to be seen how it will work; none of them have been in the service sufficiently long yet for us to see how it will work; and it seems to me very doubtful whether it will work well; but I think, supposing difficulties arose, or rather were likely to arise, the Governors of provinces and the Governor General would so arrange as to keep these natives in appointments where they would not come into collision with Englishmen of rank. The only high positions in India that natives hold, such as you suggest, are in the High Court of Calcutta; in that court there is a native judge, but he is surrounded by English judges; it does not come home to suitors that this native judge is deciding a case; there are two or three judges sitting together, and the consequence is that the public do look on a particular decision as that especially of the native judge. But supposing that he were a magistrate and collector, or a commissioner of a large district in India, I think you would find great difficulties in working the administration with English civilians, and military men in civil employ, under that native. I think there would be great difficulty for him to hold his own.

5521. Have you ever considered the question of the great saving that would be effected to India if the Imperial guarantee were obtained for the Indian public debt?—I have no doubt that it would be an excellent thing, and I have often thought of it, and talked it over with Secretaries of State and other people, but the simple answer was that you would never get Parliament to agree to such an arrangment.

5522. Beyond that you see no objection to it?—I think it would be a very excellent thing myself, in its way; I do not think much of the argument against it, that it would induce habits of waste and extravagance; I do not think that it would do anything of the kind; but I think that the broad argument against it is that the people of England at present in Parliament would be very adverse to it.

5523. Mr. *Fowler.*] I think I gathered that your Lordship's opinion was in favour of the present military system; you do not see that there is to be any immediate reduction of the military expenditure in India?—I think that there is no royal way of doing it, but that by carefully looking to economy in the army you could lop off here and there excrescences, and in that kind of way save money.

5524. As regards the Madras army, are we not maintaining a very large native army in Madras in times of peace, and is it not the fact that during a long course of years we have had no war there?—I think it is unnecessarily large; we have reduced it considerably of late years, and the feeling which prevented our reducing it further was partly that, of course, it was a very unpopular thing, both with the men and with the officers, and partly that by a little arrangement it constituted a reserve for the other armies; so that if you wanted to send an expedition anywhere beyond the frontier, you would take the troops of the other Presidencies, who are of a more warlike character, as regards the men (not as regards the officers), and then push the troops of the Madras native army up in the place of the others, and hold the country in that way for the nonce.

5525. So that, in fact, they are rather a police than an army?—I would not give them the name of a police, it would hurt their feelings to do so; I do not say that you could not employ them on foreign war; the officers are an excellent body of men, as far as I have had any experience of them, or as far as I have heard officers of rank and long experience speak of them; but I think that those troops are naturally less warlike than the people of Northern India, that they have less physique, and during the last 50 or 60 years of peace they have lost a great deal of the warlike tendencies they had in former days; they are not the men of the times of Clive and Lawrence, and such men of 70 or 80 years ago.

5526. Have not some of the irregular corps been a great deal officered by natives; the Scinde Horse, for instance?—They have always had a body of native officers, but they have not been officered by natives distinct from English officers, except the corps of military police, and there all the work would devolve upon the native officers, but the English officer attached to such corps would be always with them in actual fight.

5527. What would be the proportion of English officers; not above two or three to a regiment, I suppose?—Under that system the Punjaub force of cavalry had probably three

Lord *Lawrence.*

27 June 1873.

officers; the cavlary would have been about 500 men, and the infantry regiments about 800 men; and there were three or four officers with each regiment.

5528. What were the class of the native officers?—That is one of the things which people do not estimate fairly in the irregular system; the officers were generally cadets of old families, the gentry of the country; of course there were men who had risen from the ranks, but they were exceptional cases, men of great force of character and courage, and good conduct, and who, after a long training, had got their commissions as a man rising in the English ranks would; but the great bulk of the native officers were sons of gentlemen, men with high feelings of honour, men of quite a different character and tone from the ordinary men; these native officers got their positions very young, and if such an officer was killed, his son was often brought forward, and rapidly passed through the ranks of the non-commissioned officers. Sometimes the authorities would select a young native gentleman, and make him a commissioned officer without going through the ranks of the non-commissioned officers, and in that way he rose to command his company or troop when he was 28 or 30 years of age, we will say, or perhaps younger.

5529. Some of them were relatives of the minor princes of India, were they not?—Some, but very, very few; that is not a class which, as a rule, would make good native officers.

Tuesday, 1st July 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Beckett Denison.
Sir George Balfour.	Mr. Grant Duff.
Sir Thomas Bazley.	Mr. Eastwick.
Mr. Beach.	Mr. Fawcett.
Mr. Birley.	Lord Edmond Fitzmaurice.
Mr. Bourke.	Mr. Robert Fowler.
Mr. Candlish.	Mr. Lyttelton.
Mr. Stephen Cave.	Sir David Wedderburn.
Mr. Charles Dalrymple.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

The Right Honourable JOHN LAIRD MAIR LORD LAWRENCE (attending by special permission of the House of Lords), further Examined.

Lord *Lawrence.*

1 July 1873.

5530. Mr. *Fowler.*] Is your Lordship satisfied as to the permanency of the opium revenue?—It is a very difficult question. I am inclined to think that there is some danger of our gradually losing a portion of the opium revenue. Still, on the other hand, it has been prophesied for the last twenty years that we should do so, and so far from any tendency that way being experienced, the revenue has largely increased. Still, in the nature of things, it strikes me that you are likely to lose a portion of it in the course of time, because I do not see any reason why the people should not grow more and more opium in China and in Persia, and on the coast of the Arabian Sea, and other countries, and that opium would of course come into competition with ours. It is said that our opium is so very much better prepared than any other kinds that all the upper classes, all those who can afford to pay for it, prefer it to the other opiums, which are inferior.

5531. Then you would look upon that as a source of revenue which would be likely to continue, but not to increase?—I should think it would hardly go much higher; the return is very great now, quite remarkable, I think.

5532. Your Lordship, I think, was Governor-General at the period of the failure of the Bank of Bombay?—Yes, I was.

5533. With reference to the relation of the Government to the Presidency banks, may I ask whether the Government ought not to exercise and does not exercise a very powerful influence in their affairs through carefully selected Government officers?—They exercise a very considerable influence, of course, inasmuch as they select a certain number of officers to represent them in the banks.

5534. That, I believe, has always been the case with the Bengal Bank?—Yes, with the three banks, the Bombay, the Bengal, and the Madras Banks.

5535. Does the history of the Bombay Bank render any change in the relations of the Government to the Presidency banks necessary or advisable, in your opinion?—In my opinion no change is advisable; but that is not the general view of the case. The general view is the other way, that it is expedient to interfere, and to make modifications. I think that as long as you select good men to represent the Government interest in the bank, and look fairly after them, nothing will happen, but that the banks will go on very well and flourish. But, of course, if you put careless or indifferent men into a bank, and do not look after them, anything may occur.

5536. Then it would follow that if the Bombay Government had exercised as much care with reference to the Bombay Bank through its Presidency Government Directors as the Government of Calcutta did with respect to the Bengal Bank, that bank might have passed as safely through exceptional times as the Banks of Bengal and Madras?—Well, I think, it would; but I think that just this may be said in defence of the Bombay Bank, that that was a very extraordinary time in Bombay; people all seemed to have gone mad in the way of speculation, and the circumstances were such that it did require very great caution no doubt, and the Bombay Government I think were very unfortunate in the men they had representing them in the bank at that particular time, when they wanted, above all other times, to have had exceptionally good men if possible.

5537. That, in fact, the Government Directors partook of the general financial mania which prevailed in Bombay at that time?—I fancy they did. I was not down there, and I had not personal knowledge of what was going on; but I could gather from what happened, and the discussions which ensued, and the correspondence which took place, that that was the case.

5538. If the Government of Bombay had furnished you with the information, which I believe your Lordship repeatedly called for after authorising the advance of a million and a half to support the bank, might not a large proportion of the capital have been saved?—I think that if at the time when the Government of India let it be known that they would support the Bombay Bank, arrangements had been made by the Government of Bombay to draw in and

Lord *Lawrence.*

1 July 1873.

realise wherever they could; and, in fact, to be as cautious and as prudent as it was possible to be under the circumstances, then there was still time to have saved a great deal of money, perhaps to have saved the bank altogether; but at any rate to have saved a great deal of the assets of the bank. But sufficient care was not taken at that time, and the consequence was that the bank went from bad to worse, and at last the climax was that the Directors allowed a very large sum of money (I forget exactly how much it was; I think it was about a quarter of a million) to be advanced to Prenchund Richund upon security, which was to a great extent worthless. That was the last blow which broke the bank.

5539. Was not the Bombay Government's application to you to support the bank based upon political and financial considerations, in order to avert disasters from the Presidency?—It was based, no doubt, upon financial and political grounds; if the bank had gone, it would have pulled down a great many other banks and houses in Bombay; and, of course, there might have been a very large amount of disaster; but beyond the fact that every mischief that occurs to a large body of influential people to a certain extent, does injure the State indirectly, it would not have hurt the Government.

5540. If the Bombay Legislative Council had exercised ordinary care, is it not the fact that the power to lend on unguaranteed companies would not have been exercised?—Certainly, under the old bank law they could not advance money on that kind of security. When the new charter was brought out, that clause was omitted which prevented the bank from advancing money on unsatisfactory security.

5541. Mr. *Fawcett.*] Not sharing in the opinions which your Lordship has expressed in favour of extending the permanent settlement over India, I am anxious to know whether there are many persons influentially connected with the Government of India, who hold the same opinions on that subject as you do?—Well, I cannot say who hold that opinion, and who do not. At the time that Sir Charles Wood, now Lord Halifax, sent out instructions regarding the permanent settlement in 1862, there were a good many officials, both in India and in England, who held that view; but I do not know to what extent that view is now held.

5542. Was that Despatch which Sir Charles Wood sent out, in favour of a permanent settlement, approved of by a majority of his Council?—Yes, I think so.

5543. Then, as a great many of those who were on the Council are still on the Council, I presume it is fair to assume that a great many persons who are at present on the Council are in favour of carrying out his policy of extending the permanent settlement?—Well, I have never asked them since that time whether they have changed their views or not; but it is possible that some of them have changed their views.

5544. But, as far as you know, they have made no public declaration of a change?—No; not that I know of. The only one in the Council who was very strongly against the permanent settlement was Mr. Mangles; I do not remember anyone else at this moment who was very much against it.

5545. Therefore it would be quite possible, of course, without consulting Parliament, or even without obtaining the consent of the Governor General, for the Secretary of State, if he obtained the consent of his council, any day to send out a Despatch similar to that of Sir Charles Wood's, giving directions that, as far as possible and as rapidly as possible, your views in reference to the permanent settlement should be carried out in India?—Well, he could, with the concurrence of the Council, send out such a Despatch; but I hardly think that he would do so without consulting the Governor General in India in the first place.

5546. Supposing that after consulting the Governor General and all the authorities in India, the Secretary of State found that he disagreed with them; if the Secretary of State was a man of strong will, although he may have been suddenly put into office, never having given a day's consideration to India, he may carry out a policy such as this, vitally affecting the future fortunes of India, if he likes, against the remonstrances of all the highest officials in India?—He could do so, but I do not think he would.

5547. Did Sir Charles Wood consult the authorities in India?—His Despatch was based practically upon the Despatches which had come home from the Governor General in India; in fact, the Despatches upon which that policy was based went further than Sir Charles Wood and his Council went; they advocated a redemption of a considerable portion of the land tax, up to 10 per cent. in the first instance; and it was in substitution of that recommendation that Sir Charles Wood and the Council made the recommendation that was made by them; but even then, when it went out, it did not go out as an absolute instruction which must be carried out, but more as a suggestive measure.

5548. Has it ever occurred to you that the permanent settlement does not give the smallest security that the cultivators of the soil will be in the least degree in a more favourable position than those cultivators who cultivated under a different system. In fact, for instance, taking Bengal as an example, there is nothing whatever associated with the permanent settlement, is there, to prevent the zemindars who benefit by it extorting the most extravagant and ruinous rates from the cultivators of the soil?—No doubt that is the case in Bengal as regards the tenants at will; but even there, as regards the other tenants with beneficial interests, the power of the zemindar over them in the way of extracting rent is limited.

5549. But if you lease a great deal of the country on the condition of a fixed rent to a zemindar (and that is what it comes to), there is nothing whatever in the permanent settlement, is there, to prevent him from sooner or later making every cultivator of the soil a tenant at will, and placing constantly every cultivator of the soil in a position in which he might extract from him the utmost rent possible?—Well, in making your permanent settlement you might so regulate the details that he could not do it. Now, for instance, in the settlement that I contemplated, the permanent settlement in Upper India and other parts of India, he certainly could not do that, with the exception of the case of the tenants at will; he could unquestionably do it in their case, but he can equally rack-rent them now.

5550. But it is proposed to place no limitation on the letting of the land, as I understand?—Not as

as regards the tenants at will, but as regards all the other tenants, and they are very numerous.

5551. But, ultimately he may convert all the others into tenants at will, may he not?—No, I do not think he could. I think that one of the great defects of the settlement in Bengal and Behar was, that while there was a clause put in the law that the Government should have the right, if the great landholders abused their powers, of interfering and regulating the relations between the two, that was never done; but if it had been done, I think it is quite clear that, as regards all the tenants, except the tenants at will, we could have saved them from extortion.

5552. You would admit, I presume, that if there was a very great change in the value of money, such as took place, for instance, from the discovery of the gold and silver mines in South America, if, for instance, the value of money was reduced by 400 per cent., the revenue resulting from the permanent settlement must necessarily be reduced exactly in the same ratio?—If such a thing happened, no doubt it would.

5553. Then, considering that suddenly the aggregate yield of gold was increased in Australia and California by more than 400 per cent., and that the experience of the gold discoveries in South America, proves that the ultimate effect of a great increase in the yield of precious metals is not shown until after the lapse of a considerable number of years (it was not shown in that case for nearly a century), and, considering also that many competent authorities say that the yield of gold and the other precious metals is likely greatly to increase when these gold mines are properly worked, and considering further that all the best authorities now almost unanimously agree that a very considerable and marked depreciation in the value of the precious metals has been going on, many estimating this depreciation to amount altogether to as much as 25 or 30 per cent., do not you think that it would be hazardous so to arrange the future revenue of India as to let it rest on the basis of a fixed money payment?—I would hardly say that it was hazardous myself. It does not appear to me that there is any reasonable probability of what you have described occurring; but, assuming that it did, it seems to me that you would be able, in various ways, to raise revenue in India which would meet the losses which you have described. Assuming that it was deliberately decided that this was an extremely hazardous measure, I think that you might meet that by settling the permanent settlement on a condition that, in cycles of years, the money payment would be reconsidered with reference to the price of certain staples.

5554. You propose then that the permanent settlement should be based the same as the tithe commutations in this country, upon the price of agricultural produce?—Something like that; but I would not reconsider the prices in such short cycles as they do as regards tithes; I would say at the end of 20 or 30 years.

5555. Then would not that introduce just the same kind of uncertainty in the minds of the cultivators, as you now attribute to the 30 years' settlement; it would virtually lead every 30 years to a great struggle, and a great dispute, between the Government on the one hand and the cultivator on the other, as to whether there had been or had not been a depreciation in the value of money, would it not?—I think not; it would be a very simple matter, in the one case, to calculate whether the money assessment should be raised with reference to prices of the day of given staples; but in the other case, it would be to go into an elaborate scrutiny of the assets upon the land, a remeasurement of all the lands, and a reconsideration of the value of each field, and all that. The process that a village goes through now under the present settlement cannot be one of less than a couple of years; and then there is the period prior to the settlement, which has to be taken into consideration, when there is a tendency to throw the land more or less into poorer cultivation, and not to renew their wells, and so forth.

5556. Then I may assume that, in saying that you advocate the permanent settlement, you do not want a permanent settlement analogous to that which exists in Bengal; but that you would like one based upon the price of agricultural produce?—I would be still inclined to have a settlement based upon a money assessment; but rather than not see a permanent settlement, I would be content with the other arrangement.

5557. When I was pointing out to you just now the possible loss that might result if the whole land of India was permanently settled, supposing that there were a depreciation in the value of money, you said that the loss of revenue which might result from that source could be made up from other quarters. Will you describe to me, if you please, from what sources; for instance, if you suddenly found that from the depreciation of the value of money you virtually lost 5,000,000*l.* of revenue, what new taxes would you impose, or what existing taxes would you increase to make up the deficiency?—I think, under the system that I advocate, in course of time the yield of the land would become immensely larger; you would derive a very large revenue in course of time by the extension of irrigation; I think that it would yield a very large sum, because, with the permanent settlement, the people would go on with great heart and vigour to get as much as they possibly could out of their land, and you might raise then your water rent very considerably, without its bearing hard upon the people, because the yield from irrigation, compared with the yield on dry land, is very large; I think in that way you would get a very large revenue, and that the great mass of the people would become very much better off than at present.

5558. But you have expressed an opinion that you would not compel the people to take water unless they liked; you object strongly to the policy of imposing a compulsory irrigation rate; and you are probably aware that the Government of India are so extremely doubtful at the present time of many of their irrigation works paying (and some of them undoubtedly have not paid), that they actually inserted a clause in an irrigation Bill lately, so little was their confidence in their success, saying that if the scheme did not produce 7 per cent., the people should pay for the water whether they took it or not. If it is necessary to resort to such compulsory powers as that, is it certain that the people would take the water; and if they did not take it, would it prove a great financial success?—I have no doubt in my own mind that they would take the water; but what I do admit, which I have already said in a previous examination is, that it takes time for them to take the water as they ought to do,

Lord *Lawrence.*

1 July 1873.

and as they would do when they appreciate it, when they see the great value of the water, they gradually learn to appreciate its value; they see that their crops are doubled, trebled, and perhaps quadrupled, and that instead of being only able to grow inferior crops, they can grow very valuable crops; in that way the advantages of irrigation become apparent to them, and then, in course of time, they take the water very extensively. I do not think that it was fair to argue that because the Government adopted an erroneous policy in the way that you have described, therefore, that is an evidence that irrigation would not pay; I am convinced in my own mind, not from theory, but from experience, that irrigation from canals would pay, and pay largely, where it is conducted in a proper economical way.

5559. I am not quoting this law or this proposition of imposing a compulsory rate, whether the people use the water or not, as a proof that the irrigation works would not pay, but I think that it affords evidence, that at any rate the Government thought they would not pay, because otherwise they would not gratuitously have ever inserted such a clause in the proposed Act?—Of course there is a great deal in what you say on this point, but I am inclined to think that Government came to that conclusion in something like this way; they felt that there was a strong party disinclined and adverse to the construction of these canals, and they thought it was so important for the good of the country that canals in many places should be constructed, that rather than run the risk of the system of extending canals through the country being put a stop to, they preferred enacting that law. They came to that conclusion, but I think it was an erroneous conclusion. It was suggested in my time to do the very same thing, and I fully considered it and talked it over with men of ability and experience in India, and who thoroughly understood the subject, and they agreed with me in thinking that it was not necessary.

5560. Without in the least degree wishing to depreciate the advantages of irrigation, and the pecuniary gain which would result to the Government and to the people if irrigation works were properly carried out, you will admit that many irrigation works, from their bad construction, have proved disastrous financial failures in India?—Well I do not think that any of the irrigational works that have been undertaken by the Government have turned out to be failures. At this moment, the only work of that kind is the one in Madras, which was undertaken by a company, and for some reason or other hitherto it seems to have been a failure. I do not understand exactly why or wherefore, but so apparently it is; but I should hope even that that work would hereafter be so improved that it would pay.

5561. The Orissa Irrigation Works have not paid, have they?—It is quite true that the Orissa Works, I believe, have not paid, but they were made under very peculiar circumstances. One of the great objects of the Orissa Works, as I understand, was, to regulate the waters from the great rivers in Orissa. At one time these rivers carried devastation all over the country, and at other times the failure of the water caused drought. But, in point of fact, the failure of the water was quite an exceptional case in that province. I am not aware that within the time that the English have had India, there had been a drought in Orissa at all; it was really and truly that there was a tremendous flooding of the country, and great damage was continually being done. It struck the engineers that by regulating the supply of water, they would avoid the losses incurred by the flooding of the country, while that water might be used for irrigational purposes. I would look upon that as a great political scheme, independent of a mere irrigational work.

5562. I suppose you have carefully examined the accounts of the Ganges Canal, excluding the Eastern and Western Jumna Canals, which were partly constructed not by the British Government, and reckoning the loss of the interest on the capital while the Ganges Canal was being constructed, which you ought to reckon, are you prepared to say whether the Ganges Canal pays at the present time 2 per cent.?—I do not know exactly what the Ganges Canal at present pays; but I should think that it paid a great deal more than that.

5563. I have looked into the accounts, and making allowance for the loss of interest on capital before the Canal was open, according to my calculation it pays less than 2 per cent.; I should be glad to know whether you could say that you have looked into them, and have arrived at a different conclusion?—I think that there is one element in the question, which apparently you have not taken into consideration, and that is the great saving of revenue which has been effected by the existence of that Canal. Without making an accurate calculation from year to year, which I do not think you could easily do, and which if you could do, it would not be of any particular value, I would say in a broad and general way, that the money which you saved in the year 1861-62 in the shape of land revenue, and in the shape of saving the property of the people, was far more, on the most moderate calculation, than all the accumulated interest which we lost until the Canal paid say 5 per cent. on its actual outlay.

5564. Considering the great weight which your authority will carry, I am only anxious to find out whether that opinion is based upon a general impression, or whether it is based upon a careful examination of the accounts, and from making a most accurate calculation you can as to the gain resulting from the source which you have just indicated?—The actual authority which I quoted as to the saving of land revenue, and the saving of property in the drought of 1861, was Colonel Baird Smith, an engineer officer of great ability and reputation, who is now dead, who was sent up by Lord Canning immediately after the famine, when the effects of the famine could be seen, and he got together all the data of the famines which had occurred in previous years; and I have been present in India, living in some of the districts where the famine in 1838 and the famine in 1834 occurred, and I have no doubt myself that the estimates made by Colonel Baird Smith were very likely correct, or at any rate were very near the truth. But taking his data, and assuming that one-fourth of it, or one-sixth of it, or one-eighth of it was a real saving, instead of what he put down, I would say that that value was more than equal to all the loss of interest during the time that the Ganges Canal was under construction.

5565. Yes; but then what I understand Colonel Baird Smith's calculation to rest upon is this: it

did

did not say, "If this canal had not been constructed so much land would not have been irrigated which is irrigated now;" but what he simply said was this, was it not, that if the whole of the land had been irrigated over which the famine took place, such and such results would have followed?—No, I think not. He says that in the Agra division, which is in a cluster of five or six districts, and in the Allahabad division, which comprehends five or six districts more, the actual loss of revenue in 1837-38 was a million in each division, putting aside the saving to the people. I think it was approximately true in that case. There is no doubt that on some of these lands some cultivation would have gone on under wells; but that is very scanty compared with what you get from canals; and where the land is distant from the water, the wells become dry very often, or fail to a very great extent, when you want the water most to complete the crops, to give them their last two or three waterings.

5566. But the point which I wish to find out is this, whether Colonel Baird Smith distinctly stated that the whole of the land in the Agra division, in which this loss of revenue to the extent of a million occurred in 1837, was irrigated by the Ganges Canal in 1861?—He does not put it exactly in those words, but very much in words to that effect; speaking from memory, I should say that what he intended to convey was, that in those lands on which in 1837 the crops more or less entirely failed, there was an abundant harvest in 1861, consequent upon the irrigation from the canal.

5567. It seems to me that it is impossible to make anything like an accurate calculation on the subject, in consequence of the vagueness with which this particular report to which you refer is written; you speak from memory, as I understand you?—I travelled through those districts in 1837; I saw the utter barrenness of the land; the whole country was waste; there was not a green leaf of any kind or description in many of the districts. I saw large tracts of land under canal irrigation in other districts in those very years of which we have been speaking, and there it was one sea of corn and barley.

5568. The loss of revenue which you think might result from the permanent settlement, you would expect to make up from the general improvement that you think would result in the condition of the country, and also from the extension of irrigation works?—Largely so.

5569. Now, with reference to the question of immediately increasing any of the existing taxes, or of imposing any new taxes, I want to ask you your opinion upon this point; supposing that some contingency should arise which would render it necessary suddenly to obtain an increased revenue, say next year, of five millions; we all know that an increase of revenue of five millions could be easily obtained in this country by increasing the existing taxes, or imposing many new ones which would suggest themselves to any mind; but do you think that it would be possible to increase any of the existing taxes in India, with the view of effecting an important increase of revenue, or are there any new taxes that you can suggest which you think might be imposed with that object?—My view is, and I have always said, that India, as a whole, is an exceedingly poor country at present, and one of the great objects which I have in view is, as it were, to relieve that poverty by a permanent settlement and in other ways, and, therefore, if you ask me what I would do now, I would say, as regards my policy, that if it were carried out, it strikes me that when you wanted a considerable revenue you would be more easily able to raise it under those circumstances than now. But if you come to this point, what should be done if such circumstances happened that we required five millions next year, I do not see where you could get it; you could get some of it, but not any large portion. I should be for putting on the income tax again; as an absolute necessity, I would have light export duties; I admit that it is better not to have them, but still I think that you might raise in that way two, or three, or four millions of money in a case of extreme necessity.

5570. But, going through briefly the important items of revenue (and it seems to me that this really raises the fundamental point which we have to consider), you have already expressed an opinion with regard to the salt duty, that that cannot be increased, and that you think it should rather, if possible, be reduced?—I have said that, and I think so.

5571. You have also expressed yourself as thinking it quite possible that the present rate of salt duy produces discontent, because over our frontier in some districts the people of India obtain salt nearly duty free?—On very light rates, compared to our rates.

5572. Are you aware that the salt duty was lately raised in Madras 18 per cent., and that although the duty was raised 18 per cent. the increase of revenue was only 12 per cent.?—I saw that statement, but I think you cannot, from a year, or two years, judge whether it would be a loss of revenue rather than an increase.

5573. But still, if, when the duty is increased, it does not produce a proportionate increase in revenue, it shows, does it not, conclusively, that the amount of duty diminishes the consumption?—No doubt, unless you take stringent measures to prevent smuggling, and so forth. I am not an advocate for raising the salt tax; I think that a light salt tax is a very important matter; but assuming that we insisted upon having a very heavy tax in the Bengal Presidency, it does not seem to me, if you want money, that it is unreasonable that you should try and raise the salt tax in Bombay or Madras.

5574. That is the first important item of revenue, and you think that that cannot be increased?—No; I think in course of time, when the people become very much richer, then, perhaps, they would be better able to bear the salt tax than now.

5575. But not at present?—Certainly not.

5576. Next, with reference to opium, of course we get the utmost that we can from opium?—Yes.

5577. You have already expressed the opinion that it is quite possible, from opium being more extensively cultivated in China and Persia, indeed, that the probability is, that our revenue from opium will rather decrease than increase?—The chances are that you will get no more from opium; at any rate, you cannot rely upon getting any more from it.

5578. Are you aware that the Government of China, in order to discourage the growth of opium, have placed various prohibitions upon its growth, and have imposed license duties and

Lord *Lawrence.*

1 July 1873.

other prohibitions, which amounted to an excise duty of something like 100 per cent., and now that the Chinese have discovered that no power on earth will keep British opium out of China, and that we will rather go to war with China than not sell them opium, may it not be quite possible that they may arrive at the conclusion that this policy of theirs to check the growth of opium in China is altogether a mistake, and of no use, and that they might abolish that excise duty; and if they did so, would it not at once give a most powerful stimulus to the growth of opium in China?—No doubt it would.

5579. With reference to Customs, which I take as the next branch of revenue, I suppose if the Customs duties were increased, considering the great poverty of the Indian people to which you have referred, it is very likely that not more revenue would be raised from such an increase of duty?—Not under present circumstances; but if the people became richer then there would be.

5580. Then, again, with reference to export duties; if an attempt was made to increase the export duties, to put an export duty, for instance, upon cotton or upon jute, it would *pro tanto* place the trade of India in a, comparatively speaking, unfavourable position, and would bring to bear against the Government of India the very powerful pressure of the commercial classes in England, would it not?—That is quite true.

5581. Do you think, considering that India is scarcely represented at all in this House, that it is only indirectly represented in the House, and that the commercial classes of England are powerfully represented in it, that any Government would, for one moment, be likely to resist an opposition brought to bear upon them from people who have votes against putting on such an export duty?—I think not.

5582. Therefore, considering how India is governed, that India is governed by the House of Commons, and that India is governed by the Secretary of State, who, after all, is a member of a Cabinet whose existence depends upon the votes of the House of Commons, you cannot rely upon the imposition of an export duty as giving you an increase of revenue in India, can you?—I am afraid not.

5583. You, do not think, I suppose, that the stamp duties could be greatly increased?—Not under present circumstances.

5584. Therefore, so far as the present position of Indian finance is concerned, if you wish to obtain more revenue (bear in mind that all my questions are addressed to the present), you really have no other resource left open to you as an immediate resource, except an increase of the income tax, have you?—Perhaps not.

5585. You are aware that the income tax has been condemned by an extraordinary concensus of financial authorities in India?—Well, I would hardly say that myself. I think there are as many officials in favour of it as against it.

5586. You are aware that three successive finance ministers have condemned it in the strongest possible terms; Sir Charles Trevelyan, Mr. Laing, and Mr. Massey?—Yes, they did; I would say, however, that I do not go so much upon authority as I would go upon experience, and judgment, and knowledge of the country; and, from analysing their arguments, I do not place much weight on their arguments really. Of course I place this weight in them, that I know it is very unpopular with those that pay the tax; but then it simply comes to this, that the majority of those that pay the tax do not want to pay any tax, and it is really a question of their pockets. I am not talking now of the three ministers, but of the people who pay the tax; I think it is mainly a question with them of being exempted from what they do not like to pay.

5587. But has not Sir William Muir, who is the next Finance Minister in India, after collecting the opinions of all the officials in the north-west, and has not also the present Lieutenant Governor of Bengal, Mr. Campbell, and have not a host of other authorities who might be quoted, referred to this as the great disadvantage of the income tax: not the amount of the tax, but the abuses connected with its assessment and collection; is not that the disadvantage on which they particularly dwell?—I admit that Sir William Muir is a great authority on the subject, and his opinion would have great weight in my mind. I do not know that Mr. Campbell is very much against the tax; I saw a paper of his, in which he rather hinted that if they would give it to him for local purposes, he did not think it would be so objectionable.

5588. You have probably seen a blue-book which has lately been published, containing the opinions of a great number of officials as to the effect which the income tax produced in India; they were stated in letters, in reply to a circular which was issued, I think?—Yes, I did see it, and I looked through it.

5589. And you probably have noticed this, that even those who express an opinion favourable to the income tax, almost, I believe, without an exception, dwell upon the very great mischief and harm that is done by making the tax a varying tax; they speak of the extent to which the people are frightened and alarmed by having the tax one year 1 per cent., another year 3 per cent., then going back to 1 per cent., and then increasing it again?—I think that there is truth in that. However, I think that if they fixed the tax at a moderate rate, say at 2 per cent., and did not increase it, and kept it as a source of revenue, and took great care to see that it was not abused, and if such an arrangement were made whereby there was no excessive extortion, the tax would not be so unpopular even as it was.

5590. Then you agree in these opinions, that, considering the circumstances of India, if you have an income tax at all, it is of the utmost importance that it should not vary, but should be fixed?—I think, as a rule, it should be fixed. It would be a most extreme case where I would raise it, and then, of course, I would go back as soon as I could to the old standard.

5591. Therefore, this being the case, we unfortunately seem to arrive at this conclusion, that so far as the present financial position of India is concerned, if you wish at once suddenly to obtain more revenue, the only means that you have of doing it is to increase or vary a tax, as to which it is admitted, by universal consent, to be of the utmost consequence that it should not be varied?—No, I do not think that that exactly follows; I think that you might put on an income tax of a given amount, and maintain that amount, and trust to the general improvement of the country in other ways, and at the worst, not raise it except there was such a thing as a great war or a great convulsion, or something of that kind, when you might raise it to a moderate extent; as a rule,

rule, I would keep it at the rate that was fixed, and that rate should be a low rate.

5592. And you would almost rather resort to a loan than vary it, I suppose?—It would depend upon the political condition of India at the time. The circumstances might be such that I would rather resort to a loan; but under ordinary circumstances I would rather resort to the income tax. I have a great dislike to increasing the debt of India.

5593. With regard to local taxation, you probably are aware that in consequence of the policy described as the decentralisation policy, various Acts have been passed which give local authorities the power of taxing almost every article which is worn or consumed by the people of India, that this possible amount of taxation is constantly hanging over them?—I am not prepared to say that the local taxation extends to every article in the way that you describe; but no doubt the local taxation at one time was assuming very serious proportions. I think there is a good deal that may be said against some of the sources from which the local taxation was derived; but, at any rate, I am quite against making it in any degree excessive, and I think it was a very wise policy to limit it. But the people of the country, if you are to have revenue for certain improvements about towns and so forth, do prefer paying it in the way that those municipal taxes were raised, rather than pay it in a direct way.

5594. But are not a great many of the local taxes which have been imposed direct taxes, whereas, probably, if the wishes of the people had been consulted, they would rather not have had them direct; for instance, has not a house tax been in many cases imposed when probably the people would greatly prefer an octroi?—Not in any part of India that I personally know. I think in Madras a tax of that kind has been introduced since I came away.

5595. But this local taxation policy has assumed its great development since you left India, has it not?—Well, to some extent it has; but when the income tax was given up, or when the law under which the income tax was raised, expired by efflux of time (it expired, I think, in August 1865), within a very few months it appeared to Sir Charles Trevelyan himself, that he would not be able to get along without something in substitution, and one of the measures that he proposed, was to throw upon the local Governments a considerable proportion of the expenditure on police, particuarly of the towns. Well, they had no remedy; they could do nothing else but either absolutely refuse to respond to the call of the Government of India, or increase their octroi duties. As long as their octroi duties were very low the people did not care about them, for they were hardly appreciable; but when you came to raise the octroi duties in order to meet the increased expenditure on police and other matters, then they began to be felt, and as time passed, it became evident that if some modification was not made the trade of the country would begin to change; that, for instance, the merchants would make their depôts in the cantonments instead of in the towns; and so the matter was brought to our notice, and a modification was carried out, and a reduction of the octroi was made.

5596. But the great development of local taxation took place under the decentralisation policy?—It is quite true; but what I meant to say was, that there was a bias that way from the time that we dropped the income tax.

5597. With regard to the relations between the Secretary of State and his Council, I understood in your previous examination that you said, speaking, for instance, as a typical case in reference to the Indo-European Telegraph, that when it was proposed to throw the whole expense of that telegraph on India, instead of making England bear a part of it, there would be no use in the Council of the Secretary of State objecting, because they had no political influence, and they were unable to resist the pressure which was brought to bear upon the Secretary of State from outside?—I said that that was the practical result; I think that the Council did act in many cases as a very considerable buffer between the people, pressing on expenditure in India, and the Secretary of State, and in many ways helped the Secretary of State to resist that pressure; but when it came to be a very important matter, in which the interests and the feelings of merchants in England were enlisted, then I think that the Council could not resist it with any effect.

5598. But were they not appointed, and was not this great charge thrown upon the revenues of India, with no other object than that they should resist; that was the chief object with which they were appointed, was it not; if not, the duties which they perform might be performed as they are in other Government Departments, by the permanent officials, the under secretaries; why, therefore, should they not, if they thought that this expenditure was wrong, say, "We are receiving a salary from the revenues of India to represent the interests of India; we care nothing about the political pressure that may be brought to bear upon the Secretary of State; no power on earth shall induce us to sanction an expenditure of money which we think is wrong, so far as the interests of India are concerned"?—I think if you had no Council you would find that practically there would be a very great difference in that way. The Council may not be a perfect machinery, or a perfect buffer between those who want unduly to put expenditure on India and the Secretary of State; still they do a great deal in that way. I am sure from my experience of the five years that I was in Council, that had there not been a Council, a very great deal would have been put on India, which was not put on it in consequence of the remonstrances of the Council.

5599. But still, without now discussing whether the Council do any good whatever, or whether it would not be desirable completely to abolish them, I want to know why was it not their first duty to the interests of India to resist, and how can it be said that they were not disregarding an important trust if they did not resist, this political pressure that you refer to, and did not say that no power on earth should induce them to sanction an expenditure which they thought wrong towards the people of India; for what other purpose did they receive their salaries, except to do that?—That seems theoretically a very simple way of acting, but I think in practice it is extremely difficult; and I think, moreover, that if the Council had acted in that kind of way, they would not have succeeded; some movement would have been made in Parliament, or elsewhere, whereby they would have been

Lord *Lawrence.*

1 July 1873.

been perhaps done away with, or their powers would have been so shackled, that in point of fact, they would have been less able to work than they hitherto did work.

5600. Then if a Secretary of State were to go to his Council and say, "I want you to sanction an expenditure out of the revenues of India," and the Council were to say, "We think that expenditure is wrong, and we will not sanction it," and the Secretary of State were then to say, "I shall overrule you in the Cabinet, and you must sanction it;" supposing that the Council then were to stand firm, and say, "We have the legal power to refuse, and refuse it we will;" do you think that any Secretary of State could possibly have the slightest chance in going to the House of Commons and proposing to abolish the Council because they, having been appointed to look after the revenues of India, had faithfully discharged their trust; and even if he could abolish them, would not the men have honourably done their duty, and obtained their proper reward, supposing that they suffered abolition, instead of doing that which they knew was unjust towards the revenues of India?—If the case was exactly as you put it, I think that the Council would resist it; and under such circumstances, if they did, probably Parliament would not put them aside. But then I think cases, as they arise in practice, are not exactly in that way. In all these propositions there is a great deal to be said on both sides of the question. Take that very case of the Indo-European line; it turned out that the Court of Directors in 1856 agreed that India should bear the expenses of that line; the consequence was that that was so great an argument, that it silenced the Council to a great extent on that occasion.

5601. But I take this typical case of the Indo-European Telegraph; you must remember that you said that they did not resist, not because they were doubtful as to the policy, or the justice, or the wisdom of this expenditure, but because of the political pressure which was brought to bear upon the Secretary of State; now there is but one conclusion, as it seems to me, from that answer, and that is this: that the Council thought the expenditure was wrong; they did not think it was either wise, just, or politic with regard to the revenues of India, but that they did not resist (quoting your own words) because of this political pressure being brought to bear upon the Secretary of State?—I have not my words before me, but what I meant to convey was this: that that political pressure would be a great element in the question, no doubt; but I also bore in mind that in a number of these cases there is a great deal to be said on both sides of the question, and that, although on the whole it would have been better to have resisted sanctioning the expenditure, nevertheless there was a great deal to be said on the other side, and that, under those circumstances, there was an increased difficulty in resisting.

5602. But so far as the Council is concerned, you admit that this political pressure must be a great element in their consideration; I venture to ask why it should be; have they not got simply to consider what is just to the people of India, and not what the political exigencies of the Secretary of State may be?—In an abstract point of view that is the case, but I do not know any class of men or any man myself, that I have come in contact with during not a very short life, whose minds are so well balanced and so thoroughly independent, that a strong pressure of any kind has not an influence on them.

5603. But was not that one of the ideas, and one of the great objects for which this Council was appointed, that they should constitute an independent body who would be able to resist the political pressure which it was foreseen would be brought to bear upon the Secretary of State?—And I submit that they do to a great extent do it; only I say that in these special cases, and what I would call extreme cases, that outside influence does affect them, and it is impossible, it seems to me, that it should be otherwise.

5604. Are there any instances in which the Council objected to some charge being thrown upon the revenues of India, and after having protested stood firm and refused to sanction this charge being thrown on the revenues of India?—I am sure that there were many cases in which the Council stood firm and refused it, and in consequence of their refusal, the Secretary of State gave up his intentions.

5605. Are those recorded?—No, the instances would never be recorded where the Secretary of State gave up his view, or accepted their view.

5606. Do not you think that it would be desirable, in order to enable the Council to be supported with a greater weight of public opinion, that their proceedings should be public?—Well, at one time I did think so, but I have rather changed my view. I am rather inclined now to think of latter years, that the publication would rather do harm than good.

5607. But would not this take place, that supposing there were very influential members of the Council objecting to some act on the part of the Secretary of State, if it was known that they objected, some action might be taken in Parliament to strengthen their opinions, which could not be taken unless it was known what their opinions were?—No doubt there is force in what you say; but it strikes me that there would be considerable difficulties in the matter, that it would complicate the relations between the Secretary of State and the Council very much.

5608. Of course there is no doubt about it, that as far as the Government of India is concerned, the Secretary of State is absolutely supreme over the Governor General in Council in all matters of finance?—The Secretary of State in Council is supreme over the Governor General in Council.

5609. With reference to finance, in regard to the relations between the Governor General and the local governments, I will take especially the Government of Bombay; witness after witness has described certain acts of extravagance done by the Government of Bombay, and this expression has been more than once used by official witnesses, that the Government of Bombay took the bit into their mouths, and no power on earth could get it out. Now, how comes it that the Government of Bombay has been allowed to do so many acts of extravagance, and that no Governor General or no Secretary of State could apparently stop it?—No doubt, in many cases, the Governors of Bombay were stopped regarding expenditure.

5610. But in a great many they were not?—No doubt they were not; but what I was going to say was this, that in many cases they were stopped, and in many cases their desire to expend money

money was limited, and that had such restraint as was put forward against those Governors not existed, there would have been a very much greater expenditure than was otherwise the case; but when it relates to particular cases where they spent money in a more lavish way than could be justified, it was owing to various circumstances; sometimes the Secretary of State, from imperfect information or from the force of the eloquence of the Governors of Bombay, did not take that view of the case that the Government of India took of it; and the fact of there being a constant communication between the Governors and the Secretary of State, enabled those Governors to put before the Secretary of State, in a semi-official way, their view of the matter, and to influence the Secretary of State, and in that way these things occurred. Then there is one other point connected with Bombay which, it seems to me, has not been altogether considered, and that is, that the Governor of Bombay, in my time, had got hold of what he thought a great resource, which would enable him to spend money in local improvements, to beautify Bombay, and to improve it in various ways, and they were all excellent schemes in their way, if you had plenty of money; but the Secretary of State believed that this fund would last much longer than it did last, and the consequence was, that he was led to approve of an expenditure in Bombay which probably otherwise he would not have approved of.

5611. I think your answer supplies the clue to what appears to be a mystery; you, as I understand, think that the Governor of Bombay, although in some respects a subordinate to the Viceroy, is in other respects independent of him, because he is allowed to communicate directly with the Secretary of State, and, therefore, it is an *imperium in imperio*?—Yes; I think there was a great deal in that.

5612. We will take, for instance, one typical case, in which it appears to me that the Governor of Bombay was remonstrated with again and again for what he was doing, but he never took the smallest notice of it; I refer to the spending of 175,000 *l.* upon the country house at Poona; I believe the Viceroy repeatedly remonstrated, and the more he remonstrated the more money was spent. Now, what was there to prevent the Governor General from saying that that was an extravagance which could not be tolerated; that such a sum of money as that should be spent upon a country house for a local Governor, where the mass of the people are so poor that, as you say, they can barely obtain subsistence, and that he would absolutely stop it. Did he try to stop it, and, if he did not try to do that, why did he not try to do it?—I speak from memory, because I have not seen the papers connected with those occurrences for five or six years now; but speaking from memory, it is not quite as you put it. The facts, as far as my memory goes, are these: The Governor of Bombay had a house near Poona, which had been from time immemorial the country house of the Governor of Bombay; the Governor, without any reference to the Governor General of India, sold that house, and sold it for a very large price (it was a time when everything was unduly inflated), and got a very good sum of money for it, 35,000 *l.*, or thereabouts; he then wrote to the Government of India, and said, "I have sold the Government House at Dalpooree for this sum of money; the house was very unsuitable, and it was in an unhealthy position; now, I ask you to let me spend this 35,000 *l.* in building a new Government House." I was Governor General, and therefore I mention the circumstances as far as my idea of the matter goes; I was annoyed that he had done this without reference to the Government of India.

Lord *Lawrence.* 1 July 1873.

5613. Had he any right to do it?—Well, I think he ought certainly not to have done it; but, as the case was put, I considered that he got what appeared a very good sum of money for the house, and a sufficient sum to build the new one; and as we were at this time, so to speak, in collision with him on more important subjects, I said to the Council, "I think this is irregular, but we had better give our consent," and accordingly we did so; and the implied, if not the expressed understanding was, that he would build this house for 35,000 *l.*, the sum realised from the sale of the other one. We heard nothing more of it for a time, but we assumed that he was building the house. A year or eighteen months elapsed, and he wrote up and said, "I have spent 90,000 *l.*" (I say all this under reservation). Upon this we were very angry, and wrote him very severely about it, and thought so bad of it that we sent a report home with the papers, saying that we thought it was very improper, and the Secretary of State said that he agreed with us, and admonished the Governor of Bombay severely; but we could not do more than that. It was not only that he had spent this 90,000 *l.* on it, but it was not finished. Then we called upon him, as far as I recollect, to give an estimate of what was necessary to finish it. He did not do that for a long time, and by that time I had left India; it was either just as I left India, or shortly after I left India, that there came up a revised estimate, showing that a great deal more had been spent upon it; but I think that it was not solely and wholly the act, from beginning to end, of one Governor of Bombay; I think that a portion of the responsibility lies upon his successor.

5614. Your account of the transaction corroborates the conclusion which I have arrived at. What I understand is this: first he supposed that the house would cost 35,000 *l.*; he then spent 90,000 *l.*, whereupon he was severely reprimanded by yourself as Governor General, and the Secretary of State; you did not think the case sufficiently serious, although it was grave, to dismiss him; but you reprimanded him, and told him at once to forward an estimate of what expenditure would be required to complete the house. He took no notice of that, or delayed it for a very considerable time, and, in the meantime, went on spending the money?—Yes, that is about the case.

5615. Having, in the first place, sold the house irregularly?—Yes, there was a certain amount of irregularity in it; but I would not have thought much of that; more especially as he got its full value, and probably a great deal more than it cost the State.

5616. Then do not you think that it is a very legitimate conclusion that the local Governor, if he can carry on a series of transactions like that without being re-called, is, virtually, so far as spending money is concerned, independent?—If he carried on a series of transactions like that, no doubt that would be the conclusion; but I think it was a very extreme case, and I do not think,

Lord *Lawrence.*

1 July 1873.

looking back at it, that it would have been possible for the Government of India to have done more than it did; public opinion, the Secretary of State himself, would not have justified, nobody would have justified, the Government of India had they recommended that a Governor of that character should be summarily dismissed because he had done an act of that kind.

5617. Now the Secretary of State for India, who is a member of the English Cabinet, and whose policy is of course partly that of the Cabinet, is not only absolute with regard to finance in India, but does not this take place since the amalgamation of the army, that the Commander in Chief of the British army, without consulting any authority whatever connected with India, may carry out a change in the English army which will exercise a most important influence upon the finances of India?—I could not speak authoritatively as to the absolute powers of the Commander in Chief in England, but I conceive that he would not do that, because he could do nothing in England without the assent, in the first instance, of the War Office, and subsequently, I presume, of the Treasury. Until the given measure which the Commander in Chief wanted to carry out had been introduced into the army in England, it could not apply to India, and he could not make a suggestion, still less could he send out any instructions to India whereby an expense was put upon India which was not in force in the British army as regards England; the mode in which the Commander in Chief in England would operate as regards India is, that he would make a suggestion which would be sent to the Secretary of State for India, and if he approved of it, it would only then go to India and be carried out; if the Secretary of State in Council did not approve of it, they would resist it in England; it is only when it would be backed by the Secretary of State in Council that any suggestion of the Commander in Chief in England, which would cause expenditure in India, could be carried out.

5618. But supposing that the pay of the British soldier was raised, that would affect India?—Of course it would; but then two things would have happened; first of all, it would not be that the pay of the soldier in India would be raised, but the pay of the soldier in the whole of the British Army would be raised.

5619. That is my point; if the Commander in Chief and the Secretary of State for War tomorrow agreed to raise the pay of the British soldier, that would affect the British soldier, whether he was in England or whether he was in India?—Of course.

5620. In that way the Commander in Chief and the Secretary of State for War, who are not directly connected with India, may introduce changes into the British Army which may immediately throw a very large additional charge upon the revenues of India?—It could be done; but I presume that the matter would be discussed in the Ministry as to its bearings on India, and if it was finally settled to introduce it into the British Army, they would take the question as to what effect it would have in India into consideration.

5621. But as to discussion in the British Cabinet, that does not place the financial position of India in a more favourable light, does it, because there are 15 people generally in the British Cabinet who are interested in English finance, and but one who is interested in Indian finance?—That is quite true; but, of course, everything depends upon the Cabinet.

5622. You have probably seen the correspondence between Lord Mayo and the Duke of Argyll, and members of Lord Mayo's Council, in reference to military expenditure, and you are probably aware that complaint after complaint is made in that correspondence of a great amount of military expenditure in India being unnecessary, but being simply caused by the policy of the Commander in Chief at the Horse Guards?—I do not know that I have seen it all; but I have certainly seen some of it. I was shown some of the correspondence, but I do not think that I have seen the greater part of it. I do not at this moment call to mind the particular items of expenditure to which Lord Mayo's Government took exception, but I daresay there were some items.

5623. But when it was proposed, in order to save the revenues of India, the highest military authorities having expressed the opinion that that reduction could be made without any disadvantage whatever to India, to reduce the cavalry regiments by four and the infantry regiments by seven, do you remember that the reply which the Government of India virtually received was this, that only two cavalry and two infantry regiments could be reduced, from considerations connected with British finance?—I do not remember the precise number, but I recollect that there was a correspondence of that kind. It was always difficult to induce the Government to reduce the British force in India, because it would come upon the Home Estimates, and because a portion of that force had been raised for India.

5624. I understood you last time to express the opinion that the Queen's regiments in India were somewhat over officered, because it was our policy to keep up a great number of officers with the Queen's regiments when they are at home; but does it not strike you that what would be a perfectly justifiable expenditure in an extremely wealthy country such as England, is an altogether unjustifiable kind of expenditure in an excessively poor country such as India is?—I think that such expenditure is of much more consequence to India than it is to England; but, at the same time, when you come to discuss these questions from different points of view, you find that very eminent men, men of high reputation, are adverse to propositions for reductions which are made from time to time, and, of course, that renders it extremely difficult to get those reductions allowed. Now, for instance, if the Government of India, with all its Council, were unanimous, the proposed reduction would come with very much greater force in that case than it would in the other; but, in point of fact, it is very often the case that some of the Council differ, and think that the proposition of the Governor General and the rest of the Council is unreasonable, and use their influence the other way, and then, of course, that weakens the reference which comes home.

5625. But, in these cases, the reductions to which I have alluded were recommended unanimously by the Governor General and the whole of his Council?—If that is the case it comes with very much force, and I would say that it ought to be listened to.

5626. But does not this general remark apply to

to all the questions bearing upon the army since the policy of amalgamation has been carried out, that here you have the same army for two countries; one of those countries is extremely rich and the other is extremely poor; consequently, that being the case, and considering that the rich country decides, virtually, the military expenditure, the natural result is, that a great additional charge is thrown upon the poor country?—I do not think that the system, as regards military expenditure, has changed since the Government of India came directly under the British Government.

5627. I mean ever since the amalgamation of the army?—Nor since the amalgamation of the army. I do not think that the general policy as regards the number of the British troops, and their officering, and so forth, has altered. Whatever was done for the British army before amalgamation, was done for the British troops in India, or for the local troops in India; but in point of fact, first, owing to the circumstance that many more English troops are kept in India now than there used to be, and secondly, that various things are done for the British soldier which were not done in former days, on the whole, the expense connected with the troops is greater relatively than it used to be; that is what I mean.

5628. With regard to your evidence as to our employing the natives, you, of course, know the words of the Queen's Proclamation, which produced a deep impression, I believe, in India, in which she declared that all her subjects, whether India or British, should be freely and impartially admitted to those offices for which they were fitted by ability and by education; and no reference was in this promise made to race?—That is quite true; I recollect it very well.

5629. Now, in your last examination, you said that you thought it was undesirable that natives should be admitted as commissioned officers in the army, not because they were unfitted by ability or by education (I quote the words of the Queen's Proclamation) for those positions, but because of the pride of race of the English officers. Now, when the Queen made that Proclamation to the people of India there certainly was no reservation as to pride of race?—I suppose there was not, but I am not responsible for what was said in that Proclamation. When I am asked a question as to whether this would be politic or the reverse, I give you the opinion (it may be right or it may be wrong, but it is founded on my experience), that it would not be a politic arrangement; and when I am pressed for a reason I give what you quoted as a reason. There are other reasons, but that is the main reason in my mind.

5630. But then, as this proclamation of the Queen's is properly looked upon by the people of India as containing really the principles on which they are to be governed in future, and as they properly look upon it as emanating from the highest possible source, do not you think that if our statesmen decide that it is not politic to carry out this statute literally and truly, it would be better at once to say so, and alter the proclamation?—That is a very difficult question to answer, it seems to me. It is a great political evil, of course, to retrace your steps, and, as it were, to modify your proclamation. On the other hand (and I say it after long reflection and a very great desire to come to an opposite conclusion), I think, that what I said before is the right answer, that it would not be wise to do it. I think you may do a great deal for the natives in various ways which would not militate against our power, and would not come in contact with the prejudice of our race; but that is one of the kind of things which, I think, would be extremely difficult to carry out.

5631. Do you think that the natives of India, again to quote the Queen's proclamation, are "freely and impartially admitted to the offices for which they are qualified by ability and education," when you say to all the natives of India, "If you wish to enter our civil service, or if you wish to become an engineer, you shall travel many thousands of miles in order to have an opportunity of testing your ability," whereas the people of England have the examination almost close to their own homes; do you think that we can say that they are treated with impartiality as long as that is the state of things?—I think that they are treated with as much impartiality as is consistent with our hold on India; at any rate, that we might treat them so, but without relaxing the present system to that extent, which you indicate in your question.

5632. But then the point that I want to get at is this; I think nothing is worse than making a promise and not carrying it out; and you cannot say, can you, that the promise, or that the spirit of the proclamation, is carried out under our present system?—I say that it is not; but then I think that the responsibility of that must be upon those who put forward that proclamation; I think it would never do for those who are in authority in the present day, and who see that there are serious objections to carrying out certain promises absolutely to shut their eyes, and say, "Well, it has been once laid down, and no matter what happens, it must be enforced." The wiser way (I say it in all humility), it seems to me, is not to carry out such promises; to do as much in that way as you can do safely and securely, and do it with a liberal and kind spirit; but still not to do what you think politically evil. I think our hold on India, and our position in India is a very peculiar one, and a very little, on one way or other, might do a great deal of harm.

5633. The only element of representative institutions which, so far as our Government is concerned, exists at the present time in India is, is it not, that one or two natives have been nominated upon the Councils of the Governor General, and the Governors of Madras and Bombay?—Yes, that is the case.

5634. And in that way the European population is, to a certain degree, represented by having some persons, merchants for instance, put on the Council, who are not officials?—Yes.

5635. Now with regard to this representative element, which must at all times be small, is it not reduced to a minimum by the new practice which has grown up during the last few years of the Government of India spending a great portion of the year at Simla, to which the merchants often cannot go, and the natives often do not go?—I do not think so. I think that the great bulk of the legislation is carried on in Calcutta. It is only in exceptional cases, and unimportant cases, or where it particularly applies to the up-country, that the legislation goes on at Simla. And moreover, there is no real difficulty in either the merchants or the natives coming up to Simla. If you take the up-country natives who have sat in

Lord *Lawrence.*

1 July 1873.

the Council, I do not think that there is one of them who would not very much sooner have gone to Simla than to Calcutta; they far prefer going up there than going to Calcutta; and I have had chiefs who have come to me to Calcutta and told me that if I did not let them go away, they would die.

5636. Did the natives come up to Simla?—Some of them came up and some did not. If any chief did not want to come up, he wrote and said that certain circumstances had occurred, and that unless he was very much wanted he did not want to come up; and in that case we did not press him to come.

5637. How many months in the year is the Government absent from Calcutta, because I understand from your answers that they do not transact important business as a general rule, except at Calcutta? — Not in the way of legislation. When I was Governor General, the Government was about five months of the year on an average in Calcutta, and about one month going and coming, including visits to places off the line, and about seven months at Simla.

5638. It has been estimated, has it not, that this migration, which is a new practice, costs about 56,000 *l.* per annum? — I do not think it costs so much as that. I had a paper showing about what it cost in my time, and I should have said that it was about 30,000 *l.* or 40,000 *l.* A great part of that cost arose from expenditure in going and coming on the railway, which was hardly any expense at all, considering that we had to make up the 5 per cent. on the railway, and that the railway did not pay. But assuming that the railway did pay, the expense would have been, I should say, perhaps 40,000 *l.*; and I should say that three-fourths of that was probably due to the railway.

5639. In what way is this expense limited, because of course India being so poor a country, it is necessary to look after small sums of expenditure with a great deal more care even than they are looked after in England, and I do not think that that expenditure has been very carefully scrutinised; to what extent, for instance, are the members of the Government allowed their expenses when they go to Simla; is it simply confined to themselves, to all those practically engaged in the work of Government, or are they allowed the expenses of moving their domestic establishments?—They are allowed a certain expenditure; originally, whatever were their actual *bonâ fide* expenses, were allowed; but there was some discussion on this subject during my time, and it was understood that the expenses should be limited to what was absolutely necessary, but that did include their domestic servants; the amount covered everything; but I think it is only fair to say this, that on the average the expenses of the Governor Generals in moving about in India, previous to my time, were about as much as the expenses were in my time, including the cost of the visit to Simla.

5640. But this allowing of the expenses of the establishment did not refer to all the people who moved, did it; for instance, a member of the Council was allowed, was he not, the expenses of moving his wife and family, and their travelling expenses were paid, and those of his servants; but when you got lower down was the same privilege extended to the subordinate clerks?—Yes; to all of them there was a sum allowed which would cover all their expenses on an economical basis.

5641. With reference to sales of waste lands which you mentioned, have you ever looked into the question what has been done with the proceeds of these sales of waste lands?—Yes, they were carried to the side of income.

5642. But are you aware that that was in express contravention of an Act on the subject, and that they ought to have been appropriated to capital?—It would have come to the same thing, in my mind, because we were in those days borrowing for various reasons, and if we had carried these sums to the credit of capital, it would have been at the very same time that we were borrowing; and if we had carried a quarter of a million of money, for instance, to the credit of capital, we should only have had to borrow 250,000 *l.* more than otherwise we did borrow.

5643. But then it gave an erroneous idea of the revenue of India, because, if one year a sufficient amount of waste land was sold, and the capital was appropriated to income, it was brought out that there was a surplus, and everyone in this country, and I suppose most people in India, believed that it was so, and yet, when the accounts were examined into, it was found that there was no surplus at all, but that the surplus had been simply arrived at by appropriating such funds from the sale of waste lands, which, according to what was strictly enjoined, ought to have been appropriated to capital; therefore, should we not have obtained a more accurate idea of the finances of India if that had been stated?—I think there ought to have been a foot-note to each account, showing that so much money was of the character that you describe; and, in point of fact, I believe that almost invariably the Financial Member of the Council did, in his speech, state that there was a given sum, arising from sales of land, which had been carried to income, but which was really in the nature of capital.

5644. Did I rightly understand you, from an answer that you gave on the last occasion, that you are in favour of giving an Imperial guarantee to the debt of India?—I would be in favour of it, but I am afraid that nobody in England would listen to it; but it would be a very great relief to the finances of India.

5645. In the event of the English Government taking upon itself this great responsibility, it would be necessary, would it not, entirely to change the Government of India, and for the House of Commons, as representing the English nation, to exercise a much more immediate and direct control over the finances of India than it does at the present time?—I think, even at that cost, it would be advantageous to do it.

5646. Of course you think that, at the present time, if any misfortune should happen to India, and India should not be able, from her own revenues, to pay the interest of the debt, England is in no sense liable?—No, I do not think that England is liable, but I think that there would be an immense effort made to get England to recognise the debt in some way or other.

5647. From those people who are interested, you mean?—Of course; and I think that would be an argument, among others, in order to induce the English nation, if they could be induced, to take upon them, in that degree, the responsibility, so as to be able to reduce the interest which they pay for it.

5648. As you feel that this pressure, which would undoubtedly be brought to bear by the holders of Indian stock upon the Government, would be successful, you think that the thing had better be acknowledged at once, and that India should have the advantage of our being able to reduce the interest to 3½ per cent. ?—That is my view.

5649. And you would be prepared to give the House of Commons more direct control if that were done?—Certainly.

5650. Mr. *Denison.*] For the sake of the small difference which now exists between the price of English and Indian securities, do you think that it would be advisable to introduce so great a change into the finances of India?—It would save 1¼ per cent., taking the price of money now in India as 4½ per cent., and the fact that you get it at 3¼ in this country. That would make a very considerable difference when you come to millions of money. It would also affect our responsibilities in regard to railways; we might borrow money in that way, and pay off our liabilities when the time comes that we are at liberty to redeem the railways; and so save a great deal in that way.

5651. You are aware that the 4 per cent. securities are at par in India now?—Just now they are at par; but the great bulk of our debt is at 4½ per cent., and some of it at 5 per cent.; and the railway liabilities are at 5 per cent.

5652. Sir *C. Wingfield.*] Would you take away from the Governors of Madras and Bombay the power of direct correspondence with the Secretary of State?—I do not think that I would take it away from them; but I think that the Secretary of State might so manage that it did not do any harm.

5653. That he would limit it to unimportant matters?—Yes; or where it was an important matter, that he refrained from giving a decision, except through the Government of India.

5654. With reference to local taxation, you are of opinion, are you not, that after a settlement has been concluded in which the cesses have been reckoned and contracted for, to impose additional cesses, or to enhance the cesses by an Act of the Legislature, though it is as legal as any act of the Legislature is, is regarded by the people as a breach of the understanding come to?—I think it is.

5655. Then it is a measure that you would not approve of?—No, I never was for it, except in the case of the permanent settlement of Bengal, which I think was an exceptional case.

5656. You regard that as exceptional because all allusion to cesses at the time of the settlement was omitted?—Yes.

5657. And you consider that in such a case it becomes an open question?—Yes.

5658. But where they have been provided for we must abide by the terms?—I entirely agree with that.

5659. Now it has been said often by the advocates of local taxation, that the people will pay willingly to the Local Government for local purposes, new taxes or cesses which they would object to pay to the Supreme Government as part of the imperial taxation. Do you think that there is much force in that?—No, I do not. There is some slight force in it as regards influential people in the towns, that they would lend themselves to a policy of that kind where it was very limited and very moderate, even though in their hearts they were against it; but with that exception, everybody would look upon it in just the same light as if it were imperial taxation.

5660. In fact they would draw no distinction as to the source from which the taxation came; they object to novel taxation of any kind, from whatever quarter it may proceed?—Yes.

5661. I gather that in a case of very pressing necessity you would rather raise money in any other way than by adding to the demands on the agricultural population?—I would.

5662. You consider that the contentment of the agricultural population is the main security for the maintenance of our rule in India?—I do; I think nothing could happen in India if the agricultural population, as a whole, were on our side.

5663. As regards the income tax, do you not think that if the income tax had always been as it was last year, if it had never extended below incomes of a thousand rupees, and had been at a moderate rate, say 2 per cent., those abuses in regard to the collection which have been so much animadverted upon by the local officers, would never have existed, because then the number liable to income tax in the country districts would have been so limited, that the European officer would have been able to undertake the duty of assessing it, and would not have had to delegate it?—I think so. Not only would they have been so moderate in number that they could easily have been supervised, but those who had to pay it would be in that position of life, that they could easily have come forward and complained if there was an abuse of power.

5664. And the complaints of oppression have originated mainly from the tax going so low that the native collector could threaten almost the poorest man with it?—Yes; and I think that where the natives had been well selected to carry out the income tax arragements, they would have taken care that there was no real abuse. It would have been so seldom that any such case occurred, that it would have been very easily remedied.

5665. With regard to the permanent settlement, of course a permanent settlement in the Upper Provinces of India would benefit a vast number of the population, because the rights and interests of the actual proprietors of the soil, and those holding a beneficial interest under the actual proprietors of the soil, have all been so clearly defined; but the position of tenants at will would be the same precisely under a permanent or temporary settlement, would it not?—Yes.

5666. And the tenants at will, even in Upper India, I fancy, would constitute half the agricultural population?—Yes; perhaps more.

5667. You do not think that the permanent limitation of the Government demand on the proprietor of land, whether a great proprietor or a a small proprietor, would influence his demands on the tenant at will?—I think it would, to some slight extent: but of course I could not say that it would to a very large extent. I think that a man who is pretty well off himself is more likely to be reasonable and kindly in his dealings with his cultivators, than a man who has a very heavy burden on him.

5668. Now, have you ever observed that in villages exempted from the payment of revenue, the owners of those were more moderate in their demands from tenants at will, than in revenue paying villages?—I am rather inclined to think they were, but I would not say it very decisively. I certainly think that under native governments they were; I have often heard cultivators say that they were better off under the holders of rent

Lord *Lawrence.*

1 July 1873.

free lands, than they were under the collectors of revenue of native governments.

5669. Do you think that if a permanent settlement were adopted in Upper India, the peasant proprietors would be thereby tempted to alienate their lands, to the richer classes; that the value in fact of the property would so rise, and such large sums would be offered that they would be tempted to part with it, and that so in fact the benefit of the permanent settlement would pass to other classes of the people than those peasant proprietors?—I think in exceptional instances it would be the case, but not as a rule, and for this reason; every man well acquainted with the agricultural communities, especially where they come down from ancient times, and are pretty much the same races, knows that there is in them a remarkable love of their land, and that they will undergo the greatest sacrifices rather than lose their land; and I think, bearing that feeling in mind, which I have often noticed, and have often heard expressed, they would stick to the land as long as ever they had a chance of living on it, with certain exceptions. It is not an uncommon expression among the yeomen and present cultivators of Upper India, "We would sooner sell sons and daughters than part with our land."

5670. But do not you think that the effect of the record of rights at the settlement in the North West Provinces, and the accurate definition and security of the position of the peasant proprietors, has been to lead to a great deal more alienation than would otherwise have taken place?—No; I think not.

5671. Has it not given their right a market value which while there was an insecurity about them did not exist?—Yes, of course.

5672. And thereby enabled them to part with them more easily than they could otherwise have done?—Of course they could part with them more easily; but I do not think that that facility has counterbalanced that extreme love of their holdings which they show.

5673. Have you not heard that in some of the districts in the North Western Provinces the peasant proprietors have largely parted with their land to the money lending classes?—No doubt, but that has arisen from various circumstances which I think would be lessened under the permanent settlement, rather than increased; I think that has arisen partly from poverty, partly from accident in some few cases, though they are exceedingly economical people in my mind, nevertheless, on certain occasions they are extravagant, that is, on their marriage occasions, and the village banker is a very cunning fellow, and continually gets those men, who cannot read or write, into his books, and allows the accounts to run on for a long time, and then brings in a heavy balance against them, and goes to the civil courts; and the man, partly from his ignorance and partly from his not being able to employ counsel to defend him, in these various ways has very little chance, and he loses his case, and his land is sold up; I think that a great deal of the land has been alienated in that way, and so much so, that that was one of the reasons, in my mind, why many of the people joined against us in the mutiny, who would otherwsse have been on our side; at Allahabad and Cawnpore, and in Bundeland, and many other places, it was said during the mutiny, that the great feeling was against the village bankers and the Government civil courts, and when I made inquiry about it, it came to what I have been telling you.

5674. In fact, in those cases, when the mutiny broke out they thought that they would repossess themselves of the land that had been sold to the bankers?—Yes, they said that their day had come, and that they would recover their ancestral lands.

5675. But the extent of the alienation which has taken place is regarded by the Government of India as so great a political danger, that they contemplate some measure to check it?—I had nothing to do with the policy, but at the same time I approve of it; I think it would be an excellent arrangement, if carried out judiciously. Now, in the Punjaub and in the Delhi territory, it was a constant axiom with our officers in the civil courts, that when they gave decrees against the people, they should always try to arrange that the money should be paid by instalments, so that the owner of the land was not forced to sell. Where the man belongs to an old ancestral community, these things break up the whole community, and are very mischievous.

5676. And often these dispossessed old proprietors form a most discontented class ready to join in any convulsion, do they not?—No doubt. Some of the most troublesome dacoits that we had, when I was Governor General, in Bundelcund and Allahabad, were rajpoots, whose lands had been sold up for decrees of court.

5677. I do not know whether you have heard that during the last three or four years a party has arisen in India who say that at the late settlement in Upper India, the Government demand had been fixed too low; they consider that to leave 50 per cent. of the rental is more than you need leave to the people, and that justice had not been done to the Government in the assessment. Do you agree with that view?—No, not at all. Of course I cannot judge of any individual settlement that has been made, and nobody could do so without going over the papers carefully; but taking it in a general way, I say that the case is quite the contrary.

5678. Assuming the calculation of assets to be correct, you think that the Government should be content with 50 per cent.?—I do. Moreover it comes to more than 50 per cent., because if you put on the different cesses and the different allowances to head men and village accountants, and so forth, it comes to at least 60 per cent.; and if the villagers get into the criminal court, or any trouble comes on them, they have to make, as you know, a cess to pay fines, and in that way villages are very heavily mulcted at times.

5679. So that probably the basis of taking 50 per cent. for the State, does not leave above 35 per cent. for the proprietor?—No.

5680. And you think that that is as little as we ought to leave him?—I think that, if in the course of events, it could come to be less, without the Government suffering, it would be so much the better in a political point of view; I think if you had a commotion in a district, with a light assessment, the bulk of the people would be with you, and if you had a heavy assessment, the bulk of the people would be against you.

5681. With regard to irrigation, I imagine that probably only a very small portion of the area over which the great famine extended is now accessible to the irrigation from the canals?—I do not know exactly what amount, but I should say probably a fourth or a third, or something of that

that kind; but then, as you know, in irrigation, if you have an average of a fourth or a third, that would secure the whole village practically in a famine year.

5682. You are aware perhaps, that it was contemplated to make canals from the Sarda river through Oude, and that the landholders objected to it, and petitioned against it, and the Governor General referred to the Chief Commissioner of Oude, and the Lieutenant Governor of the North West Provinces, and they both gave their opinion against the scheme, and it has been abandoned?—Yes.

5683. The objection urged by the people was that water throughout that country is so near the surface, and there are so many natural reservoirs, that they got as much water as they wanted and objected to paying for it?—Yes.

5684. That being the condition of those lands, you think that it was a wise determination on the part of the Government to abandon that scheme?—Certainly. I would never make a canal where it was not wanted. There are many parts of India where it is a question of life to the country to make canals, and I would concentrate my resources there.

5685. You would consider that on such a question, the people themselves were very good judges of what would be for their interest?—I should say that on the whole they were the best judges.

5686. You think that if water were a great necessity, the people would not object to the canal?—I think they would all hold up their hands for it.

5687. You think that when they come thoroughly to appreciate the advantages of water they will readily take it?—I think so, provided you fix the price at such a moderate rate as will give them a good margin.

5688. But is it not the case (I dare say you have heard it stated) that for the summer crop they will wait for a rainfall, and will not take the water till they despair of a timely rainfall?—They will in many parts, but in many other parts the rainfall is so uncertain and so small when it comes, that they find that it will not do to wait for it, that they will get nothing unless they take the irrigation water; in such cases they would take it; but whenever the water is near the surface, and whenever the rainfall is plentiful, of course they would act in the way which you describe; and in such parts of the country I would not make canals.

5689. Therefore you think it was injudicious to propose to expend 4,000,000 *l.* or 5,000,000 *l.*, in a part of the country where nobody could say that the country was suffering from want of canals, when there were many other parts of India where they would be highly beneficial?—I think so; I think it was want of thought, if it was determined to make the canal. If it was only a suggestion, subject to the reconsideration of the Government, when the local authorities had expressed their opinion, that would be a different matter; but if the Government of India said, "We are going to make a canal without any reference to the local authorities, or any reference to the wants of the country," it seems to me to have been a very unwise measure.

5690. With reference to the employment of natives, do not you think that they might be more freely employed in offices of trust and emolument, particularly in the judicial branch?—I think so. I think that they make very good judicial officers.

5691. And you perhaps would not wish to see them much more employed in executive posts, for instance, as deputy commissioners or collectors of districts?—I think that the chief authority in the district should be an Englishman.

5692. But you would not object to the chief judicial authority wherever it is separate from the executive, that is to say, the district judge being a native?—No; I would have a certain number of English judges in the province, but I think it would be a good plan also to have a good number of Native judges.

5693. At present there are a great many native judges, but they are subordinates; but as regards the persons who are called the Civil and Sessions Judges, you would not object to half of them being natives?—No, I would not; but I think they ought to be very carefully selected men; I should think that they ought not to be selected by anything like competition; I think they ought to be men who had in their youth proved not only their ability and their business habits, but their moral character.

5694. And your objection to employing natives as the chief officers of districts, is rather on the ground that they might not be fitted to exercise executive power in certain times?—I think it would, because more apparent in times of commotion, of course, than in ordinary times; still, I think that the chief administrator of a district ought to be, with rare exceptions, an Englishman, as the district officer is the centre of all executive authority; everybody looks to him, and refers to him, and troops marching, people moving, Europeans going about, every kind of person is under his control; and if he was not an Englishman, I think complications would every now and then arise of a very serious character, even in time of peace.

5695. It would be absolutely necessary for him in any case to speak English?—Yes; but I do not think that the Englishman, as a rule, would respect the authority of a native magistrate who had the charge of a district, as they would the authority of an Englishman.

5696. And in carrying on communications with the military officers, there might be complications, if he were a native?—That would be the most serious part of it all.

5697. You do not doubt the ability of the natives for the post?—No, I think that they are very clever, as clever as any Englishman.

5698. You must have known some deputy collectors whom you would consider in point of capacity fitted for almost any civil office?—Yes, very able men.

5699. You said, in part of your evidence, that the English officials look more to home now than formerly, and that they turn their thoughts rather to English life, and do not devote themselves so much as formerly to Indian interests?—I think that is the tendency; I have heard natives say so, and I have heard Englishmen say so themselves.

5700. Do you think that our English officials, our Civil servants now are less kindly disposed to the natives; that they are less disposed to friendly intercourse with them; have less liking for them, in fact, than was formerly the case?—Well, I am afraid that the gulf between the two races has very much increased since the mutiny.

Lord *Lawrence.*

July 1873.

5701. And would you attribute that so much to embittered feelings arising out of the mutiny as to the growth of circumstances. The fact, for instance, of England being brought so much nearer to India, and the thoughts of the English officials being always fixed on getting home?—I think partly one, partly the other; I think the effect of the mutiny was greatly to increase the ill-feeling between the two races. Of course, the native did not express it, while the Englishman often did; but I think that there is an increased ill-feeling between the two since those days; the proximity of England, and the facilities of getting home, also tends to lessen the inducements for the cultivation of kindly feelings between the two races.

5702. Would you be inclined to think that the different mode of appointment to the civil service, I mean the fact of men now being appointed by competition, whereas formerly they had some hereditary connection with India, has had anything to do with diminishing those feelings of sympathy which the European officers formerly entertained for the natives?—I do not think that is the case, though I have heard it often said; I think that natives like to see a man who is the son of a distinguished man, who has been in India, and they take to him, but I think that after all a great deal depends upon the individual himself.

5703. Do not you think that one cause may be that the officials now have so much more work to do, that they are so much more confined to the office that they have less time to move about and hold friendly conversation with the natives than they formerly had?—I think that there is something in that; the tendency is for work to increase very much, and thus there is little time to give to other matters, however important.

5704. You would say that it is of immense importance in India, that European officials should command the confidence and attachment of the natives?—Yes, I should; I do not think that a man can do anything very well without having either the affection or the respect of the natives, or partly one and partly the other.

5705. I daresay you have seen officers in India of great intellectual power, who were by no means liked by the people?—I have.

5706. With regard to the army, I think you said with reference to locating the troops in the hills, that it is absolutely necessary that a large proportion of the European army should be kept in sight of the people?—I think so; I think out of sight is out of mind. Of course if you put the troops in good strategical positions, their influence pervades a certain area, and you utilise them in that way to the fullest extent; but there is a limit to that influence; and it is of the highest importance that that influence should exist.

5707. And you may have heard at the time of the Mutiny, in consequence of the denudation of almost the whole country between Calcutta and Meerut of European troops, that the natives had ceased to believe in the presence of any large body of European soldiers in India?—I have seen it in their intercepted letters. I recollect a letter in which the writer said that there was a clear space without an English soldier between Calcutta and Delhi.

5708. And the people in those parts of Upper India would not believe if they were told there were 20,000 or 10,000 Europeans in the Punjaub; never having gone into the Punjaub, they would not believe it?—No; that is quite true. I think it is of the highest importance that the plains should not be denuded of English troops.

5709. You approve generally, as I understand you, of the present system of officering the army. Have you not heard it complained of that the officers are so much removed now from one regiment to another, necessarily, in the way of promotion, that they have not time to become known to the men, or to secure the attachment of the men?—I have heard people say so; but I think that a great deal of that might be remedied by the commanders-in-chief themselves. I think there is a tendency to remove officers very often when they need not be removed; and that if it was carefully considered, any evil of that kind might be very much modified. And I think, secondly, that there is a tendency to over-value the importance of an officer being a long time with his regiment. I think if he is a good officer, and is a man that understands the natives, and sympathises with them, then he is liked, whether he is an old officer or has recently been attached to them; and if, on the contrary, he has not those qualities, I do not think that any length of time will make them like him. I think a good officer, going to a regiment, would in three or four months be as much appreciated as if he had been many years with it. Of course it would not do, just as you are going into the field on some serious expedition, that the bulk of the officers should be changed; but provided that three or four of them have been in the regiments two or three years, the rest might be men who had joined the day before. In fact, I have seen a regiment which went down in the Mutiny with a large proportion of the officers they had, quite new to them, which behaved in the most magnificent way.

5710. Without adding to the number of officers in a regiment, could not some plan be devised for making the promotion go regimentally, by linking three or four battalions together, and by that means keeping the officers more with the men?—It would destroy one of the very principles of the old irregular system, which made the regiments what they were, namely, that you had an officer with a regiment, and if any mischief arose, and he did not suit the regiment, you could easily change him to another, and I think that was a great thing; and then again, his promotion in the regiment to the different posts in it (his promotion in the roster went on on another principle) depended a good deal on his merits.

5711. Do not you think that formerly when a man was appointed adjutant, if he were a good officer, he rose to be commandant of that regiment, and they were not much transferred from one regiment to another?—No, they were not; neither is it necessary that they should now be changed. As a rule, where you want to change an officer, it is when he is promoted, so that the appointment which he held in his regiment was unsuited to him. But that would not be a frequent occurrence; the whole of the steps in his life, regimentally considered, are only four or five. Supposing that he became a captain in the general list, and held the adjutancy of a regiment, under the present system he could still remain as adjutant; he probably would if he liked the regiment stay with it, and would not be particular in getting what is called the charge of a wing in another regiment, and when a vacancy occurred in

in his own regiment, he would get that staff appointment; and in that way, if care were taken to consult the officers, I think changes would not be of that frequency that they would be of importance.

5712. Promotion in the staff corps or in the local list may necessitate an officer being removed from one regiment to another because he might be of a higher rank than the man above him in the regiment?—In that case the authorities would take an opportunity of a vacancy in another regiment to transfer him, but I do not think that that would often occur.

5713. I have always been given to understand that the great objection against the present system is the constant changes which it entails in the way that has been pointed out?—I do not think that there is the importance in that consideration which people think. When people want to enforce any change that they desire, of course they gather up every kind of argument which seems at all plausible in support of their view; but I do not think that it is a matter of much importance. What I think of the greatest importance is, that an officer should get his appointment in the regiment as a staff appointment, and not as his right, so that he should always be on a kind of probation, and could loose that position without actually destroying his position for life.

5714. But you think it also a point of importance, do you not, that an officer attached to a regiment should regard a regimental service as his career, and it was the evil in the former times, was it not, that every man with a regiment looked forward and hoped to get away from it?—It was a balance of evils. It was an utter stagnation of prospects for a man to remain in a native regiment, and therefore he used every influence that he possibly could to get out of that regiment, and if you kept him in the regiment, he became soured, and discontented.

5715. It was a benefit to the man who got away, I quite understand; but then it was an evil to those who were left behind, was it not?—Every man left behind hoped that his turn would come.

5716. Was it not the case that if the man did not get away young, his chances of being removed to some staff appointment was very small?—Seven or eight men got away from a regiment; at one time it was six, then it was made seven, and I think in exceptional cases they let an eighth go away; I think, putting oneself in that position, I would rather be in a regiment where there was a hope of getting away, than be condemned to live all my life in a native regular regiment.

5717. But I imagine you must have observed at different times that there were always many discontented, disappointed, and disgusted men left with their regiments, men with no interest, and hopeless of getting away?—There were a certain number of them, particularly in the case of old officers; but I think it was better to have that system, than to have the system of keeping them all waiting; it was a wretched prospect.

5718. Do you think that the pay of the men in the native army is adequate to the rise that has taken place in the price of commodities?—I think as prices rise you must raise their pay; I have heard officers in whom I have confidence, say that there is much greater difficulty than there used to be in getting recruits on that account; but we have done various things to improve the position of the sepoys of late years. When I was Governor General we gave increased good conduct money, so that a large proportion of the men, perhaps a third or a fourth of the men, had better pay than the others, all arising from good conduct. Then the native officers get very much better pay since my time than they used to get; all that has been a help, but still, if prices go on, you will have to raise the pay of the soldier.

5719. I believe the pay of a native private is still what it was 20 years ago?—With the exception of this good conduct money, which makes it considerably better.

5720. But for the first few years of his service it is the same as it was?—Yes, he gets something deducted from the 8 rupees a month for various necessaries, so that he only draws about 7 rupees a month.

5721. You may have seen constant references in the Indian newspapers, and letters complaining that the pay is not adequate, and that the men are not enlisting so readily, and that many are deserting?—I do not know about the deserting, but I have heard that we do not get the same number of candidates for regiments as used to be got.

5722. Now can you conceive of circumstances under which you would make a native commandant of a regiment?—I can conceive of that readily; I had commandants under me in the Punjaub.

5723. The Police corps you mean?—Yes, but they were some of them on a military footing, and they were really in their own eyes commandants of military corps.

5724. Was there no European officer attached to the corps at all, not one?—Yes, there was to the civil division in which the force was employed. For instance, there was generally a battalion of police on a military footing, and so many horse for each commissionership; there would be one English officer for the whole of them, and then a native commandant for the battalion. There were some regiments which we took over after the second Sikh war, in which in consequence of the good conduct of the native officers and men, we kept them up, and in two or three cases where the native commandants died, we put in others of our own selection. In the mutiny, all these men behaved very well, but still, when they came in contact with regiments under English officers, the system did not work so well, and then, in consequence of the great expenditure, reductions were made; and perhaps you may recollect all the military police were broken up, and these battalions were also broken up. It did not signify so much to most of the native officers and men who behaved well, for they were mostly draughted into the military regiments, the regular regiments, and the others were pensioned, but it did work for some years exceedingly well.

5725. Then you would not have any distrust?—I think there are many natives who, as a rule, would be loyal and behave very well; but there is a point to be considered even in that matter; it is not only whether a man is loyal, but whether your own people think him loyal, because if you do not think him loyal yourself, the action of your own officers might be to make him disloyal.

5726. Do you recollect a paper written by Sir Henry Lawrence in the "Calcutta Review," in which he advocated the appointment of one or two

Lord *Lawrence.*

1 July 1873.

two distinguished native officers to the command of regiments?—Yes; what I have described was quite in accordance with his view; he was glad of the opportunity, when he came into the Punjaub, to carry out something of that sort himself.

5727. He referred to that case where the French had appointed an Arab General of Division, General Yus-oof, who afterwards served in the Crimea, and he thought that we might follow somewhat in that direction?—I think if we had many native commandants of regiments and anything serious occurred, of course their position would be a subject of anxiety, because if they went against us they would naturally have great influence with their regiments, and might carry them over to the enemy.

5728. In fact in the mutiny the incompetency of the native commissioned officers was a very important element on our side, was it not?—No doubt; no men rose up among them that were of real ability.

5729. That our seniority system in the regular army had bred a set of men from whom nobody was found fit to be a leader?—No; there was only one native officer, a subadar of artillery, who brought the Robilcund brigade to Delhi; if you recollect he was a Mahometan.

5730. There would be a danger, you think, in appointing natives to the command of regular regiments?—My answer had regard to extreme cases. No doubt it is a serious matter, but, on the whole, I think it would be better to have efficient officers and men who could do you good service, even though some of them might, under very peculiar circumstances, be tempted to leave you, rather than to have a very inferior set of men who were no value one way or the other. There were some of the native officers in the Punjaub regiments who were splendid fellows, and behaved magnificently.

5731. Mr. *Denison.*] Have not the new furlough rules and the greatly increased number of officiating appointments for short periods, much to do with the relaxed feeling of attachment of the natives to their officers?—I do not think so. I think the first effect of the new furlough rules was naturally that a good many officers went home. A great many officers under the old system could not get home, the sacrifice was so great, and therefore under the new rules there was a great rush to go home. That was interrupted by the orders of Government not allowing more than a given number to go at one time; but when the effect of this has worked itself off, I think there will be a steady flow of officers to and from home.

5732. But is it not the fact that there is a very much larger number of officiating appointments now than there were under the old rules?—No doubt, and for the reason which I described, namely, that there were a great many officers that had not had furlough; they could not sacrifice their position and come home. Now they can come home and retain their appointments. But I would much sooner have men contented and let them come home, than keep them there against their will under a very restricted rule; for if an officer is a discontented man, it leads to discontent among his men.

5733. Is not promotion also quicker now in all the junior ranks of the Service than it was?—No doubt it is far quicker.

5734. That also would tend to remove officers more quickly?—It is not so quick as that. A man under the staff corps rules only gets his company in 12 years. In the Royal Army a man often gets his company in six, or seven, or eight years.

3735. You said that you would see no objection to making the natives judges of districts, as also judges in the high courts?—Yes, I said that.

5736. In that opinion do you comprise both civil jurisdiction and criminal jurisdiction; would you make them an appellate authority from European officers in criminal proceedings?—In that there is a difficulty; but if, as you learned the character of the men, you trusted them, it would be a good plan. You must do something to assist the natives; and I think that is the best way of doing it.

5737. As a matter of fact, there are many natives now judges of the high courts, are there not?—There is only one in Calcutta, and I do not know about one in Madras.

5738. In the last few days I have seen the appointment of two judges in Bombay?—When I was there, there was none in that court.

3739. In the High Court, the native judge would have the assistance of his European colleagues, whereas a judge in a district by himself would not have that?—That is so.

5740. There would be considerable difficulty wherever the native judge came to have jurisdiction over British subjects in criminal matters, would there not?—There would. You must bear all that in mind, and arrange accordingly.

5741. With reference to the proposed legislation to prevent the alienation of ancestral lands through the process of the civil courts, will not such legislation materially decrease the selling value of the land?—No, I should think not; because wherever a man wished to sell his land, he could sell it.

5742. But if it is contemplated, as I understand it is, to prevent the alienation of land, in what way could it be done, except by giving a right of pre-emption to other relatives, for instance?—The object would be only to prevent the forcible sale of the land; that is to say, where a man got into debt, and there was a decree given against him in the civil court, then, instead of selling up his land when he could not pay, the judge would rule that the creditor was to receive the money by instalments. The only effect I see from it would be, that there would be a danger that where a man wanted money, he would have to pay higher for it than otherwise; but I do not think that it would lessen the selling value of the land.

5743. *Chairman.*] Are not most of these debts of landholders very much influenced by the fact that they must pay the revenue to Government at a regular date?—The payments of the revenue are very well arranged. They are arranged for such a time that they will fall due after the harvest is got in, and a certain time allowed for selling the produce.

5744. But they are very imperative, are they not?—Ordinarily speaking, they are very imperative, but in Upper India every good collector takes care, if there is any accident in his district whereby the crops are delayed, or anything like a calamity to delay realising the instalments, he either decides it on his own authority, or it goes up to the commissioner, and from the commissioner to the Government.

5745. If

5745. If the man has not money to pay the revenue, he goes to the bank and borrows it?—Yes but if his assessment is a reasonable one, his crops will pay it and leave him a margin, unless there has been some calamity, or he is an extravagant man, and has got into debt.

5746. Then the money having to be paid, is there not rather a difficulty in preventing him selling his estate if he cannot meet the debt?—In the Delhi territory I do not think that in the ten or twelve years that I was there, I recollect two estates being sold for revenue balances; the Government officers were against selling the land for arrears of revenue.

5747. In the North Western Provinces was not it the practice to sell the land if the rent was not paid within the ultimate fixed period?—Yes, and it was a great political evil in my mind. I would have done anything almost rather than sell a man's land, knowing what an evil it was, and how it made, not only himself, but all his friends and relations our enemies.

5748. Mr. *Denison.*] There is a distinction between the two processes, is there not? The Chairman has been alluding now to ultimate sale for default of Government revenue: I was alluding to forced sales under decrees of civil courts, in which the officers have no option whatever, have they?—No; but if they passed a law whereby ancestral lands were not to be sold except under very extreme circumstances, then the consequence would be this, that these village bankers would not be so ready to lend money and get the people into debt, and there would be a certain hedge round the alienation of the land, which would have a very excellent effect; I recollect very well in the Punjaub, that for many years when we were not under the exact law, but under what I may call the spirit of the law, we drew up codes and regulations; you must recollect the civil code which Mr. George Barnes was instrumental in drawing up; I recollect in that code it was laid down as a rule of the civil court that ancestral lands should not be sold for debt, except where the district officer and the Commissioner both agreed that they might be sold.

5749. Is it not a fact that, for a long course of years, all Governments have been exceedingly tender about selling land for arrears of revenue; every other process has been tried first?—I think they have been careful; still, in the Upper Provinces, there have been many cases. I have often heard officers say that there have been a great many sales in the districts to which I have alluded.

5750. In reference to that case of the Government of Bombay and the Government House at Poona, you told the Committee that one of the reasons why the Government of India did not press their objections in that particular case was, that there were other questions pending at the time of greater importance; I would ask you, were those financial questions?—General questions on which we were at issue with the Bombay Government. There [redacted] been several cases just about that time in [redacted] we had blamed the Government of Bom[redacted]d when this matter of selling the house [redacted]ooree came up, it seemed to me by com[redacted] to be a minor matter; I could not an[redacted]e that what did occur would occur.

[redacted] But I would ask how, in your view of [redacted]s, did the conduct of the Governor of [redacted] differ from that of the Governor of Madras, Sir Charles Trevelyan, who for an Act of contumacy was recalled from his post?—I do not desire to criticise Sir Charles Trevelyan's conduct; I was very sorry when the Secretary of State recalled him; it was a great blow to him, and he was a very meritorious and excellent officer, and had rendered great services; but his conduct in that particular case was very peculiar; at the very time when the Government were discussing whether they should put on an income tax or not, he published his minutes without any reference to the Government of India strongly denouncing it.

5752. In fact, the *gravamen* of his offence was the publication, rather than the passive resistance which he might have offered?—Quite so; whereas there was no contumacy on the part of the Bombay Governor of that kind. And then you must also bear in mind that the Governor of Bombay was a very distinguished officer, a man of great merit, who had done good service for a long series of years, and was highly esteemed; and when a man like that commits an error, however serious the error may be, you ought to deal with it differently from an ordinary case.

5753. But your Government was seriously in collision with the Bombay Government with regard to the Bombay Bank, was it not?—Yes, afterwards.

5754. Did it happen, that for a large portion of the time that you were in India, the Government of India were not in accord with the Government of Bombay?—Yes.

5755. And the result was that the Government of Bombay had its way?—To some extent, it had its way, but I have no doubt, if you heard their story, they would say that they had not their way, and, perhaps, that they were not very kindly treated.

5756. With regard to the objections made to the Home Government at certain periods to the reduction of regiments in India, were those objections of a permanent or a temporary kind; that is to say, did they have reference to the English Estimates for the passing year?—Partly one and partly the other. I recollect one case where they said that they could not allow the reduction at the time, but that they would in a subsequent year arrange to take such credit for a given sum in the Estimates; and in other cases there was an objection of a permanent character.

5757. The most serious objection was as to the artillery?—The strongest was to the reduction of artillery. They did not say that they would not reduce the force because they would have to take them over, but the argument put forward was that it was not wise to reduce them.

5758. With reference to the Home Council, do you think that there are any possible changes, or any desirable changes to be made in the constitution of that Council?—I think it is very difficult to know where there is anything to be done, when you bear in mind the system of Government in England.

5759. The suggestion is that from the fact of the Secretary of State being a Member of the Cabinet, in all grave cases the power of the Council must give way to the superior power of the Cabinet?—I will not say that it must give way, but I think it must in the nature of things be greatly influenced by it. You see, it is not only the Secretary of State, but it is the whole Cabinet, and then the Cabinet, of course, are backed by the majority in Parliament. It is the

Lord *Lawrence.*

1 July 1873.

effect of a Parliamentary Government. So far from thinking that the Council in any way are to blame for what has occurred, it seems to me that in the very nature and essence of things, it must be so. And as for supposing (I am not saying this only for the sake of the Council, but for the sake of India) that you would improve the system by doing away with this Council, which, though it may not have done all its duty on particular occasions, has been an effective buffer between India and the influence of people in England, it seems to me that you would only greatly aggravate the evil by getting rid of them.

5760. I was not aware that anybody had suggested doing away with the Council?—I allude to the views expressed by Sir Charles Trevelyan on that point.

5761. I imagined that the general feeling was, that in certain grave circumstances the Council of India are not sufficiently powerful to resist that influence which has been alluded to?—I think it is not; but that is inseparable, I think, from the nature of Government in England.

5762. Is it your opinion that on the whole the Council has been of very great value?—I think it has been of very great value; of course, I cannot speak of it so much since I left it at the end of 1863; but judging from the five years that I was in the Council, I think the Council has been of immense value.

5763. And is it, or is it not, your general opinion that the Council has, on the whole, worked for the benefit of India, as well, if not better, than the old East India Board?—I think it has.

5764. Is the system of correspondence kept up by the Indian Council quite as strict in its details as it was under that old system; or to put the question in another way, under the old system the Government of India had to send duplicates of all correspondence, as also a history of everything of importance that went on; is that system still maintained?—There are some modifications of it now, but I think that for all practical purposes the accounts and the correspondence comes home very regularly.

5765. When you were Governor General, besides your own confidential reports to the Secretary of State, was there also a formal Government record sent home?—Yes, double; one printed and the other in manuscript.

5766. Can you tell the Committee what is the course of proceedings adopted by the Council at home on the receipt of detailed reports of the proceedings of the various Governments?—They are examined by the secretaries of those departments, and then they come, case by case, before the committees of the Council as the answers are prepared.

5767. Mr. *Cave.*] What do you consider the best way of getting evidence from native witnesses from India?—I told the Chairman that I thought the best way was to do it through the Governor General.

5768. What would be the best way, in your judgment, of the Governor General getting that evidence; what class of people would you get evidence from?—He would consult various persons about him; he would consult the Governors of provinces and Lieutenant Governors, and hear whom they would suggest, and then out of the general list that would be made, he would, after consulting some of his Council, pick out the names of men who he would recommend should go home, having ascertained that they were willing to go.

5769. Would that list, do you think, be satisfactory generally to the natives; would they consider that their opinions would be expressed in that way satisfactorily?—I think they would, because he would be very careful in making his selections, and would consult very likely some of them too.

5770. I suppose that there are two classes of native opinion; one that goes with the European and one rather in the contrary direction; would you get the class that is non-European represented in that way?—I think that you could not say that any of the natives were influenced much by European opinion; I think they have their own opinion, and their own views.

5771. You think it would give satisfaction to the great body of the natives?—If the Governor General selected them carefully, I think that he is more likely to do it in a satisfactory way than by any other mode which could be adopted.

5772. If you were simply to advertise broadcast for witnesses, I suppose you would run the risk of getting adventurers of all kinds?—Thousands and thousands of people would apply to have their expenses paid to come to England.

5773. Do you think that the native evidence obtained in the way which you mentioned would be satisfactory as to the opinions entertained in general in India?—I think such witnesses would give you a very distinct and clear opinion of their own, and of those who thought with them; but of course as to the value of that evidence, it would depend in each case in my mind on the estimate that is formed of it.

5774. Is there such a thing as public opinion in India as compared with what we call public opinion in this country?—It is not so general or so wide, but there is a public opinion among every circle of natives. As a rule, the public opinion in the Presidency towns is different to a considerable extent from that of the natives in the up-country. The one has been very much influenced by English education and contact with Englishmen, whereas in the interior of the country it is much more pure and unadulterated native opinion.

5775. You think that public opinion is more local in fact in India than in this country?—Yes, there would be one kind of public opinion in the Punjaub, another in Oude, and so on; but I think that the men who have been educated in our English schools and colleges would have an opinion very much of the same kind, generally speaking.

5776. And would you take the last as the best opinion which we could obtain to guide us in deliberating on the questions submitted to us?—I would rather prefer the native opinion in the interior, if you wish really to have native evidence, but I would listen to both, and pay attention to both.

5777. The last would be more general, I suppose, and less local of course than the former?—Yes, I think you would find that there would a certain similarity in it, but at the sam there would be a considerable difference is for those who hear of it to judge, an it, and see what it is worth.

5778. *Chairman.*] Do you consider tha very much in India an opinion of caste an —I do not think on finance questions t distinctions would signify. The upper

through India are the most intelligent classes. I am not talking of the chiefs and rulers, but what you call the nobility and gentry, the upper classes, the landholders, bankers, and merchants, they are the most intelligent classes, and they have their own opinions, and can give good reasons for their opinions.

5779. Sir *G. Balfour.*] I think on the Council you protested very strongly against the abolition of the local European force in India?—I was one of the Council who objected to that; all the Council objected to it.

5780. You have given strong evidence, quoting the words used by a native, that during the Mutiny there was a clear space between Calcutta and Delhi, clear from European soldiers?—Yes.

5781. Will you recal to recollection the cause of the force being reduced; was it not the withdrawal of the European forces for the Russian war?—There were only two English regiments away from the Bengal Presidency, but it is quite obvious why it was. The English force in India was a very limited force, and bit by bit several regiments of that force were placed in the hills, and then came the Persian war, which took away two regiments. Then all these circumstances put together caused that state of things.

5782. Were there not two regiments of cavalry of the same force taken for the Russian war?—I do not think there were from our side of India, there may have been from Bombay.

5783. And from Madras also?—I do not recollect any English cavalry going from the Bengal Presidency.

5784. If we had had two regiments at Cawnpore and Lucknow we would have held those stations at the time of the Mutiny, would we not?—If we had had half a regiment at Cawnpore, with the English artillery we had there, we would have held it.

5785. We were short of our complement by fully 5,000 troops, were we not?—I forget how much, but I know that the regiments were short of their complement.

5786. And if we had sent out the European force which we had surplus to our English establishment on the 1st of January 1863, we should probably have been enabled to make head against the Mutiny more quickly?—If we had re-inforced the British troops in India up to the usual complement, I do not think that it would have sufficed. I think the English force in India in those days was too small a force for anything like a convulsion such as the Mutiny.

5787. *Chairman.*] Was there not a profound conviction at that time, that India was never in such a state of tranquility and universal security, and such content with the British rule, as at the time when the Mutiny broke out?—In point of fact the country was in a quiet state, but, as I said before in answer to questions put to me, when you come to so great a country, such a vast area, you cannot tell, unless you are a prophet, what may take place, and you ought to hold the country in such a way that, humanly speaking, you can meet all comers, and I do not think that you had at that time in India such an English force as was sufficient to have met the circumstances of the Mutiny. No doubt, if we had had a few more English troops than were in India, we should not have had the Mutiny. One of the things which caused the Mutiny was the native troops seeing that there were fewer men to oppose the mutineers at the time, than they were previously accustomed to see.

5788. But at the time, from the Governor General downwards, everybody wrote from India that they were in a state of satisfaction that had not been known before?—I would not say so much as that. I recollect very well writing to Lord Canning in the October before the Mutiny, urging him to reduce the native army, and to increase the English force.

5789. Sir *G. Balfour.*] Did not Lord Dalhousie report, "Peace within, and peace without"?—No doubt he did, in a general way, and if I had been writing home I would have said that there was peace within and peace without; but if you ask me if there was a sufficient force of British troops in India, I say not; 5,000 more, at least, were wanted.

5790. When I mentioned that we were deficient by 5,000 European troops of our establishment, your Lordship will see that that fact alone was the cause of much danger to India?—I have no doubt that it was the cause of great danger; 5,000 men will prevent a great deal which perhaps 20,000 cannot remedy.

5791. Seeing that to be the case, I would ask whether you attach any importance to the fact of India having an European force of its own?—Well you know, of course, there are great advantages on the one side, and there are disadvantages on the other. I think that sound policy dictates that we should accept the circumstances which we are now in; I think continued changes here, and changes there, have a very bad effect; they are most wasteful, and cause much unnecessary outlay.

5792. But, merely having reference to the changes that have taken place, your Lordship would not have advised those changes if your Lordship had had the power of preventing them?—I was one of the men who were very much against the change; but afterwards, when the change have taken place, and you have a new phase of things, I could not go back to an European local army.

5793. Your advice would be simply to try and improve the present system as much as possible?—Yes, and economise as much as you can without affecting the efficiency of the troops.

5794. Your Lordship also, when in Council at home here, minuted very strongly in 1861 about the establishments of the European regiments; would you still adhere to the view that you then expressed, that the establishments of the European regiments should be made subordinate in some degree to the wants of India, and not kept up to suit English ideas?—I would, if I had influence enough, put them simply on such a footing that they would suffice to supply India.

5795. And then you would endeavour by every means in your power to reduce the expense of maintaining those troops in the pay of the country?—Yes, every reduction consistent with reasonable efficiency.

5796. Your Lordship mentioned that the frontier force is one of the most efficient bodies of men that we have in India, and also that if you were to withdraw that frontier force and station them in the Lower Provinces, you would have great difficulty in recruiting them?—Yes, I think so.

5797. And that the efficiency of the force would be endangered if it were so employed?—Yes.

Lord *Lawrence.*

1 July 1873.

5798. Then does not all that tend to localising the native troops much more?—I was, to a great extent, in favour of localising the native troops, and still am, to a certain extent; but in Lord Canning's time, while this consideration was borne in view, on the other hand the general idea was not to carry that localisation to the extent that perhaps I and others would have advocated. The native army has now been formed on a modified basis as regards localisation. My reply is similar to that which I gave about the local European army; I would not make changes; when I have got a system at work, I would not be very ready to change it; but I would bear in mind the means whereby I could make the native troops more local than they are, without making a sweeping change; I would be inclined that way.

5799. You have expressed strong opinions with regard to the Madras Army; do you think that any portion of the native army of India has covered such an extensive territory and such varied provinces as the Madras Army has done?—I should say that the Bengal Army has covered a much larger extent of territory than the Madras Army.

5800. When I mention that the Madras Army has covered nearly 400,000 square miles of territory, do you not think that in proportion to its strength it has covered more than the Bengal Army?—If you ask me in proportion to its strength, that is another matter; I thought you meant that as a matter of fact it had covered a greater area than any other army; and I mentioned that the Bengal Army had actually covered a larger extent; but if you look at the map you will see at once that what I have said is so. The Madras Army was a great army, and had a great influence a hundred years ago, and did a great deal, no doubt, in its way, in helping the European troops. But for the last fifty years, except when they were sent to China, they have never had anything to do.

5801. Is it not the fact that the Government of India, especially, excluded the Madras Army from every operation going on in India?—I do not know whether they did or not, but it is a fact that they have not been employed in the way that the others have.

5802. Is it not the fact that the Bengal Government sent the Bengal regiments to Burmah in 1852, and especially excluded the Madras regiments?—I do not recollect.

5803. I have been looking over your Lordship's Committee connected with the organisation and the officering of the regular regiments; I do not see in that how you propose to give promotion to the officers?—Without going over it, and carefully considering it, I could not go into the details of it now. If you say that that point was not considered, of course it was not; but I have no doubt whatever that it would very easily dovetail with that system.

5804. Your Lordship also mentioned the dissatisfaction of the officers with the old system under which the regular regiments were formerly officered, that they were dissatisfied with being so long with their regiments?—In the sense that they wanted to get away.

5805. Would it not have changed their condition very much if they had had the same large proportion of superior ranks then that they have now that they are so much more numerous, especially in the field officers?—Of course, the greater the relative proportion of the higher ranks of the officers compared with the lower, the better it is for the officers of the army; but, in point of fact, in spite of all this promotion that you have given in India, the officers, judging from the papers, are more discontented than ever; but I think that only arises from the fact that they want more and more.

5806. *Chairman.*] And from the fact that the more they claim the more they get?—I think it is something of that kind. I never heard an individual officer talking with me privately, who did not admit that they had immensely benefited of late years.

5807. Sir *G. Balfour.*] Your Lordship allows that the system has not given satisfaction or contentment to the officers?—I do not admit that it has not; but as far as one can judge from outside it has not; but if you ask any reasonable man among them quietly, he will tell you that he is satisfied, and that most of his friends are, only that there are certain classes who want something more.

5808. *Chairman.*] Did you ever know, as a general proposition, that the officers were contented with their lot?—I think that if you are to go on improving their condition until they are contented, they would all require to be made generals, and then they would say that there were too many generals.

5809. Sir *G. Balfour.*] Your Lordship has been asked several questions connected with the Bank of Bombay; do you recollect an application being made to the Government of India to request that you would send down some one to inquire and investigate into the state of the Bank of Bombay?—Yes, I do recollect something of that kind.

5810. Would you enlighten the Committee upon what objections you had to complying with their wish?—In a general way, my view was, that with regard to anybody whom we could send down from Bengal, anything that he did could not have been satisfactory to the people in Bombay, and they would have said that he knew nothing whatever about it; and we would have found only increased opposition in consequence. We thought it better to let them alone, and let them manage their own affairs, subject to such instructions as we could give them in a general way.

5811. Was it not the fact that the Government of Bombay expressed themselves in great difficulty in finding some one to whom they could confide the examination?—I recollect that there was an application of that kind, and we consulted in the Council together about it, and we came to the general conclusion that it was not expedient for us to do it; that it was much better that they should be left to themselves.

5812. But still, your Lordship gave permission to the Bombay Government to give that assistance to the Bank which has been referred to?—Yes; because we nearly all of us thought that it was expedient, as a matter of policy, to do so, and I recollect now, that the very next day after we had sent a telegram to Bombay, saying that we would support the Bombay Bank, we got a telegram from the Secretary of State, telling us to do so. I think we could not have done anything else; and we were in great hopes that that support would have enabled them to tide over the danger; and I think that if they had gone to work in a judicious way, it would have done a great

5813. If, in return for the support g

certain commercial parties, they had taken proper securities, you think that the Bank might have tided over its difficulties?—I think they might have done it, but it is very difficult when men become demoralised, and have got into one course, if I may so call it, for them to retrace their steps. Very few men will allow that they are in the wrong; they generally adhere to the course that they have adopted until it is too late.

5814. *Chairman.*] That view of the Government of India was all based upon the representation of the state of the Bank, which turned out afterwards to be erroneous?—No doubt; but as far as we saw, we thought that we might save it.

5815. Sir *G. Balfour.*] That state of the Bank was due, however, to the advances which they had improvidently made to those bubble companies?—No doubt a great deal of it was.

5816. And these advances were forbidden by the old charter, were they not?—Yes.

5817. Do you remember the circumstances under which the old charter of the Bank was altered?—Without going into details, there was one thing that was notorious to everybody which led to the alteration of the charter, and that is this, that the capital of the Bank was a limited capital, I think half a million of money; the shareholders doubled that capital; then, within a few months afterwards, they doubled it again; so that, practically, the capital was quadrupled; that being the case, they had the greatest difficulty, under the old charter, in employing the money profitably; and I think that led to the alteration of the charter, but I would not like to give any more precise view on the matter.

5818. *Chairman.*] Or it may have been the old story, that those who wanted to get the money led those who owned the money to give it to them upon easy terms?—I recollect people used to say that there was great difficulty in the Bombay Bank in employing the large capital.

5819. Sir *G. Balfour.*] But your Lordship has no reason to suppose that the Governor of Bombay was cognisant of that alteration of the charter, have you?—Of course he was cognisant of it; it came up through him; not in my time, but in Lord Elgin's time. It turned out that this had been done in Bombay, and I suppose for their own purposes.

5820. Your Lordship has urged that we should not force irrigation upon the parts of the country where the people will not take the water willingly?—Yes.

5821. Taking the Madras Presidency, where the irrigated land brings in from six to seven rupees per acre, and the unirrigated land from rupees, would it not, therefore, be desirable to extend irrigation in the Madras Presidency?—Wherever water can be profitably ed, of course it would be desirable to extend The very fact of there being such a difference between irrigated lands and unirrigated ds, would show conclusively that there was at value to be derived from irrigation, in dras.

822. Your Lordship has borne testimony to great value of the irrigation works in the avery district?—Those constructed under supervision of Sir Arthur Cotton.

23. Is it the fact that the revenue has nearly d in consequence of those works?—I dare

With reference to communications, also, our Lordship encouraged the opening up of the Godavery works?—No, I had nothing to do with that beyond being, unfortunately, one of the Council who assented to it. I was in the Council when it was agreed on, but I must say that I would rather not have had it undertaken.

5825. But if we could have communication opened up for 400 miles for 2,000*l.* a mile, your Lordship would consider it a great benefit to India?—If you did not open it further till you got right up into the cotton district, it would be very little use opening out that distance.

5826. The 400 miles would bring it to Ginghaat, where the best cotton is produced?—I am not quite so well at home on that subject as to be able to go into that detail, but I have considered it, and I thought that it would have been better if we had not gone into that scheme. The original idea was to spend 200,000*l.*, and I believe, up to this time, we have spent 800,000*l.*, and we have not got beyond the second barrier, if up to it.

5827. But does your Lordship object to this large expenditure on railways of 20,000*l.* per mile?—I would not spend 20,000*l.* nor 10,000*l.* a mile on them. I think that we have been spending too much; the best thing may cost too much.

5828. *Chairman.*] Do you recollect whether the proposition that was finally approved of was not somewhat in this form, that the Godavery would be navigable where nobody wanted to navigate it, and that where everybody wanted to navigate it, it would not be navigable at all?—I was going to say something of the same sort; in point of fact, it seemed that, for a large portion of the year, it would not be a navigable river. It is a curious fact that nearly all the rivers in India, even the finest rivers, are bad for navigation; and when you come to a river like that, which nearly empties itself after a certain time, it seems a serious matter to spend so much money on it.

5829. Just as the crops are ripe for export, the water in the river has flowed away, has begun to sink down into a little rivulet almost in depth?—Yes.

5830. Sir *G. Balfour.*] Your Lordship has never seen the Godavery?—No.

5831. When I mention that there is a noble line of communication to a considerable distance, by means of an anacut across that great river, do not you think it possible that other parts might be made navigable in the same way?—An anacut suffices with the limited amount of water that comes down to irrigate the country; but when you want to navigate the rivers, you want a large volume of water.

5832. But when I mention that I myself have been there in considerable sized steamers, your Lordship will see that it is quite possible to make that stream navigable?—I would speak with deference on the subject, but I cannot conceive how an anacut across the river would hold up the water for navigation beyond a certain distance.

5833. *Chairman.*] The effect of an anacut at the Delta would be no criterion of the condition of the river in the uplands?—Just so.

5834. Mr. *Denison.*] Judging from past events, and speaking from a purely political point of view, do you think that the Indian Mutiny, and the extent to which it went, was to be regretted?—I think enormously.

5835. Do you not think that a large propor-

Lord *Lawrence.*

1 July 1873.

tion of the reforms in the administration of India which have taken place during the last 15 years have issued directly from the political state of things arising out of the Mutiny?—I do not. I do not know any reform at this moment which could be suggested which was not going on in one province or the other in India and would not have spread, though perhaps not at the same ratio, before the Mutiny, as subsequent to the Mutiny. The great improvements in the North Western Provinces, for instance, date back in my mind to the settlement of the North Western Provinces; and the same in the Punjaub.

5836. Do you not think that it is a great advantage for us to have been shown where our weak places were?—But we have paid for it at a very dear cost.

5837. Mr. *Fawcett.*] You are opposed to what is known as the amalgamation of the Queen's Army?—Yes.

5838. At that time you were on the Council of India, were you not?—Yes.

5839. What proportion of the Council agreed with you or objected to that amalgamation?—They were unanimous in objecting to it.

5840. Then could the Secretary of State, considering that question as one vitally affecting the finances of India, overrule the whole of his Council?—He took it to the Cabinet.

5841. There was a case in regard to the finances, in which, if they had stood firm, they could have prevented the step, could they not?—They stood as firm as anyone could stand; everyone in the Council objected to it, and 14 out of the 15 signed a protest against it; what more could they have done?

5842. *Chairman.*] Parliament in reality sanctioned it; the Cabinet or the Secretary of State, in his capacity of the Queen's Minister, submitted a proposition to Parliament adverse to the views of the Council, and Parliament sanctioned the views of the Secretary of State, and by the authority of Parliament the change was made?—Yes.

5843. Mr. *Fawcett.*] But at the time when the question was raised in Parliament, were the objections of yourself and the other members of the Council who objected to it on the Table of the House?—Yes, they were; all our Minutes objecting were on the Table of the House, and Parliament did not seem to care for that.

5844. Did the authorities in India, did the Governor General object?—Yes. The Governor General sent home his objection very late. It was said that if his objection had come home earlier it would have had an influence; but I think that the Government were committed to it. I am not at all certain that it would have made any real difference.

Friday, 4th July 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Mr. Fawcett.
Sir Thomas Bazley.	Lord Edmond Fitzmaurice.
Mr. Beach.	Mr. Robert Fowler.
Mr. Birley.	Mr. Hermon.
Mr. Bourke.	Mr. Lyttelton.
Mr. Candlish.	Mr. M'Clure.
Mr. Baillie Cochrane.	Sir Stafford Northcote.
Mr. Cross.	Sir David Wedderburn.
Mr. Dickinson.	Sir Charles Wingfield.
Mr. Grant Duff.	

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE re-called; and further Examined.

Mr. *Nowrozjee Furdoonjee.* 4 July 1873.

5845. *Chairman.*] Do you wish to make any statement as to the views of the natives of India with reference to the expense of the judicial system in India?—Yes, I have taken a great deal of pains to gather information on the subject, and have made myself acquainted with the wants of the people and their complaints, and I will lay them before the Committee. The cost of the administration of law and justice in the Bombay Presidency amounted in 1864-5 to 36,81,978 rupees, since which time it has increased considerably every year. In 1865-6 it was 43,72,820 rupees; in 1868-9 it was 46,05,855 rupees; in 1869-70 it was 50,13,165 rupees; and in 1870-71 it was 52,14,340 rupees. These figures are taken from the Bombay Administration Report, and they show an increase of 15,32,000 rupees, or 40 per cent. in four years. This enormous increase in such a short time appears to me to be utterly unjustifiable. Notwithstanding this excessive increase the number of courts has been reduced in the Bombay Presidency, and the provision of justice is inadequate; this I will endeavour to show to the Committee. In 1869 there were the following courts in the Surat district, namely, the Court of the District Judge, the Court of the Senior Assistant Judge, located at Broach, the Court of the Assistant Judge, the Court of the Principal Sudar Ameen, or first class subordinate judge, the Court of Sudder Ameen, or second class subordinate judge, and nine courts of Moonsiffs or third class judges, of different grades. In 1869 the Senior Assistant Judge's Court was abolished, and the 10 courts of the second and rd class subordinate judges have been reduced even, three of these courts have also been ished. The Court of the Second Class Sub- ate Judge of the District of Olpad, contain- bout 170 villages, and a population of about 00 or 700,000 persons, was removed in June ar to Surat, for the purpose of relieving ts of that city, the judicial work eatly accumulated at Surat, in con- of the reduction of the subordinate courts. The first class subordinate judge of Surat, who is overburdened with work connected with the city of Surat, and the surrounding district, called Chowrasee, had not been able to dispose of more than 10 or 15 contested cases out of about 500 made over to him from Olpad; 37 of these cases were transferred to the assistant judge, Mr. Druit, who, owing to his inexperience and ignorance of the vernacular language, had not been able to decide more than one case up to January last. The removal of the Court from Olpad to Surat has resulted not only in a denial of justice to the people of the district, but also in heavy loss to Government revenue, estimated at from 6,000 rupees to 8,000 rupees in six months, the institution of new suits having declined from 1,000 to about 500 cases during six months of last year, and business is at a deadlock, to the detriment of the interests of the people. Two petitions were addressed to Government on the 18th of April and 2nd of December 1872, but without effect. Suitors and witnesses are compelled to leave their homes, and travel over a large extent of country without made roads and bridges, which is very difficult in the rainy season, to sue and recover their dues. It is difficult to issue writs of execution. Attached property must be conveyed to Surat, a long distance, and kept in the custody of the Nazir there. In June 1869 the Subordinate Judge's Court was removed from the city of Broach to an out-of-the-way and obscure place called Wagra. The result is, that cases are heavily in arrears, and cannot be disposed of for a year and upwards, and suitors are put to much inconvenience, trouble, and expense. Last year, Mr. Newnham, the district judge, recommended its removal back to Broach, but without effect.

5846. Why was it removed?—I am not aware of the cause why it was removed, but it was in a very good place, a large city, and a central position. In 1869 Government made a revision of the judicial establishments in the district of Surat and Broach; the object was to increase the

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

salaries of the native judges and subordinate officers, who were paid at a very low rate. The first object was carried out, but the latter object has not been carried out. All the courts of the lower grade in the Bombay Presidency are not only self-supporting, but moreover leave a large surplus to Government, after deducting the costs of their maintenance out of the fees which are received from suitors. In the Bombay Small Cause Court the receipts amounted to 2,18,819 rupees, and the expenditure to 1,70,849 rupees in 1871, leaving a surplus of 47,970 rupees. In the Mofussil Small Cause Courts the receipts were 1,81,305 rupees, and the expenditure 95,843 rupees, leaving a surplus of 85,462 rupees. In all the subordinate courts of the Presidency the receipts were 16,01,417 rupees, and the expenditure 7,00,212 rupees, leaving a surplus of 9 lacs of rupees, or a total surplus of 10¼ lacs of rupees, including the Small Cause Courts. The per-centage of costs on the value of original suits in different districts ranged from 10 to 20 per cent. In suits for smaller amounts the per-centage is larger, and amounts to about 25 to 30 per cent. Owing to the salaries of the judges of the High Court and of the district courts being very high, and the amount of work done by them being small, compared with the work done by the subordinate courts, the financial result is as follows: High Court receipts, 2,81,548 rupees; expenditure, 4,35,740 rupees; deficit, 1,54,192 rupees.

5847. Does that include the whole expense as a court of appeal, as well as the expense of the local jurisdiction?—Yes. Then for 21 district courts, receipts, 153,506 rupees; expenditure, 5,38,065 rupees; deficit, 3,84,559 rupees.

5848. Are they courts of appeal also?—They are courts that in certain cases exercise original jurisdiction, but for the most part the business done by them is appellate jurisdiction.

5849. Is the fee on the appeal the same as the fee on the first commencement of the suit, or less?—I believe that the costs in the Appellate Court amount to nearly the same as in the original courts; the total receipts of the high and district courts are 4,35,054 rupees, the expenditure 9,73,805 rupees, deficit 5,38,751 rupees.

5850. In the last set of courts are they entirely courts of appeal?—The district courts have also original jurisdiction in a certain class of cases, but for the most part they are courts of appeal. Taking all the receipts and expenditure of all the courts in the Bombay Presidency, there is a surplus of five lacs of rupees a year. These results show that if a considerable reduction be made in the fees and stamps, the courts will yield income sufficient for the costs of their maintenance.

5851. How would you propose to reduce the expense of the courts?—The expense of the courts may be reduced by readjusting the judicial establishments, and by reducing such salaries as may be found to be very high and could safely be reduced. I am confident that a reduction could be made. But the Committee will observe that, owing to the heaviness of the stamp and court fees, there is a very large surplus notwithstanding the present strength of the establishment and the present high expenditure and salaries; and therefore Government may safely give relief to suitors by reducing the stamp and court fees so as to bring the income derivable from these sources within the expenditure, without leaving any large surplus, as at present. With regard to the other object which the Government had in view, namely, that of raising the salaries of the establishment, that task was entrusted, I am informed, to the Honourable Mr. Tucker, so far back as the year 1864, but nothing has been done in that matter.

5852. Do you mean that their salaries have not been raised?—No.

5853. Do you think it is necessary to raise them?—I will show that it is. The establishment is so crippled and so short that it has not been found adequate for the purposes of the courts, as I will show. Although the Small Cause Court of Poona last year yielded a surplus of 45,000 rupees, yet its establishment is so small and inadequate, that it is unable to give timely redress to suitors, and it is difficult to get warrants and execution in time. The Nazir, or Sheriff, of the district court of the Small Cause Court, and the first-class subordinate judge of Poona, has officially reported his inability to execute decrees, owing to the want of sufficient establishment. The subordinate clerks in the lower courts receive pittances of 10 and 15 rupees a month-pay, which is lower than that of menials and domesties. The financial result of the revision of the judicial establishment in Surat and Broach was, notwithstanding the raising of the salaries of the judges, a saving of 24,000 rupees per year, the monthly amount of the establishment before revision being 10,000 rupees, and the revised establishment being 8,000 rupees per month. This result was, in a great measure, brought about by the abolition of the three smaller courts which I have already mentioned, as having been productive of injury to the public interests. The provision for deciding small causes in Broach is also inadequate. The judge of the Surat Small Cause Court proceeds to Broach only two days in a month for deciding cases under 500 rupees. Owing to the absence of the judge from Broach, suitors are unable to obtain attachment and arrest in cases where the defendant removes his property, or leaves Broach suddenly. Owing to there being no judicial officer at Broach possessing authority to grant probate, letters of administration, and certificates of heirship and guardianship, people are obliged to proceed to Surat with their witnesses for these purposes. Parties are compelled to appear personally before the district or assistant judge at Surat to make affidavits in support of their applications, and again to appear with their witnesses on the day of hearing, which is fixed to take place after the lapse of six or 12 months. In the meantime the estate cannot be administered. Contested certificate and administration cases cannot be decided in less than a year or two. In such cases evidence is taken by the Assistant Judge, who transmits the record, with his opinion, to the District Judge. If the latter has doubts, he declines to grant a certificate, and compels the applicant to file a suit. In Surat, Wagra, and Jumbooser, civil cases have accumulated so much that contested cases cannot be decided until after the lapse of a year and upwards. Then there is another subject of complaint which I wish to bring to the notice of the Committee, and that is the way in which the salaries of the criminal officers and of the collectors are adjusted in the accounts.

5854. Do you think that there is any objection to the mode in which the salaries of officers engaged in the administration of justice are blended with the expense

revenue in the collector's office?—Yes; the offices of Collector and Magistrate, and Assistant Collector and Magistrate, are combined in one person, and half the amount of the establishment is charged to the Revenue Department, and the other half to the Judicial, on the assumption that half the value is given to each of these departments. I will show to the Committee that that is not done, and that the result of this combination of the two offices is detrimental to the public interests. It is not desirable that a gentleman like the Collector or the Assistant Collector, who is an executive officer, should also be invested with judicial functions; moreover, these gentlemen devote the greater part of their time and attention to the discharge of their revenue duties, and the magisterial duties are very often neglected. Not only that, but during eight months of the year they travel through the districts, and persons who are obliged to go up before those officers in their capacity as magistrates in connection with their cases, are obliged to go with the camp of the Collector and of the Assistant Collector, from one place to another, and are detained there and put to very great expense; and a great delay and expense is the result of the union of both these functions of the Collector and Magistrate in one and the same individual.

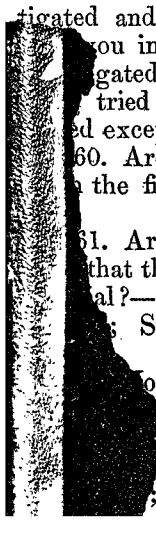
5855. Is it not a question of economy as to whether you should have one or two persons for the different duties?—I submit that there will be no increase whatever; if the executive officers are separated from the judicial officers, and a proper adjustment is made, the public will gain, and a great deal of inconvenience and expense, to which people are subjected, will be obviated.

5856. Would there not be two establishments instead of one?—There would be, but then the number of officers would be smaller.

5857. But would they not have to go over the same ground?—They could be located at particular places, instead of moving about; and the districts would be made smaller, and there would be no occasion to shift from one place to another for the greater part of the year; then I should like to show the quantity of criminal work that is done by the class of officers that I have mentioned. Out of 41,000 criminal cases which arose in the Bombay Presidency in the year 1871, the district magistrates tried 263 cases only.

5858. Then do they not examine and send for trial a great many other cases?—These are all the cases that they tried and committed.

5859. You mean all the cases that they investigated and committed; they do try cases, but



ou included in this number all that they gated and committed for the purpose of tried?—Yes, I believe they are all in- d except appeals.

60. Are you quite sure about that?—I have the figures from the Administration Re-

61. Are you sure that you are speaking of that they do try, or cases that they commit al?—Here is the statement: "Criminal ; Statement of Trials before Magis-

ow, is there a column here of com- The headings are: "Number of nber of Persons Convicted; Number Acquitted; Total Number of Per- ; Average Number of Persons Con-victed and Tried." Now I wish to lay before the Committee the amount of work done by all the civil courts in the Bombay Presidency in 1871. It was as follows: 21 district courts, including joint judge, senior assistant judge, assistant judge, and extra assistant judge, presided over by civilians, decided 399 original suits, and 3,926 appeals; total, 4,325 cases. There are 86 subordinate courts, presided over chiefly by natives, and they decided 132,736 cases; in the small cause courts 53,450 cases were decided, and the total number of cases decided was 186,186. The cost of the 21 district courts was 5,33,065 rupees, and of the High Court 4,35,740 rupees. The cost of the 86 subordinate courts was seven lacs of rupees, and of the Small Cause Courts 2,66,692 rupees; say, total, 9½ lacs of rupees. Such is a comparative statement of the costs of the higher and lower grades of judicial tribunals. With the exception of one or two natives who, under a special law are allowed to occupy a seat on the bench of the High Court, no natives can be promoted to the post of even an assistant judge or district judge. In the cities of Bombay and Calcutta, although there is a large European population, a native can hold the post of magistrate, with summary jurisdiction, over British born Europeans and all other classes of the people, with power to sentence offenders to six months imprisonment and fine to the extent of 500 rupees, without appeal; yet no native is by the present state of the law eligible to the post of magistrate or assistant magistrate in the Mofussil. It is time to remedy such an anomaly, and to remove the barrier that has been interposed to the promotion of natives to the higher posts in the judicial service and the other services.

5863. Do you propose, when they are promoted, to pay them salaries proportionate to their position as natives serving in their own country, and to effect an economy in that way?—They should be paid such salaries as may be fixed for the posts, and there should be no distinction with regard to natives or Europeans. It would not be fair or just to employ a European as a judge or assistant judge, and to pay him one salary; and when a native is found qualified for promotion, after serving in the lower and underpaid ranks of the service for years and years, to pay him less than the salary which he ought to receive as a reward, and as an incentive to honesty and integrity and faithful services performed in the lower grades of the judicial service; he should, when found qualified, be promoted to the higher grades, and receive the salaries that are fixed and allowed for such grades.

5864. You do not see a difference between employing a native in his own country to perform a duty, and employing an Englishman who goes from this country to India?—I do not see that any difference or distinction should be made.

5865. On what principle do you think that the public servants are to be paid their salaries?—Paid according to the nature and quality of the work, and the responsibility of the work which they are called upon to perform.

5866. Without reference to the scale of remuneration that persons in the same position in life in the same country receive?—Without reference to colour or creed.

5867. But are they to be paid without reference to the earnings of the people of the country, and the remuneration that they obtain when they are not in the Government service?—Without

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

reference to any other consideration; the only consideration should be the post, and the responsibility of the post.

5868. You see that does not give any standard at all to start from; a standard would seem to render it necessary to consider what remuneration persons in the country earn for themselves, independent of the Government employment in any way; taking the standard, the remuneration is then ascertained by comparison?—There are some natives that are on large salaries, according to the positions in which they are placed, and they rise from small to large salaries; and they range high and low, according to circumstances and positions.

5869. Do you think that the general standard of wages throughout the country is some beginning upon which you may build to find the remuneration of persons employed in various ways?—I would follow out one principle, that one which I have already mentioned, and that is, that whether natives or Europeans, they should be paid for the work that they do, according to the position which they are called upon to occupy, and the office which they are called upon to hold.

5870. That is an abstract principle without any means of practical application, unless we have some basis to start from of practical remuneration. What is your notion of the basis; are you to find the basis by inquiring what the natives of the country usually receive as remuneration quite independent of the Government, or what do you take as your basis?—I would take the basis that may be fixed as to what may be considered to be fair for the particular posts. So much should be the salary that ought to be allowed to a deputy collector and magistrate, so much for an assistant judge, so much for a judge; and then, after filling the lower and subordinate offices, they should, when found qualified, be promoted and receive such salaries. The Committee will bear in mind that all the bulk of the work and the drudgery of the work falls upon the natives when they enter the service of Government, and on very low salaries, and then they should rise by degrees, as they are found qualified.

5871. Are those salaries low with reference to the remuneration that natives pay to each other in India for similar services?—I have given one instance, that the clerks employed in several subordinate courts receive 10 and 15 rupees a month; whereas cooks and butlers and menial servants receive larger salaries than that.

5872. Do you mean that the cooks that are employed by the natives receive larger salaries?—Yes; I pay my cook a larger salary than the clerk of one of the courts of justice in India gets in the subordinate courts.

5873. What do the natives pay the clerks employed by them?—They pay them a much larger salary than 10 and 15 rupees.

5874. Do they pay larger salaries for similar services at the same age and length of service?—Yes.

5875. How then do you account for the natives being so eager to get these employments; is it not a fact that they are eager to do so?—Yes, because they expect promotion.

5876. And are not the persons who are eager to get the persons who are constantly applying for employment, competent to fill the offices, qualified persons and fit to be employed?—I believe that they are; I wanted to bring to the notice of the Committee the fact that the competency of the natives for filling high posts in the judicial and other services has been acknowledged by the highest authorities.

5877. As it does not affect the finances, it is not a matter that we, this Committee, have anything to do with?—It will affect the finances in this way, that you incur a very large expenditure on account of the judicial administration of the country, and that administration is conducted in such a manner as to give all the higher appointments to Europeans and to exclude natives, notwithstanding their fitness and qualifications.

5878. But as you do not propose to alter the scale of remuneration, it is not a matter that concerns us; we are not engaged in investigating the administration of the Government, but the finances; do you wish to give any further evidence respecting the administration of justice which affects expenditure?—I will now give evidence with regard to the administration of justice by the High Court of Bombay.

5879. Do you consider the charge for the High Court to be more than is necessary?—All the evidence that I shall give will have a direct bearing on the financial aspect. I will now invite the attention of the Committee to several grave defects which impair the efficiency of the High Court, and injuriously affect the interests of the people, and lead to a denial of justice in cases of an important class. The natives repose great confidence in the integrity, independence, and impartiality of the High Court; they regard this tribunal as the protection of their rights and interests. It is therefore, necessary, to remedy the growing defects which have of late produced considerable dissatisfaction amongst the people. The bench of the High Court is now composed of eight judges, namely, one chief justice on 5,000 rupees per month, and seven puisne judges each on 3,750 rupees. In 1856–57 there were two judges on the original side, and three on the appellate side, the latter on 3,500 rupees per month. The existing arrangements for the conduct of business cause delay and enhance the costs. Three or four division courts sit daily, except on Wednesdays, on the original side. A very expensive double machinery of attorneys and barristers is employed to conduct the suits on the original side; on the appellate side this double agency is not required. All the barristers are allowed to practise indiscriminately in all the division courts. Counsels' fees are heavy, ranging from 8 to 20 gold mohurs in each case, besides refreshers, consultation fees, &c. It is compulsory on suitors to employ two barristers on the original side in every case, even in simple contested cases. This is done more for the co[illegible] ence of counsel, one of whom is gener[illegible] gaged in another court, and, therefore, [illegible] leaves the conduct of the case to his junio[illegible] sometimes to the senior.

5880. How does all this bear on the fin[illegible] of India?—It bears on the finances in this [illegible] that the people have to pay heavy costs, [illegible] are enhanced by the mode of procedure w[illegible] have just described, and therefore they f[illegible] grieved; and by adopting a better mode[illegible] cedure, the costs which the suitors hav[illegible] would be lessened, and the burden wo[illegible] Therefore, I submit, that it has a d[illegible] on the finances.

5881. The costs that they pay t[illegible] legal agents would be less, perhaps[illegible]

costs do not come out of the revenues of India?—But they are a burden on the people, and the less the burden is made the more contented the people will be, and there will be a justification for the expense of the court.

5882. We are not appointed for the purpose of inquiring into these matters, and therefore I am afraid that it is no use your giving evidence upon the subject?—But the only justification for heavy expenditure to be incurred on the judicial establishment will be if the burdens of the people are not great, but moderate. I submit that under the system that is adopted they are very great, and that therefore it does not afford a justification for keeping up a very highly paid judicial establishment.

5883. Mr. *Bourke.*] Government have no control over the fees to counsel, have they?—They have control, and they have exercised control. The scale of fees in certain courts is fixed.

5884. Counsels' fees?—Yes, counsels' fees.

5885. *Chairman.*] In the High Courts?—In other courts; if they are fixed in other courts, I see no reason why they should not be fixed in this court, and why people should be compelled to employ two barristers when they could do with one. Then there is a large staff of ministerial and other officers attached to the High Court on salaries ranging from 400 rupees to 2,500 rupees per month, and amounting to nearly a lac of rupees a year. With the exception of an act- of the lowest grade recently , all these posts are filled by e many competent natives, ys, and others, who do not hese offices. In the same nent law officers, costing per year, are Europeans, t Government pleader on the court, on a salary of , a post which a European e is a master and registrar issioner for taking accounts ions, on the large salary of year. Cases referred by the cer are generally protracted to nd not unfrequently to one or entail heavy expense and delay.

rman.] Do you think that the salary luced?—I think that the post should altogether; public interests require pensive and dilatory office should be and the work should be entrusted to e judges. In Calcutta such cases are by a judge. In order to maintain and the *prestige* of the court, it is desirable dges for the original side of the High hould be selected as hitherto, and sent this country. The salaries paid to the and Remembrancer of Legal Affairs, 00 rupees a year, and to the Prothono- Ecclesiastical and Admiralty Registrar, pees, are very high and admit of reduc- e salary of the Remembrancer for Legal been recently doubled, and raised to 1,000 rupees a month. With ge salary given to the Prothosiastical and Admiralty Regispees, it admits of considerable inasmuch as there is very little and admiralty business that is re- be done by the High Court. The ees levied by the sheriff are heavy, and contribute to enhance the cost of judicial proceedings in the High Court. The charge was made originally on account of the responsibility incurred by the sheriff, to reimburse him for loss that might accrue from the sale of property claimed by another individual. Now, he does not sell any disputed property without taking an indemnity bond. All the sheriff's work is done by the deputy, who receives a fixed salary of 600 rupees per month. The post of high sheriff is a perfect sinecure, and ought to be abolished. The sheriff's surplus fees amount to from 15,000 rupees to about 20,000 rupees a year. The appointment is in the gift of the Governor, who has this year conferred it on Dr. Hewlett, a pluralist, who is executive health officer of the Bombay municipality, and coroner of Bombay, and has been appointed surgeon to the Goculdass Tejpall Hospital, now in course of erection. I now desire to bring to the notice of this honourable Committee a most serious blemish in the administration of criminal justice which, if not remedied, is calculated not only to shake the confidence of the people in British justice, but to produce disagreeable consequences.

5887. How does this affect the finances?—It affects the finances in this way, that the High Court costs a large sum of money; to justify that outlay, and to justify the people being taxed for that outlay, it should be thoroughly efficient. I want to show that there is a failure of justice; does the Committee think that, if in several particulars the High Court, costing such a large amount, leads to a failure of justice, that has no financial bearing, and that the high expenses will be justified, and suitors should be taxed for it.

5888. Mr. *Candlish.*] If justice was efficient, it would not be cheaper, it would cost as much then as it does now?—Only then the expense would be justified; not otherwise.

5889. Sir *T. Bazley.*] Do you mean that payments are made for which no services are rendered?—Yes, that is what I say in one important department.

5890. *Chairman.*] We cannot enter into the whole system of the mode in which justice is administered by the court. If you have any suggestion to make respecting the unnecessary expense of the establishment, that is a proposition within the province of this Committee. The general character of the constitution of the court as a sheme for administering justice, is quite foreign to the purposes of this Committee. Do you wish to give some information to the Committee, respecting the system of forced labour exacted by the Government?—Yes; but first I would observe that in 1864, the jurisdiction of the Bombay Small Cause Court was extended from 500 rupees to 1,000 rupees, and the public having derived much benefit from this extension, a further extension to 2,000 rupees, or even 3,000 rupees, is desirable, and a reduction of the heavy institution fee 12½ per cent., charged on the filing of suits, is also necessary. The travelling allowances paid for the Revenue Commissioners and their establishment, amount to 18,000 rupees a year; civilians of the higher grade receive from 200 rupees to 300 rupees a month, and others draw smaller amounts for travelling allowances. These travelling allowances are more than ample, and it is therefore the duty of all Government officials to provide themselves with carts, supplies, and everything necessary for travelling at market rates, or at such rates as private indi-

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

viduals are able to procure them at. I will now proceed to show that that is not done. Moreover, forced labour, which is exacted by all these Government functionaries, is prohibited by the Indian penal code, and its exaction is constituted a crime by Section 374 of the Code, which enjoins that "Whoever unlawfully compels any person to labour against the will of that person, shall be punished with imprisonment of either description, for a term which may extend to one year, or with fine, or with both." It is, also, unlawful to seize carts or bullocks; to impress labourers, workmen, artisans, &c.; to seize or take forcible possession of supplies or articles of food against the will or consent of the owner, and to compel villagers, tradesmen, grain-dealers, or others, to furnish supplies at rates lower than the market prices, or at such rates as they cannot afford to accept. These practices, although prohibited by law under heavy penalties, are resorted to systematically by European officers of Government; and in this particular the evil practices of the native governments have been followed by enlightened rulers like the English. The result is the commission of injustice and oppression, and the infliction of heavy loss and injury, and even personal violence. As these evils are practised by and under the authority of the executive and judicial officers of Government, the unfortunate sufferers cannot get any redress for the wrongs inflicted on them. Wide-spread discontent is produced throughout the Bombay Presidency by the prevalence of forced labour and compulsory supplies. Whenever a European Government official leaves his station, or travels from one place to another, he sends a requisition to the mamlutdar or chief revenue officer of the district, who is also invested with criminal jurisdiction, to furnish a certain number of carts, carriers, &c., a certain quantity of provisions, and other supplies. This requisition the mamlutdar is bound to obey. The mamlutdar sends his sepoys or peons into the village, town, or city, to fetch the carts and supplies.

5891. Mr. *B. Cochrane.*] Do you mean that this is an isolated case, or a general system prevalent throughout the country?—A general system throughout. The sepoys often seize a large number of carts, and release those persons who give gratuities. These cartmen and tradesmen are detained very often for days, and are paid for the hire and supplies at 25 to 50 per cent. under the current rates, and little or no payment is made for detention and loss. To make up the required number of bullocks and carts, the sepoys unyoke and seize bullocks actually employed in irrigating, or ploughing fields, thereby inflicting heavy loss and damages on the poor cultivators. On a market day villagers stay away from a place where an officer is encamped. To prove my assertion and satisfy the Committee regarding the systematic practice of compulsory labour and forcible exaction of supplies, I adduce brief particulars of six authentic cases of this nature which I have collected, showing the hardship and oppression inflicted on the people by European officers of Government, and the ineffectual attempts which some of the aggrieved parties made to obtain redress for their wrongs and sufferings. Here is a statement of the cases which I wish to put in (*handing in the same*). I will only read from this statement three illustrative cases, to show the amount of the hardship and oppression, and how it is practised, and how no redress has been given. Lately, Mr. Gosling, a surveyor of the Great Trigonometrical Survey party in charge of the Unkleser, Broach and Hansote talookas, forcibly seized and retained in his possession a cow belonging to a native of the village of Sujode. In the village of Serthan, in Unkleser talooka, he seized about 40 fowls, and severely assaulted a villager named Morad, who attempted to prevent him from capturing his fowls. He ill-treated several other villagers. In the village of Ruvedra, in the same talooka, he entered the houses of the villagers, and forced the women to spin cotton for his use. Strong complaints were made to Government regarding the oppression practised by Mr. Gosling, whereupon the only redress which the Governor in Council gave to the aggrieved parties was this, "If any further complaints are made against him, the Government of India would at once be addressed on the subject." I will now mention another case; on the 28th September 1871, two policemen seized seven carts at night. They were proceeding from Khaira to Prantij for the purpose of fetching oil. Three of them had been hired for that purpose by Hargovun Vullubdoss, a dealer of Khaira, three had been hired by Kachhia Runchore, and one by Jaisung Raichund. These three persons were proceeding to Prantij with the carts laden with empty cases of oil. Whilst they were so proceeding, they were seized outside the city gate of A[illegible] policemen, who detained them[illegible] whole night. The next [illegible] taken to the bungalow of M[illegible] settlement officer, now fir[illegible] of Ahmedabad. There th[illegible] Mr. Pratt's kit, and were t[illegible] bad Railway Station, and [illegible] bungalow and station. Th[illegible] were in custody were obliged t[illegible] and the following day, when[illegible] at 5 p.m. They were paid [illegible] annas each by Mr. Pratt, [illegible] been hired at the rate of two [illegible] four rupees for the trip to Pra[illegible] of October, Bappoojee Juggonn[illegible] the Ahmenabad Association, lodg[illegible] against the said sepoys for emp[illegible] labour, in violation of section 374 [illegible] Code; but Mr. Fulton, the magistrat[illegible] take cognisance of the complaint, un[illegible] filed by the aggrieved parties themselve[illegible] this decision Bappoojee appealed to [illegible] rodaile, the district magistrate, praying [illegible] would investigate the case in conformity [illegible] tions 434 and 435 of the Penal Code. M[illegible] rodaile held that he would not interfere [illegible] decision of the full power magistrate.

5892. *Chairman.*] Do you object to [illegible] Yes, I do, because parties complained; [illegible] dom have the courage to complain; th[illegible] rather suffer very great wrongs than [illegible] and here the complaint was lodged and n[illegible] was given.

5893. There was no complaint fro[illegible] themselves?—But according to [illegible] Procedure Code, any person c[illegible] plaint with regard to the commis[illegible] in fact, that question was take[illegible] High Court and decided; they ru[illegible] person was entitled to complain.

5894. Mr. *Candlish.*] This is not a [illegible] but a civil matter?—It is a crime a[illegible]

the Civil Code, punishable with six months' imprisonment.

5895. What was the crime?—Forcible detention and compulsory labour.

5896. *Chairman.*] What bearing has that on the finance?—It has this bearing, that large sums are paid out of the Indian Treasury to officers of Government for travelling allowance to enable them to keep up travelling establishments, and to procure all their supplies, and although they draw these travelling allowances, they do not spend the money properly in the market and keep carts and establishments as they ought to do, and they force the people to supply carts, to work for them, and to labour for them, and do these illegal acts, and ill-treat them, and it is a species of slavery which is practised by high officials of Government, although they are so largely paid for their travelling allowances.

5897. Do you know whether these officers really disburse to their subordinates, and whether the subordinates commit these acts by not paying the people whom they employ?—I do not know whether they do it or not.

5898. Did you ever hear it suggested as a matter of general information, that inasmuch as the European officer cannot pay all these monies with his own hand, he employs some chief servant under him, and that that servant does not pay the people properly?—The fact is undeniable, that the people are pressed, and forced to work.

5899. But you have not answered my question, whether you have ever heard of it as a matter of equal rumour and report, that these civilians and persons keep a head man under them (or more than one head man), and that he does all this work; that they pay him the money, and that he is in the habitof deducting monies from those whom he employs, whether tradesmen, or workmen, or others?—I have not heard that.

5900. Have you heard that officers, in the position and rank of collectors and other high officers, have servants or persons under them to whem they pay considerable wages, wages which you have stated are higher than those paid to the clerks in the public service, and that they hand over the money to those servants, and that they leave to those servants to make their domestic arrangements for their conveyance, their provisions and other matters, and for providing a table; and that these head servants are very much in the habit of insisting upon tradesmen and workmen making deductions for their own benefit, when they pay them?—They do that.

5901. Have you never heard that it is one of the great difficulties, both with Europeans having establishments, and with the Government in all departments, that when they entrusted to the subordinate native officers the money to pay people, they are very much in the habit of insisting upon the people that they pay, making them allowances of all kinds, and deducting money which they appropriate to themselves; have you never heard that as a matter of general rumour and impression, on authority as good as that which you have used in making other general statements?—No, I do not know that.

5902. Do you not know that every now and then that takes place, and that people in the public service especially, are prosecuted for making deductions from the wages of the subordinate people employed by the Government and using them for themselves?—Very rarely.

5903. The detection is rare also; but do you know that with reference to European officers holding high offices who have large establishments, it is a matter of universal belief, that their head persons never pay anybody the sums that they represent to their masters, but always, either get bills made out for larger amounts and then make deductions, or if the bills are made to the just amount, make deductions to the oppression of the people employed, whether tradesmen or workmen?—In some cases that may be.

5904. But do not you think it would be more correct to say that it is an universal impression, or rather that it is supposed to prevail almost universally?—It is not an universal impression; but with regard to this forced labour, the impression is, that this forced labour is done and practised with the knowledge and with the sanction of the European officers.

5905. I am speaking now with reference to not paying the sum which is the recognised rate; because you will observe that the code which you have quoted to us is not an absolute prohibition against insisting upon work being done, but a prohibition against insisting upon its being done below the established or market rate?—There is nothing in the penal code about the market rate.

5906. You so read it, I think?—The words of the penal code are these, "Whoever unlawfully compels any person to labour against the will of that person shall be punished with imprisonment of either description for a term which may extend to one year, or with fine, or with both;" this is the whole of the Section 374 of the code; there is not a single word in that section or any other of the penal code about the market rate.

5907. The word "unlawfully" is used in that section?—Yes, that is put in to constitute it a crime.

5908. What was the passage you read with reference to compelling people to give provisions, or other matters below the established rate?—I said that that is the practice.

5909. You stated, that in your opinion it was unlawful to compel supplies at rates lower than the market prices; if that be your view of unlawfulness, it does become a material question as to whether the European did give the full amount to his servant, or whether the servant committed the offence really as a criminal offence in embezzling the money of his master, or cheating the person that his master employed?—The offence consists in impressing the men and compelling them to work.

5910. It says, "whoever unlawfully," does it?—I submit that the word "unlawfully" is put in in the sense in which an act is constituted a crime, and in no other sense. I was going to say that recently a judge of the Small Cause Court of Dacca was dismissed by the Government, and one of the reasons for which he was dismissed has been recently promulgated by Government, and it is to this effect. The Governor General says, "Further, in defiance of a well-known order, Mr. Linton employed his court peons to purchase fowls for him, and as a natural result they were purchased at unfairly low prices. Mr. Linton used his official authority to force the peons to bring them in at the price which he chose to name. His Excellency in Council takes the opportunity afforded by Mr. Linton's plea, that it is no unusual thing to employ peons in procuring bazaar supplies, to direct that the Government of Bengal will impress emphatically on all public

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

officers that the employment of public servants in making purchases, or in any private matter in which the receipt or expenditure of money is concerned is strictly prohibited, and that every breach of this order which is brought to the notice of Government will be severely dealt with;" yet this order is violated; and the penal code is violated by almost all the Government officers that travel through the districts.

5911. Mr. *Bourke.*] But the instance that you give now shows that it cannot be violated with impunity, because that is a censure, and the man is dismissed?—The man is dismissed in Bengal, but I say that in the Bombay Presidency there is no redress for such practices; whilst in the other Presidency redress is given. But in Bombay forced labour is practised with impunity and without any redress.

5912. Have these instances of illegal forced labour ever been brought to the notice of the Bombay Association?—They have been brought to the notice of the Bombay Association.

5913. And to the notice of the Government?—They have been brought to the notice of the Government. I will give you instances: the Bombay Government's attention was brought to a complaint that was made of forcible exaction of supplies by the police superintendent of Ahmedabad. It was on a complaint that was published in the papers. Government called upon that officer, if he was not guilty of such an offence, to vindicate his conduct by bringing an action of libel against the editor of the vernacular paper who had published that complaint; therefore that gentleman was obliged to bring an action of libel, and that case was inquired into by the magistrate of Ahmedabad, and the editor justified the libel and adduced a body of evidence to show that the forced exaction of supplies was practised, and the action was dismissed, and there was a report of the case published in the papers.

5914. *Chairman.*] What was done to the police officer after that?—He was transferred from Ahmedabad to the very next district on the same salary, pay, and allowances; nothing else was done.

5915. Who was the Governor who did that?—The Bombay Government; this was about two years ago; Sir Seymour Fitzgerald was the Governor then.

5916. Sir *D. Wedderburn.*] Is there no rule, then, in existence in the Bombay Presidency whereby provisions or means of conveyance may be requisitioned for the public service at fixed rates; is there no law permitting the Government officials for the public service to requisition means of conveyance or provision at fixed rates?—They have adopted a system by which supplies are forcibly obtained, and they are paid for at what they call tariff rates.

5917. But is there any law which would justify that, supposing them to pay the fixed rates?—There is no law that would justify the purchase of articles and supplies at any particular rate.

5918. *Chairman.*] Are you sure that there is no law in the Bombay Presidency by which persons in the public service can obtain means of transport and provisions at certain fixed rates?—I am not aware of any such law. In fact this system of forced labour prevailed to a very great extent in Scinde, and the Commissioner of Scinde, Colonel Jacob, took steps to put an end to it. He represented all the evil consequences resulting from this practice to the Government, and took steps to put an end to that practice, and he promulgated a notification on that occasion with the sanction and approval of Government, which will show that there could be no such law. The notice that was promulgated by the Commissioner of Scinde with the sanction and approval of the Bombay Government is to this effect: "Statute, or forced labour, is abolished in Scinde. Every man is at perfect liberty to work when, where, and at what rates he may please. Any Government servant who may hereafter be guilty of compelling any person to labour, whether upon canals or any other public or private work, will be liable to be dismissed from the Government service, and to legal prosecution by the injured parties. Every work, of whatever description, may be performed either by means of contract or measured task work, or by payment of daily wages at the discretion and pleasure of the parties immediately concerned. But no person must henceforth assume the right arbitrarily to fix the rates at which labourers or others are to be paid for work performed; such rates must always be fixed by free consent and mutual agreement of the parties themselves;" that is dated 25th April 1856.

5919. That regulation does not apply to supplying carriage and other services to public servants engaged in travelling on a public duty, does it?—It applies, I believe, to all these matters, as I will show from the representation that he made to Government; in one case he issued another notice in which he said: "It has been brought to notice that in many parts of the country nerricks" (that is tarrifs) "are published by authority, under colour of which all Government departments and servants exact supplies at rates much lower than the current bazaar rates of the place. This is, therefore, to give notice that Government strictly prohibits its servants, whether Europeans or natives on the establishment of the Commissioners, the police, the kardars, or any other Government Department whatever, from taking any supplies, however trifling, without paying the full price thereof. There is not to be one price for private individuals and another for Government servants; all are to pay the full current bazaar price of the day for everything they require."

5920. You see that that does not prohibit the obtaining of supplies by persons on the public service performing public duty, it only prohibits their paying less than the market rates?—I submit that according to the wording of this resolution, it does prohibit their exacting them; then another Governor, Mountstuart Elphinstone, in 1821 directed that "the present opportunity may be taken to repeat and enforce the orders against pressing carriages or taking supplies by force."

5921. What are the orders?—I believe it refers to previous orders to the same effect.

5922. What are the terms and conditions?—I have not got those previous orders; I have taken this from Mountstuart Elphinstone's minute, published in one of the Government selections.

5923. Are you acquainted with the rules and regulations that prevailed in the Bombay Presidency, especially in the time of Mountstuart Elphinstone, with regard to the requisitions by public officers engaged in the public service; are you

you acquainted with the rules and orders from time to time issued by Government in those particulars?—No.

5924. Then perhaps you will pass away from that subject to something that you are acquainted with; I think you had better go on to the evidence that you wish to give with regard to the cost of the police?—Will the Committee allow me to submit to them a few facts with regard to the treatment of natives by high executive officers of Government who receive large salaries, and the only justification for receiving such large salaries from the public purse would be their giving general satisfaction.

5925. No; it is quite foreign to this inquiry; we are not investigating the general Government of India and its administration, but the financial administration?—The way in which it would bear on the financial part of the question would be this, that these officers have large salaries of 2,000 rupees, and 3,000 rupees, and 4,000 rupees a month.

5926. No, it is quite beyond the scope of this inquiry; if you can throw any light upon the financial administration, the Committee will be glad to hear anything that you have to say?—I will now give some evidence regarding the salt tax; the natives do not object to the salt tax if it be kept within proper bounds, and levied at a moderate rate. But it has of late been so excessively enhanced that it is exceedingly high, and presses heavily on the poor. The following enhancements have been made in the Bombay Presidency; in 1844 it was increased to 12 annas a maund; in 1859 it was increased to one rupee; in 1861 to Rs. 1 4.; in 1865 Rs. 1 8.; and in 1869 to Rs. 1 13. The increased duty is so heavy that it amounts to 1,600 per cent. on the cost of production and manufacture. A great deal of evidence has been given before this Select Committee, with a view to show that little or no complaints are urged by the people of India against the salt tax; the Rev. Doctor John Wilson went so far as to state to the Committee that he "never met a native in the Bombay Presidency who complained of the salt tax." Sir Cecil Beadon and Mr. Pedder have made a suggestion to the Committee for raising the salt tax in Bombay and Madras to the level of the duty levied in Bengal, namely 3¼ rupees per maund. I believe these opinions are unfounded; they are attributable to ignorance of the real state of matters; a large majority of the agricultural and labouring classes are so poor that they cannot afford to buy food and clothing sufficient for their healthy existence; many of them are compelled to live on half diet, and many are reduced to a state of starvation; they cannot afford to buy salt in quantities sufficient for their wants. Those persons who have made themselves intimately acquainted with the poorer and indigent classes of the people, and with the manner in which they subsist, will at once be able to contradict the evidence of the gentlemen who have stated that the people do not suffer from nor complain against the undue enhancement of the salt duty, and of the cost of that necessary article of life.

5927. Now, what is the condition of poverty referred to by you that is rendering it impossible for the people to pay the salt tax; what are the incomes of such people?—Their incomes are so small that in a great many cases they are barely able to earn 2½ rupees or 3 rupees a month, which amount is insufficient to enable them to provide the food and clothing necessary for their healthy existence.

5928. Do you mean that their inability arises from their not getting employment, or from their physical incapacity to work, or in what sense?—No, not from their physical incapacity to work; they are fully able to work; but from their poverty arising from their state and condition.

5929. Are you describing able-bodied men, who do a good day's work, and only get paid for it at the rate of two or three rupees a-month?—Yes.

5930. To what particular districts do you refer?—In many districts of Goozerat and the Deccan that is the case.

5931. Can you name a district, either in Goozerat or in the Deccan?—Yes, in the district of Ahmedabad, in the district of Khaira, in the district of Pandee, and other districts.

5932. Those are the earnings of a man himself apart from the earnings of his family, I suppose?—The man himself. His wife and family may pick up some little amount, but all that the whole family is able to earn is entirely insufficient to enable them to provide the means of healthy existence.

5933. These people, however, do live in a healthy state, do they not?—No; many of them are emaciated and sinking. I have myself observed their condition; and when asked and interrogated with regard to their physical condition, they say that they have been reduced on account of their inability to provide themselves with sufficient food. Many of them I have known live on half diet with only one meal a-day, and many of them live on wild herbs and fruit growing on the wild trees.

5934. Are you now describing an ordinary state of things, or a state of famine?—No, an ordinary state of things.

5935. Can you explain to the Committee how it happens that these people in this particular district of which you speak, get such small means; is it that the population is beyond the wants or requirements for cultivating the land of the district?—That is the state of the people; they cannot obtain land on sufficiently favourable terms, so as to be able to cultivate and leave a larger income for themselves. The assessment is very high.

5936. You mean that there are too many people in the village for the land to be cultivated, and, therefore, the share of each is not large enough to afford him sufficient remuneration?—They cannot obtain land on such terms as after cultivation would leave sufficient for their healthy maintenance.

5937. What prevents them from obtaining land on such terms?—Many of those that have obtained lands, after cultivating them and after paying the Government assessment, find that the amount left is utterly insufficient for their healthy maintenance.

5938. Are you aware as to any of these districts of which you speak, of the number of years' purchase for which the person can sell his land when he holds it from the Government, and pays the Government tax?—I have been informed that many lands that were attached and sold at the suit of creditors fetched from one rupee or two rupees to five rupees per field or holding of each of those persons.

5939. Showing that they had no value in the

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

the market?—Very little value. I will mention one fact which alone is sufficient to refute the Rev. Dr. Wilson's statement that the natives do not utter a single complaint with regard to this salt tax. The Act of 1844 for raising the salt tax was promulgated in Surat on the 28th of August. It produced great consternation and discontent throughout the city. On the following day business was suspended, all the shops and markets were closed, the people collected in large masses, and uttered loud and most bitter complaints against the enhancement of the tax. They were so much enraged and exasperated that they committed excesses amounting to a riot in that city; they proceeded *en masse* to petition the collector and magistrate against the enhancement of the duty; and I believe some temporary relief was given on that occasion. Had the Reverend gentleman, to whose testimony I have referred, taken the trouble to inquire into the matter, and to ascertain the feelings and condition of the people, he would not have committed himself to such an erroneous opinion. I will refer the Select Committee to the action taken by another missionary who came in contact with people who were suffering from the dearness of salt caused by the levy of a very heavy tax.

5940. Sir *G. Balfour.*] Can a man consume a pound of salt a month?—Yes, that is the amount, I believe.

5941. And how much tax do you suppose he would pay to Government for that pound out of the *Rs.* 1 13 annas a maund? — The bulk of that is for the tax.

5942. How much would go to the Government in the way of tax out of the *Rs.* 1 13 annas. When I mention to you that it is only a halfpenny a pound, would it fall heavily upon the earnings of the man?—From the facts that I have gathered I conclude that it does.

5243. *Chairman.*] The fact, as I understand you is this, that the duty on salt is a rupee and a half a maund?—One rupee 13 annas.

5944. And the maund is 82lbs.; that is a matter of arithmetic. It seems to me to be about one halfpenny in the pound, is it not?—Yes. Several years ago a native chief placed 100 rupees at the disposal of the Rev. Mr. Mackie to be devoted to charity. The natives of the villages in the neighbourhood of Gogo represented to that gentleman the hardship from which they suffered in consequence of their inability to procure salt, which was subject to a heavy tax, and their being compelled to mix their food with earth saturated with salt; that reverend gentleman being moved with compassion purchased salt with the said money, and distributed it freely amongst the people for relieving their wants.

5945. Sir *G. Balfour.*] In what year was that?—Some 15 years ago.

5946. Before railways were established?—Yes.

5947. And before railways could convey salt to those parts of the country?—Yes; in Goozerat, the Deccan Cowcan, and other parts of the country, the poorest class of the people are forced to have recourse to the expedient of mixing with their food earth saturated with salt, because they cannot afford to buy sufficient salt for their food.

5948. In what particular place is that?—In the interior of the district of the Khaira Collectorate, and several districts of the Concan.

5949. Would that apply to the present day?—Yes, it applies to the present day.

5950. *Chairman.*] Have you made any inquiry, so as to be able to inform the Committee whether there has been any rise in the remuneration or rate of wages of the native population of Bombay within the last 10 years?—There was a rise since 1860, but during the last three years the rise has been rapidly declining.

5951. Then is the rate of wages the same now as it was 20 years ago, or is it higher?—The rate of wages is a little higher.

5952. With regard to those people whom you have described as earning two or three rupees a month, is their rate of remuneration the same as it was 20 years ago, or have they derived any benefit from the rise in wages?—They earn nearly the same amount now as they used to do before.

5953. Sir *G. Balfour.*] Then the price of labour has not risen in the Presidency of Bombay?—It did rise, but it is rapidly going down to its former level.

5954. The labour is just as cheap now as it was 10 or 12 years ago; is that what you mean?—It is somewhat dearer.

5955. Mr. *F. Fowler.*] What are the wages of a labourer?—The wages of a labourer vary in different districts, but in the interior of the country the wages are about three rupees or three-and-a-half rupees or four rupees a month.

5956. *Chairman.*] Can you explain how it is that the people in Bengal are able to pay a salt duty of three rupees a maund, whilst the inhabitants of Bombay are not able to pay without great pressure such as you have described a salt duty of one-and-three-quarters rupees a maund?—There is one circumstance which perhaps might enable them to pay more duty, or explain why it would not be felt by them so much as in the Bombay Presidency; the land assessment in Bombay is much higher than in Bengal.

5957. Do you know whether the rates on the land that are paid by the actual cultivator in Bengal are lower than those which are paid by the cultivator in Bombay?—They are not.

5958. What subject do you wish to take up next?—I propose to give some evidence with regard to police expenditure.

5959. Will you state any objections that you entertain to the expenditure for the police of Bombay?—The objection with reference to the police expenditure is that that expenditure has been of late years considerably enhanced. The expenditure in the Bombay Presidency now amounts to close upon 40 lacs of rupees. In the year 1864 the Government of India deputed Colonel Bruce to Bombay to examine and review the police establishments, so as to enable Government "finally to settle the strength and cost of the police in the Bombay Presidency." The result of this officer's mission was a very large saving, estimated at 5,30,914 rupees per annum, after placing "every member of the force on a salary adequate to the increasing rates of the times." In 1866-7 the entire cost of the police in the Bombay Presidency amounted to 35,65,574 rupees, since which time the expenditure has been enhanced from year to year, and now amounts to about nearly 40 lacs. Even within the last two or three years, I think, since 1871, there has been an increase in the number and emoluments of the officers in the higher grades. In 1871 there were 27 officers

in

n the police department; in January of this year there were 34. In 1871 the salaries of the superintendents of the first grade were 800 rupees each, per month; since then they have been enhanced to 1,000 rupees each, and so on, throughout all the different grades, their salaries have been increased; and in that way, by employing a large number of superintendents of different grades and paying them on a very high scale, very large salaries, the expenditure has been greatly increased.

5960. Sir *G. Balfour.*] What has been the increase?—The increase since 1867-8 has been four lacs in the police expenditure.

5961. And what has been the increase since the time immediately before the Mutiny?—The increase I think is much larger; but I have not got with me the amount of police expenditure in 1856-7, the year of the Mutiny.

5962. And what is the sum that you say now is the cost of the police?—Forty lacs of rupees.

5963. When I mention to you that the whole cost was upwards of 39 lacs before the Mutiny, you will see that the increase has not been very large?—I do not know as to that, but I submit that one fact shows that the increase cannot be justified. In 1864, when prices were at the highest, the Government deputed their own officer of police, Colonel Bruce, to settle the strength and cost of the police in the Bombay Presidency permanently, and he made a saving of 5,30,000 rupees; on his report the strength and remuneration were, I believe, fixed, and that reduction resulted in the police expenditure; but since that time there has been a large increase.

5964. *Chairman.*] Have you got the number of men, apart from the officers, of each of those two periods?—No, I have not got the number of men; but in some districts the numerical strength of the police has been greatly reduced, although the expenditure has been so much increased.

5965. Sir *G. Balfour.*] And can you give us the number of policemen to each square mile, and to the population?—Yes, in several places I will. In the city of Surat, six years ago, the numerical strength of the police was 200; it has since been reduced to one-half. The result is, that there is only one policeman for 1,000 inhabitants, a rate which is utterly inadequate for the protection of the population of Surat.

5966. And what proportion do the district police bear to the area and to the inhabitants?—I am not able to give the exact proportion, but in Broach the number of policemen has also been reduced from 90 to 35; that has taken place in a large town like Broach; and moreover, by removing the garrison that had formerly been stationed there, and reducing the police force, the city is regarded by the inhabitants as in considerable danger, because large bodies of Bheels are living and roaming about in the adjoining districts, and thefts and robberies are more frequent.

5967. Considering that we are able to ascertain the sufficiency of the police force by taking the proportion to the population and to the area of square miles, it would be very desirable if you could furnish the Committee with that specific information?—I will try to do so at the next sitting. In the same way in the town Khaira, a large and populous town, the police force consists of only 25 Sepoys, and the population is 20,000 persons.

5968. *Chairman.*] Do you wish to say anything on the subject of the cost of education?—Yes; the amount spent on superintendence and inspection in the Educational Department is very large, and out of proportion to the amount disbursed by Government on the educational institutions in the Bombay Presidency. The charges for superintendence and inspection sanctioned in the Budget of the current year amount to 261,056 rupees for the Bombay Presidency, exclusive of about a quarter of a lac of rupees drawn from local funds, whilst the sum spent on all Government and aided educational institutions, exclusive of the university and general and professional colleges not inspected by Government inspectors, is estimated at 6,35,435 rupees. Thus the cost of inspection amounts to a great deal more than one-third of the sum actually spent on education. In this department all the higher posts are filled by Europeans and the lower by natives, and, howsoever qualified they may be, the latter are not promoted to the higher posts.

5969. But do you think that the natives might be employed in the Education Department at much lower salaries than those which are paid to Europeans?—Yes, as inspectors they can be. The inspectors receive very large salaries, ranging from 800 rupees to 1,000 rupees and 1,500 rupees a month each.

5970. What do you think would be the proper salaries to pay natives employed in that service?—I think these salaries in themselves are very high, and whether these posts are filled by natives or Europeans they should be filled at lower salaries.

5971. What do you think would be a proper scale of salaries for natives employed as inspectors, putting aside now Europeans and dealing with natives; how much a month?—About 600 rupees a month.

5972. Do you think that that would be a reasonable salary to pay a native?—A native or a European, whoever is employed in that post.

5973. That would be two hundred times the earnings of the workmen in the districts that you have described?—Yes.

5974. Mr. *Fowler.*] Is that post now filled by Europeans?—All the posts of inspector are filled exclusively by Europeans, and they receive from 800 to 1,000 and 1,500 rupees per month.

5975. Then it would be a saving of 200 to 900 rupees a month, if natives were employed at the rate you suggest?—Yes.

5976. *Chairman.*] Do you think that that is a reasonable rate, or a very extravagant rate of remuneration, to pay an inspector of a school 200 times the earnings of an able-bodied workmen; do you know that if any inspector of schools were paid at that rate in this country, his salary would be about 8,000 *l.* to 10,000 *l.* a year?—There are deputy inspectors also, who are paid on a smaller scale.

5977. As you have studied these things very much in India, I want to get your view upon native remuneration; an inspector of schools in this country would be paid about 20 times the earnings of an able-bodied man, and you propose in India that he should be paid 200 times the earnings of an able bodied man; now I want you to explain the principle upon which you arrive at the basis of paying native salaries in India?—You asked my opinion as to what I would consider to be an adequate salary for the post of inspector, and I gave you my idea; but my principle is, that I make no distinction

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

with regard to the salaries to be given to natives or Europeans; it is the post that I consider.

5978. I understand that, but then what I want is to get the basis upon which we are to start; in this country we understand that you get some idea of remuneration by the profits that people make, or the remuneration which they receive in other occupations, or you can take the standard of wages generally, and multiply them, or otherwise arrive at some idea of remuneration; I want you to give some basis upon which we could arrive at a scale of remuneration for the natives of India, if you can; of course I do not ask you to do it if you have not studied it?—No, I cannot give you any basis such as you suggest; the natives who are employed as deputy inspectors have salaries ranging from 25 rupees to 200 rupees a month.

5979. Mr. *Fawcett.*] Then you would probably say that the comparison which has been made by the Chairman is scarcely a fair one, because in England, in which the comparison is made between an inspector of schools and an ordinary labourer, the inspectorship of schools is an appointment which an immense number of people are fitted to hold; but from the fact that in India, hitherto the Government have said that no native is fit to occupy the position, therefore they must think that it is a position which requires, so far as the people of India are concerned in the matter, very rare and very exceptional abilities; and, therefore, those very rare and very exceptional abilities ought to be rewarded in an entirely different scale as compared with ordinary labour in India from what they would be in England?—Just so; it requires special qualifications, and when they do possess or acquire such qualifications, and they are appointed to such important posts, they should receive adequate salaries.

5980. *Chairman.*] Are you of opinion then, that there are many natives in Bombay who are qualified for this office of inspector of schools?—I believe there are. And there is another subject of complaint, that natives in the Educational Department do not receive the promotion to which they are entitled. I will give the Committee a recent instance of this; Mr. Ramchristna Gopall Bhandarker, who had been employed as assistant professor of Sanscrit in the Elphinstone College of Bombay, filled the post of Acting Professor of Sanscrit in that College; he was appointed to it, and he filled that post in a satisfactory manner; he is a most competent Sanscrit scholar, and his attainments and fitness are acknowledged, and yet he was not appointed permanently to the post of Professor of Sanscrit, but a European was appointed, and he has been confined to the post of assistant professor on 350 rupees a month. When a competent native is to be had, and is available for promotion, he has been superseded, and another gentleman has been appointed.

5981. You see that we are getting far beyond the subject of our inquiry, which is to discover a more economical mode of administering the finances and expenditure of India; in your view it is perfectly immaterial whether they have a European or a native as regards expenditure?—I wish to point out that a native might very well have been employed in this case.

5982. Mr. *Fawcett.*] Would it not be your opinion, taking positions, like the inspectors of schools as illustration, that it would represent a very considerable saving to the finances of India, if the pay of these appointments was reduced to a remuneration sufficient to attract natives who are willing to discharge the duties of the office?—Yes.

5983. You are not opposed to that, are you?—No, I am not opposed to that.

5984. It seems to me that your evidence involves two points, does it not; in the first place, you wish to insist that if there is a certain office which Europeans and natives are alike able to fill, no distinction should be made as to the remuneration; that is your first contention?—Yes.

5985. But the fact of your holding that opinion does not necessarily imply that you are opposed to a reduction of the pay of these offices so as to represent an adequate remuneration to the natives and to attract a different kind of Europeans to fill them, and thus effect a saving to the finances of India?—Just so; many of these appointments that I have mentioned are very highly paid, and their emoluments should be reduced, and whether natives or Europeans, the persons filling them should be appointed at the reduced salaries.

5986. What the Chairman has been endeavouring to impress upon you is this, that if you confine your argument to the point that natives and Europeans should be paid the same, that is scarcely a question into which we can inquire, because it does not then represent any financial saving, but is simply a question of justice between natives and Europeans, and a question of administration. If, on the other hand, you argue that these positions are overpaid, that their pay might be reduced, and that when the pay of them was reduced you would at the same time get a sufficient number of qualified natives to apply for the appointment, and also Europeans, then if you put the subject in that light it represents itself in an aspect which involves financial saving, and we can inquire into it?—Yes, that is the light which I wish to put it; I have shown that these superintendents of police in the different grades are paid very large and extravagant salaries, and in the same way that the educational inspectors are paid very large salaries, and that they should be reduced.

5987. *Chairman.*] You see the question of the salary as a sufficient remuneration for an Englishman going out from this country to India, and holding a certain station with reference to his condition in this country, is one that you would hardly feel yourself in a position to go into; but the question of whether these appointments can be efficiently held by natives, and what would be the proper and reasonable remuneration for a native holding the appointment, is a question upon which you would be very well qualified to express an opinion. I want you to separate these two questions, because they are entirely different in their character, and whilst we should be very glad to have your opinion upon the one, I do not think that we should gain much by having it on the other?—In the Educational Department there are many Europeans who are employed on smaller salaries, salaries of 500 rupees a month, and that fact is sufficient to show that if the high salaries of the inspectors on 1,000 and 1,500 rupees a month were reduced and kept within proper bounds, they would still attract Europeans as well as natives.

5988. That is another question, whether the European would like to take up the appointment, supposing the standard of remuneration were fixed

fixed upon the basis that a native of the country is perfectly well qualified to perform the duties, both in education and general conduct, and that it would be unnecessary to employ Europeans; then if the European takes up the appointment that is his affair. On the other hand, supposing that the Government deem it expedient that the office should be held by an Englishman proceeding from this country, then the standard of remuneration proceeds upon an entirely different set of considerations, which it would be very useless for you to go into. I want to get from you positive evidence on that which you may be supposed to know, namely, whether in all the cases which you have mentioned, you think that the native would perform the duties just as well, and just as much to the satisfaction of the native community as the Englishman does now?—Yes, if elevated to many of these posts the natives would.

5989. Then I want you, consequent upon that, to state what you think would be the proper scale of remuneration to give to natives occupying those positions, bearing in mind the rate of remuneration that prevails generally among natives and all the other conditions that make up the standard of remuneration, how much the saving would be, or the reduction generally in these appointments; whether you think half, for instance, would be the principle to pay or a quarter. If you could give us your view upon that point, it would be very valuable?—The salaries of the educational inspectors could be reduced one half, without impairing the efficiency of the service.

5990. Sir *G. Balfour.*] You could get qualified natives to fill these appointments for half the sum, you think?—Yes.

5991. *Chairman.*] And they would be efficient, you think?—They would be efficient.

5992. Sir *G. Balfour.*] They would give satisfaction to the natives, you think?—They would give satisfaction to the natives, and then there is the salary of the Director of Public Instruction, amounting with allowances to 33,000 rupees; that is also very high, and admits of considerable retrenchment.

5993. Mr. *Fawcett.*] Is that the Director of Public Instruction in Calcutta?—In Bombay. In the larger Presidencies of Bengal and Madras, the Director of Public Instruction receives a salary of 24,000 rupees a year.

5994. That is less than is given in Bombay; what is the reason of that; it is the old story, I suppose?—I do not know the reason, but it shows what I contend, the very high salaries that are given to the higher grades of officers employed in the Educational Department.

5995. But I suppose this fact has been commented upon, that the Director of Public Education in Bombay should be paid a great deal more than the Director of Public Education in Bengal. Have you ever seen an explanation of that?—I have not seen any; but I know this, that the Government of India, some time ago, directed the reduction of this salary, so as to place it on the same level as the salaries in Bengal and Madras; but that has not yet been done.

5996. How long ago was that recommendation made by the Government of India?—About three years ago.

5997. And no notice whatever has been taken of it?—The salary remains the same. And I further submit, that instead of taking a member from the Civil Service and appointing him Director of Public Instruction, the interests of the Educational Department would be better served, and with greater economy, by procuring from England a competent and trained educationist.

5998. But this is not considered a covenanted appointment?—No.

5999. It is not necessary that a member of the Civil Service should be appointed to it?—No.

6000. In Bengal and Madras, I believe the gentlemen who held these positions were neither of them in the Civil Service, were they?—No.

6001. *Chairman.*] It has been held in Bombay by a gentleman not in the Civil Service, has it not?—Yes, by the late Mr. Howard, and by Sir A. Grant.

6002. Mr. *Fawcett.*] You have stated that the wages of the natives rose about the year 1864-5, and that they are not considerably higher now than they were 10 or 15 years since?—Just so.

6003. Can you give me any estimate, first of all, of what the rise has been, which you say is not considerable, during the last 15 years in wages in the town of Bombay and in the country districts; can you give me the exact rises during the last 15 years, stating what the wages were in 1856, and what they are, for instance, now, and has the rise been 10, 15, or 20 per cent.?—There has been a rise of about 25 per cent., I think.

6004. That is what you mean when you say that the rise is not considerable?—No; it is not considerable.

6005. Then during the same time, what has been the rise in the cost of living in those districts where wages have risen 25 per cent.?—The cost of living has been enhanced in a greater ratio than the rise in the rate of wages.

6006. What estimate can you give of the rise in the cost of living or the rise in general prices, which comes to the same thing?—For instance, if wages have increased 25 per cent., the price of living has increased about 40 per cent.

6007. That is the evidence that Sir Bartle Frere gave; I think he expressed the same opinion; therefore, according to your statement, the real wages of labour, meaning by the real wages of labour the purchasing power of those wages as contrasted with their nominal amount, have decreased and not increased during the last 15 years?—Just so.

6008. And during this time taxation has increased, has it not?—It has increased very much.

6009. And therefore the labourer has increased taxation with really diminished resources?—Yes.

6010. In what you are speaking of now, you are referring to the town of Bombay?—Yes.

6011. Does a similar remark hold true with regard to the Presidency of Bombay?—I believe it holds good.

6012. But you can speak with more positiveness as to the town of Bombay?—Yes.

6013. You have observed, I suppose, an enormous increase in various items of Government charge in the Town and Presidency of Bombay, especially in all the personal charges connected with the Governor, have you not?—Yes.

6014. Can you state how much the personal establishment expenses of the Governor of Bombay have increased during the last 15 years?—They have increased very much. In 1856-57 the Governor's staff and household amounted to 66,020 rupees, and tour expenses to 11,720 rupees;

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

rupees; his staff and household expenses now amount to 1,67,000 rupees, and his tour expenses to one lac.

6015. Therefore, you have to compare 78,000 rupees with 2,67,000 rupees. Therefore these personal expenses and establishment expenses of the Governor of Bombay during this period of 15 years, when your figures prove that the condition of the labourer has been declining and taxation has been increasing, have increased by no less an amount than 350 per cent.?—They have.

6016. Can you give me a few other items of the expenses of the Governor of Bombay?—I have not the figures with me.

6017. I should like to hear some non-official explanation of this extraordinary fact. Can you suggest, or did you ever see suggested any explanation why these establishment expenses of the Government of Bombay should increase 350 per cent. in those 15 years?—I have not heard any justifiable cause or reason assigned for that.

6018. A fact like this must have attracted great notice on the part of the people who have to pay the money, has it not?—Yes.

6019. I suppose it must necessarily have caused great dissatisfaction?—The increase of expenditure in all the Government departments has been so great as to cause complaint and dissatisfaction.

6020. But you are not aware that any explanation or apology for this increase in the expenditure of 350 per cent. was ever given to the public?—I am not aware of it, except that the plea which is assigned, is that there has been a rise in the wages.

6021. But this rise in wages, according to the estimate, has amounted to no more than 50 per cent., has it?—No.

6022. And this increase in the expenditure amounts to 350 per cent.?—Yes.

6023. Therefore that is an inadequate explanation?—That is the only explanation that I have heard.

6024. Are you aware whether, in India, any notice has been attracted to an item which yearly appears in the expenditure, namely, an item, I believe, amounting to about 180,000 *l.* for Ecclesiastical Establishments?—Yes, that expenditure is without justification; it is contrary to the policy on which the Government of India is conducted.

6025. I will get you to explain the exact nature of it first of all. What I understand this 180,000 *l.* spent in Ecclesiastical Establishments to be is this: that the Government provide chaplains for those Europeans who are employed in the Civil Service, and also for the officers and privates of the European troops; that represents that large amount?—Yes.

6026. Does the Government undertake to supply ecclesiastical services for the natives who are employed in those Civil Departments or in the army?—They do not.

6027. Have you ever seen any reason why the Government think it is necessary in addition to the pay which European civilians and European soldiers receive, to supply them with ecclesiastical services and not extend a similar aid or similar advantage to the natives whom they employ either in civil or military departments?—There is no such aid given to natives.

6028. Has the fact of this amount being spent in ecclesiastical establishments been commented upon by the people in India?—Yes.

6029. With regard to local taxation, I believe, it is a correct description to say that during the last few years a system has been introduced which will gradually spread over India a great net work of local taxation?—Yes.

6030. That a great many new local taxes have been imposed, and a very great many more have been threatened, have they not?—Yes.

6031. That Acts have been already passed, which give the power to the local authorities to impose a great number of local taxes, and this power hangs, as it were, constantly as a threat over the people of India?—Yes, the Supreme Government have given power to the Local Governments to raise money for local purposes by fresh taxation if they consider it necessary so to do.

6032. Therefore you cannot estimate by any means the dread, the alarm, and the discontent which this new policy of local taxation has caused to the people of India, by simply considering the number of local taxes which have been actually imposed; but you must also take into the account the great number of local taxes with which the people have been threatened, and which exist, as it were, ready at any moment to be imposed upon them?—Yes.

6033. Now all this policy of local taxation has been carried out, has it not, without giving the natives any better opportunity than they had before of representing their wants and expressing their opinion?—No better opportunity whatever has been given to them.

6034. Are you aware of the views held on this subject by many of the statesmen who have governed India with the greatest success; I refer particularly to Sir Donald M'Leod; I believe he was a man who obtained a high position amongst the natives, was he not?—Yes, he was highly respected.

6035. No English official that ever was in India (I have seen that description of him, and I believe, from your experience, it is a true one) was more beloved by the natives than Sir Donald M'Leod?—He was very much beloved.

6036. Are you aware that Sir Donald M'Leod expressed the opinion again and again of the great danger and peril of imposing any new tax in India without first consulting the natives as to their wishes?—Yes, he has expressed such an opinion.

6037. And these new local taxes have been imposed without consulting the natives at all?—Without consulting the natives, and against the remonstrances of the natives.

6038. And in many cases taxes have been imposed when it would have been possible to have raised the money in a form which would have been regarded by the natives as less objectionable, and would have been less opposed to their instincts and their feelings?—Yes, and the feeling is that there is no necessity for additional taxation; that if the Government reduced their large, heavy, and growing expenditure there would be no necessity for additional taxation.

6039. Therefore there is a wide feeling that if the economy is introduced which ought to be, the taxation would be greatly reduced; that feeling exists, of course?—Yes, it does exist, and generally exists.

6040. Then, in addition to that, there is another question; some money of course has to be raised, and

and if money has to be raised it is very important not to start with any cut and dried rule as to what is the best form of taxation, but to consider each tax in reference to the character, and the feelings, and the wants of the people upon whom that tax is going to be imposed; you would recognise that, would you not?—Yes.

6041. Has not this constantly happened, for instance, with regard to local taxation; did not many of these English officials themselves admit that some direct tax, such as the house tax, has been imposed when it would have caused very much less discontent and been much more suited to the feelings of the people if the same amount of money had been obtained not by direct taxation but by some form of an octroi duty?—Yes.

6042. At the time when the Imperial income tax was causing so much notice in England, and exciting so very much agitation, and was written about so very much in the English press, during the whole of that time a very much more onerous local income tax was imposed in Bombay, and yet it scarcely attracted any notice at all in this country; is not that the case?—I do not know whether it attracted notice in this country or not, I not being then present here.

6043. You did not study the English papers sufficiently to see that?—I did not.

6044. Do you share in the opinion that the raising of a part portion of the revenue by local taxes, which before was raised by Imperial taxes, in fact the carrying out of what is known as the decentralisation policy will have this disadvantage associated with it, that local taxes of an oppressive kind may be imposed, and they will not attract so much notice and they will not create so much public opinion throughout India, and, consequently, not in this country, as if an Imperial tax of a similar kind had been raised?—I do not think it would attract so much notice.

6045. Are there any other points on which you would like to express opinions, purely financial points, I mean?—I should like to give some evidence with regard to the revenue administration and the assessment of land, as to how it affects the people.

6046. On what particular point would you like to express an opinion?—I wanted to lay before the Committee the hardships which are felt by the agricultural classes of the people, and the first is, as to the instalments by which the Government revenue is made payable. They are two, and they are made payable at inconvenient periods; and not unfrequently the people are, on account of the state of cultivation, not able to pay them. Formerly the revenue was made payable by four instalments, and at convenient periods; and if that arrangement was reverted to it would be a great relief to the people. Then with regard to the arrears of Government revenue there is a very heavy rate of interest levied by Government, namely, 94 per cent., and that is an exorbitant rate.

6047. Do you mean, for instance, that if a tenant was in arrear of rent 100 rupees, and that rent was overdue by one twelvemonth, he would have to pay at the end of the twelvemonth 100 rupees of rent, and 94 rupees of interest in addition?—Just so. That hardship was represented to the Government by the Bombay Association.

6048. Do you know that from your own knowledge, or is it simply a statement that has been made to you?—It is laid down in the Government rules, and I will quote those rules. The rules promulgated by Government for the administration of the survey settlement under the provisions of Section 28 of Bombay Act 1 of 1865, contain several stringent provisions for regulating the collection of the revenue when instalments are overdue. Rule 16 directs (these are the words of the rule) "That interest, at the rate of half a pie per rupee per diem should be charged from the day after the instalment falls due up to the date of payment, both days inclusive." Now that comes to 95 per cent., calculated at this rate. In 1869 we represented this great hardship, and solicited Government to reduce this enormous rate of interest which is felt by the ryots to be very heavy and extortionate; but they declined to reduce it. A return on that occasion was called for by Government from their revenue officers, which I have here before me, and which shows that this exorbitant rate of interest was enforced in 53,995 instances in the year 1867-68, and the amount of interest recovered from these people in all these instances was 43,481 rupees.

6049. *Chairman.*] On a revenue of how much?—The revenue is not stated; but the amount that was recovered on account of this high rate of interest is given here, showing that there were nearly 54,000 persons who were unable in that year to pay the instalment just at the date when it was due, and that the amount due by them was recovered, with 43,000 rupees addition for interest.

6050. Mr. *Fawcett.*] Supposing that any misfortune should happen in India, for instance, a bad season, or anything like that, I suppose the Government reserves to itself the power of allowing these arrears of rent to go then on without charging interest?—The interest is charged for arrears up to a month, and after that, whenever Government think proper to enforce the payment of their demand, an execution issues, and the ryot's property is sold.

6051. I understand from your last answer, that the Government only necessarily gives a month, and then they can, if they like, put in an execution, and the property will be sold?—Yes; Recently the time has been extended to two months.

6052. But the point that I want to put is this, suppose there has been a famine in the district, and great draught, and a failure of crops in consequence of the draught, and the Government knows that the tenants are unable to pay the land revenue, they have the power, I suppose, to let the revenue get into arrear without charging this rate of interest that is fixed?—They have that power; they have the power of making remissions.

6053. That is decided, I suppose, on the recommendation of the district officers?—Yes; but remissions are very seldom made even for a bad harvest, or a bad season, or for draught.

6054. Then did the Government give any defence for charging this high rate of interest?—They say that they exact this more as a sort of penalty than as interest; that is the only defence that they put forward.

6055. Have you got anything to say with regard to the land revenue in reference to what form of settlement is best; that which exists in the Bombay Presidency, that which exists in Bengal, or that which exists in Madras?—The

Mr. *Nowrozjee Furdoonjee.*

4 July 1873.

ryotwaree settlement which exists in Bombay is good; but the settlement should be fixed, and then it should not be subject to changes and revisions frequently.

6056. Then what I understand you to be in favour of is, the ryotwaree system, with a settlement at long periods?—Yes, not to be disturbed except for good and sufficient reasons even at the expiration of the period.

6057. You mean a 30 years' settlement?—Yes; and there should be no re-survey after that; no periodical re-surveys, which admit of enhancement of the assessment from time to time.

6058. Have you any other opinion which you wish to express?—With regard to the interest on the arrears of land revenue, it is not only that heavy rate of interest but there is also a fee charged for notice which every ryot is served with, calling upon him to pay the amount of the instalment that is over-due; and that also is felt to be a burden. And then another complaint is that there were village commons which were not assessed, and which were kept free for the express purpose of enabling the villagers to graze their cattle upon; and all these village commons have been resumed, and have been assessed and sold to cultivators. And therefore unless cultivators take up lands and pay assessment to Government for them, they are not able to have any grazing ground, and they feel that as a great hardship.

6059. Do these village commons exist in almost every village?—Yes.

6060. And, as I understand you, they were used freely by the whole inhabitants?—Yes.

6061. For how long did that right to common property exist?—For years and years, long before the British Government came into power.

6062. What is the extent of these commons on an average; has any estimate been made of them? You say, I think, that they existed universally in every village?—In every village.

6063. Have they all been appropriated?—They have all been appropriated.

Tuesday, 8th July 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Dickinson.
Mr. George Balfour.	Mr. Grant Duff.
Mr. Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Mr. Robert Fowler.
Mr. Campbell-Bannerman.	Mr. Hermon.
Mr. Stephen Cave.	Sir Stafford Northcote.
Mr. Crawford.	Sir David Wedderburn.
Mr. Beckett Denison.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. JOHN FLEMING, called in; and Examined.

Mr. *J. Fleming.*

8 July 1873.

6064. *Chairman:*] WHAT is your occupation?—I am a Merchant.

6065. You were in Bombay formerly, I believe?—Yes.

6066. And what were you there?—A merchant, partner in the firm of William Nicol & Company.

6067. And did that company take an interest in the works known as the Elphinstone Company?—Yes, they managed them.

6068. Was there a body of shareholders?—Yes, there was a large body of shareholders.

6069. Has your attention been directed to statements that have been made before this Committee respecting the circumstances under which the Bombay Government purchased the property of the Elphinstone Company?—Yes.

6070. Do you wish to give any explanation of those circumstances to the Committee?—Yes, I wish to explain certain statements which are ambiguous and to contradict others which are incorrect.

6071. Do you wish to hand in a statement of what really occurred on that subject?—Yes, this is the statement that I wish to hand in on that subject. "Early in 1859 the Elphinstone Company was founded for the purpose of reclaiming land from the sea, constructing wharves and piers, erecting and maintaining warehouses and suitable premises with machinery for pressing cotton and other produce into bales, and providing facilities for the growing trade of the Port" of Bombay, and commenced operations by reclaiming a piece of waste ground in the rear of Nowrojee Hill, subsequently known as the Elphinstone Bunder, which had been transferred to it by my brother, James Nicol Fleming, a native named Kessowjee Naik, and myself, we having acquired the property in 1858 from its owner, Manockjee Merwanjee. In 1861 it obtained the Clare and Carnac Bunders from Ramchunder Luximon, who held them under grants secured by his father, Luximon Hurrichunderjee (Bhow Russel), in September 1839. About the year 1858, the Honourable Arthur Malet submitted to Government a plan for the improvement of the eastern foreshores of the island between the Fort and Mazagon, which was highly approved of by Government. Its object was not only to provide wharves and docks, which were much needed, but also to get rid of a fertile source of malaria in the filthy mud-bank in the rear of the native town, left exposed by the ebb tide for many hours daily. (The Bombay Health Officers' Reports, for two quarters of 1871, show that whereas the average number of deaths from cholera in six months, during the years 1851 to 1865 inclusive, was 1,203, the average number during six months, from 1866 to 1871, was 163. I attribute this improvement mainly to the reclamation made by Elphinstone Company.) It included the reclamation of the foreshores of the Elphinstone, Clare, and Carnac Bunders, but as these possessed the right of sea frontage, it could not have been carried out unless by arrangement with their owners, who, although possessing this right, had no power to improve their foreshore without consent of Government; while, on the other hand, Government could not touch the foreshore, so as in any way to interfere with free access to the bunders, without consent of the owners. The scheme involved so large an outlay, it was hopeless to obtain for it the sanction of the Supreme Government, and no active steps were taken by the local government to put it into execution; nor, excepting by the Elphinstone Company, were overtures made by any private parties in Bombay to take up any portion of it. At this date the Great India Peninsula Railway was rapidly progressing towards completion without a terminal station being yet provided by Government, and there was not in Bombay a single wharf accessible to large boats at all states of the tide. Such was the state of matters in 1861, when the Elphinstone Company, having, as above stated, recently acquired the Clare and Carnac Bunders, in addition to the Elphinstone Bunder, proposed to give Government a site for a goods terminus for the Great India Peninsula Railway, in return for permission to reclaim the foreshore of its property and adapt it for trade purposes. The proposal was accepted, and an agreement entered

Mr. *J. Fleming.*

8 July 1873.

into with Government by which the Elphinstone Company obtained:—

	Sq. Yards.
The Old Musjid Bunder - - - - - -	35,148
The right to reclaim from the sea, and from the muddy and unhealthy foreshore, and adapt for its own purposes - - - - - - - -	1,543,307

But Government was to receive, free of all expense, from the Elphinstone Company, the following extensive area of land, exceeding 90 acres:—

	Sq. Yards.
For Great India Peninsula Railway Goods Terminus -	390,362
For Passenger Station at Carnac Bunder - - -	10,000
In exchange for the old Musjid Bunder, new land equal in area with an equal sea frontage, but 800 yards further seaward - - - - - - - -	35,148
In addition to the area of the old Musjid Bunder - -	10,000
	445,510

In addition to this, the Elphinstone Company undertook to construct, at its own cost, a road 80 feet wide, from the goods terminus in Warree Bay through the whole length of its property, occupying 48,000 square yards. In consideration for the land made over to Government, the Elphinstone Company was to hold absolutely rent free for ever 950,000 square yards, together with all land given up for roads, the remainder of its lands and basins being subject to a rent of 500 rupees per acre per annum. The company was also to have the right to levy wharfage fees on all goods landed or shipped from its own wharves, and also on all goods, except those *bonâ fide* the property of Government or the Railway Company, landed or shipped from the wharf made over for the use of Government and the Railway. Towards the close of 1866 the company had expended upon its works nearly the whole of its paid-up capital, amounting to a little over one million and a quarter sterling. Bombay was in a state of great depression, and to have pressed calls on the shareholders, who were for the most part traders resident in Bombay, would have greatly aggravated the existing distress. Under these circumstances, with the approval of the directors of the company, I openly applied to the Secretary of State for India to assist the company in raising a loan of 600,000 *l.* My application was referred to India, with the object of verifying my statements respecting the position of the company, and its ability to pay interest on the proposed loan, and the result was that Government, instead of rendering the assistance applied for, proposed to purchase the property at its cost price. The offer of Government was made on the 12th July 1869; it was discussed at a meeting of shareholders on the 24th July, when the directors were authorised to treat with Government; the terms of purchase as finally arranged were submitted to a meeting on 10th April 1870, and formally accepted by the shareholders; and on the 30th April 1870, the property was transferred by the company to Government. The statement made to the Committee that the Public Works Department, Bombay, began some 15 years ago, granting concessions of foreshore to enterprising men to establish wharves, &c., and that the Colaba and Elphinstone land were given in that way, is incorrect. I am unable to state definitely the date of the Colaba Land Company's concession, but it must have been granted long previous to 1849, when I arrived in Bombay. As already stated, the Elphinstone Company obtained the Elphinstone, Clare, and Carnac Bunders from natives, and I have detailed the arrangement by which they became entitled to improve and utilise their own foreshores. The statements that the shares of the Elphinstone Company fell at one time to 330 rupees (per 1,000 rupees), that this represented the fair commercial value of the undertaking at the time, and that the price subsequently rose in consequence of its being bruited about that the property might be purchased by the State, are incorrect. The lowest price touched by Elphinstone shares was 435 rupees, in May 1867, under the pressure of sales by liquidators of bankrupt estates. The shares of all Bombay concerns, good as well as bad, were difficult of sale at that time, and the prices then current for some shares held by bankrupt estates afforded no criterion of the real value of the property they represented, nor of the prices which solvent shareholders would have demanded for their shares. In June 1867, the price of Elphinstone shares advanced to 610 rupees, and, having fluctuated slightly in the interim, stood at the same figure at the beginning of September. From that date to the end of the year the price gradually fell, and stood at 505 rupees at the end of December. During September, October, and November 1867, there was a good deal of discussion in the Bombay newspapers respecting the Elphinstone property. Its acquisition by Government was strongly advocated by the "Bombay Gazette," and on the 16th November it announced with approval "that Sir Seymour Fitzgerald had urged the vice-regal Government and Sir Stafford Northcote to buy back the property at the par value of the shares." The value of the shares in the market, however, remained unaffected by this announcement, and it was not until the following February they began to improve; and they continued to do so steadily, but slowly, until, at the beginning of July 1869, they stood at 900 rupees, from which they suddenly advanced to 1,020 rupees on the publication of the Government proposal to buy. The rumoured possibility of the property being purchased by Government had, therefore, very little, if anything, to do with the advance in the price of the shares. That advance was due to the obvious improvement in the position of the company. Its revenue was steadily increasing, and its works were progressing most satisfactorily, and had nearly reached a stage when their suspension, if rendered necessary by the failure of funds, would have caused little inconvenience. The following are particulars of the Capital Expenditure and gross Bunder Revenue, as given in the published accounts of the company for the years 1867, 1868, and 1869:—

	Capital Expenditure.	Gross Income.
	Rs.	*Rs.*
30th June 1867 - - - -	1,40,84,626	3,84,568
1868 - - - -	1,54,32,138	6,22,232
1869 - - - -	1,85,87,946	6,97,000

The statement that influence was used by my partners and myself to bring about the sale to Government is untrue. The proposal to purchase the rights of the Elphinstone Company emanated entirely from Government, and, so far as I am aware, was neither suggested nor encouraged by any one connected with the company, nor was influence of any kind whatsoever used by my partners nor myself, nor by anyone under our authority, to promote the carrying through of the transaction. The statement that there was no list

list of shareholders ever published, and that hence it was impossible to ascertain exactly the nature of the influence used, is untrue. In conformity with the requirements of the Indian Joint Stock Companies' Act, a list of shareholders was annually deposited with the registrar of Joint Stock Companies in Bombay, along with copies of the annual accounts. These documents were open to the inspection of the public, and further the register of shareholders was at all times open to inspection by shareholders at the office of the company. The statement, that Government might have purchased the property at the time the purchase was first mooted, for half the money ultimately paid, is incorrect. I can confidently state that it was never possible for Government to have purchased the property as a whole, at less than its cost price. No proposal to do so would have been entertained for a moment, and if it be meant that Government could have bought up the separate shares at the low prices current in 1867, I scarcely think such a suggestion need be seriously discussed. There were 10,800 old shares fully paid up, and 10,800 new shares, with a liability of 800 rupees per share. At no time was it possible to purchase any large number of the old shares at the low quotations, and it is not needful to point out the position in which Government might have been placed had it attempted to buy up the new shares. When Government ultimately offered the equivalent of the capital sum actually expended by the company, many shareholders considered it inadequate, and where only induced to yield to the evident desire of Government to possess their property, by the consideration that the adjacent Modee Bay estate, belonging to Government, might be so managed as very seriously to affect the profitable working of theirs. One of the directors, Mr. Peter Adams, retired from the board rather than appear to countenance the sale, which he considered involved a heavy sacrifice to the shareholders. The purchase has been characterised before the Committee as a prodigal one. Difference of opinion may very fairly exist as to the value of the property; Government, however, had been frequently and bitterly reproached in the public Press for having parted with the foreshores of the island to private speculators, and urged to secure possession of them again; and, in the case of the Elphinstone Company's property, this was accomplished, not by payment of a large premium, but by simply repaying to the owners the money actually expended in improving it. The announcement that Government had made an offer to purchase the property, was received with satisfaction by the public (judging by the tone of the Press), and during the nine months which elapsed between the publication of the Government proposal and its final acceptance by the shareholders, no protest was made against the transaction, nor were any unfavourable comments made upon it until long after its completion. The property handed over to Government is thus described in the final report by the chief engineer, dated 31st October 1870: "The purchase-money was 1,859,082 *l.*, for which Government has got of newly-reclaimed land, including the site of the railway station, 252 acres, also 5½ miles of metalled roads, 7 miles of masonry drains under the same, 2½ miles of single line of railway in sidings, 10 acres of metalled wharfing, 1½ miles of temporary walling, and 2⅛ miles of permanent wharf walls, 4 acres of open sheds, partly permanent, partly temporary, and 130 godowns and warehouses, all of which have been fully occupied during the season. The estate lies between the business town of Bombay and the harbour, and on it is already worked a trade of over a million of tons" I exhibit a map of Bombay, and call attention to the position and considerable extent of the Elphinstone property. It is true that a large portion of it is at present waste and unproductive, but this is only waiting arrangements by Government to provide for the overflow of population from the crowded Native town on the other side the railway, where land is at present worth 40 rupees to 120 rupees per square yard. Since the property passed into possession of Government, nothing has been done to develope it, as all progress has been suspended until the Port Trust, which is to have charge of this and the other properties on the foreshore of Bombay, hitherto belonging to Government, has been constituted. Had the property remained in charge of the Elphinstone Company, it was intended to have proceeded with the construction of a deep tidal basin for the accommodation of the largest seagoing steamers and ships, and to have built ranges of suitable shops and dwelling-houses. The vital importance of this public improvement will be seen when I state that more than half the trade of Bombay passes over the Elphinstone property. It yielded a revenue for the year ending 30th April 1872, of 77,000 *l.*, and this amount must largely increase under good and timely arrangements. But for the intervention of the Elphinstone Company, I believe this part of the harbour foreshore must have remained unimproved until this day, and it is patent that the trade of Bombay would have been reduced to great straits, had not the Elphinstone works been constructed. No one has questioned their utility, their excellence, nor the economical manner in which they have been carried out. It has been said that Government might have completed the Modee Bay reclamation, and constructed a good dock for the sum expended on the purchase of the Elphinstone property. Colonel Fraser, R.E., now in this country, who was deputed by the Government of India to report upon the Elphinstone property, has stated, "in regard to Modee Bay, that one-third of a million sterling is required to complete the land estate, and two millions more would be necessary to complete the dock estate." Adding this to the sum already expended on Modee Bay—about half a million—we get nearly three millions, the interest upon which must have been extracted either from the trade, or from "the unfortunate Indian taxpayers." In the words of a writer in the "Times of India," vindicating the Government purchase of the Elphinstone property against the attacks recently made upon it: "If both Elphinstone and Modee Bay properties had been completed—and it is presumed they would have been, had the Elphinstone estate not been purchased—there would have been more wharf and dock accommodation than the trade of the port requires. And had Government and the Elphinstone proprietors combined to raise rates sufficient to pay interest on their joint capital—and Government, acting in the interests of the 'unfortunate Indian taxpayers,' could not well have refused so to combine—Bombay merchants would have had to find interest on 300 lacs, plus on 283 lacs, instead

Mr. *J. Fleming.*

8 July 1873.

stead of only on the former sum." The following is an extract from Colonel Fraser's report with reference to the attempt made by Government to sell land, the highest bid being 25 rupees per yard, against an upset price of 40 rupees per yard: "As I have said before, it is not yet time to sell the land * * It must become, as situated close to docks, or basins, or wharves, for large ships, the most valuable property in Bombay; and I think it a great pity that either attention or money, should be diverted to any other object than that of the prosecution of these works."

6072. Were Messrs. Nicol and Company also interested in the undertakings at Carwar?—Yes.

6073. Had they warehouses or other means there, for obtaining cotton from the interior?—Yes, and cotton presses.

6074. And did that lead them to take an interest in the construction of a railway from Carwar into the interior?—Yes.

6075. Have you also read the statements which have been made to the Committee on that subject?—Yes.

6076. And do you wish to give any explanation upon them?—Yes.

6077. Do you hand in a statement upon that?—Yes; this is the statement that I hand in upon that: "It has been represented to the Committee, that when the official papers recommending the construction of the Karwar Railway were published in Bombay, vehement remonstrances were made by the Press, and the Bombay Chamber of Commerce took up the question, and passed strong resolutions against forming the line. Of the Bombay newspapers, the "Gazette" alone protested against the construction of the line; the other Bombay newspapers advocated it, and the Chamber of Commerce merely recommended further consideration. The resolution passed by the Chamber was as follows: "That, in the opinion of this Chamber, the estimates of traffic given in the correspondence in the Karwar Railway, published by Government, are founded on an incorrect basis, and cannot, therefore, be relied upon. Resolved, that the committee of the Chamber be instructed to memoralise the Secretary of State for India, to institute further inquiries regarding the correctness of these estimates of traffic, and the advisability of giving a preference to the construction of a railway from the Dharwar district to a point of junction with the Great Indian Peninsular Railway." The resolution was carried by 22 votes against two, the Chamber consisting at the time of about 50 members. Copies of the memorial of the Chamber, and of a letter addressed to the Under Secretary of State for India by the two dissentients, stating their reasons for their dissent, are appended hereto, and it should be mentioned that before the adoption of this resolution, a memorial from the principal native cotton merchants trading with the Dharwar cotton district, was addressed to the Chamber, praying that nothing should be done to cause delay in constructing the railway. At the close of the meeting of the Chamber at which the above resolution was adopted, the chairman stated that the Secretary of State for India had already ordered the appointment of a committee to revise the estimates; and this information had been previously communicated privately to some of the members before the meeting. The committee thus appointed by Government to revise the estimates, some of the members of which, had previously strongly opposed the construction of a railway from Karwar, have reported unanimously in favour of a line from Karwar to Bellary, on the Madras Railway, and with one dissentient, they recorded the belief that, taking expenses at 55 per cent. of the gross receipts, it will yield a net return of 4·09 per cent. The dissentient member is of opinion, that the expenses should be taken at 60 per cent., and reduces his estimate of net return to 3·63 per cent. The average working expenses in 1871 on the Indian broad-gauge lines, amounted to 53·48 per cent. A clerical mistake has been made in preparing the estimate of working out the pay of the locomotive superintendent at 600 rupees per month, as 72,000 rupees, instead of 7,200 rupees per annum, correcting which, the return will be either 4·67 or 4·21 per cent., as the views of the majority or dissentient are accepted. In their estimate of traffic, they have assumed that only two-thirds of the cotton produced in the Dharwar district will be sent by the proposed railway, and that the cotton traffic will amount to one-third of the total traffic upon the line. On the B. B. and C. I. line, which was projected specially for cotton traffic, it is found that cotton forms only one-seventh of the whole traffic. On the G. I. P. line, which is also a cotton line, only one-eleventh of the total traffic consists of cotton. The committee report that the following indirect advantages will result to Government from the construction of the railway:—

	Rs.
Increase of Land Assesment - - - - - -	1,50,000
Increase of Revenue from Kanara Forest - - -	1,20,000
Increase of Salt Revenue, from suppression of smuggling and increase of consumption - - - - -	1,46,000
Rs.	4,16,000

which is equal to 3·78 per cent. on the estimated cost of the line. It has been represented to the Committee, that a railway from Karwar to Bellary is an entirely new idea. I believe that upwards of 20 years ago, the Madras Government considered, and favourably reported upon, a project for a system of railways for the Southern Mahratta country, having its base at Karwar, and none of those who have since advocated the construction of a railway from Karwar, have done so as an isolated line. This was very pointedly put to Sir William Denison, in a memorandum he submitted to the Secretary of State for India in 1869, when he asked for a Government guarantee to a line "from Karwar to Hooblee, as the first section of a system which shall be ultimately extended northward, to join the G. I. P. Railway; eastward to Bellary, to join the Madras Railway; and southward, through the Mysore country to Bangalore." It has been represented to the Committee that making a railway from Karwar to Bellary would involve the complete construction of everything to make a port of commerce at Karwar, "in opposition to Bombay," port, trade, everything. So far from this being the fact as regards the port, it is a fine natural harbour, is perfectly safe, and easily accessible at all seasons. During the last 10 years many ships and steamers have loaded at it, not a few during the stormy season, and without a single accident. It has been visited regularly since 1863 by the steamers of the British Indian Steam Navigation Company, latterly twice a week, and the steamers of another coasting

coasting company now visit it weekly. These steamers call regularly at all seasons, and have not once been prevented by weather from entering or leaving the port by day or by night, which is more than can be said of Bombay; nor has their loading or discharge ever been delayed from this cause. A lighthouse is already built, moorings have been laid down, a wharf has been constructed, and it is quite unnecessary that another rupee should be expended on harbour works, even although the trade should attain considerable magnitude. It is the only harbour between Bombay and Cape Comorin, on the Western Coast of India, accessible at all seasons, the other ports on the coast being either open roadsteads or barred harbours, unapproachable during the south-west monsoon, excepting Narrakel and Alleppee, which are open roadsteads, but being partially protected by mud-banks, are sometimes approachable. As to the general question of the necessity or advisability of a railway to Karwar, I draw the attention of the Committee to the following extract from a letter addressed to me, 2nd August 1872, by the Rev. Dr. Wilson, of Bombay:—"Since my return to India, I have been very busy, especially in connection with our own Mission, which, of course, at all times occupies my chief concern. My attention, however, has during these few weeks been aroused by the discussions conducted in the Chamber of Commerce and elsewhere, about the projected Karwar Railway. With a view to the welfare of Western and Southern India, I wish that enterprise most cordially God-speed. For this I have reasons which largely bulk before my mind, and which have in no degree been affected by the discussions in the Chamber. Looking at the map of the portions of India which I have now mentioned, or rather looking at these portions of India themselves (for I am familiar with them by personal travel), I cannot resist the conclusion that the great desiderata for the provinces lying above the Sahyas (or Ghat Mountains), the Southern Maráthá country, and the north of the Karnatik, are practicable access to the seaboard, and a practible harbour available at all seasons of the year. Nearly directly opposite Mangalur, above the Ghats, there are most remarkable ruins at a place called Hallábíd (the old fort in Canarese), which have been photographed by Dr. Pigou, Colonel Tripe, Mr. Butcher, C.E., and others. These ruins are the remains of a capital called Dwàra Samudram, the Gate of the Ocean, which had its importance from its being the inlet to the mountain passes leading down to the sea about Mangalur and the other localities in its neighbourhood. Commerce took this route for long, and met with diversions elsewhere only because at these places there was really no good harbour at all, and ultimately because of the establishment of the Portuguese power, where Goa now stands, at the mouth of the river taken from the Bijapur Mahammadan dynasty. The commercial advantages of Karwar, however (intermediate between Goa and Mangalur), were soon discovered by the English East India Company, which had a considerable factory there so early as 1663. These advantages consist in its excellent natural harbour, accessible at all seasons of the year, and next to Bombay in this respect on the Western Coasts of India, and its being the natural terminus of the more easy passes communicating with the Southern Maráthá country and the north of the Karnátika. It was only the blind and demented policy of the tyrant Tippu that brought it to temporary ruin. In this position it could not long remain; and the restorement of the port is unadvoidable under enlightened government and mercantile policy. The great desideratum for it is the construction of such a railway, communicating with the higher country lying eastward of it, as was projected a few years ago. To think of a paying railway draining the Southern Maràthá country and the north of the Karnátik, and leading, *viâ* Sholapur or Pandharpur, to Bombay, is, in my opinion, quite Utopian. Think of the broken ground over which such a railway has to pass, and the numerous mountain streams and rivers like the Matarba and the Krishna, which it would have to bridge, and its great length before it can reach the G. I. P. R. works, and you will see that its costs must greatly exceed any expectancy of profit. The Karwar line, conducting directly to the sea, is much preferable. I have the cotton traffic in my eye in this remark, but not the cotton traffic alone. The high country needs the salt and the rice and the cocoa-nuts of the low country, and the European imports which would reach Karwar; and the low country needs the wheat, and the barley, and the pulse of the high country. The forests, too, must not be forgotten. Who would propose to take their wood to Bombay by the circumbendibus route above the Ghats? But I write with very limited time at my disposal, and I cannot enlarge on these matters at present. Some of the merchants here have alluded to the tendency of commerce to go to great places of export, in preference to those of lesser importance; and on this account hesitate to attach due importance to Karwar as a place of export compared with Bombay. But the answer to this is, if the cotton be wanted in Bombay it will be taken thither by sea, at a smaller expense than it could be by land by the proposed route above the Ghats, as already stated." Compta, distant from Karwar about 30 miles, was the principal outlet for the produce ef the Southern Mahratta country until Karwar was opened. It has no harbour, is only accessible to small coasting vessels, and the trade is closed completely from the first appearance of broken weather at the commencement of the south-west monsoon, say middle of May, until its close in September. It has been stated that the native merchants are averse to leaving Compta, where they have good houses, gardens, and temples, and complete arrangements for carrying on their business; but though it is true they have many ties to Compta, they all recognise the superiority of Karwar, and are prepared to come over if the railway be made. Indeed, many of them have already got permanent establishments at Karwar, and the house assessment, at the same rates, now yields more at Karwar than at Compta. The present influence of Compta and Karwar on the trade of Bombay may be judged of by the following traffic statement. Last year the exports of cotton for the 12 months ending the 30th June were—

	Docras.	*Bales.*	*Bales.*
Compta to Bombay - - -	163,200 =	54,400	56,000

6078. Do you know whether the first movement in Bombay for the purchase of the Elphin-

Mr. *J. Fleming.*

8 July 1873.

stone Company originated with this letter which I want to show you (*handing the letter to the Witness*), this is a letter from Mr. Russel Aitken?—Well, he says so. He told me so the other day, and sent me that letter.

6079. You have read the letter?—I have.

6080. And having read the letter, does it convey to your mind a correct view of the fact to say that that letter was the commencement of the negotiation?—That I cannot tell. The letter is dated 1866, and the suggestion to purchase may have been made first by him, but I am not aware of it. Several people claim to have been the originators of the idea. Mr. Knight, of the "Bombay Times," claims it; Mr. Maclean, the editor of the "Bombay Gazette," claims it, and Mr. Russel Aitken now claims it.

6081. You stated it was towards the close of 1866, that the first idea was entertained of applying to Government in some way for assistance?—Yes; I applied in London to Lord Cranborne for assistance in obtaining a loan.

6082. This letter appears to have been written in India on the 6th of September 1866?—Yes.

6083. It would seem from that to be probable that Mr. Aitken gives a correct view?—It is quite possible.

6084. Mr. Aitken was the Executive Engineer to the Municipality of Bombay?—Yes.

6085. Mr. *Crawford.*] With reference to the claims of these different gentlemen of having originated this idea, do I rightly understand that they claim to have included Moody Bay also in it?—No; the proposal was to get back possession of the foreshores which had been alienated; the foreshores which were in the possession of private companies or private individuals.

6086. *Chairman.*] This is the letter of Mr. Aitken:—"Municipality, City of Bombay, Executive Engineer's Office, Bombay, 6th September 1866. From the Executive Engineer, Municipality, to the Municipal Commissioner for the City of Bombay.—Sir, I have the honour to bring before your notice the present state of the harbour and bunder accommodation of Bombay, which although a matter not immediately under my departmental charge, I cannot forbear bringing forward, as the interest of the town and the future success of the municipality are entirely dependent upon the dock and wharfage accommodation of the port. The remarks I am about to make must not be taken as mere theoretical ideas, but simply as suggestions based on the application of well known principles adopted with success in England under somewhat similar circumstances. The introduction of railways to a port has invariably necessitated the provision of ample wharfage accommodation for shipping, so that the railway waggons in which goods are brought from or taken to the interior of the country, may be taken alongside the vessels, and the goods be rapidly transferred from one to the other, thus saving the enormous expense and delays which attends the present cumbrous system of carts and burden boats. It may be urged that this wharfage accommodation is not required in Bombay, as it would not be used by merchants, who invariably take goods to their warehouses before shipping them. It is also said that this is a state of things which cannot be altered, it having been the native manner of conducting business from time immemorial. Those who argue in this way, entirely overlook the fact that, the present imperfect method of carrying on trade results from causes, which, in future, ought to have no existence. It is evident that the sole aim of every merchant, whether European or native, must be to conduct his trade in as economical a manner as possible; and that, if increased facilities are provided, whereby an enormous saving would be effected, it is absurd to suppose that the merchants would not avail themselves of them. My opinion is, that they would at once adopt themselves to the altered circumstances. There are two methods by which wharfage accommodation may be provided, namely, either by the construction of jetties, projecting into the deep water of the harbour, or by wet docks constructed on the foreshore. The objections to jetties projecting from any points near these centres of trade, the fort and the native town, are, that ships could not lie alongside them during the greater part of the monsoon, and that if they were carried out far enough to be useful, they would interfere with the anchorage, and also with ships using the harbour. The only alternative therefore, is the construction of wet docks on the foreshore. The Elphinstone Land and Press Company are proposing to construct wet docks, and the Bombay Reclamation Company are also taking steps in the same direction. The Government alone are at vast expense, providing means for working bunder-boat traffic only, a traffic which must in the very nature of things shortly become much curtailed; besides which, its requirements will be amply provided for by the two basins in the Elphinstone Reclamation, and by the proposed Malet Basin, which will give, I believe, about double the bunder-boat wharf accommodation now possessed by the harbour. Within the next few years the trade of Bombay will doubtless be greatly augmented, but its increase during the next 30 years can easily be accommodated by wet docks, which might be constructed on the Elphinstone and Moody Bay Reclamations. Those proposed in Back Bay and at other places in the Island of Bombay need not therefore be seriously considered at present, as they are so far removed from the warehouses, &c., of the fort and native town, that they could not compete for traffic with docks which are situated nearer. I assume that the first cost per acre of dock space at all the proposed places would be about the same. It would thus appear that for a considerable time the trade of the city of Bombay must depend upon the accommodation to be provided for it on the Elphinstone and Moody Bay Reclamations. Such being the case, it appears to me that the municipality should have some voice in the management of these reclamations; otherwise there is nothing to prevent the interests of the city being sacrificed to those of the harbour, or *vice versâ*; and, ultimately, the prosperity of both may be seriously and permanently injured. In most of the large ports of England and Scotland the docks and harbours are either directly under the municipalities, or are managed by separate "Trusts" or public bodies, several of the members of which are nominated by the municipalities. Thus, although the interests of the harbour and of the city may be, and often are, distinct, yet by means of a dock or harbour trust these difficulties are overcome, and both public bodies work harmoniously together. Whether the Harbour Board of Bombay is capable of extension and reorganisation so as to enable it to undertake the construction of wet docks

on

on the Elphinstone and Moody Bay Reclamations, is a subject on which I cannot venture to offer an opinion, nor can I indicate on what terms the Elphinstone Land Company would be willing to transfer their bunder rights, for which and for the right of reclamation they have paid so heavily, nor can I venture to say whether Government would be willing to hand over the frontage of Moody Bay, by far the finest site for dock purposes in Bombay, instead of expending an enormous sum in providing accommodation for a traffic which must, to a great extent, become subsidiary and dependent on properly constructed docks. If a Harbour and Dock Trust be instituted in Bombay, it could, I believe, easily raise money in England on its own security, such a security being there considered one of the safest and most desirable means of investment; in proof of which it may be mentioned that money can always be obtained by Harbour and Dock Trusts at a slightly lower rate than by the best railway companies. I would, in conclusion, point out that the present is the most favourable time for the organisation of a Harbour and Dock Trust, as the great depression in the value of the shares of the Elphinstone Company will probably induce that company to agree to terms which could not be obtained in other and more favourable times. The Elphinstone shares are now at a heavy discount, which, combined with other depressing effects of the late crisis, must prevent the company for some time at least, from being able to raise money on anything like favourable terms for the completion of their proposed docks and bunder-boat wharves. I have the honour to be, Sir, your humble servant, Russel Aitken, Executive Engineer to the Municipality"?—Yes.

6087. Sir *Stafford Northcote.*] I understand that the statement that you have put in contains in substance all that you wish to say to the Committee. I understand that you particularly desire to dispute the statement that has been made that influence was used by your partners and yourself to bring about the sale to the Government?—Most distinctly I repudiate the idea of having used influence of any kind.

6088. And that you also distinctly dispute the statement that no list of shareholders was ever published?—A list of shareholders was annually deposited with the Registrar of Joint Stock Companies in Bombay, and was open there to the inspection of the public, and the list of shareholders at the office of the company was also open at all times to the inspection of shareholders.

6089. Now, I understand, that in substance your account of the transaction is that the Elphinstone Company had obtained certain land which gave them a sea frontage, that when the Government desired to reclaim the foreshores they were unable to reclaim the portion that was in front of some of the land that belonged to the Elphinstone Company, and that it was necessary that the consent of the Elphinstone Company should be obtained?—It never exactly came to that position of matters; that is, the position of Government wishing to reclaim, and the Elphinstone Company standing in the way; the Government never got that length; but when it came to the knowledge of the Elphinstone Company that a scheme, suggested by Mr. Malet, for the general improvement of that foreshore, had been approved of by Government, the Elphinstone Company came forward and proposed to take up that portion which lay in front of their own property.

6090. That could not have been done without the consent of the Elphinstone Company?—No.

6091. Then had the Elphinstone Company become possessed of this land by purchase or by grants from the Government?—By leases from the natives who possessed the shore.

6092. Which leased property they afterwards bought out and out?—The Government bought it out and out.

6093. Did the Elphinstone Company buy it?—No; we got perpetual leases from the natives.

6094. You were not actual freeholders?—No.

6095. Now, when the time came at which the difficulties of Bombay prevented matters proceeding, the wish of the Elphinstone Company was to obtain a loan from the Government, was it not?—It was so.

6096. And if that loan had been conceded, you believe that the works might have been carried on by the company themselves?—Certainly they would have been.

6097. And they would have preferred that to selling their land?—Yes.

6098. And you made formal application for that purpose, which led to no result?—It was referred to the Government of India.

6099. Referred, you mean, by the Secretary of State to the Government of India. Your application was made to the Secretary of State, who referred it to the Government of India?—Yes.

6100. And you never received any formal answer to that request?—No; I never received any formal answer to that request.

6101. Then, a proposal afterwards came to you from the Government, as I understand, to purchase the property?—Yes; the proposal came from the Government.

6102. You had not yourselves expressed any desire to sell it?—Never.

6103. With regard to this statement which was made, that the Government might have purchased the property for half the money ultimately paid, you say upon that, that it would have been impossible for the Government to have purchased the property as a whole, but that they might have gone into the market and bought up the separate shares to a considerable extent. Do you think that would have been possible?—No, but it is the only way in which I can reconcile the statement that has been made to the Committee with the truth.

6104. If it had been known that the Government were buying shares, would not that in itself have raised the price of the shares?—Certainly it would.

6105. Would it have been possible under the constitution of the company for the Government to have held shares in it?—I do not know of anything in the constitution of the company which should have prevented Government from holding shares in it.

6106. Could the company have rejected a purchaser?—I think not.

6107. Now, supposing that the Government had gone and bought up the shares, they would have had to buy probably a considerable number which were not fully paid up?—They would have had to do so.

6108. They, in that case, would have been liable to calls?—Yes.

6109. Then, in point of fact, it would have come to much the same thing as if the Govern-

Mr. *J. Fleming.* 8 July 1873.

ment had advanced a loan?—It would have been better for the company, for the other shareholders.

6110. But not necessarily better for the Government?—No.

6111. What were the considerations which led to the original concession of the foreshore to you; besides, the obligation laid upon you to reclaim it from the sea, you were to give the Government certain portions for the purpose of the railway terminus, were you not?—Yes; we were to give 390,000 square yards for a goods terminus for the Great Indian Peninsula Railway Company.

6112. That is the terminus, is it not, which is now placed at a different point at Colaba?—No; the terminus at Colaba is that of the Bombay, Baroda, and Central India Company.

6113. Then, was it ever proposed that you should give a terminus for the Bombay, Baroda, and Central India Company?—In 1867, I believe the Bombay Government recommended that a terminus for the Bombay, Baroda, and Central India should be placed upon the Elphinstone Company's property as more convenient for the trade.

6114. We may as well have it distinctly in the evidence, though it is in your statement, but what property was it that was handed over to the Government; what was the amount of the purchase-money?—£. 1,859,082.

6115. And what did the Government get for that?—Including the railway station, 252 acres of land, 5½ miles of metalled roads, 7 miles of masonry drains under those roads, 2½ miles of single lines of railway in sidings, 10 acres of metalled wharfing, 1½ miles of temporary walling, 2⅛ miles of permanent wharf walls, 4 acres of open sheds, partly permanent and partly temporary, and 130 godowns and warehouses, all of which had been occupied during the season previous to the sale.

6116. The property has not yet been fully developed?—No.

6117. Does the Government receive any rent from the company in addition to that?—The Government was to receive a rental for land reclaimed in excess of 950,000 square yards.

6118. What amount is paid to the Government under that arrangement?—The reclamation had not proceeded so far.

6119. Do you expect that the property will become much more valuable?—I do; very valuable.

6120. What is it that it is waiting for?—At the present time there is not a single dwelling house upon the land, and the land on the other side of the railway is the most densely populated part of the native town.

6121. You consider it of great importance to the trade of Bombay that the foreshore should be improved?—I think it was necessary in two points of view; in the sanitary point of view; and also the trade requirements of the port necessitated it.

6122. Mr. *Crawford.*] You had no shipping facilities at Bombay, had you, in the nature of wharves, alongside of which vessels could come and discharge?—No; alongside of one of those wharves reclaimed by the Elphinstone Company coasting steamers now come.

6123. The large ships lie out in the harbour, half a mile or more from the shore, do they not?—Yes.

6124. And in the monsoon months they are very difficult of access; the property is damaged by water and otherwise injured?—Very seriously.

6125. There was therefore a great policy in the establishment of wharves, alongside of which ships may come and discharge their cargo?—It was a very desirable thing.

6126. And the Government therefore, as representing the public, had a policy in obtaining the possession of that property?—Yes, clearly.

6127. Sir *Stafford Northcote.*] In what other way could the object have been accomplished?—By forming docks or tidal basins in Moody Bay.

6128. Do you consider that that would have been a more economical or a less economical process?—I think it would have been less economical.

6129. You quote the opinion of Colonel Fraser upon the subject?—Yes.

6130. When was that opinion given?—In 1871, I believe; I am not sure whether it was 1871 or 1872. He was sent over from Calcutta to inquire into the condition of this property, which had been acquired by the Bombay Government.

6131. Since the purchase was made?—Yes.

6132. And he states, with regard to Moody Bay, that one-third of a million sterling would be required to complete the land estate, and that two millions more would be necessary to complete the dock estate; and there has been besides a considerable sum already expended on Moody Bay?—Yes.

6133. How has that money been applied which has been already expended on Moody Bay?—On the reclamation of land from the sea.

6134. Is that reclamation good, so far as it goes?—So far as it goes it is good; but it is not protected by permanent walls; merely by rough rubble walls.

6135. If it does not go on would it be lost money?—No; I believe that the walls, though rough, are sufficient to protect the reclaimed land.

6136. So that if no more money were laid out than that, it could not be considered as lost money?—No; it is in a rough state; but it could be utilised for building purposes.

6137. Mr. *Crawford.*] Is the ground filled in up to high-water mark?—Yes; above high-water mark.

6138. Mr. *Beach.*] Is a large outlay required to develope the property more fully?—The idea of the Elphinstone Company, which, I believe, has been adopted by the Government, is to make a large tidal basin to receive sailing ships and steamers, vessels of large burthen, and a large expenditure will be necessary to carry that work out.

6139. Can you form any idea what expenditure will be required?—I believe that about three quarters of a million is required.

6140. Sir *T. Bayley.*] Are the merchants of Bombay willing to make large investments in the projected scheme?—In the railway, do you mea?

6141. In the scheme altogether?—The native merchants, I believe, were; that is in the Carwar Railway.

6142. I ask you whether the merchants have sufficient interest in the proposal generally to enter into it themselves jointly with Government?—The merchants in India get a higher rate of interest for their money generally than what

what has yet been obtained from railways, and I do not think that with the experience of the existing railways before them merchants would be very much disposed to go into railways, excepting under special arrangements.

6143. Sir *G. Balfour.*] When I was at Bombay, in 1859, if I remember correctly, there was a great outcry then raised by the home mercantile community, regarding the defective accommodation for loading and unloading vessels?—Yes.

6144. Do you consider that your house, in commencing with the purchase of those bunders from the natives who held the leases, were doing good service to the trade of Bombay by so commencing?—We had that distinctly in view by providing accommodation for the trade.

6145. Did the events of the war in America lead to a still greater demand by the merchants for additional accommodation?—Yes.

6146. And, therefore, your house did good service in commencing this large undertaking?—I have always thought so.

6147. And the main object that you had in view was that your extensive transactions should, in common with those of other merchants, be benefited by your measures?—Certainly.

6148. And you are now still of opinion that if proper energetic measures were taken for the development of these foreshores, and the improvement of the port, still greater service would be rendered to the town of Bombay?—Certainly.

6149. With regard to Carwar, was not that place transferred from the Madras Government to the Bombay Government, because of its great connections with the trade of the Southern Mahratta country?—Yes; the produce of the Southern Mahratta country found its way chiefly to Bombay.

6150. And therefore the Government of India thought it desirable to make that portion of Canara subordinate to the Government of Bombay instead of Madras?—I understood so.

6151. The Madras Government had made efforts to ascertain the safety of the port of Carwar before it was transferred to Bombay?—I believe so.

6152. They had applied to the Government of Bombay to send ships there to lie for upwards of 18 months in order to test the capabilities of the harbour?—Yes.

6153. And an enterprising merchant had, previously to that, opened out cotton gins, and so on, at Carwar?—At Tuddry.

6154. And for years an outcry had been raised against the Madras Government for not providing a communication for the shipment of the cotton from the district, between Dharwar and Carwar?—It was a constant subject of complaint; the Bombay merchants frequently complained to the Bombay Government respecting the insufficient accommodation.

6155. And the Manchester manufacturers had also raised urgent cries against the dilatoriness of the Government in not opening up Dharwar with Carwar?—Yes.

6156. And therefore the commencement of the railway referred to in your statement was one of the great objects which had been desired for years and years?—It had been frequently urged upon Government.

6157. In opening out the country from Carwar into the interior, we opened out a country of great value to India, did we not?—Yes; it is a very rich country, the Dharwar country.

6158. And cotton is not the only article of produce which came from that part of the country?—It is capable of producing any of the products of India; and we used to receive grain and seeds, and saltpetre, and jagree from those districts until of late years, when cotton has absorbed the whole of the carrying power of the country.

6159. And you still consider that it would be exceedingly advisable, in a commercial point of view, that that rich country there should be opened out?—Certainly.

6160. Whether by means of canals, as some have proposed, or by railways?—It is impossible to do it by canal, in my judgment.

6161. But you consider a railway feasible up the ghauts?—Yes.

6162. Looking at the direction which the railway must take from Carwar to Dharwar, its extension up to the Raichore Doab, one of the richest parts of the Nizam's dominions, would open out a fine and rich tract of country?—Yes.

6163. The produce from the ceded districts, instead of going the long distance of 400 miles to Madras, would travel the shorter distance of 200 miles to Carwar?—Yes, and get to a better port.

6164. And the mere difference of cost of carriage for that cotton by the shortened route, would alone make it a paying concern in Manchester?—It would be a gain, certainly.

6165. And do you still continue to advise that that communication should be opened out?—Yes.

6166. Now, as you have been a long time in India, I would ask you, politically, is it not of great importance that that almost unopened country which lies between the Doabs should be opened out with the western coast of India?—That country is inhabited by a very bold and rather turbulent people, and it has always seemed to me to be of importance that there should be free access to that country.

6167. Would not that line of railway pass through the country where the only insurrection that broke out in the Madras Presidency in the mutiny of 1857 took place?—Yes; it would pass right through that country.

6168. And had it not been for the facilities of moving from Bellary that country might have been raised up by the influential natives who rebelled on that occasion?—Certainly; if you had not promptly repressed that movement it might have been very serious for the peace of that portion of the country.

6169. And the communication from thence might be extended up to Hyderabad, the capital of the Nizam's dominions, from the Raichore Doab?—Yes.

6170. Mr. *Beckett Denison.*] Have you personally visited Carwar and these western ports?—I have visited Carwar, but have not been in the Bellary district myself.

6171. When were you at Carwar?—In the beginning of 1865.

6172. What was the condition of the harbour at that time as regards Bombay?—There was a pier and a wharf; not a very complete structure, but quite sufficient for its purposes.

6173. Any warehouses?—Yes, there were two press establishments; one of which belonged to my firm, and the other belonged, or had belonged, to the Manchester Cotton Company.

6174. Will you tell the Committee what were

Mr. *J. Fleming.*

8 July 1873.

the physical difficulties which existed at the time which led the Government of India to halt in its design of opening out the port of Carwar?—I do not know of any physical difficulties connected with the port.

6175. No reasons connected with the trade?—Not that I know of.

6176. *Chairman.*] Any bar?—No.

6177. What is the depth of water?—Vessels drawing 19 feet can ride with perfect safety in low water.

6178. Mr. *Beckett Denison.*] This other place that you have mentioned, Tudry, is completely south of Carwar, and outside of the harbour?—Yes, it is about 30 miles south.

6179. *Chairman.*] Another estuary altogether?—Yes, the Tudry river is a little river and quite inaccessible to large vessels.

6180. Mr. *Beckett Denison.*] Have the Indian Government at home proceeded with their plans regarding the Carwar Railway?—I do not know what the Secretary of State is doing with respect to the matter just now. Recently, a committee which had been appointed to revise the estimates, reported. That report was commented upon by the Bombay Government and the Government of India, and has been forwarded to this country; but I do not know what the Secretary of State has done respecting it.

6181. I suppose that a great deal of the opposition that the plan meets with from Bombay is from a fear on the part of the Bombay merchants that their own port may be prejudiced by the opening up of Carwar?—I believe that to be the principal point of opposition to it.

6182. How far south of Carwar is Compta?—It is 26 miles south (*pointing it out on the map.*).

6183. In the statement which you have put in I see that great doubts are expressed whether the merchants of Compta would be willing to give up their landings and trading establishments at Compta to establish themselves at Carwar, in the event of the Carwar Railway being made; have you any such apprehension?—As a matter of fact, many of them have got agents at Carwar, and I should like to be permitted to put in a copy of a memorial, addressed by the merchants of Compta to the chamber of Commerce of Bombay, expressing distinctly their willingness to remove to Carwar in the event of a railway being made (*handing in the memorial*).

6184. What is the distance from Carwar to Dharwar?—105 miles. I should rather say to Hooblee, because Hooblee is the centre of the principal cotton marts.

6185. Is that the length in a direct line?—No; that is the length by railway.

6186. As regards the direct intercourse with the port of Carwar of ocean-going ships, you have no reason to believe that there are any impediments, as regards the navigation, for vessels drawing 19 feet of water?—None whatever.

6187. Do you remember at the port of Cochin what is the greatest depth that a vessel can get in?—I believe that vessels, going in to load at Cochin, must cross the bar at 12 feet, and then only during the fair season; they load outside.

6188. Do you know what has caused the suspension of all the contemplated projects of opening the country in question?—I understand that it is an apprehension that the construction of the railway may entail a charge upon the revenues of India.

6189. Then it has also to contend with the direct opposition of the Chamber of Commerce at Bombay, and the Great Indian Peninsular Railway, has it not?—The Great Indian Peninsular Railway gets none of the traffic, at present, from the country which would be drained by the Carwar Railway.

6190. Then I will put it in another way, that the Great Indian Peninsula Railway anticipate that if the longer line were made, that from Hooblee to a junction with their line, that will bring traffic on to their line?—Doubtless it would bring some traffic on to their line.

6191. And then the uncertainty as to the local return for the line between Hooblee and the junction with the Great Indian Peninsula Railway would be very much greater, being the longer line than it would be between Hooblee and the sea?—I do not quite catch the point.

6192. You have said that there was an apprehension that this proposed line from Carwar to Hooblee might cause a charge upon the revenues of India?—Yes; I understand that the making of this particular railway, and of some other railways in India, has been stopped for the present from the fear that they may not pay; at least it was so put in the Despatch of the Secretary of State to the Government of India.

6193. Then I say, upon that, if the projected line from hooblee to join up with the Great Indian Peninsula were carried out, the risk of loss would be very much greater over the longer line?—It would be greater.

6194. Mr. *Dickinson.*] There has been no opposition offered, has there, by the Great Indian Peninsula Railway to this?—No; I believe not.

6195. *Chairman.*] Did you state that two vessels can lie in the harbour of Carwar all through the year?—Yes.

6196. In the monsoon?—Yes.

6197. What would be the distance of the vessel at anchor from the piers or pier and wharf which you have described?—I am not perfectly certain; but my recollection is that vessels lie about 300 or 400 yards from the shore.

6198. Sir *G. Balfour.*] Is there not a fine island off Carwar, where a fine light is shown?—Yes.

6199. And the facilities for approaching that part of the coast are good?—Yes; since the year 1863 the steamers of the British India Company have been visiting the port regularly by day and night, and they never have had once to wait.

6200. And I am right in saying that the Madras Marine Board made great efforts to secure the opening of that port from believing it to be an exceedingly important place for ships to approach?—I believe it was due to the Madras Government that it was opened in 1860.

6201. *Chairman.*] Do you know whether Goa is a better entrepôt?—Immediately to the south of Goa, there is a harbour which is capable of being made a very good one; it is a very desirable site for one.

6202. Mr. *Crawford.*] There is a great bar at the entrance to Goa river, is there not?—To Goa river itself.

6203. Sir *G. Balfour.*] There is no bar whatever at Carwar, is there?—No.

6204. The characteristic features of all the rivers on the western coast of India, are that they have bar harbours?—All of them.

6205. And

6205. And the opening which goes into the land here is a very peculiar opening, distinct almost from all the places of refuge on the western coast of India?—Quite distinct; there is a very bold headland which strikes out from the coast and runs almost in a northerly direction, and it protects the harbour from all westerly and southerly winds.

6206. Besides that fine island which protects the entrance, has not Carwar a bold headland also under the lee, of which ships lie in the monsoon?—That is the headland of which I speak.

6207. And if the trade should increase to the extent which is anticipated, it would be very easy to add to the protection which that bold headland of Carwar now affords the shipping?—I do not think that it would be necessary unless the trade nearly attains the proportions of the Bombay trade, to afford any additional protection.

6208. But it is the fact that there is no port on that coast where ships can approach so near to the land as in that remarkable inlet?—Yes; it is very easily approached.

6209. Mr. *Beckett Denison.*] Have you heard any unfavourable report of the climate inside?—I know the contrary; I have had people living there since 1860; and one of my people, a married man, had his wife and family resident on a hill 1,800 feet high, about five miles distant from his work, and rode up and down daily.

6210. Sir *D. Wedderburn.*] I suppose it would hardly be an exaggeration to say that Carwar is by far the best natural harbour in British India?—I could hardly go the length of saying that, but it is a very fine natural harbour for its size.

6211. Is there any other harbour in British India equally accessible in all times of the year, and at all times of the tide?—Bombay is really more difficult of access than Carwar, although it is a larger and finer harbour; I would not compare them; but Trincomalee is very good.

6212. That is not in India but in Ceylon; can you explain how it is that Carwar has not hitherto developed into a great commercial port?—Because until recently there were no roads to it.

6213. The ghauts about Carwar are peculiarly inaccessible, are they not?—Yes, immediately in the neighbourhood of Carwar, but the road now made is a very fair road.

6214. Do you think the Canara fevers have had anything to do with keeping back the place?—The Canara fever never seriously affected Carwar itself; but in making the road from Carwar, it seriously interrupted the work; but the Canara fever has quite disappeared during these last few years.

6215. Sir *G. Balfour.*] Is it not the fact that since the Bombay Government got possession of that coast, the cry which was so loud against the Madras Government for not making those improvements has entirely ceased?—All the Bombay people seem to have become afraid that if Carwar was made too good, the trade which comes to Bombay would go direct to Carwar.

6216. You are quite cognisant of the outcry raised 20 years ago against the Madras Government?—Yes.

6217. That outcry now, at all events, is considerably less?—There is no outcry now, except from a few people, who say that a road is not sufficient, and that a railway is necessary.

6218. You have no doubt yourself of the feasibility of communication by the ghauts?—None.

6219. The slope is by no means difficult to overcome?—There is a break at that portion of the ghauts.

6220. Showing a great facility for running a communication up that break?—Yes.

6221. *Chairman.*] You mean as compared with the hills that have no gaps in them?—It is an easier ghaut than either the Tull or the Bhore Ghaut.

6222. Sir *G. Balfour.*] When once the ghaut is overcome the level land above the ghauts is singularly well adapted for communication, is it not?—After you pass Yellapore.

6223. I think the British India Steam Navigation Company have regularly visited that port for a number of years?—Since 1863.

6224. And they have never failed to enter at all times of the year?—Never.

6225. And even at night?—At night, and at all times, they have entered freely and gone out freely.

6226. Showing that the navigation is certainly free from all dangers whatsoever?—Very free.

6227. And that the lights and the safety of the water are sufficient alone to enable the steamers to run in?—Yes.

6228. Is it the fact that no accident has ever happened to any ship since Carwar was opened?—One ship, the Mahabuleshwar, which, contrary to the orders of the port officer, anchored too far off, dragged her anchors and had to be assisted, but there was no accident.

6229. Mr. *Beckett Denison.*] Have there not been doubts expressed often as the holding ground of the anchorage?—I have heard a doubt expressed as to its being a good port, but I simply have the experience of these years that it is a good port against that doubt.

6230. Mr. *Dickinson.*] I think I understand you say that you understand that one of the reasons why the Carwar project is at all events in abeyance, is that there is an idea that it may involve a charge on the revenues of India?—That has appeared to be the feeling expressed in the Secretary of State's Despatch to the Government of India.

6231. Then your opinion is that the railway would pay?—I am sure it would pay.

6232. Have you any idea that any plan could be suggested in which the natives of the districts would take an interest; by which, at all events, Government would be secured against any loss?—Yes, I think there is a mode by which it could be done. I think that a system, which might be called the exact converse of the guarantee system, would meet the case. Under the guarantee system the public or companies have provided the capital to construct the railway under the guarantee of the Government; but I believe that if Government would find the money, companies would be found to guarantee the Government against loss.

6233 And you have no doubt, as regards that particular line, that such a company could be created?—Yes; I know that it can.

6234. And do you think that in such a company the natives would take an interest?—Yes.

6235. *Chairman.*] Do you think that you would get capital subscribed in that way unless the Government tied its hands so as not to interfere either to increase the expenditure or to diminish

Mr. *J. Fleming.*

8 July 1873.

diminish the profits?—Well, the plan that I have in view is this: supposing the railway approved, that Government should advance to the company the money required for the construction of the railway at 4 per cent., that being the rate at which, I believe, that Government could borrow money for remunerative works; the present value of 4 per cent. Government Stock is 104 in London, and 103 rupees for the rupee paper in India, so that I have no doubt that they could borrow money at 4 per cent.

6236. But would the risk of the cost of the railway being constructed within the agreed capital fall upon the Government or upon the railway company?—The company would be required to subscribe a certain sum of money beforehand, and deposit it with Government as a security.

6237. But what I want to know from you is, would the contract provide that the Government should construct the line at the estimated cost, or that the company should construct the line at the estimated cost?—That the company should construct the line.

6238. Would that involve the company operating throughout without any interference whatever on the part of the Government?—Beyond supervision there would be no interference.

6239. Supervision which was to share the responsibility of the works, the character of them, or the expenditure on them; or what would be the nature of the supervision in your view?—The supervision I take it would be to see that the works as they were proceeded with were sufficient works, and that the material supplied was good material.

6240. That would be an inspection rather than supervision. After the railway was completed they would inspect it, and see that it was according to the contract?—The idea that I have is that there should be a continuous supervision of the material sent out from this country and of the work in progress, very much as there was a supervision of the guaranteed lines.

6241. Do you think that private people would become responsible if they had to share with a Government officer the decision of the question as to the nature and quality of the materials, and the decision of every question connected with the construction of the railway?—I take it that it would operate in this way: that there would be on the part of the company, seeing that their aim was to make a profit, a desire to be as economical as possible.

6242. Mr. *Crawford.*] The supervision of works would amount on the part of the Government to insisting that the specifications were complied with and executed?—Yes.

6243. Sir *G. Balfour.*] But you would not allow the interference which now takes place, by which the whole of the works of all the railway companies have been increased in cost to an enormous degree?—I was not aware that it was the interference of the Government which had caused the increased cost of the railway.

6244. What do you think caused that large increased cost?—There have been a variety of causes.

6245. Mr. *Crawford.*] Has there been that increase of cost?—Over the original estimate in some cases, I believe there has, but I am not familiar with that subject.

6246. *Chairman.*] Do you know that the Great Indian Peninsula Railway has actually doubled its mileage expenditure from what it originally started with?—Yes; I am aware that it has cost a great deal more than was estimated.

6247. Do you know that that has been the result of principles of construction laid down by the Government to a large extent; take for example, insisting upon a gauge and fencing the line upon both sides all through India, and making platforms and various stations of a certain quality; if all those are supplied up to a definite standard, would they not very much enhance the cost of the railway?—But were they not in the original specifications?

6248. There was no specification originally; you, however, would proceed upon a specification, as I understand you?—Yes.

6249. Would you fix beforehand the limit of the rates to be charged, the same as is done by a railway company in this country, so as to preclude all interference by the Government within the prescribed limits?—That is a matter which might fairly be arranged beforehand.

6250. But would it not be necessary to arrange it beforehand; supposing you had learned that the Government have prescribed unprofitable rates for the use of the guaranteed railways, they themselves bearing the loss, what would be the fate of a railway company, that was itself to bear the loss under such conditions?—Rates which might not pay a guaranteed railway, might yet pay an economically constructed narrow gauge railway.

6251. Would it be necessary, in order to induce capitalists to invest, that they should know beforehand what the rates would be?—Yes.

6252. And would they not claim a discretion within the originally prescribed rates?—Yes; I take it that they would.

6253. Mr. *Fawcett.*] You have expressed the utmost confidence that this particular railway will pay; you say that it would pay a profit, and particularly would pay Manchester?—No; the meaning of my answer was, that the difference in the cost of carriage 200 miles by rail to Carwar, and 400 miles by rail to Madras, would amount to a profit upon the transaction.

6254. Therefore, it could be sold at a cheaper rate to Manchester?—Yes, it could.

6255. And, therefore, Manchester would profit by it?—Yes.

6256. You are extremely confident, are you not, from your commercial experience, that this railway would pay?—Yes, I am.

6257. And I suppose other people are so too?—Yes.

6258. If you yourself have invested capital willingly in Carwar and the Manchester Company, which, I suppose, is composed of Manchester capitalists, have also invested capital in Carwar, why do you not give tangible proof by supplying capital yourselves for this purpose, and getting up a private company; the Government would not object to that, would they?—No, I suppose not; but the capital required would be 1,100,000 *l.*, and I do not happen to possess 1,100,000 *l.*

6259. But if there is this opinion among the commercial classes in India as to the extreme profitableness of this undertaking, Government may fairly say, "There have been companies started in India with large capital; we do not wish to deprive you commercial gentlemen of the great advantage which you will derive from this railway;

railway; we will place every facility at your disposal, and leave it to you to undertake it?—Indian capitalists get more for their money than this railway is likely immediately to yield. I consider that it is a certainty that this railway will yield 4 per cent., probably 5, or probably 6 per cent.; that is my conviction; but there is no very great profit to be derived from it, and, therefore, I do not expect that native capitalists would withdraw their money from their business, and from their other investments which yield them a much higher return, to put it into a railway which would yield them not much more than 4 or 5 or 6 per cent.

6260. But I am not now referring to native capitalists; schemes involving great capital were floated in Bombay; the capital was embarked by European capitalists, and by civilians, and others; if there is this great confidence that this railway is the wonderful speculation that you describe, how is it that those advantages are not pointed out to European capitalists in India; why is not the same account that you and Sir George Balfour have now given of its great advantages to Manchester, given in Manchester; why do you not say to them, "You will get your cotton a great deal cheaper; bring your capital to this railway?"—It has not been described by me as a railway that would bring wonderful results, but as a railway likely to pay a fair return upon the cost. The cost of money to Government is 4 per cent., and I feel perfectly confident that it will yield at least 4 or 5 or 6 per cent.

6261. But, if you are going to get a great supply of cotton, as I understand you, by this railway, and to effect a considerable amount of saving on that; and if, in addition, you get a railway which will pay in itself, it must be obvious to you that you can hardly present a more lucrative speculation to Manchester cotton buyers?—Manchester cotton buyers spend their money in spinning their cotton and manufacturing their cotton; their business is not to make railways.

6262. You know that their capital is invested wherever an eligible investment is offered; you have yourself spoken of the Manchester Cotton Company in this particular place of Carwar; that shows that when a sufficiently eligible opportunity is offered to the Manchester people, in fact, to any English capitalists, they are willing to invest their capital?—I mentioned the fact of the Manchester Cotton Company having an establishment at Carwar at the beginning of 1865; but I did not mention the fact that, wearied out by the delays in opening out the road, they abandoned their property, and sold it at a heavy loss.

6263. And they want the Government to open up the communications?—Yes.

6264. You have said that there is a considerable amount of opposition in Bombay from the Bombay merchants to this railway, because they are afraid that Carwar will become the rival of Bombay?—I can in no other way account for the opposition which they make to the construction of a railway from Carwar to this district that I speak of.

6265. Then, according to that statement, I am to understand from your evidence that you consider that the opposition of the Bombay Chamber of Commerce is because they have property in Bombay, and they are afraid that Karwar will prove a rival to Bombay, that it is an interested personal opposition; you can give no other explanation?—I cannot give any other explanation.

6266. May they not just as fairly retort that your firm has property at Karwar, and that your recommendation of Karwar arises from the same feelings?—They may retort that; but let them answer the evidence, which goes to show that the opening out of that country by a line of railway would be an immense advantage to that country; let them adduce any evidence of that kind.

6267. But what I understand is, that they have made statement after statement, asserting most positively that this railway would prove a losing concern to the Government of India, if it was made; you are perfectly well aware that those statements have been made in Bombay?—By one man.

6268. By whom?—The "Bombay Gazette" has made statements to that effect.

6269. But is it not in the petition from the Bombay Chamber of Commerce?—The petition from the Bombay Chamber of Commerce is to the effect, that further investigation should take place; but investigation has taken place with the result that a committee containing adverse members, members who were quite hostile to the construction of this railway have unanimously approved of its construction.

6270. But you referred just now to the opposition of Bombay; is there no opposition in Bombay; has the opposition to this railway which was so strong a short time ago been entirely given up?—The "Bombay Gazette" is agitating against it at this moment.

6271. Am I to understand you that every one of the Bombay merchants who you said opposed Karwar originally because they were afraid of rivalry has now changed his opinion?—I do not know what the opinion of every Bombay merchant is.

6272. You have said that there is only one man in Bombay now opposed to Karwar; if you can say that, you must know positively that there is no one else opposed to it?—My meaning was this, that there is only one public agitator against it in Bombay.

6273. You mean then, only one gentleman in the Press?—Yes.

6274. Is the "Bombay Gazette" the only paper that has written against it?—I believe so.

6275. Never the "Bombay Times"?—No.

6276. Were not just the same favourable and glowing accounts (you have been acquainted with India for a long time) given to the Government of India when they were pressed to engage in other schemes?—I do not know that.

6277. If the plan was carried out of advancing the company money at 4 per cent. as you suggest, suppose the railway should turn out a second Mutlah railway; you are probably aware of the position of that railway, that the Government were obliged to pay the railway their 600,000 *l.* at par, that it does not half pay its working expenses, and that therefore instead of being a property that is worth anything, it is a thing which entails a very serious loss to the revenues of India; supposing this Karwar railway should turn out a second Mutlah (because equally glowing accounts were at one time given of the Mutlah railway), what security then would the Government have for the 2,000,000 *l.*, or whatever that they had advanced to construct the

Mr. *J. Fleming.*

8 July 1873.

Karwar railway, except having handed over to them a railway, which like the Mutlah did not pay its working expenses?—I cannot suppose the case that you put, because the cases are perfectly different.

6278. Port Canning was to be the great port of India, the Mutlah railway was to take the produce of India to a most prosperous port, and it was going to be a most extraordinary speculation; statements similar to those which you have made to-day were made in reference to that railway going down to a new port; they have all turned out to be untrue. I am not saying that your expectations as to Karwar would prove to be untrue; but if money is advanced, you as a man of business know perfectly well that those who advance that money ought to look with the utmost care after the security they receive; would they receive any other security but the railway?—They would have the security of the railway, and the sum deposited as the guarantee sum.

6279. How much would you propose it should be?—It would be a matter of arrangement.

6280. Would you propose that one-half should be deposited as a guarantee?—No; I do not think that would be necessary.

6281. How much?—Say, one-tenth.

6282. Take the case of the Mutlah, the Government would get in that case its deposit of 60,000 *l.*; having received 60,000 *l.* they have handed over to them a concern which without reckoning what will have to be spent on the railway in new capital, entails an annual loss of 25,000 *l.*; therefore, what your scheme would have brought to the Government would be, that they would have received 60,000 *l.* in order to sustain an annual loss of 25,000 *l.* with the expectation of having to spend an enormous amount of capital on a thoroughly worthless concern?—The cases are perfectly different in this respect, that it was believed that the merchants of Calcutta would make use of the Mutlah River, which is unquestionably a better river than the Hooghley; but still there was Calcutta itself, with a fairly navigable river; the trade has naturally remained at Calcutta, where there was every facility for conducting it, in perference to Port Canning where similar facilities do not exist. I believe that more might have been done at Port Canning than has been actually done. But the case of Carwar is quite different; Compta, which is the rival port, is not a port at all; it is a place which during the fair season is unapproachable by large vessels, whereas Carwar is an excellent port; already a large trade comes to Karwar, and the whole of the trade, which now comes to Compta, will, according to the native merchants themselves, who may be presumed to know more of the matter than the European merchants, come to Carwar, if the railway is made there.

6283. Similar statements were made as to Port Canning. I am not for a moment casting the slightest suspicion upon the sincerity of your convictions; I have no doubt that you are as firmly convinced at the present moment that this railway will turn out a considerable success as the original projectors of the Mutlah railway were, that it would turn out a great success; all of us are liable to make mistakes sometimes; and I come back to this point again: according to your plan, the Government is to advance the money necessary for the making of this railway, and receive a deposit of only one-tenth as security, and therefore I say, if the railway should turn out to be a failure and not pay, the only security which the Government would have for the money which it had advanced, would be an unproductive railway; you do not propose that the shareholders should deposit this money, and if the railway did not pay, make themselves personally liable, do you?—Certainly not.

6284. Then the whole of the security would be, according to your idea, the deposit of one-tenth of the capital of the railway?—Quite so.

6285. Now, if the Government advanced, for instance, 2,000,000 *l.*, and the company deposit one-tenth of that, then the Government has advanced ten-elevenths of the whole?—No, the whole amount expended on the railway is supposed to be two millions.

6286. Then I will put it nine-tenths; you having advanced nine-tenths of the capital requisite for the construction of any public work, the capital being yours, except one-tenth; or, to put it differently, you only receiving a deposit amounting to one-tenth of the capital expended, would you not think it necessary to exercise the most constant supervision and control over the construction and working of the railway to see that the money was not wasted?—Yes.

6287. Therefore, this control and supervision would be such that the railway would have virtually to be constructed by the Government?—But let me say this at once; although in this particular case I say one-tenth, the amount to be deposited has nothing to do with the principle of the arrangement. I say, let the Government demand such a deposit as in its judgment is sufficient to cover the risk. The Government takes this position at the present moment: "We will make no railways in India, unless we are perfectly assured that we shall not increase the public burthens by so doing"; I come forward and say here is a way in which people who have confidence in this railway are willing to put up a sufficient sum as a guarantee fund between Government and loss.

6288. Had any offer like that been made to the Government, I should think that the Government would be rather imprudent if they had not received a deposit amounting to one-half, which you gave in one estimate as one-tenth. Assuming that figure of one-tenth, what does it amount to; it is this: the Government, we will say, spends two millions; the only security it receives is 200,000 *l.*; they have all the responsibility of carefully supervising the railway, and inspecting it; and then who would pay those expenses?—I should think that the company would pay for the inspection of the railway.

6289. And pay for the superintendence?—No, that would be part of the arrangement.

6290. Then who would pay it; if the Government, do not you see that you would be saddled, to begin with, with two separate staffs?—I do not think that a company under such an arrangement should be called upon to pay for a heavy staff.

6291. Then we are getting out the nature of the transaction a little more clearly; in addition to advancing this money, therefore, on this security, which, I think, an imperfect security, the Government would have to pay all the expenses, whether they be great or little, of superintending the railway?—It would have to be a matter of arrangement with the Government.

6292. Then

6292. Then in regard to every bridge that had to be constructed, every earthwork constructed, and every bit of material used; would it not be necessary for the Government to see that the bridge had been properly constructed, and that the materials were good?—If they deemed it necessary.

6293. But it must be necessary; no man of business would advance capital to such an extent as you propose, without taking those precautions, would he?—Doubtless, they would take precautions.

6294. Then, would not those precautions necessarily involve expense?—Clearly they would involve expense.

6295. *Chairman.*] Would it not be better, in your view of the case, for the Government at once to enter into a contract with a proper specification, with a responsible contractor to construct the line; and would they not do it better without the intervention of a company than with; if they employed a person, like the late Mr. Brassey, to construct the line on a specification for a specific sum, would not that be a more efficient and more economical mode; they would arrive at exactly the same conclusion by that means, and have the line constructed for a specific sum?—I see no objection to that; but the suggestion that I made, was to meet this difficulty that Government apprehend a loss, or appear to apprehend a loss upon the working of the line.

6296. Then that would involve merely a working contract; that would be a very different thing; because, if it failed in any year, they would have the right of resumption: but, then, they would have all the loss, and the 10 per cent. that you would have deposited would only amount to two-and-a-half years' profit?—Yes.

6297. And, after that two-and-a-half years' profit was exhausted, if it still failed to pay, it would be thrown on the hands of the Government, who would have no further claim, and would have to bear in perpetuity all the loss?—Quite so; but, in the meanwhile, no man would pay any sum, unless he had confidence that he would make something out of it, and he would be deeply interested in making something out of it.

6298. Do you think that the experience of what I may call the floating of joint-stock companies in London is that people do not subscribe their money, unless they have an intelligent and well-grounded confidence in the operations?—I take it, in this particular case, that, in the first place, it is a railway which has been approved by the Government; but that they hesitate to construct it, because they are doubtful whether it will pay.

6299. But is the fact of a subscription evidence really of the permanent stability of the undertaking, or of the cleverness of the people who get up the subscription, judging by our experience every day?—At all events, it is evidence of the faith of the people who make the subscription.

6300. Mr. *Fawcett.*] But you are perfectly well aware that the advantage which is obtained by a railway may consist of two portions: first of all, it may pay a good interest upon the capital expended; and, secondly, it may ensure an indirect advantage, for instance, to the owners of property and to the purchasers of produce which is brought by the railway?—Yes.

6301. Now, undoubtedly, two of the indirect advantages which would result from the opening up of this Carwar Railway are, that it would improve the value of property at Carwar, which is partly owned by private individuals, and, secondly, that it would be a great advantage to the Manchester men who purchase cotton?—I should not put it in that way.

6302. Sir *T. Bazley.*] As a merchant, do not you find that the market price regulates the value of an article, and not the cost of production?—Yes.

6303. And that if cotton be grown cheaper in India, it does not follow that it will be sold cheaper in Manchester?—No.

6304. The general market price regulates the price at which it shall be sold?—Yes.

6305. But if India be improved, the people of India will derive the primary benefit of the improvement?—Yes.

6306. You are aware that India is open to every market in the world, France, the United States, and Russia, and so on, and as to the advantage which is derived from this railway, it is not that Manchester will derive it, but India will derive it?—The answer which I was about to give to Mr. Fawcett was, that it is the people in the Dharwar district which will be opened out, who will get the greatest advantage from the opening of that railway.

6307. Mr. *Fawcett.*] But you admitted just now that, if the course of communications were improved, the owners of property at Carwar would benefit; I am not saying that the people who own property at Carwar and the people who purchase the cotton in England are the only two persons who benefit by it, but you admit in the first place that the owners of property at Carwar would benefit by it?—Yes.

6308. Then without saying more of the growers of cotton, you admit that if the means of communication were improved, the cotton would be cheaper?—The cost of bringing it to the coast and sending it to Manchester would be cheapened.

6309. *Chairman.*] In your prepared statement you state the quantity exported in the year to Manchester, or as you describe it, "the present influence of Compta and Carwar on the trade of Bombay may be judged of by the following traffic statement: last year the exports of cotton for the 12 months ending 30th of June, were," and then you bring it out in bales, "56,000 bales from Compta to Bombay and Carwar;" the whole export to which you refer is only 45,000 bales, I understand it, in the year?—For the 12 months ending 30th June 1872, there were 56,000 bales of cotton sent from Compta.

6310. I am speaking of the export to Europe which was only 45,000 bales; the export to Bombay and Carwar was 56,000?—But the whole of that 56,000 bales was afterwards exported to Europe.

6311. Not necessarily, because there is an export to China, is there not?—Very little; there may have been some.

6312. However, the result is that it is something under 100,000 bales of available cotton to go to Europe?—In that particular year.

6313. Are you aware that this is an obvious principle in the economy of prices that if 100,000 bales of cotton come to a market composed of several millions of bales, those 100,000 bales will not regulate the price of the commodity; but the price will depend upon the millions, and whatever is gained by economical production will

Mr. *J. Fleming.*

8 July 1873.

will go into the hands of the people who bring it to the market, whether the merchant or other person; it will not be obtained by the seller?—Yes.

6314. The honourable Member for Manchester puts this view to you, that the price of cotton in England is regulated by what may be called the market of the world, and that if any particular person, or particular set of individuals, can bring a small quantity like this for sale, all the profit goes to those connected with that particular production, and does not go to the persons who buy in the open market of the world. Another honourable Member, namely, the honourable Member for Brighton, suggests that a part of it would go to the profit of the purchaser in the market of the world, taking Manchester to express that term; those two views have been presented to you?—Yes.

6315. Mr. *Fawcett.*] With regard to this proposal of yours for constructing these railways, I will not suppose that the Carwar Railway, if it is constructed in the name you propose, does not pay at all; I will assume that it pays 2 per cent,; then supposing that 2,000,000 *l.* is spent upon it, the loss to the Government would be 20,000 *l.* a year?—Yes.

6316. Therefore supposing, as you suppose, that there was a certain deposit, in a given number of years the deposit would be exhausted?—It would be so.

6317. Then, all that would happen then would be that the Government would simply have got its 4 per cent., and then they would be saddled with a losing concern?—It would be so in the supposition.

6318. Then, suppose that this railway were, according to your expectation, to realise, say 6 per cent., the Government does not get any advantage; they do not share with you the extra profit; they still simply get the 4 per cent.?—That is my proposal.

6319. Therefore it comes to this, that they run the risk of loss and have no gain?—They have an indirect gain.

6320. Looking upon it as a pecuniary transaction, what you propose that the Government should do is, that if the thing turns out badly they ultimately lose; if it turns out well they gain nothing directly?—They gain nothing directly.

6321. Have you the paper of the Secretary of State here in which he refused to make this railway?—He has not refused to make the railway.

6322. The Despatch, I mean, in which he gave orders to suspend it?—No, I have not that Paper here; the Despatch is, I think, dated the 12th of August last year, and it is a letter simply urging upon the Government of India further inquiry and revision of the estimates, desiring that a Committee should be appointed to revise the estimates for the Carwar Railway.

6323. Has that Committee reported?—Yes.

6324. And what is its report; is it favourable?—It is favourable.

6325. You do not know what the decision of the Secretary of State is?—That I do not know.

6326. Mr. *Dickinson.*] You have been asked about the obligation of those who benefit by the railway to make the railway; is there any persons likely to benefit so much as the great landholder, namely, the Government of India?—I should say not; nearly half of the revenues of India are derived from land.

6327. Sir *G. Balfour.*] Has it not been the object of all those who have advocated the improvement of India for several years to advocate the improvment of the communications?—Yes; I believe so.

6328. What do you consider to be the greatest defect in India at the present moment in any shape of public works?—The want of means of transport in the country.

6329. Is it not the fact that there is hardly any civilised country in Europe, not even Russia, that has less communications in proportion than India?—Mr. Baynes, the Secretary of the Bombay, Baroda, and Central India Railway, put forward a statement that India has one mile of railway for every 305½ square miles of territory, and 37,989 inhabitants; whereas we in England have a mile of railway for every 7¾ miles of square area; and the United States have a mile of railway for every 56 miles of area, sparsely peopled though it is.

6330. *Chairman.*] You have not given a comparison as to the taxation per head?—No.

6331. Sir *G. Balfour.*] But have we not endeavoured to improve the communications of India during the last 30 years?—We have been doing something, but not enough.

6332. But everywhere it is visible that wherever we have opened out communications, the revenue has increased?—Immensely.

6333. And in India we have products incalculable in quantity and in value, which are not now moveable because of the want of communication?—Yes, there are districts capable of producing, but which produce nothing, because we have not the means of transport.

6334. And the old bullock transport is totally insufficient now for the increased and increasing exports from India?—The old bullock transport is certainly insufficient.

6335. The bullocks could not be fed along the line of comunication if they had to convey all the produce now requiring to go to to the sea-coast?—They could not subsist.

6336. Therefore India is charged to that extent that it requires a greater and more powerful line of communication?—Certainly.

6337. Then I understand you distinctly to say, that what you are now contending for is this, that you see your way to constructing a railway from Carwar into the interior which will cost from 8,000 to 10,000 *l.* per mile?—No; I believe that the last estimate of the cost of the railway is equal to 7,600 *l.* a mile, and I think that that is an estimate in excess of what is needed.

6338. And you know that the 5,000 or 6,000 miles of railway already constructed in India, have cost from one 100,000,000 to 120,000,000 sterling, equal to about 20,000*l.* per mile?—Yes.

6339. And therefore the difference of cost between your economical railway and these dear railways, which the Government have constructed upon their system, would alone enable you to pay a fair dividend upon your cheap line?—That is what I believe.

6340. And you contend, therefore, that if a different system was now followed for opening up India by means of railways, that great good which we expected from the first would be certain of being secured?—I believe so.

6341. And therefore you think that, having guaranteed to the Government that you could construct a line of railway by an association at about 7,000 *l.* per mile, the Government ought not to distrust the results of that cheap railway in

in respect to earning a profit from the traffic which would pass over it?—The Government have already investigated this matter again and again, and again, and always with the same result. Although with some little differences as to figures, yet always with the result that it would be profitable; every Government that has investigated or inquired into this railway have come to a favourable conclusion respecting it.

6342. When you get a cheap line of railway constructed at 7,000 *l.* a mile, the traffic over that line necessary to earn 20 *l.* a mile a week is exceedingly small, is it not?—The traffic upon a line costing 7,000 *l.* a mile need not be so great in order to yield a profit, as upon a line which cost double, or three times that amount.

6343. And therefore you, as being thoroughly alive to the extensive resources of the Southern Mahratta country, and knowing the variety of products which can be brought to Carwar, not only as affects cotton, but as affects oil-seeds and other articles, are confident of a sufficient produce being carried over that line to enable you to earn sufficient to pay the expenses as well as 4, 5, or 6 per cent.?—I am quite confident of it.

6344. Therefore when you say that an association could be obtained to lodge a guarantee with the Government, in contradiction to the Government guaranteeing an accommodation, you have no distrust as to that guarantee ever being drawn upon by the Government to secure the payment of the money invested?—I believe that it will never be drawn upon; but I merely make that suggestion to meet the difficulty that has presented itself to the Government. I do not know how, but Government seems to have paused respecting the sanctioning of this railway, from a fear that certain burdens may be entailed upon the public revenue.

6345. Mr. *Fawcett.*] In the statement which you have handed in with respect to the Elphinstone Company, you give certain figures of the capital expenditure and the gross income, for the years 1867, 1868, and 1869. Have you brought out distinctly that it is gross income, and not net?—I have not given the net income, but I have given you the gross income for these three years.

6346. But as this paper has been prepared with very great care, and you have been privy to all the transactions connected with the Elphinstone Land Company, it must have struck you, as a man of business, that we would want to know, in order to give us any idea of the thing, what was the net income?—I could furnish you with that also. What I wanted to show, however, was what was patent to the public, which was this, that whereas on the 30th of June 1867, the capital expenditure was 1,40,00,000 rupees, and the gross income 3,84,000 rupees. In 1868, the capital expenditure was 1,54,00,000 rupees, and the gross income had increased to 6,22,000 rupees; and in 1869, the capital expenditure was 1,85,00,000 rupees, and the income had increased to 6,97,000 rupees.

6347. But do those figures show anything at all, unless you put in along with them what the net income was?—It could be done.

6348. I am not a business man, and therefore it seems to me that it could not have struck me so much as it would a man of business; but how is it that if this paper has been carefully prepared in order to show the financial state of this company, you did not state the net income rather than the gross income?—The gross income shows it more plainly.

Mr. *J. Fleming.*

8 July 1873.

6349. No; because with regard to the gross income we have have found in India concerns, particularly in the Forests Department, that an increasing gross income very often means a diminishing net income?—It was not the case here; I could satisfy you as to that point, because it is a fact that the net income increased pretty much in the same proportion. I think I can give you the figures from the reports which I have here. It will require a little working out from these reports in my hand, because the profit and loss account for the year ending 29th of June 1867 commenced with a balance brought forward from the year 1866, of 3,44,000 rupees, and the balance at the end of the year was 4,42,000 rupees, therefore the net gain for that year was 1,28,000 rupees.

6350. But then those accounts want a very much more careful scrutiny; you know all this time you were increasing your capital?—Yes; that I give you in my statement.

6351. But how do I know that this increase of balance of income which you say has arisen in these two years is not owing to capital. Can you prove to me from these accounts that a portion of that increase of balance which you have shown has not been derived from the new capital which was raised?—No doubt it was partly derived from new capital which was raised, because that capital was spent upon works; the area of the land was increased.

6352. But what I mean is this; what I understand is that that means a cash balance, does it not?—No, this is a profit and loss account. I say that the net income that year, after deducting the expenditure and the balance with which the year opened, was so and so.

6353. The balance with which the year opened is a cash balance?—The balance with which the year opened was not necessarily a cash balance.

6354. In what form did it exist?—In the form of balance to the credit of the profit and loss account; but I may explain to you that a portion of the income of the company was not divided in dividends, but was expended upon the reclamation; new works.

6355. I do not want to unduly disparage these works, but simply to get a distinct statement of their financial position; but if you speak of the balance, it is necessary to know of what that balance consisted?—It consisted of a balance of cash.

6356. That is what I say, that that was a cash balance; your point is this I understand, that your cash balance between 1867 and 1868 increased?—No; I say that the profit made for the working year 1867 amounted to 1,28,000 rupees.

6357. That you had expended a capital of 1,400,000 *l.*, in order to secure a profit of 12,800 *l.*?—Yes.

6358. According to that, the company at that time was as nearly as possible paying 1 per cent.?—Yes, upon incomplete works.

6359. Then do you not see how very much better an idea we should have got of the position of the company, if in your prepared statement the net annual income had been stated?—No; the object was to show that there was a patent increase in the income of the company which was patent to everybody.

6360. But then if the Government ultimately bought this, what you want to know is at what cost that increase was obtained?—I am quite

Mr. *J. Fleming.*

8 July 1873.

open to be cross-examined on that point. I am not evading anything. I have not got anything to conceal.

6361. What is it for the next year?—The next year is 30th of June 1868, and the net income that year was 3,42,000 rupees.

6362. Then what was the gross income that year?—The gross income that year was 6,22,000 rupees.

6363. How much had been spent then?—*Rs.* 1,54,00,000.

6364. That is a return of 30,000 *l.* upon a million and a half of capital?—Yes.

6365. What was the last year?—The net income for the year 1869 was 3,83,000 rupees.

6366. That is to say, it was 38,000 *l.*; what was the capital in that year?—*Rs.* 1,85,00,000.

6367. Then you see, comparing 1869 with 1868, the figures that you have just given me (and 1869 was the year in which the Government purchased this over) show that, at that time, instead of the company increasing the profit, it was slightly less profitable than it was the year previously?—That is quite true; but you must always bear this in mind, that it was a large and incomplete work.

6368. Then what the transaction amounts to is this, that the company was paying 2 per cent.; it was incomplete; according to its own showing, its financial position was such that it wanted 600,000 *l.*, and could not get it; and Government buys that concern at par, exactly the same price that they ought to have paid if the company had been paying 5 per cent.?—The Government could not have acquired it for less; that is, the position.

6369. But I want to exhibit clearly the financial nature of the transaction; and in my description, without considering whether any of the representatives of the company would have sold it for less, I am correct; I have stated this repeatedly, and I am glad to get your opinion to corroborate it, that the Government have purchased at par a concern paying 2 per cent., and which could not raise 600,000 *l.*?—It was seeking to raise 600,000 *l.* in the year 1866.

6370. But it tried to raise 600,000 *l.* in the year 1866, and you have not yet proved that you could have raised it afterwards?—We spent between 1867 and 1869, 450,000 *l.*

6371. On what terms did you raise that?—We got it partly from our shareholders; part of it we received from Government by selling to Government our right to levy wharfage fees upon the railway bunder; we got 10 lacs from the Government for that.

6372. Therefore you got 350,000 *l.* from the shareholders?—Partly from the shareholders, and partly from our income.

6373. On what terms did you get it from your shareholders?—We called it from our shareholders.

6374. Then your capital, previous to that time, was not all called up?—It was not all called up.

6375. How much was called up at the time that Government bought it?—There were a number of shares forfeited.

6376. Relinquished, do you mean?—No.

6377. What were the original shares?—There were 10,800 shares of 1,000 rupees each, fully paid up; there were 10,800 new shares upon which calls had been made, amounting to 650 rupees a share, but then a number of those shares had been forfeited; the actual sum obtained from the shareholders of the company at the time of the purchase was made by Government amounted to 1,60,93,000 rupees.

6378. You have talked about forfeited shares; why were those shares forfeited?—Because the shareholders were unable to pay their calls.

6379. If they were unable to pay their calls then at that time, the value of the shares cannot have been as much as the calls upon them?—They were not worth as much at that time.

6380. So that the company was in this position: this company, which is ultimately bought at par, that the shares were absolutely so worthless that a man would rather forfeit them than pay the call?—It amounts to this, that in the year 1866 and 1867, people were absolutely unable to pay their calls.

6381. It is not for me to express an opinion upon the transaction; but in 1866, when you applied for a loan to the Government for 600,000*l.* the shares were being forfeited, and, of course, they would not have been forfeited if the shares were of sufficient value to have something more than covered the calls?—The shareholders were unable to pay the calls.

6382. But you said that a great many shares had been sold; that might have been because the shareholders were unable to pay the calls; but what I put to you is this; if there is a call on a share amounting to 10 *l.*, if that share can by any means whatever, whether on the part of the man who holds the share, or not, sell for even 11 *l.* in the market, the share would not be forfeited, but the shareholder who could not pay the call would sell the share, and appropriate the money?—You will bear in mind that I stated that in May 1867, the value of the fully paid up shares was 435 rupees, that is to say, a discount of 565 rupees. The new shares had 300 rupees paid at that moment.

6383. Was that a real quotation, or as one would suppose from finding the number of shares forfeited, a nominal quotation, as is often the case in panic?—It was a price at which there were transactions.

6384. But very few?—There were certain sales at that price.

6385. That was the time when you applied to the Government to ask for 600,000 *l.*?—No, it was at an earlier date, in November 1866, that we applied to Government.

6386. A few months before?—Yes.

6387. Did you offer to give the Government a general mortgage of the whole of your property if they advanced that?—Yes.

6388. And they did not think it even advisable on those terms?—The advance was recommended to be made by the Government of India.

6389. Who refused it?—I do not know who refused it.

6390. If you applied, and the Government was willing, how was it that it was not advanced?—I do not know what the Secretary of State did.

6391. If you applied for it to the Government of Bombay, or the Government of India, and you wanted 600,000 *l.*, and they were willing to advance you the 600,000 *l.*, and the money was never received, the Secretary of State must have stopped it?—I applied to the Secretary of State to assist us in raising 600,000 *l.*; I made a statement as to our assets, and so forth, and as to the income. My statements were referred to India for verification; the Government of Bombay reported upon the matter to the Government of India,

India, and the Government of India reported to the Secretary of State. I know that the Government of India recommended the granting of the loan, but the Secretary of State never communicated that to me officially.

6392. I did not ask you for your reasons; but it was refused by the Secretary of State?—It was not refused; I never had a refusal.

6393. But the Secretary of State did not let you have the money?—I applied for a decision, and never got one. What ultimately took place was, that the Government of Bombay, in the month of July 1869, instead of granting me a loan, offered to purchase the property.

6394. During that time the money was not advanced by the Secretary of State?—No, it was not.

6395. At that time, therefore, it did not advance the 600,000 *l.*, although at that time no less than 1,200,000 *l.* had been spent upon the property, and the entire property upon which this 1,200,000 *l.* was spent was offered to the Government as a security for the 600,000 *l.* which they were asked to advance, and which they did not advance?—It was not advanced. What actually took place was this: I asked for the advance, the Government recommended it, and what the Secretary of State's decision upon the matter was, I do not know.

6396. I am not asking you now the reason of the decision; I want to get the thing clearly stated; I want to know whether I am not giving a perfectly correct description when I say that you offered, as representing the company, the whole of the property of the company upon which 1,200,000 *l.* had been spent, as a security for a loan for 600,000 *l.*; three years elapsed, and that loan was not forthcoming?—Quite true.

6397. Now you say that between 1867 and 1869 the shareholders advanced 350,000 *l.*; there was 450,000 *l.* additional capital; 100,000 *l.* of that was obtained from the Government by selling certain wharfage rights, and the remaining 350,000 *l.* was advanced by the shareholders; when you say that, it was simply that they paid calls which they were legally obliged to subscribe?—They answered the calls to the extent of 35 lacs.

6398. But they were obliged to do it?—Yes.

6399. Therefore it did not in the least show their confidence in the concern?—If they had not paid in the money they would have forfeited their shares, probably.

6400. They were difficult to sell at that time, were they not?—They were difficult at one time.

6401. Leaving out the 600,000 *l.* question, this is a correct description, is it not, of the financial bargain which the Government of India ultimately transacted with the Elphinstone Land Company; they bought a company which was paying 2 per cent., whose profits were not so great in the year previous to the year when they purchased it, as they were in the year previous to that again; they bought this company at par, the company having just before been in the position that the shareholders would rather forfeit their shares than pay the calls which were due upon them?—That is one way of describing the matter; but it gives a very incorrect and a very untruthful impression of the fact.

6402. I have not used a single expression as to whether the Government was justified or not; I am simply referring, not to the policy of the purchase, but to its financial character; is there in one of my figures or facts, in the question which I put to you, anything incorrect?—The statement is correct, excepting this one little minor particular, that the net revenue in the year 1869 was 3,83,000 rupees as against 3,42,000 rupees in the previous year.

6403. But then, if you compare the net income in 1869 with the capital of the company in 1869, and if you compare the net income in 1868 with the capital in 1868, what is the result?—Then it is a better result in 1868 than it was in 1869; that is quite correct.

6404. Then I am perfectly correct in saying that the company, as an actual fact, was slightly less profitable in the year when the Government purchased it, than it was the year previously?—That is quite true; but again I say, as I said before, that the Government purchased an incomplete, unfinished property.

6405. You say in the statement which you have already put in that there were 10,800 old shares fully paid up, and 10,800 new shares, with a liability of 800 rupees per share; does not that sentence, with the sentences in connection with it, imply that the shares were not at par, because you have yourself admitted that at one time the new shares were unsaleable, and that of the old shares, on which 1,000 rupees had been paid, the price was 400 rupees?—No, it distinctly implies that they were not at par.

6406. But how does that statement bear upon the statement that the Government could not have bought the company at less than par, considering that a portion of its shares were unsaleable; you have yourself stated that they were forfeited, and the old shares were standing at 400 rupees; if the Government could have bought a great number of those shares at that time, even admitting that there had been a great increase in their price, they need not have paid anything like par?—It does not follow that the remaining shareholders would have parted with theirs at par.

6407. I say, how in the world does that bear, considering the extent to which the shares were at one time depreciated, upon the question whether the Government ought to have bought the company at par?—It is an answer to the statement that the Government might have purchased the property at the time the purchase was first mooted for half the money ultimately paid; I say that it is an incorrect statement.

6408. If the old shares, for instance, on which 100 *l.* had been paid are quoted in the London money market at 40 *l.*, and if the new shares, upon which a considerable amount of capital has been paid, are unsaleable, it may be your opinion that I could not buy all of your shares at 40 *l.* or 50 *l.*, but you have no proof of it?—I say this, that if the Government had come into the market to buy shares, if they had taken advantage of the depression to buy shares, and then wreck the company, I do not believe that they would have succeeded in doing anything of the kind.

6409. If you express your opinion, that is one thing; but what I say is that you do not express that as your opinion, but as a positive fact?—I assert this as a positive fact, that they could not have purchased the property as a whole at less than its cost price; in the beginning of 1865 I had been instrumental in refusing an offer for that property of 3,000,000 *l.*; I had influence

Mr. *J. Fleming.*

8 July 1873.

with the shareholders to induce them to do that when only half a million had been spent upon it; and I say that if I had sufficient influence to do that in the year 1865, in the face of a great body of shareholders, I was certain to be able to carry this point with a body reluctant to sell, even at par.

6410. Bombay was then in the moment of its greatest financial excitement, was it not?—Yes.

6411. At what price were the shares quoted?—They were quoted in a peculiar way; an original share with its family; they were quoted at a premium of about 1 lac and 30,000 rupees for the group; the quotation was equivalent to about a million and a half for the whole property.

6412. What was the highest quoted price that these shares ever were at; they were at an enormous premium at one time were they not?—I believe equal to about 300 per cent.

6413. You refused 3,000,000 *l.* for the company in 1865, because you believed that the company was worth more, and the shareholders came to the same conclusion?—No, indeed I did not; but I refused it because I considered that it was a stock-jobbing trick that was attempted to be passed upon the public; I refused it on that ground.

6414. Did you consider that that was an offer of more than it was worth?—Yes; and I got greatly abused at the time for refusing it.

6415. Let your opinion have all the weight it deserves; but there is nothing from the figures to show that the Government could not have bought it at a greatly lower price than they did. You, of course, have a perfect right to say that it is your opinion that if they had attempted to do so they would have failed, but there is nothing from the figures to show that?—I can only say, that the permanent investors, of whom there were a very great number, knew perfectly well that they held a valuable property, and that they would not have parted with that valuable property for less than its par value.

6416. How can you reconcile that fact with what you afterwards admitted, that the shareholders after this time considered their property was so poor that you could not raise 600,000 *l.* in the open market; a great number of the shareholders abandoned their shares rather than pay their calls?—Certainly the holders of new shares, who were unable to pay the calls upon their shares because Bombay was absolutely destitute at the time; I know a case of an iron ship company, where ships of the very highest class were sold at an equivalent of 4 *l.* a ton, but that gives no idea of the real value.

6417. I understand that the Government paid exactly the capital which was raised by the Elphinstone Company?—No, they repaid the money actually expended upon the works, and that included certain portions of revenue which had been expended upon works.

6418. Then the whole amount was 1,800,000 *l.*?—Yes.

6419. They did not give anything besides that?—No.

6420. What revenue has the Government of India during the past year been deriving from this expenditure of 1,800,000 *l.*?—I know that what the Elphinstone property last year yielded (I only know the gross revenue) was 7,70,000 rupees.

6421. But the net revenue is very small, is it not, at the present time?—The whole of the Government revenues from bunders in Bombay amount to, I think, about 11 lacs.

6422. But what I want to know is this; can you tell me whether it is incorrect to say at the present time that upon this outlay of 1,800,000 *l.*, Government is deriving an income representing 2 per cent. on the outlay?—I cannot tell exactly what the proportion is, because the whole of the Government bunders are now under one administration; the net income from the whole of those bunders amounts to 6,75,000 rupees.

6423. But there is other property besides the bunders in connection with this company, is there not?—Yes, the gross income from these was 11,19,000 rupees.

6424. But not the net?—No, the net income from the whole is 6,75,000 rupees.

6425. But has no statement ever been made of the amount of revenue?—Yes, there is a statement given here of the revenue and expenditure for the year from the 1st April 1871 to 31st of March 1872.

6426. But I understand from your evidence that the Government is not getting as large a revenue as they might have done if they had properly developed this property?—They would get more if it were well developed.

6427. And you say that the company would have developed this property in a much better manner than it has been done since it has become the property of the Government; that the company intended to construct a deep tidal basin, and make the property productive and more useful to Bombay than it has been since it has been in the hands of the Government?—That was the intention, but I understand that the reason of stoppage of their works has been the waiting for the formation of the Port Trust, which is ultimately to have charge of all these properties.

6428. So far as the general interests of the public are concerned, what appears is this, that the Government buys a concern at par which pays the 2 per cent., and instead of the public getting any compensation for this unfortunate financial transaction, they have only the consolation of hearing from you, the best authority on the subject, that owing to its being in the hands of the Government it has remained undeveloped, whereas if it had remained in private hands, important improvements would have been carried out, which would have conferred great advantage on Bombay?—In the first place, I do not admit it to be an unfortunate transaction.

6429. Then I will leave out that word, and put the same question to you?—I say this, that if it had remained in the hands of the Elphinstone Company, the probability is that we should have taken measures which would have enabled us to sell a considerable portion of our land.

6430. And to have constructed a deep tidal basin?—Probably.

6431. And both of those things would have been as you have described them, it seems to me perfectly correctly, a great advantage to Bombay?—Yes.

6432. Then the Government buys the company at par, which is only paying 2 per cent., and the public has the satisfaction of knowing, or the reverse of satisfaction of knowing, that if the Government had not bought this concern which only pays 2 per cent., improvements would have been more rapidly carried out if it had remained

mained in the hands of private individuals, and these improvements would have been a great advantage to Bombay?—I do not know what the exact return from the property now is, but I have already explained that the reason why Government has suspended works upon the property has been that they have been waiting for the formation of this Port Trust.

6433. I am not now questioning the policy of the Government in waiting; we are not inquiring into that; I simply want to get at the facts; it is not necessary for us to know what the Government are doing now; am I not correct in saying this again: that the Government buys a company four years ago; at the time they bought it at par, the company was only paying 2 per cent.; since the Government obtained possession of the property, owing to various circumstances which it is not necessary for us now either to approve or disapprove, the Government have done nothing with the property, whereas you express it as your opinion that if the property had remained in private hands and not in the hands of the Government, certain improvements would have been carried out which would have been for the advantage of Bombay?—Certainly.

6434. Mr. *Fowler.*] What would have been the cost of making the deep sea basin referred to? — The estimated cost of the Elphinstone Tidal Basin was about 700,000 *l.*, three quarters of a million.

6435. Then it is your opinion that if the Government lay out this three quarters of a million, the property will become remunerative? —They do not require to lay out three-fourths of a million to make the property remunerative. What I say is, that such a basin is required for the accommodation of the trade; but I believe that by the sale of their land, of which they have a large unoccupied space, they would derive a large return in the shape of capital, or if they feu it, a large return in the shape of rental.

6436. What is the date of the meeting of the Chamber, referred to in your statement with regard to the Karwar railway?—It was a meeting held in July 1872.

6437. Sir *D. Wedderburn.*] In what way is the railway likely to increase the salt revenue from suppression of smuggling, as you say it is in the statement which you have put in?—There is a very large salt traffic over the Goa frontier; and the cost of carrying it by bullocks is so very heavy, and would be so much less by railway, that there would be no longer any motive to smuggle.

6438. *Chairman.*] You state that the Committee appointed by the Government of India thought that taking the expenses at 55 per cent. of the gross receipts, the Carwar railway would yield a return of 4 per cent.; on what cost per mile was that estimated?—Upon the cost per mile of about 76,000 rupees.

6439. That is including everything?—That is including everything; that is the increased estimate. The original estimate by Mr. Shaw gave the cost a little over 50,000 rupees a mile; but the Committee added items to the estimate of cost, which bring the estimate up to about 76,000 rupees a mile.

6440. What is the gauge proposed? — The metre gauge.

6441. Sir *D. Wedderburn.*] I asked you just now with reference to the capabilities of Carwar as a harbour, why it had not been earlier developed before we got possession of it into an important harbour and place of commerce. Now I see that it is stated in Dr. Wilson's letter which you have quoted, that this was due to "the blind and demented policy of Tippoo." In what way did that policy act detrimentally to Karwar, and what sort of place was it previous to this time?—The East India Company had a factory there, and there was a considerable commerce at Karwar, produce being brought down upon the backs of bullocks from the upper country, but when the commerce of the whole of that district was deranged during the disturbances in Tippoo's time, these tracts got overgrown, jungles grew up, no trade came to the place, and the population disappeared.

6442. But was it ever a populous and wealthy city to be compared with Mangalore, or some of these other places along the coast?—I think there were no highly venerated temples there, such as at Compta; the temples at Compta kept population about them, when other places on the coast were deserted.

6443. Would religious considerations outweigh such great commercial advantages as you represent Carwar to possess?—But during the time that commerce was destroyed under Tippoo there were no commercial advantages at all.

6444. Should you attribute anything to the rivalry of Goa in keeping down Karwar?—To some extent only.

6445. The point that I want to get at is, how is it that a place with such advantages has never been an important place, or a prosperous place, in the history of India?—Simply because there was not good access to it.

6446. But it says in Dr. Wilson's letter that Karwar is "the natural terminus of the more easy passes communicating with Southern Mahratta country, and the north of the Carnatic?" —It is a good port.

6447. Are we not to infer from Dr. Wilson's letter, that the passes communicating with the upper country, with the Deccan, are easy in the neighbourhood of Karwar?—The same passes by which you get access by Karwar to the upper country are available to Compta also; but the difference is, that Compta is not a port at all.

6448. Mr. *Fawcett.*] Why then has Compta been more prosperous?—Because there were venerated temples there, and the population gathered and took shelter there and kept about Compta, but disappeared from Karwar.

6449. Dr. Wilson was examined before our Committee, and we put to Dr. Wilson a series of questions, asking him to give us an idea what defects there were, and what improvements there might be in India; how was it, if his mind was so full of this Karwar railway, that he did not give us the advantage of these opinions, so that we might have cross-examined him; when was that letter which you have quoted written?— That letter is dated the 2nd of August 1872.

6450. Then it is written the year after we examined him, and it was written with the facts fully in his mind?—It was written with the facts brought out in the Chamber of Commerce discussion fully before him.

6451. Sir *G. Balfour.*] Is it not the fact that the country above the ghauts has only recently been settled?—Quite so; the country was in a very disturbed state.

Mr. *J. Fleming.*

8 July 1873.

6452 It is only in the last few years that we have, comparatively speaking, got thorough possession of the Southern Mahratta country?—Yes.

6453. And that we have been in a position to open out these fine tracts which from the time of Tippoo have been left unopened?—Yes, it is 30 years since the Southern Mahratta country has been finally pacified.

6454. And although we overran this country when under the Peishwa in 1817 and 1818, still various political arrangements prevented us from having thorough command of it?—Yes.

6455. We have now the right to interfere to an extent which we never have had before?—Yes.

6456. And therefore the opening up of communications is particularly opportune at the present moment?—Yes.

6457. Mr. *Fowler.*] Is the position of Karwar altered by steam navigation; I mean is it a good port for steamers, and better than ports around?—Well, it has this advantage, that it is a sheltered harbour. Between Bombay and Cape Comorin there is not another sheltered harbour, it is really a very fine harbour.

6458. Mr. *Fawcett.*] What is the use of putting in those statements which you have put in about the exports from Karwar and Compta in 1872?—The object of my making those statements was this, it was represented that the trade would naturally all go to Bombay, that there could be no direct trade from Karwar to Europe.

6459. Have you seen Mr. Maclean's evidence yourself?—Yes, he re-produced it in Bombay. He has represented that there would be no direct trade from Karwar to Europe. Now, last year there were 28,000 bales exported from Karwar to Europe. I tender this evidence merely in refutation of certain untruthful statements that were made. The expression, untruthful, may be over strong, but when the statement is made that Karwar is not a good port at all, and that it is necessary that a very large sum of money should be spent upon its further improvement, and such statements are received by the Committee and are likely to influence them if they express an opinion at all as to the making of a railway from Karwar into the Dharwar district, surely it is well that they should receive rebutting evidence. There were certain insinuations made before this Committee respecting our having used influence regarding the sale of the Elphinstone Company and the promotion of the Karwar railway, and there were statements made respecting that which were not correct, and my object was to refute those statements.

6460. Sir *C. Wingfield.*] In the evidence you have given, you have referred to the memorial of the Chamber of Commerce of Bombay, with reference to the Karwar railway?—Yes.

6461. Speaking of that, you say that the Chamber of Commerce "merely recommended further consideration"?—The Chamber, in their resolution, did so.

6462. "And the Chamber of Commerce merely recommended further consideration"?—That is said in reference to the resolution.

6463. But I observe that in this memorial, they take up all the arguments that have been advanced in support of the scheme before them, and meet them apparently one by one, and attempt to refute them, so that I think it is rather a faint expression, is it not, to say that they "merely recommended further consideration"?—No, I consider that I am perfectly justified in saying what I do say; I say that the resolution embodied the views of the Chamber; the memorial was prepared by the chairman of the Chamber; it was not adopted by the Chamber as a body. What took place at the Chamber was, that they passed the resolution which I have quoted. The chairman or the secretary was instructed to prepare a memorial, which he did, but that memorial was never submitted to the Chamber as a body.

6464. I can merely go by the memorial itself; the memorial, after reciting that there were reasons for disbelieving that the line would be remunerative, concludes thus, "your memorialists therefore," that is to say, for those reasons, "trust your Grace in Council may be pleased to delay your sanction, &c."?—I merely state this fact, that a certain resolution was adopted at a meeting of the Chamber, and that that resolution afterwards was embodied in a memorial addressed to the Secretary of State, but that memorial was never submitted to the Chamber as a body.

6465. That we cannot enter into; but the memorial does more than "merely recommend further consideration;" it states with great detail, the various reasons for believing that this would be an undesirable project to execute?—I can only state the simple fact in answer to that, that there is the resolution which the Chamber as a Chamber adopted, and the memorial was never submitted to the Chamber.

6466. Mr. *Fawcett.*] Are you aware that a memorial was drawn up, worded somewhat in the following way: "Your memorialists, members of the Bombay Chamber of Commerce, are of such and such an opinion in reference to the Karwar railway, and therefore recommend such and such things;" and are you aware that a document beginning in such a way, and making distinct allegations, was forwarded to the Secretary of State?—Yes, I am aware of that; but I am also aware that that memorial was never submitted to the Chamber as a body.

6467. Mr. *Beckett Denison.*] But it is not a very unusual course of proceeding, is it, for a Chamber of Commerce to leave their secretary or chairman to draw up a memorial carrying out a resolution?—It is not an uncommon thing; but the actual resolution I have given.

6468. Mr. *Fawcett.*] Did you say that the Manchester Cotton Company had no property at Karwar now?—Not now.

6469. They have sold it?—Yes.

6470. To whom?—To Ritchie, Stewart, & Co.

6471. The two persons, dissentients from the Bombay Chamber of Commerce, are Nicol & Co. and Ritchie, Stewart, & Co., and you represent Nicol & Co., who have property at Karwar?—Yes.

6472. And Ritchie, Stewart, & Co., the other members of the minority of two, bought the property at Karwar which was formerly in possession of the Manchester Cotton Company?—Yes.

Friday, 11*th July* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Grant Duff.
Sir George Balfour.	Mr. Charles Dalrymple.
Mr. Campbell-Bannerman.	Mr. Fawcett.
Sir Thomas Bazley.	Mr. Robert Fowler.
Mr. Birley.	Mr. Hermon.
Mr. Baillie Cochrane.	Mr. M'Clure.
Mr. Dickinson.	Sir David Wedderburn.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. DADABHAI NAOROJI, called in; and Examined.

Mr. *Dadabhai Naoroji.*

11 July 1873.

6473. *Chairman.*] WILL you be good enough to state what your occupation has been in India?—Before I left India for England in 1855, I was Professor of Mathematics in the Elphinstone College in Bombay.

6474. Have you been in England ever since then?—I have been backwards and forwards, but my chief residence has been in England since 1855. I have been four times backwards and forwards.

6475. What is your occupation in England?—A merchant.

6476. Trading with India?—Trading with India.

6477. Are you acquainted with the different productions of India?—Of course the productions of India are very large, but that is not the point I intend to go into.

6478. Will you be good enough to answer the question I put to you?—Then I must understand the question; what is meant by the different productions of India?

6479. The different productions of India are the various agricultural productions. Some people would call them natural productions; and there may be another class of productions in the shape of those that involve work upon natural productions or imported commodities?—I am acquainted with them; with all that has been officially made known, as far as I could.

6480. Are you aware of the particular productions of India that are now made the subject of taxation?—Yes; I know a great many of them.

6481. Do you think that those productions are the most suited for taxation, assuming that the taxation has to be made, or rather that the amount of taxation has to be levied?—I would rather not answer that question, at least until the evidence I desire to give is finished. After that I shall be happy to answer, to the best of my ability, any questions the Committee may put to me. I want to disprove the assertion often made here, that India is prosperous.

6482. Do you consider that the taxation that is now levied upon the people of India is of such an amount as to be what I think you have described as crushing?—Yes; I shall be very glad to give evidence upon it.

6483. What are we to understand by your view of crushing?—The view is this: that the ability of the people to pay the present taxation is so very small, that, taking that ability into consideration, the taxation, or the amount of it, is very crushing.

6484. Do you mean that it is crushing upon all classes, or only on some particular classes?—Upon the mass of the people.

6485. Can you state what the amount per head of the population is?—Yes; what I mean is this, that the total production of the country being only under, or very nearly only about 40 *s.* a head, and the total incidence of taxation is about, I think, 6 *s.* a head, the production itself being very scanty to live upon, even the taxation taken, no matter however light, over such poor wretched production, must necessarily be crushing. Every ounce of rice taken away from this scanty production is so much more crushing and starvation.

6486. Do you know whether any authentic account has ever been published of the value of all the productions of India?—I have collected all the information upon that point, and that is the very thing I want to lay before the Committee, that the total production is under 40 *s.* a head; and I may also say that Mr. Grant Duff has on one occasion accepted that, as he called it, as a guess, and Lord Mayo has distinctly stated in his speech, that the guess expressed by Mr. Grant Duff has very good reasons for it as far as authority goes, but as far as actual calculation goes, I have got it all from simple official figures, worked out with the greatest trouble to myself.

6487. Do you know how much of this taxation bears upon the mass of the people?—Opium does not bear upon them, evidently. For the rest, salt bears upon them fully, and all the other taxes, of course, have their share from the mass of the people as well as from others; I am talking of the total.

6488. The total of what?—The total of the taxation.

Mr. *Daddbhai Naoroji.*

11 July 1873.

6489. What is your total?—Leaving out opium revenue?

6490. Do you consider all the rest taxation?—Yes.

6491. It is upon that estimate, then, that you are speaking?—What estimate do you mean?

6492. The estimate of all the revenue except that derived from opium?—Except that derived from opium.

6493. What is the total that you arrive at?—The total is about 43 millions for 1870-1; that is the gross revenue.

6494. That is the simple process of arithmetic, deducting opium revenue from all the receipts for the year?—All the receipts for the year, taken from the total production of the country, no matter in what shape. To me it is so much given to the State for its purposes by the people. It may be in the shape of land revenue, or taxes, or in any other shape whatever. Whatever Government can get is from the production of the country.

6495. You have not entered into any inquiry to ascertain how much of the total you have been speaking of may be regarded as revenue derived from the mass of the people; is that so?—No; I have gone fully into it. The only difficulty is, that if I were allowed to state the case in my own way, perhaps many of these questions would be spared. I am quite willing to go on as you may dictate.

6496. Perhaps you can state how much of the total that you have just given may be regarded as levied from the mass of the people, and how much may be regarded as special sources of income which is not so levied, giving the totals merely; we have got all the figures before us already?—Before I proceed any further I must again say that I will not be drawn away in this manner from the evidence which I am anxious to lay before the Committee, and that I am not to be blamed afterwards that I did not say what I had to say when I was before the Committee. I state this necessarily. There is much evidence given here which requires contradiction. Then of course in this desultory manner I may be drawn into many questions which do not bear upon the points upon which I want to give evidence.

6497. The evidence you have to give before the Committee must necessarily be confined within the duties which this Committee is called upon to perform?—Certainly; and all these questions actually show that such is the evidence I want to give.

6498. Mr. *Fawcett.*] What you want to bring out, I understand, is this: the great amount of the revenue of the country in proportion to its aggregate production; and afterwards you would be prepared to show, I suppose, from what classes that revenue was derived?—Yes; if I go *seriatim* into my evidence, I shall go into all these points very regularly, while here I am at a loss, because I have got my reasons, and if they do not come in right the examination is really an injustice to me. If I am allowed only half an hour, to give the summary of what my whole argument is, I will be satisfied, and then I may be questioned.

6499. Giving that argument, of course you quite understand that any point you mention that was thought by the Committee not to be financial we shall be obliged, by the Reference, to order you to omit?—That is quite right. I must leave it, of course. I will just give these figures as they are. There is land revenue: that is all derived from the agricultural people. There is excise: the greater part of it is derived from them. There is income tax, which is derived mostly from the higher classes. Customs, a portion of it is paid by the poor people. Salt, almost all. Stamps, in some shape, are paid by the people in all their small causes. Post office is not paid by them. Electric telegraph is a small affair. Judicial, partly by the poor, partly by the higher classes; and then public works. These are the items, excepting opium, for the year 1871.

6500. *Chairman.*] What is the total of those, or which of those, do you think, are the taxes that are levied on the mass of the people?—The larger proportion of the land revenue.

6501. Will you give the total?—I have not made it out; if that is wanted, I shall take a note of it and make out a total. I would not promise that even, because I cannot divide the stamps, or the excise, or some of these, as to how much is paid by the poor, and how much by the rich.

6502. When we are speaking of the taxation crushing the people on account of their poverty, it would seem that we must refer to the people who are poor, and not to the people who are rich?—Yes.

6503. You would not say, for example, that a Parsee living in Bombay with 5,000 *l.* a year, is crushed by the taxation that is imposed upon him?—Certainly not.

6504. Would you say on the other hand that it would be desirable that he should contribute more than he does to the revenues of India?—Yes.

6505. It is necessary if we use these general phrases that we should arrive at an accurate appropriation of them?—I will put it in a different shape. The income of the poorer classes is so small, that however light is the taxation upon them at present, it is in itself crushing, and I feel it in this way. Allowing the higher people a larger share out of the production of the country, and the poorer a smaller share of it, then we may take what portion we like out of this revenue as bearing on the poor people only, and it is still crushing upon them in the present state of India.

6506. Is it your opinion that the land revenue as collected at present, does affect the natives in the sense of a crushing tax, or that it merely prevents a landlord class growing up with larger rights than they now possess to receive rent?—That is a very large question, and I would decline to enter into that discussion; but I can say this much with regard to the Bombay Presidency, with regard to this land revenue, that under the late settlement, I think the taxation is such as might be continued upon them, and I do not know that there was any very great dissatisfaction; they managed to pay. Bombay has been the most fortunate presidency of all India, in my opinion. The revised settlement that is now going on will, in my opinion, be a very heavy one upon them.

6507. Do you know how much per cent. it is increasing the amount paid under the old settlement?—In the case of the Indiapore settlement, the general proportion taken by the settlement officer is, I think, about 50 or 55 per cent. as laid down by him. The actual increase on an average, I suppose, which is made, is about 35 per cent.

6508. On

6508. On the previous amount?—On the previous amount. I am desirous to show that the principles on which he has based that enhancement are fallacious.

6509. Will you be good enough to explain that, because that would be very material on the question of whether the land revenue is crushing?—The settlement officer has given nearly five pages in his report about the principles upon which he has settled. I do not think that I should come upon this part of my evidence so soon, so I have not brought the book, but I will give the reference. I would have brought it and placed it before the Committee. I have the table here which is the essence of the whole statement, and it is this: He has taken prices from 1837; he has added them up, and he has taken the average of the table, which is not correct, as no account is taken of the quantity produced every year. The high prices arising from the scarcity are treated as if they had been prices rising from some favourable causes. I may, perhaps, show the fallacy of the principle in a few words, and then I can go into details, if necessary. In adding these prices no account is taken of the causes of the rise or fall of prices. The result is that when prices have risen, either from some temporary cause, such as the building of public works, or from drought or famine, these prices are taken just as they are, added up together, and an average is struck, but they are utterly worthless, because as long as the quantity produced or sold at these prices is not also taken into consideration, the average is incorrect, and therefore any conclusions drawn from such averages are necessarily fallacious, and this has led to this large increase, which otherwise would not have been the case. That is the fallacy of it. If you want me to go into the figures I can do so.

6510. I think it is very important. Did we understand you to say that the illustration you are giving of Indiapore proceeds upon the principle that is being acted upon in the entire re-settlement, and that you have not taken it is an exceptional case?—I have taken it as a general representative case as the very first revised settlement, and the principles are there distinctly laid down. Different settlement officers have, to more or less extent, made alterations in the way in which they have gone, but the principle I understand to be nearly the same.

6511. Have you got the paragraphs containing the collector's own statement of the principle?—I have got some of them; I did not copy them all, because I thought I should have the book here.

6512. Could you refer to his statement of the principle upon which he ascertained prices?—Yes; I am sorry I have not got the whole of it; what I have got I will read. "A great revolution has taken place in the price of grain during the currency of the lease; we learn from the reports of the survey officers that jowaree, the staple product of the district, was selling at 66 seers the rupee in the years in which their rates were introduced; the average price of the five years preceding is said to have been 53 seers per rupee. The following table exhibits the average yearly price in the Indiapore market during the currency of the lease:—

YEAR.	Jowaree, No. of Seers per Rupee.	Bayree, No. of Seers per Rupee.	YEAR.	Jowaree, No. of Seers per Rupee.	Bayree, No. of Seers per Rupee.	YEAR.	Jowaree, No. of Seers per Rupee.	Bayree, No. of Seers per Rupee.
1836–37	43	34	1846–47	15	13	1856–57	32	28
1837–38	36	44	1847–48	48	32	1857–58	39	37
1838–39	67	30	1848–49	72	56	1858–59	32	28
1839–40	44	30	1849–50	72	56½	1859–60	39	31
1840–41	64	44	1850–51	38	34	1860–61	33	23
1841–42	56	40	1851–52	40	32	1861–62	27	19
1842–43	68	42	1852–53	56	40	1862–63	16	16
1843–44	72	44	1853–54	56	36	1863–64	13	12
1844–45	60	36	1854–55	29	26	1864–65	16	14
1845–46	36	25	1855–56	32	29	1865–66	18	15
Ten Years' Average	56½	37	Ten Years' Average	45¾	35½	Ten Years' Average	26½	22

"During the first 10 years of the lease but little change took place; prices ranged from 72 seers in 1843–4 to 36 in 1845–6, whilst the average for this decennial period is 56½. The first year in the decennial series was a most unfavourable season, and grain rose to the rate of 15 seers the rupee; it speedily fell again, and had gone down to 72 in 1849–50; a steady increase set in from this date, and it was selling at 32 in 1855-6; the average for this period is 45¾. Beginning with 32 seers in the last decennial period of the lease, but little fluctuations occurred during the earlier years, and down to so late as 1861–2, 27 seers was the ruling rate; the general rise of prices which has spread throughout the Presidency, dates from this period; its effect was felt here, 16 seers being the rate in 1862–3, and there has been but little change since; the average price for this period is 26½ seers; we must consider present prices to be exceptional, to be the effect, in fact, of that commercial prosperity which has resulted from the American war. The export of cotton from that country being suspended by the war, India was called upon to furnish the supply required for the English market, and she set herself vigorously to the cultivation of that product. Indiapore is naturally not a cotton growing district, but reports of the large profits realised from its cultivation having reached the ryots, they naturally turned their attention to its growth; and from returns obtained from the momhitdar, I find the large area of 30,049 acres is under

Mr. *Dadabhai Naoroji.*

11 July 1873.

cotton cultivation this year; a considerable area has thus been diverted from the growth of grain during the last few years. With a diminished supply, there has been an increased consumption, consequent on the spread of that wealth which has been poured into the country by the large profits realised from cotton. These causes operating together have been mainly instrumental in bringing about the present high prices, which, therefore, I think it safe to consider exceptional; to sum up the results of the changes affecting the new rates which have taken place during the lease, grain has risen from 66 to 55 seers the rupee, or taking the average of the last 10 years, the rise will be from 66 to 26 which is equivalent to above 150 per cent. It is difficult to put a special value upon the increased facilities of transport resulting from the *ad interim* improvements. There is no doubt they have aided materially in bringing about the rise in the price of grain, and may therefore be included generally under the advantages which are ascribable to that measure." After giving particulars about the climate of Indiapore, where the average rainfall is less than six inches per annum, the report proceeds: "The problem then which we have to solve is this, when or at what period during the currency of the lease had the cultivators acquired that amount of capital which is essentially necessary for the proper cultivation of the land and their own well-being, and what was the price of grain at that time." Here is the end of it, but the rest of these paragraphs, in which he states how much is actually increasing, I have not got, because I had intended to bring the book.

6513. Having reference to what you have already read, which rather points to a more enlarged view of prices than I think you ascribe to the collector, can you state that he took a mere arithmetical result of the prices without regard to the circumstances?—Yes, because the table here gives the averages, which are taken entirely by simply adding up the prices and dividing by the number of years.

6514. You were going on to say that you think the rise in the rate of assessment based upon that average would therefore be oppressive?—Yes.

6515. Can you state to the Committee what, in your view of the relative conditions of prices, would be the percentage of increase due merely to the rise in prices from the assessment settled before and the assessment now to be settled, or recently settled?—My view is that the present prices are very temporary and local, and that they will go down again, and that the basis of the old settlement will be quite as much as would be proper to be got from the cultivators for another 30 years.

6516. We understand that it is your view that the prices for the next 30 years will be the same as those that were ranging before the previous settlement?—No, not before the previous settlement.

6517. That is the question; the settlement you observe was made 30 years ago, upon a consideration of average prices that had been ruling for some years before?—Yes.

6518. Well, then, if the settlement is re-made upon the same basis, it will be necessary to ascertain what the rate of prices has been for several years previous to the re-settlement, eliminating in your view the famine price which, although it might be high, would give no result to the farmer, because he would have nothing to sell?—Yes, I understand it now; what I mean is, that if all those elements are eliminated, such as the high price arising from drought, the temporary rise in prices on account of public works going on, prices will gradually again come back to the level which continued from 1834 to about 1850 or 1854, which was very nearly the same level, in fact of those prices upon which the settlement was based.

6519. Sir *G. Balfour.*] What article do you take as the standard?—The principal articles are jowaree, bajree, and rice.

6520. *Chairman*] This is very important, and we want to arrive at a very accurate appreciation of it. You do not quite meet the question, because it is not a question of what the prices were after the settlement which we may describe as that of 1834, but it is what they were before the settlement of 1834, on which the settlement of 1834 was based; do you know, or have you got the range of prices at that time?—This table gives the whole range of prices from the time when the settlement was actually made.

6521. The settlement is not based on the prices after the settlement, but on the prices before?—Yes.

6522. Therefore the share that the owner of the land then arranged to pay was a share based upon his previous experience, not upon the events that happened subsequently; all that appears to have happened subsequently may be to his profit or his loss; can you now compare the reasonable prices for some years before the re-settlement with the range of prices for some years before the previous settlement, and then can you tell the Committee what in your view would be the increase of assessment due, if any, to an increase of prices so arrived at?—On that important point of prices my opinion is something very different from what is generally entertained.

6523. Then we should be the more anxious to hear it?—In the whole of India generally there is no such thing as a large general rise of prices; here I have prices fortunately enough for Indiapore itself, previous as well as afterwards. I will give those figures now; these prices are from the year 1809; I will take 10 years before the settlement from 1828.

6524. On what commodity is it?—This is jowaree; in 1828 it was 32 seers per rupee; 1829, 80 seers; 1830, 46 seers; 1831, 40 seers; 1832, 60 seers; 1833, 23 seers; 1834, 46 seers; 1835, 48 seers; 1836, 38 seers; and 1837, 66 seers.

6525. What did that give as an average?—That is just the difficulty; if I simply add them up together and divide I can give that, but really it is no criterion unless I know the quantities; I can add them together if you like.

6526. You would qualify any average deduced from this by the consideration of the quantity on which the cultivator would receive those prices?—Yes.

6527. Taking that as your basis, is it your view that the average for the ten years before the Indiapore re-settlement is the same?—Yes; what I say is that the average of ten years before the Indiapore re-settlement is a high average from temporary local causes; I want to qualify that particularly; it has arisen from several causes; the re-settlement took place in 1867; beginning at 1853, that was the time of the railway works in the Bombay Presidency; Indiapore comes midway between Poona and Solapore; there were special public works

works going on there; in addition to that, the Mutiny to a great extent helped, after the destruction of a large amount of property, to make a general rise, not a very congratulatory rise, but still there was a rise; and lastly, the American War caused a great rise in the prices of jowaree. If all those temporary causes are eliminated after the settlement up to the year 1853, the range of prices was, if anything, even worse than what it was 10 years before or 12 years before.

6528. It was lower?—Yes, lower; and I can give the figures.

6529. Your opinion deduced from Indiapore, as well as from the general views you have stated, is that there has been no substantial rise in prices of agricultural produce in the Bombay Presidency, at all events?—Yes.

6530. And, inferentially, in India generally?—Yes, and I have got figures for all that; from the beginning of the century up to the present I have tried to trace out all the prices I could get, and show that from the time whenever any possession has been taken by the British to the present, there has not been anything like a general rise in prices.

6531. Can you lay before the Committee a table, showing them the information you have collected on the subject of prices in different parts of India?—Yes, I put this in (*the same was handed in.*)

6532. Have you been able to verify your conclusion from the subsequent condition of Indiapore, whether the landowners there are crushed by the rate that they have had to pay under the settlement?—Yes; so far as my information goes, there is a great complaint, and the prices are falling since the re-settlement.

6533. Do you know from actual information that they have had greater difficulty in paying their land revenue since the re-settlement than they had before?—Yes, that is my information.

6534. Have you got the actual assessments per acre of any qualities of land; the standard qualities of land, under the assessment of 1834, can you give it us in figures?—I can give it, but I have not got the figures here, and I cannot carry it in my head; I have not referred to these special assessments, because it did not come within my evidence so far as it goes, but I can put in any figures which may be necessary.

6535. On this question of what may be called the weight of the taxation on the mass of the people, I should like to ask you whether you wish to go into any other item of the revenue to show its special effect in the same way that you have treated the question of land revenue, or whether you would wish to make any further observations on the weight of the land revenue?—Do you mean as to Bombay or the whole of India.

6536. If you go into the whole of India, there will be such different conditions that we shall have to go into each separate set of conditions?—I can give this very easily; with regard to the land revenue, I have a few figures which may perhaps interest you; I have made out here the per-centage of land revenue to the total agricultural production.

6537. That does not express any idea, because we have accurate evidence before us, that in Bengal the land revenue is not paid by the cultivator; it is paid by a landlord as a portion of rent that by usage he has been accustomed to hand over to the State; therefore the land revenue in Bengal has no weight whatever upon the mass of the people?—That may be. What I mean to say is this, the land revenue actually acquired by the State; what proportion that bears to the production of the country.

6538. That we need not go into. What I am asking is, whether you would like to make any further observations to support your view, that the land revenue is oppressive on the people. I do not wish to cut you short. If you have anything more to add, this would be a convenient time?—This is what I want to add; in a good season when the production might be considered as a fair average production of the country, this is the per-centage I make of the incidence of revenue on the production of the country.

6539. I want to point out to you that this is really wholly irrelevant to the proposition of the weight of the land revenue on the mass of the people; if we have it in evidence, as we have, that throughout large parts of India the land revenue does not fall at all on the mass of the people, but merely upon landlords, who would put into their pocket the land revenue, if the State did not take it from their pockets, or prevent it going in, it does not affect the mass of the people at all; is not that so?—That is not my opinion.

6540. It is not a question of opinion; is it not a question of fact?—Yes; it is the tenant that pays the landlord.

6541. Is it not a question of fact that the land revenue, wherever it is paid by superior landlords of villages, whether in the permanent settlement or the temporary settlement, does not in any way affect the rent that those landlords take from their tenants. Is it not a mere division of the rent which they receive from their tenants between themselves and the State which claims to take a share of their income from the land as belonging to the State; is not that so, as a matter of fact?—Yes, as a matter of fact. It depends on the way in which the question is viewed. From your point of view, it may be considered as being paid by the landlord; from my point of view, I consider the whole of the land revenue to be paid by the cultivator.

6542. I am dealing with the facts, not with any point of view. As a matter of fact is it not, that wherever a settlement is made with a superior holder he is in the position of the landlord of the village; and whether he pays more or less land revenue he would receive the same rent. Do not the freeholders of villages collect from their tenants precisely the same rent that the holders of villages paying revenue to the Government collect. Have you ever discovered any difference in India, between the taking of rent of the one and of the other. If that be so is not the result of the whole this, that the land revenue in all the cases where it is taken from superior holders is a division of rent between the superior holder and the State?—No, I differ from that. The cultivator pays a great deal more than you would suppose, as I understand it as rent; and this is derived by the landlord because the landlord has to pay to you, and therefore this land revenue as it exists, bears upon the people.

6543. Have you made any inquiries to follow out your view in Bengal, to discover whether the rents that are paid by the tenants to the zemindars vary in proportion to the revenue that

Mr. *Dadabhai Naoroji.*

11 July 1873.

the zemindars pay to the State, or whether they have reference merely to the general incidence of the holding under the landlord?—The revenue is fixed revenue with the zemindar.

6544. Are you aware that the revenue of each zemindary bears, in many cases, a very different proportion to the rents received by the landlords, sometimes it may be half, and sometimes not a tenth, and sometimes not a twentieth?—Yes.

6545. Have you made any inquiry to know whether in all these different cases the tenant pays a different rate of rent to the landlord, or whether the rate of rent the tenant pays has no reference to the revenue the landlord pays to the State?—I do not understand the argument at all.

6546. It is not an argument, it is a fact?—I do not understand the fact; what is meant?

6547. I am asking you a fact whether you have informed yourself of the fact?—I do not know the relations between the landlord and tenant.

6548. Sir *T. Bazley.*] If the landlord in Bengal pays nothing whatever to the State, would the rent be reduced to the cultivator?—That will depend, I think, upon what you allow the landlord to do.

6549. *Chairman.*] Supposing he is a free landlord, and the other is a free cultivator, and they are trying each to make the best bargain they can, as they do now, there being no law to compel them, what do you think would be the result; do you think the landlord would reduce his rent?—That will depend upon the competition; upon what the landlord is able to get.

6550. That is exactly the proposition I was endeavouring to bring you to; that the incidents of the rent have no reference to the revenue paid by the landlord, but have reference to the conditions between the landlord and tenant as to competition and otherwise for the occupation of the land?—I will decline to give any answer to that question.

6551. We wish to get an accurate view of the matter, and therefore I want to eliminate from the question of the operation of taxation upon the mass of the people, taxation which does not fall directly, and as a matter of fact upon the mass of the people; and as an illustration, I am asking whether the large land revenue levied in Bengal does, or does not, fall upon the mass of the people, and in a greater or less degree, whether it falls upon the mass of the people, in any case where the land revenue is paid by a superior holder, who is recognised as the freeholder of the land by the State, and who is allowed to make a free contract with his tenant for the occupation of the land?—As matters stand, all I can say is, that it is from the rent paid by the tenant; and the position of the tenant is such that the rent paid by him is much more than he can afford to pay; that it bears heavy upon him.

6552. I was going to ask you upon that, whether you had ascertained how much of the land revenue is derived from the superior holder, and how much is derived from a direct assessment upon the actual occupant and cultivator of the land, taking India as a whole, to qualify your figures, or dealing with the Bombay Presidency if you like; if you have gone into it separately?—What I state is this, that the landlord and State both get their rent from the tenant. There is a division of that rent between them, and so far as I know (and I do not want to enter into further particulars) the tenant has to pay a great deal more, and the landlord gets a great deal more than the State gets.

6553. That may or may not be so; I was asking you whether you had, with the object of making your views more clear to the Committee, gone through the matter in a general way without going into minute particulars, with a view of ascertaining how much of the land revenue of which you have been speaking in general terms was derived from freehold proprietors having tenants under them, and how much was derived from the actual cultivating tenants of the soil?—Derived by whom?

6554. By the Government of course, I am speaking of land revenue which can only be derived by the Government?—What is derived by the Government is a great deal less than what the zemindar derives from the tenant.

6555. That is not the proposition; it is how much of the whole sum of land revenue of which you have been speaking, is collected by the Government direct from the freehold proprietors of the soil who have occupying tenants under them, and how much is derived by the Government direct from the actual occupants and cultivators of the soil?—What I meant to say was this; that in the Bengal Presidency nearly the whole of the permanent settlement is derived from the frecholder himself, and it is not derived directly from the tenant.

6556. Do you know in Madras how much is derived from the zemindars and other persons under similar conditions holding under various names and titles?—I did not come across those figures; I searched for them, but have not come across them.

6557. Do you know how much in the Bombay Presidency is derived from persons recognised as holders in villages, and freeholders or grantees like jageerdars and others, who stand between the Government and the occupant of the soil?—I do not know now; I can give it to you; I have not got the figures here; I have got the general figures.

6558. You are not able to tell us to what extent and degree we may consider the land revenue as a crushing measure of taxation upon the people?—I am talking of the whole taxation generally, and I say that to any extent it is crushing.

6559. If you begin with a general proposition, it is the duty of the Committee to analyse that general proposition to see exactly what it refers to; I am endeavouring to ascertain to what extent this general proposition is applicable to the facts as far as we know them?—According to my view the whole land revenue must be considered as paid by the cultivator.

6560. Your view will be subject to the qualifications that I have endeavoured to bring under your notice?—Yes, so we differ in our views; that is all.

6561. Have you gone into any other of the sources of taxation with the view of ascertaining whether there is any direct crushing effect upon the people from them?—Upon all these questions of addition of taxation I have not at present entered, and I have not prepared myself with my notes; but I have certain propositions, certain evidence, to be given on several points, all bearing upon finance, in fact the foundation of all finance.

6562. Then I think I may take you to the question

question of wages, which we can only go into so far as it bears upon the question of the taxation of the people in relation to their wages, and then we get very much to the same question?—The same question precisely, and there is the same answer for it.

6563. It is not the same exactly. In considering the incidence of taxation as affecting the population that is taxed independently of the cultivator whom we have disposed of; have you ascertained whether their wages have risen or fallen in recent times as compared with former times?—Yes; as I said with regard to prices, the notion that there is a general rise of wages is not correct. I have got this short paper to give the different figures of comparison of different times to show that wages have not risen. (*The same was handed in*).

6564. Will you state to the Committee generally on what you base your view that wages have not substantially risen in recent years in India, or in the Bombay Presidency?—Generally. There is a return made in 1853 in which the wages and prices are given of a much earlier time; I have actually given wages as derived from official information, and from those I show that there has not been a general rise; I have taken different periods for different places; there are so many figures that it would be hardly possible for me to give it in a general way. The general wages would be two annas for an able-bodied man, if the whole of India were considered.

6565. You take two annas as the general standard of wages?—Yes.

6566. Will you explain what class of people you take?—The common labourer.

6567. Do you mean the unskilled labourer?—The common agricultural labourer.

6568. The unskilled labourer?—The unskilled labourer; I am taking the lowest class of labourer.

6569. Have you directed your attention to the second class of labourer, the ordinary mechanical skilled labourer of India?—No, I have avoided all above the poorest class; they can take care of themselves; it is the poorer class to which I have particularly given my attention.

6570. Do you find that the rate you have given, two annas a day, which is very nearly four rupees a month, is the average rate?—Yes.

6571. Have you been able to distinguish what may be called the main variation of the rate of agricultural and unskilled labour between the two classes of labour in the agricultural districts and in the proximity of larger towns. Do you know whether there is much difference?—There is a difference.

6572. Can you give a view of the two prices?—Yes; here I have a Return from an executive engineer of Bombay, and I have got another for Bengal, this will give very shortly how wages stand in Bombay where there are large public works going on. In 1863 the maximum in Bombay was 13 rupees 8 annas per month, the minimum was 7 rupees 12 annas, that I take from the price Commissioners' Report, portions of which Sir Bartle Frere has already laid before you. Then having these high prices, we shall find afterwards that in 1867-8-9, 1870-1, it has been gradually declining. In 1867-8 wages are for a begarree 6 annas per day, for a woman 4 annas per day, and for boys 3 annas per day.

6573. Is that in Bombay city or Bombay island?—Yes; in 1868-69 it is the same, 6 annas for the able-bodied man, the "begarree," as he is called, 4 annas for a woman, and 3 annas for boys. In 1869-70 it has declined; it has come down to 5 annas for the begarree, 3 annas 6 pice for the woman, 2 annas 4 pice for the boy; this is continued during 1870-71 and 1871-72, except for woman, 3 annas.

6574. The last rate quoted is continued for three years?—Yes; the wages have declined in the city itself from 1863 up to the present day.

6575. Mr. *Birley.*] What is the labour of the women?—Common unskilled labour.

6576. How are they employed?—In buildings, in all the public works in Bombay under Government, such as carrying the metal for roads, or carrying stones and other things for the skilled workmen.

6577. Are women employed in that?—Yes; women and boys. These are the wages paid by the Public Works Department; the wages paid by private individuals would be something lower than these.

6578. *Chairman.*] Have you got any rates in the neighbourhood; I do not mean actually in the town, but the agricultural rate in what may be called the town districts, as compared with the outlying rural districts where there are no large towns?—I have collected as far as I have thought would be sufficient for my argument, the principal places, and I can say this generally, that in the agricultural districts it is, as I know from personal information, hardly above 2 annas; in some cases less and in some cases more. The average would be hardly 2 annas.

6579. What I wanted to get was, whether your average was taken over the rates paid for wages, both for town and country, or purely for country?—I am taking the country; in the towns it is always a little higher. Then for Bengal, also, I have got a list of wages on some of the public works, not merely in Calcutta, but in different places, and I will just read it. This Table was made up in 1866-67; the daily wages of unskilled labourers in several districts of Bengal where public works were going on, were as follows:—The first grand trunk road division, 2 annas and 6 pice; for the second division it is only 2 annas; for the Barrakur division 2 annas and 2 pice.

6580. Barrakpoor is in the neighbourhood of Calcutta?—Yes; Patna branch-road division, 2 annas; Terhoot division, 1 anna 6 pice; these are public works; Behar-road division, 2 annas; Barrackpore division, 2 annas 8 pice; Purnea division, 2 annas 6 pice; Bhogulpore division, 2 annas 6 pice; Berhanpore division, 2 annas 6 pice.

6581. That is sufficient; we need not pursue that any further?—In all these divisions the rate is hardly above 2 annas. There are other divisions where more works are going on in some of the larger towns, where it may be more.

6582. These are the rates which are paid on these great works?—On these great works to the unskilled labourer.

6583. You have your table brought down to a later date?—This is only for 1866-67. Since 1866-67 I understand the rate of wages to be falling, if anything.

6584. Have you computed upon this class of population what the direct incidence of taxation are, that is to say, how much they pay for salt

Mr. *Dadabhai Naoroji.*

11 July 1873.

and tobacco; I can hardly say opium, because they do not recognise the eating or smoking it; have you arrived at any view upon the point?—Yes; I am very anxious to place it before the Committee, but I am not prepared for it. Salt is the only thing which I can calculate; for stamps or land revenue, of course, it is impossible to calculate.

6585. Can you give us the particulars as to salt, to begin with?—Here I have got the scale of diet which Surgeon Partridge has put down for emigrants. This will show what the poor labourer needs. It is the scale put down by Surgeon Partridge, the Government Medical Inspector of emigrants at Calcutta.

6586. These are agricultural workmen?—Yes; to go out as labourers, this is the diet prescribed for them in quietude not labouring; rice, 20 oz. per day, dhal, 6 oz.; preserved mutton, 2·5 oz.; vegetables, 4·27 oz.; ghee, 1 oz.; mustard oil, ½ oz.; and salt, 1 oz. per day.

6587. That is not the scale of feeding for Hindoos in general?—No; then there is another scale here.

6588. That is a special scale for a sea-voyage, is it not?—Yes, in a state of quietude.

6589. You would not present that to the Committee as the scale of diet of an agricultural labourer living in his own cottage in India?—No; I present this to the Committee as the necessity of the labourer; whether he actually gets that is another thing.

6590. That is a special scale applicable to an abnormal condition of his existence; what we want is the scale which is applicable to the people as they live in the ordinary condition?—They can live upon little or more.

6591. Mr. *Fawcett.*] We have an analagous case here; if you wanted to know what the agricultural labourers contribute to the labour of the country, you would get a very false idea, if you took the diet allowed to them; if one of them happened to get into prison, or if they were emigrants on an emigant ship, they may have meat or other things which they would not have ordinarily; we want you, if possible to give the consumption of a labourer living in his ordinary state; for instance, how much salt he consumes, and whether he wears clothes which pay import duties?—I have got some independent information of that kind too. What I meant to say was, that in collecting all the information I could get upon the subject so as to come to something like a fair knowledge of it, I have taken this diet as well as the present diet.

6592. *Chairman.*] In speaking of the earnings of the people, have you considered the earnings of families as contra-distinguished from the earnings of a single adult man, that is to say, how much the wife earns, and how much one of the children would earn, so as to give us an idea of the earnings of a family?—The earnings I have taken separately.

6593. Have you any view as to what we understand as the earnings of a family as contra-distinguished from the earnings of a single man?—The figures I gave before as the wages in Bombay, will give some idea, a very fair idea, of the earnings of a man, a woman, and a boy.

6594. That would be so as regards the town of Bombay, but you did not give us similar information as regards the rural districts, generally; what do you consider a man, woman, and child of the rural districts would earn?—I said generally, that an adult will generally on an average obtain 2 annas.

6595. You did not give us the woman and child?—I did not; but they can be fairly taken in the same proportion; a man 2 annas, a woman 1½ annas, and a child 1 anna, or something like that; a child of about 12 years.

6596. Assuming that there is one child for each family earning wages?—Yes; you may take it at 1 anna.

6597. Have you looked to see what is called the average number of people constituting a family in India as shown by the statistical returns?—I could not get the Bombay returns, but I have got the late Bengal returns.

6598. What does it state to be the average of a family?—It consists of four, as I should consider it. I have taken that as the standard, and if more accurate information is required, I can get it from the Bengal statistics.

6599. Is it your opinion that there exists at the present time in the Bombay Presidency, any general feeling of discontent against the state of taxation of the people in that Presidency?—Do you mean taxation generally, or any particular tax?

6600. Either any particular tax or generally as to the weight of taxation?—Yes, generally there is a great deal of discontent, both about taxation and about the way in which land revenue is collected, and also as to the legislation upon land revenue.

6601. Can you give us any precise information as to the character of the discontent or the particular causes in the minds of the natives of the discontent, either as regards taxation in general or as regards particular taxation which they have to pay?—They feel the whole taxation as it were, very heavy compared with their earnings, compared with what comes into their hands, and they are obliged therefore to live upon less than what they would require for their own ordinary comforts in life.

6602. How do you arrive at your opinion of there being any general discontent amongst the people?—I arrive at that opinion in two ways; first, from my general information, and next from my careful examination of the condition of the people as given out by official facts.

6603. Do you mean that you have received personal information of a state of discontent amongst the people, or what are we to understand as your knowledge of the existence of discontent?—I have heard from people all sorts of complaints of their discontent. Of course I could not believe everything, and I therefore took the trouble of trying to find out the causes for myself. Those causes I have tried to collect here according to my notes if they are wanted.

6604. Have you pursued your inquiry with reference to the rural population of the Bombay Presidency, or are you speaking only with reference to the town of Bombay with which you are particularly acquainted?—All my inquiries and all the effort I have made is for the rural population. I have not cared much for the towns, they are very well able to help themselves.

6605. Which of the rural districts have you visited?—I have seen some, but very few.

6606. Which are they?—I will just qualify that. I did not depend much upon simply seeing one place or another. I got general information from Broach and Surat and other places, and I therefore

therefore set myself to work to find out the causes from official facts and figures.

6607. When you speak of finding the discontent at Broach or Surat, do you mean the Broach Zillah or the agricultural district, or the town of Broach, and the same as to Surat?—From persons connected with Broach.

6608. With the town of Broach?—Who are connected both with the town and the agricultural districts, having their own lands and connected with the whole Mofussil system generally.

6609. You have not yourself visited the rural districts for the purpose of making any personal inquiry amongst them as to what may be called the feeling of discontent, so as to ascertain the existence of such a feeling?—I think I have sufficient information upon that subject.

6610. I am only endeavouring to get at the facts?—I have not actually visited these rural districts in British India much. I have visited very few.

6611. From what class of persons is your information derived as to the state of the rural districts in Broach or Surat?—From persons in the town of Broach.

6612. What class of persons?—Persons who have themselves actually land in the country, in the rural district, and who pay taxes as agriculturists also.

6613. They are the superior holders living in the city?—They have their own land, which they get cultivated; but upon that information I do not so much rely, as upon official information of every kind that I have got, being the best thing I could do.

6614. By official information, do you mean reports of the officers of the Government, stating that discontent exists?—Stating certain facts, from which the Committee can draw their own conclusions.

6615. I wish you to observe the distinction between an inference that discontent ought to exist, because the taxation is so and so, as compared with the earnings or other matters, and the fact that discontent does exist in the minds of the people, because one is a pure fact, and the other may or may not be a correct inference; I wanted to get from you whether you were giving your views to the Committee as an inference, or as a statement of a positively existing fact?—I am not giving them to the Committee as a statement made by the officials, that there is discontent which I can hardly expect, but still there are one or two statements of the officials especially; one a very short one, which I may read, which will show that the officials think very strongly about the condition of the people in the Central Provinces; this is an extract from a report by Mr. W. S. Peddar, in connection with the Local Taxation Circular.

6616. Mr. *Fawcett.*] Is he a commissioner or one of the collectors?—He is an official in the Central Provinces; this is a report about the Central Provinces.

6617. *Chairman.*] Will you read the paragraph?—He is speaking about the poor people, and he says, "Who, if an almost universal concensus of opinion may be relied on, are rapidly going from bad to worse under our rule is a most serious question, and one well deserving the attention of Government," showing that the state of the people is so serious as to require the very careful attention of Government as to the causes of it.

6618. You have not given us the cause to which he ascribes that?—No; I have only extracted that sentence.

6619. Mr. *Fawcett.*] Have you put quite the right interpretation on that despatch; he does not say in the extract which you have just read, that the state of the people is going from bad to worse, but he says, that an universal concensus of opinion, or an unanimous feeling, exists amongst themselves, that that is their condition; he neither corroborates it nor denies it; he refers to the impression existing amongst them, does he not?—I understand that to be that he agrees with the opinion.

6620. *Chairman.*] Will you refer to the page of the Despatch from which that is taken?—I have taken this from the "Times" of India.

6621. What is the date of the Report?—The Report is, "Reply to the Viceroy's circular of last August on local funds." Then I have something more bearing upon the point. Perhaps the whole extract may be taken together. If I am asked whether he distinctly says that the people are discontented, or that there is discontent expressed, that he does not distinctly state. Now I will read this: "Mr. Peddar makes out the land under cultivation for five districts of Nagpore 3¾ million acres, and he estimates the value of gross produce as about 2,83,29,541 rupees." Of course I cannot say whether Mr. Peddar has avoided the mistake of wrong averages, but his estimate is much under mine, because I have also estimated the produce of the Central Provinces and I just wanted to make that comparison. If we took the Nagpore district as an average district, according to his estimate, his value per acre is only under 8 rupees per acre, while my estimate for the whole province is 12 rupees per acre. I wanted to show that, in estimating the total produce of the country, my calculation has been something above. It is very likely an over-estimate rather than an under-estimate. If these figures be of any use to the Committee they are welcome to them. I do not also know whether the estimated value of the produce is of any particular year, or for an average good season, or whether he has made some allowance for a bad season. My calculation is for a good average season, but I do not know whether he has made any allowance for a bad season. I give this as an instance of the very poor production of the country. My calculation is much above, and after giving these figures Mr. Peddar makes the remark that I made before.

6622. Have you any other official document you would like to refer to, as showing an official expression of opinion that discontent exists in the country at the state of taxation or the condition of the people, consequent on the state of taxation?—I do not think I have come across any official opinion which distinctly states, and I can hardly expect it from any official, that there is positively discontent; I have got several extracts here. They will all of them be more an inference of the circumstances than a positive statement.

6623. Mr. *Fawcett.*] Have you read through the Blue Book which has been published?—No, I never could get it.

6624. *Chairman.*] Now, I should like to take you to another subject; have you obtained some

Mr. *Dadabhai Naoroji.*

11 July 1873.

information respecting the administration of the finances of the Native State of Travancore?—Yes.

6625. Has that information been obtained from a well-authenticated source?—From the Administration Reports of Travancore.

6626. Published by whom?—By the Travancore State. I have not been able to get all the resolutions, but there is at least one resolution I have got of the Secretary of State for India upon it.

6627. Have you instituted any comparison between the financial system of the State of Travancore and the financial system of British India; we had better say in Madras, which is on the side of Travancore, or in any part analogous to Travancore?—Yes.

6628. Can you give the Committee generally the result of your investigation upon that point?—What I have investigated is this. I could get only Reports from 1863-64 up to 1870-71, and therefore I compared from 1863-64 what their revenue was, and whether that revenue arose from a general increase of the prosperity of the people, that is, without any additional taxation, or whether with any additional taxation. I find that from 1863-64, up to 1870-71, there is something like an increase of 20 per cent. of revenue without any addition of taxation.

6629. That is, without any addition of rate of taxation?—Yes, except salt.

6630. Or of new items?—No new items, except a very small item of a new system introduced for registration, but the rest is a gradual development of the taxation, the elasticity of the revenue itself. During this time there has been, as I said, no increase of taxation. On the contrary, there has been a good deal of diminution of taxation, such as in some customs duty, in the pepper monopoly, and several others. I have got the summary; it is very short of what has been the fiscal policy during those years.

6631. Will you run through the items in which the rate of taxation has been reduced, or where it has been altogether abolished?—Several items of land tax given up at a loss of 23,500 rupees; reduction of taxation in customs import duties, made as in British India; reduction of duty on tobacco.

6632. Can you give the per-centage or the figures?—I have not got them here, but I can give them fully afterwards. Reduction of duty on tobacco; Tinnevelly from 100 rupees to 85 rupees; Jaffna from 140 rupees to 120 rupees; Coimbetoor from 65 rupees to 40 rupees per candy of 500 lbs.; the abolition of the tobacco monopoly and the above reduction of duty caused a loss in revenue of 4 to 5 lacs of rupees. Abolition of pepper monopoly.

6633. Total abolition?—Abolition of the monopoly; that is, they made it like other goods; there was a monopoly, and consequently there was a larger duty upon it. I will supply the figures afterwards.

6634. There was a duty substituted for the monopoly?—Yes, 15 rupees per candy.

6635. As I understand, in Travancore there was a monopoly, all the pepper was delivered to the Rajah, and he re-sold it at rates he thought fit?—Yes.

6636. That has been abolished, and a duty has been levied on pepper instead?—Yes. In 1864-65, there was an increase made in the salt as a part of the commercial arrangement with the British Government, and the selling price since has been kept up to the level of British India (Madras Presidency, I think); I will fill up the figures afterwards; several reductions of taxation in 1865–66, which I will put in; several petty taxes abolished; land tax in Nungunand was excessive, and reduced; long standing arrears of assessment remitted, and the rent payable on salt-pans lowered; some temporary items brought to credit; the exceptionally heavy duty on export of areca nuts was done away with reduced from 15 rupees to 5 rupees per candy; unfavourable effect on consumption of salt by assimilation with British India, which is mentioned there as a fact, and therefore they made arrangements for cultivating or improving their salt production; abolition of duty on a large number of petty articles; loss of pepper from bad season; arrangements to increase home-made salt; the imports of Bombay salt becoming less advantageous and convenient; increased income, therefore, in salt revenue; smaller production of cardamoms.

6637. Can you give the increase of the salt revenue that has occurred from the year of that change up to the present time?—Yes; I can supply that maintained at the rate in the Madras Presidency. Then in 1867-68, remissions granted on account of drought; certain temporary items of income including profits on Peninsular and Oriental Steam Navigation Company's shares; that forms a part of the revenue; new registration fee; and this is the only item which is of any consequence, which may be considered as an extra item, 32,000 rupees. Custom tariffs revised, according to British India, which I understand to be a reduction in the tariff, duty on pepper, reduced from 15 to 9 rupees per candy.

6638. Do you happen to know what the Travancore candy is in weight?—I believe it is 500 lbs.; 1868–69 the pepper crop scanty; reduction of duty on pepper from 9 to 5 rupees per candy, thus doing away with the exceptional duty on this produce. Remissions for bad season; export trade subject to great depression; reduction of import duty on tobacco; salt sales maintain their quantity; scanty rainfall, and remissions of land revenue. This gives a general idea of the character of the fiscal policy adopted in Travancore during these seven years; and the result of all that has been an increase of nearly 20 per cent. revenue, with a large surplus at the end of the year 1870-71 carried over to another year, nearly equal to another year's revenue of 42 lacs. The large revenue for 1870–71 the Secretary of State considers as "eminently satisfactory" and "secured without pressure on the population." (Despatch on the Travancore Administration Report for 1870-71. "Times of India," 27 July 1872.)

6639. To arrive at the surplus we must go through the expenditure; can you state whether the revenue of Travancore is administered by contract or farming, or whether it is collected directly from the people?—I do not remember these particulars; my information is all from the reports.

6640. Do you know when the farming was done away with?—I do not remember whether it was in the report.

6641. Can you state the fact whether the whole of this period was a period when there was no farming, and the revenue was collected directly from the community, or whether any change took place within this period?—In 1863-64 all the reforms had already been introduced,

duced, and it was very nearly approaching the British system of administration.

6642. I should like the particular question answered, whether the practice of farming was entirely abolished before the commencement of the period you have stated?—I will not answer that positively, but I think it was, after all the reforms were introduced.

6643. During this period the system of administration was that which was copied from the English administration?—Yes, almost. By farming do I understand giving it to a particular person to collect?

6644. Yes?—All that was done away with, and the land revenue was collected directly from the proprietor of the land; I have got some extracts here bearing on that point, which I should like to read; it just shows who the payers of taxes are.

6645. Can you state generally what constitutes the revenue of Travancore, and what its different amounts and heads were; if you can give a short summary of it, we should like to have it; a summary of the revenue first, so as to compare it with the British revenue, and to see how they levy it in Travancore?—I will supply that afterwards.

6646. Can you show at the same time the cost of collection of the revenue, so as to exhibit the difference between the gross and the net revenue?—As I find it in the reports it does not give the gross revenue, but the net revenue, after deducting cost of establishment, because as I find it, on the one side is given the revenue, and on the other side there is nothing debited or deducted for cost of collection, consequently I consider this revenue, which is given on one side, as net revenue.

6647. Was any account taken of the advances and repayments which arise in collecting the Indian revenue generally?—No, the financial statement gives the revenue under each head, and on the other side the expenditure under each head, which expenditure does not include cost of collection, and therefore I conclude that that is net revenue, and then it gives the surplus.

6648. Will you give us a view of the expenditure?—I can give the expenditure of course in full, as I have promised, but what I specially selected out of that, was public works; how much they spent on public works.

6649. You will put in a comparative statement of the expenditure for the two years?—Yes, that I shall give complete.

6650. Do you wish to call attention to any particular items of expenditure shown in the account?—My object in this comparison was only to show that whereas the revenue of Travancore increased 20 per cent. without any addition of taxation, the English is different.

6651. I am now speaking with reference to the expenditure; do you wish to call the attention of the Committee to any particular head of expenditure, so as to institute a comparison between that and the expenditure under the British system?—On public works it is all done from revenue, and the per-centage to revenue of expenditure on public works of every kind in 1863–64 is $6\frac{2}{3}$ per cent.; a very small per-centage. It increased in 1864–65 to $11\frac{3}{4}$ per cent.; in 1865-66 to 13 per cent.; in 1866-67 to $12\frac{1}{2}$ per cent.; in 1867-68 to $12\frac{1}{2}$ per cent.; and yet there is a surplus. It is all expended from revenue. If you want the per-centage upon the revenue, I can give it to you. I have given the whole expenditure. I have got the comparative revenue and expenditure here, and the actual items of public works. Then, in 1868–69, 13 per cent.; in 1869-70, $17\frac{3}{4}$ per cent.; and in 1870-71, 22 per cent.

6652. Can you give the details of the expenditure on public works for any of the later years; for example, for the last year, 1870-71, and also for 1869-70?—Yes, I can give it from the Report; I have not got it now.

6653. Are you in a position to show the Committee how much of the expenditure on public works is due to the labour and materials, and how much to supervision?—I think in this answer I shall be able to give every particular that can be got from the Report. I will give full details of the expenditure on public works as given in the Report.

6654. Is there any other item?—The only additional remark I intended to make was, that notwithstanding all this expenditure on public works in 1863-64, to the end of 1870-71 there is a surplus of 42 lacs of rupees; accumulated surplus.

6655. What was the surplus of that year?—The revenue is 52,144,000 rupees, and the expenditure is 53 lacs. He spent more because he had plenty of money in his hands from the surplus of former years.

6656. In the first year of your comparison, what was it?—The revenue was 43,10,000 rupees, and the expenditure 39,99,000 rupees. I have got the revenue and the expenditure side by side.

6657. Mr. *Fawcett.*] Was there a debt when he came there?—That is not stated in the Report. He gives this as the revenue and expenditure, year after year, and he gives this as the result, without any debt whatsoever, as a positive surplus.

6658. I understood, when Madava went to Travancore, there was a heavy debt, which he cleared off, leaving a large surplus?—That is my impression, but I have not been able to get the earlier Reports.

6659. By whom is that Report published?—By Sir T. Madava Row; and it has been well spoken of by the Secretary of State.

6660. *Chairman.*] Can you tell me whether, in Travancore, there is any general military expenditure, or whether the Travancore State pays a certain sum to the British Government for protection and the maintenance of order and peace?—I will just point out the peculiar expenses; the tribute paid is about eight lacs.

6661. That is included in the expenditure you have stated?—Yes. Then with regard to other military expenditure for Nairn troops, as they are called, 1,77,597 rupees, and the horse establishment 65,000 rupees.

6662. Is that a military horse?—I cannot say.

6663. It may be the Rajah's own horse?—It is called the Elephant and Horse Establishment.

6664. That may be his own State suwaree?—It is quite possible. It pays a tribute of 8,10,000 rupees, and for what are Nairn troops there is a lac and three quarters. Then he has a great deal of private expenditure.

6665. I presume he has no naval expenditure of any kind?—I think not; at least nothing is down in the Report.

6666. Although he has a long coast?—Yes.

6667. That is entirely protected by the British Government?—Yes.

Mr. *Dadabhai Naoroji.*

11 July 1873.

6668. Sir *G. Balfour.*] Therefore, supposing that expenditure in the way of a subsidy, and the military expenditure to be added together, the proportion of expenditure for military purposes is infinitely less than in India?—Take what it is and we can see and judge of it. It is nearly 10 lacs out of 50 lacs.

6669. That is one-fifth, or 20 per cent. How much is it in India?—I do not know. You know very well.

6670. It is much more than that, is it not?—Yes. Then there is another thing; there is an amount of expenditure connected with the Rajah himself, which under the English administration, would not exist, and which even the Secretary of State has recommended should be reduced, but it is a part of the expenditure, and it is worth taking into consideration as to how much is really due for administration and protection, and how much for the mere fancy or position of the sovereign.

6671. *Chairman.*] What do you make out to be the entire expenditure for the Rajah and his family, for which no administrative services are rendered?—It is given here. The Rajah's religious institutions take 5½ lacs.

6672. Mr. *Fawcett.*] That, to a certain extent, you would have to put against the lacs that are spent in the ecclesiastical establishments, for the civilian officers and the military officers of the British Government?—Yes, I think the proportion will not be large; for a fair comparison the ecclesiastical establishments on the other side should be included.

6673. There is this distinction in favour of Travancore, is there not, that the money that is spent by the British Government for ecclesiastical purposes the people do not get 1 *s.* of, whereas the money that is spent by the Rajah of Travancore for religious purposes is enjoyed by himself and by the people?—Yes.

6674. *Chairman.*] Are you aware that all the Hindoo endowments of the Madras Presidency were surrendered to the native managers of those endowments, and separated from the State revenue by the British Government, whereas the endowments in Travancore still remain under the control and disposition of the Rajah?—Yes. There are such items as these, to which there are no corresponding items of expenditure in the British expenditure.

6675. What do you consider the personal expenses of the Rajah to be?—There are these three items: The Palace, nearly 5 lacs 499,000 rupees; that is the personal expenditure of the Rajah. Then the Ooteperah or charitable expenditure, another 3 lacs; so that altogether out of this revenue of about 50 lacs, there are 13 lacs spent in this manner. There are about 10 lacs spent upon what may be called military expenditure or protection; the remainder is the fair administrative expenditure of the territory.

6676. And of administering justice?—Yes.

6677. Mr. *Fawcett.*] You say there are five lacs of rupees spent on the Palace of the Rajah, but is there no charge in British India at all analogous to that. It appears to me that you are not doing proper justice to Travancore. As far as I understand your evidence, you have singled out these five lacs of rupees as spent on the Palace of the Rajah, as an item which is spent in Travancore, for which Travancore gets back no administrative service, and consequently there is no analogous item in the British expenditure. But is that the case? What would you say, for instance, with reference to the personal establishment, and the luxuries which are not necessary to administration with which the Governor General and the Governors of Bombay and Madras are surrounded; could you not fairly set the one off against the other?—It is so much in favour of Travancore. I wanted to make the case of Travancore as fair and as favourable to the British as I possibly could.

6678. *Chairman.*] Having made these various deductions, have you instituted any figured comparison upon what may be called the administrative expense?—I have not got the figures, but I can produce them.

6679. Do you wish to make any further comparison between the Travancore and the British system?—Yes. As I said from 1863–64 to 1870–71, the Travancore revenue has increased about 20 per cent., without any addition of taxation.

6680. Mr. *Fawcett.*] With a reduction of taxation?—Yes.

6681. And you should also add with the accumulation of a great surplus?—Yes, of nearly a year's revenue; a year's revenue is 50 lacs, and the accumulation of surplus is 42 lacs in the course of the seven years after all this expenditure on public works. On the other hand, the British revenue in 1870–71, as compared with 1863–64, shows an increase of about 15 per cent., nearly the whole of which is due to additional taxation; I may give that almost in the words of Sir Richard Temple in his speech in 1869, only two years before my comparison, since that we have additional taxation. His words are that from 1859 to 1869 the increase is about 10,000,000, or more than 20 per cent. in the revenue, half owing to opium, increased duty on salt and assessed taxes, land revenue not materially increased, customs have not increased, duties being reduced. No doubt salt has increased, but then duties have been greatly increased in some provinces. "Thus our progress, though on the whole considerable, is yet not such as would indicate any rapid development of those national resources on which the State can rely." Then he adds afterwards substantially this: "The deficits have re-appeared."

6682. Is that his expression?—Yes; he almost uses a stronger expression than that.

6683. Will you give it?—I have not got it here now; he rather banters about it, and uses some very amusing expressions. "Thus, alas! deficit, though scotched, was not killed after all. But the 'bully' of Mr. Laing's time is in these days up in arms again; the 'tiger' has come back to life; the smouldering flame not finally 'extinguished' has burst out again in our finances." The next year we know there was the income tax of 3⅛ per cent., salt raised 5 annas both in Bombay and Madras; the duty on salt raised rather suddenly. Such is the comparison between the character of the revenue in Travancore from 1863–64 to 1870–71, and of British India during the same period.

6684. It is not during the same period; it is between 1859 and 1869, is it not?—Yes; I give this as a general thing, but with regard to the actual comparison I have put down in my table what has been done since 1863–64. In land revenue there has been a revision of settlement in many provinces, and consequently enhanced taxation in the Bombay Presidency; I have taken the figures of the whole of the revenue.

6685. *Chairman.*]

6685. *Chairman.*] Do you know whether in the State of Travancore there have been very large, and still are, very large tracts of uncultivated land, and that those tracts have been brought into cultivation considerably, and that as they come into cultivation they all have to pay the full land revenue?—It may be so, that is its national resource.

6686. The Rajah does not sell it off at a cheap rate, and deprive himself of it?—That I am not prepared to answer. I think he has given up his proprietary rights in certain lands.

6687. Sir *G. Balfour.*] Are you aware that the Madras Land Revenue has considerably increased during the last few years?—I know it as a general impression, but I would not give that as a positive answer.

6688. The accounts show a large increase; are you aware that that has taken place mainly from increased cultivation, and that the Madras Presidency has, therefore, retained the power to obtain a portion of those natural improvements which good civilisation and good administration will produce in the form of extension of cultivation?—In that respect, for all India I wanted to get the exact figure of the amount of culturable land yet remaining.

6689. You are aware that no increase of cultivation in Bengal can possibly add to the land revenue of the Bengal Presidency?—That may be so.

6690. Therefore, supposing it to have increased, it is revenue from the land; that is, by the natural extension consequent on the improvements of administration which have taken place?—Yes, and on the better condition of the people if so.

6691. And, therefore, the Government of India, from the improved administration and from the improvement in the condition of the people, have a fair right to expect additions to the revenue from that source?—That is a different question; that is a question by itself, and we shall get to see.

6692. *Chairman.*] I should like to ask you whether you have heard or seen from these Reports that they speak of the continued increase, and the taking up of the culturable land which pays the ordinary revenue?—I am not prepared to say that, but I will look into it; the difference in rent between those years, 1863-64 and 1870–71, is about 322,000; that is the gross.

6693. What is the net increase?—The increase between 1863-64 and 1870-71, is about 322,000.

6694. It that gross or net—Net, after deducting charges, do you mean?

6695. Yes?—That I have not got; I cannot ascertain it from the published accounts; I have taken the gross revenue; I had not quite finished the Travancore question; in British territory there has been this increase in the revenue between 1863–64 and 1870-71, nearly the whole of it owing to increased taxation, and I want to point out that difference. The increase of taxation in British India has been of this character; in land revenue there have been revised settlements in the Bombay Presidency; there may be some natural increase also from the character of the revenue, but that is to be set off against it. In Excise there is forest increase of revenue, but that is owing to additional expenditure. The expenditure more than balances, or very nearly balances, the revenue. In house, trade, income, and assessed taxes, in 1863–64, the income tax was very nearly the same; 4 per cent. for the first quarter, and 3 per cent. for the next three quarters, and in 1870–71 there was the whole income tax of $3\frac{1}{8}$ per cent. In Customs the revenue is about 300,000 more; but there has been a good deal of additional taxation in Customs during this period. If particulars are wanted I can enter into them; in salt, there has been an increase twice, once in 1865 in the Bombay Presidency; in 1866, in the Madras Presidency four annas each, and in 1869 five annas in both. In stamps there was an increased scale in 1867; and in judicial fees also. There was a revision of the court fees in 1870, and a new Registration Act in 1865. Therefore, nearly the whole of this increase has been owing to additional taxation as compared with Travancore, where it has been notwithstanding, a reduction of taxation. The question fairly is why, in the British administration, the same thing should not happen; that is a very fair question.

6696. *Chairman.*] You have gone a good deal into the land revenue; do you wish to say anything more on the subject of the incidence of land revenue?—Do you mean in Bombay or generally?

6697. With regard to Bombay?—All I have to say is that this revised settlement will do an immense deal of harm to the Presidency, and that it is based on the fallacious principle of taking incorrect averages.

6698. That you have gone into?—Beyond that I have no more to say. I would earnestly request the Government to think over this matter carefully, and not enhance this assessment at present; in connection with the land revenue it has been stated very emphatically here, that it is collected very easily, and that the cultivators pay it with punctuality and readiness; that is what has been said, but what I wish to state is the way in which this readiness is brought about; the legislation upon this land revenue is of such a character as drives the people to pay readily and punctually, and if the Committee will allow me I will point out the machinery by which this readiness is manufactured; I have collected here, and I wish to put in, about 40 or 45 sections from more than 25 Acts, which will show that in the collection of land revenue, and in all this legislation, a ryot as opposed to Government has no legal redress whatever; that if there is exaction he can only appeal to the collectors or to Government, and Government can only act upon his report, but he has no jurisdiction in a court of law. I have given illustrations by certain judgments of the High Court; in one judgment the High Court say this: I may give it from memory without wasting the Committee's time; the course of legislation during the past several years has been much narrower and not so liberal as it was in the first part of the Elephinstone Code in 1827. What I have done is to collect all those sections in which this narrowness or illiberality is clearly shown, in which the Government, as opposed to the subject, is judge in its own cause, and I wish to put in the Appendix those sections, extending from 1827 to 1871, which bear upon the collection of land revenue and the powers of collectors, and from which I make out that the landed interest, or parties connected with land, who have to pay revenue to Government, have no legal redress in a court of law. (*The same was handed in.*)

6699. You mean legal redress against the

Mr. *Dadabhai Naoroji.*

11 July 1873.

Government for collecting revenue? — Yes, whether rightly or wrongly.

6700. Sir *G. Balfour.*] You know perfectly well that that is nothing but the Scotch law of hypothec?—That may be, but I do not know.

6701. *Chairman.*] Is there any other point upon which you wish to give evidence?—I have something to say in connection with the anna cess, the local cess; I will take that separately. If a ryot does not pay his rent on the instalment day, the present practice is to give him a certain notice for which one rupee is charged, and after a month he has to pay interest of half a pie per rupee a-day, that makes nearly 95 per cent. per annum, but the thing does not end there; if he does not pay within two months, then his land is sold up; this naturally sends him into the arms of the marwaree, because a native cultivator is very much attached to his land, and that is the only provision by which he can support himself, so that the last thing he would do would be to part with his land, therefore his readiness in paying the revenue can be very easily seen. Moreover, this rule must have acted, as Government themselves have acknowledged, oppressively, for in 54,000 cases, in 1867-8, they were obliged to apply this rule.

6702. Were those cases of an ordinary year, or of any particular year?—It is a Return made for one particular year. If I remember right this was for one year, 1867-68.

6703. Was it in any ordinary year, or were there any special circumstances?—As far as I know, it was an average good season year. It is that on the basis of which I have made my calculations about production; that is one of the modes in which revenue is collected. If it is not paid within two months he must go to the marwaree to get it at 25 or 30 per cent., or he must be sold up, and he must be turned out as a common labourer. Those two circumstances together, that is, the legislation and the mode of collection, are necessary to explain how the ryot of the Bombay Presidency pays his revenue with readiness and punctuality. That is all I have to say upon that point.

6704. *Chairman.*] Do you know, as a matter of fact, whether in the present state of the ryots they are compelled to borrow very much from the small bankers of the district to pay their revenue, or whether they are now in a condition to pay it generally as it falls due?—As far as my opinion goes they were very nearly getting rid of this necessity during the American War, but they are now going more and more into the old necessity of borrowing from the banker.

6705. Do you know whether they have also habits, which they consider necessities, of incurring considerable expenditure every now and then for what they consider fortunate and unfortunate days in their existence?—They do spend as they used to in former times; they follow their custom, but at the same time their income is a great deal less.

6706. Do they not very frequently resort to the small bankers for the purpose of finding the funds for these expenses, which too often bear no reasonable proportion to their means?—They do, because their means are now, as I wanted to make out, under the British rule, very much diminished, while their social customs remain as they were, all powerful as they are in any country, but I have not been allowed to go into that point.

6707. When you speak of their being unable to pay the tax, and being forced to go to the banker, it is important to know whether they are in the habit of incurring these expenses which sweep away their means of paying the land revenue?—They incur these expenses, and that is another difficulty, no doubt, which they cannot help.

6708. Mr. *Fowler.*] Are these bankers natives?—Yes; they charge a very high interest; from 20 to 25 per cent.

6709. *Chairman.*] Is it not the case that those people who are not provident enough to have money in reserve, always have a running account with the bankers for their special circumstances, and that they pay the money to the banker as it is convenient to them?—That is the whole thing I wanted to make out, and as you have made the remark, it may be that they are not prudent enough to keep anything in reserve, but they have really very little to keep in reserve at all, and they are getting worse on account of these social customs. Their production is very poor, they can hardly feed themselves fully, and therefore, as to reserve, that is very distant; but I have not been allowed to enter into that question.

6710. What we want to know is, as a matter of fact, whether having regard to the receipts which they are now obtaining from the land cultivation, the amount of revenue which they are called upon to pay under those Acts is such that they cannot pay it out of the receipts, and that therefore they are compelled to borrow, or whether they could pay it if they would be a little more prudent and less given to special fits of expenditure?—Of course this expenditure contracts their funds; but without taking this expenditure into consideration, they have not enough even to live upon, and so their case is worse with the social custom in addition to what they have to pay out of their scanty earnings.

6711. Have you made any specific inquiries in any given number of cases of the actual sum received in gross by the cultivator from his estate, and the actual amount of land tax that he is called upon to pay out of that at the times appointed?—Yes.

6712. Have you got any actual statement of that?—Yes; I have an actual statement of the whole production of the Bombay Presidency per head, and that gives you an idea of what it should be at the utmost.

6713. It does not give me an idea of anything except a very large amount of error and confusion; what would give me an idea of the fact would be a number of cases carefully investigated of the exact gross sum that the cultivator received, and the exact sum that he paid to the Government out of that gross harvest, and the investigation carried on so as to arrive at a fair view of the state of affairs; if you have done that, you would be in a position to give the Committee accurate information?—I may say that it would be far better to take the test I am applying of what the whole production of the Bombay Presidency is, and how much might be put down per head; my calculation is not seen.

6714. My opinion is that any such statement is so extremely misleading and erroneous, that I do not think it desirable to ask you the question?—Of course I submit to it, but how I have calculated is not seen.

6715. It cannot be a correct view of the thing?—It depends entirely on official figures.

6716. Is

6716. Is there any other question as to items of revenue or expenditure on which you would like to give evidence to the Committee?—Yes; with reference to the anna cess.

6717. Have you obtained any information as to the effect of the Act that was passed in the Bombay Presidency, directing the local cess to be made; is that the cess you refer to?—There is an Act, I think it is in 1869, by which that cess is legalised. What I want to say upon that subject is this: I think it was a breach of faith on the part of the Government, or at least Government had no right to impose any cess upon the running settlement, upon the settlements that were current. Of course, after the 30 years were over, they had every right to do what they thought proper, but before the 30 years were over, the imposition of this cess was a direct violation of promise, and that I can show in positive official language.

6718. Will you quote the official language?—There is a statement by Messrs. Goldsmid and Wingate, who were the settlement officers upon whom the whole work of that settlement depended. A letter written by them is given in a Parliamentary Return of 1853, No. 999, page 368, from which this is an extract. They describe the various advantages which would be derived from the Bombay ryotwar system as compared with that of the North West Provinces. That was a controversy then going on. And then they say this: "We further believe many most important elements of maternal prosperity to be secured by the plan of settlement now being followed in the Deccan, among which may be enumerated a moderate and equal assessment." And then they enumerate some more, and then they say, "Security against increase of demand on any account whatever during the term of the settlement." This was distinctly stated by these very settlement officers as clearly a "security against increase of demand on any account whatever during the term of the settlement. Then I shall give the reference to a letter which was written to the Revenue Commissioner at Poona in 1840. As early as 1838 it is clear that the Government had fully taken into consideration the supply of roads and education, and their effect on the land in fixing the period of the settlement during which no increase of demand on any account whatever was to be made. Mr. Mills, the principal collector at Poona, during the correspondence about the settlement, in his letter to the Revenue Commissioner, No. 2683 of 1868 (*see* Bombay Government Selections, No. 107, page 145), says, "From * * * and from the progressive improvement of the country by the construction of roads, and above all, the moral improvement of the people by education, &c., Government have every reason to anticipate that the utmost activity, both in agriculture and commerce, will in the course of a few years prevail." On account of this recommendation, Government was first disposed to limit the term to 10 years, but on further representation from Mr. Wingate, which I have not been able to come across, the Government knowing all these facts, and after taking into consideration the effect of roads and education during the period of the settlement, fixed this 30 years' settlement. Then I come to more extracts, which are also official; one of them does not bear exactly on the point, but it will show at least the general inclination of the Government of the day. This also is a letter by Messrs. Goldsmid, Wingate, and Davidson to the Revenue Commissioner, dated 2nd August 1847. (Official correspondence on reserve survey published in 1869, page 4.) Referring to the field assessment, and allowing the ryot to relinquish any field, it is said, "The fixed field assessment for the term of 30 years introduced by our surveys, thus secures to the cultivator the full, advantage of a 30 years' lease without burdening him with any condition beyond that of discharging the assessment for the single year to which his engagement extends." It may be contended that it only extended to the field assessment, and that it could not be applied to any other assessment. That was the only reason why I said this was not exactly bearing on the point, but, taken with the others, it has its force. Then further, in the rules of settlement given in the same letter at page 35, the second rule says, "All cesses upon land have been absorbed in the new assessment;" then, even as late as 1861, the Government of the day thought that revised settlements would be the proper time to make any cess for local funds. The words are these, after alluding to the necessity of a net work of roads to secure the full benefits of railway accommodation, Government recommends that "local funds must be raised, and the revision of assessment appears to his Lordship in Council to be the most seasonable time for making such provision, so far at least as the agricultural population is concerned; his Lordship in Council is therefore pleased to direct that in future each superintendent of survey after fixing the assessment of a district, should add * * one anna on every rupee of revenue as a contribution to a local fund for the improvement of the internal communications of the district." (Bom. Gov. Selec. No. XCIII., new series, page 361.) So far, therefore, from the year 1838 to the year 1861, the language is clear enough, that during the running of the settlement, there was to be no cess imposed. Then as there was no legal enactment, what was done was this: the collectors adopted what I may call an ingenious method of collecting local funds without trouble; that is, the rule adopted was, that when an instalment of land revenue was offered, the officer, in taking the instalment, was first to deduct the amount of the cess, and then give credit only for the balance for land revenue, and if the ryot did not make up that sum at once, of course he came under those rules as to giving notice, and the additional interest, and selling up in two months, so that in this way this cess was collected; but even this some landholders resisted, and at last the Government was obliged to pass this Act. I submit Government had no right to pass this Act with regard to existing settlements; however, since it has been made legal by this Act in 1869, it is in force. The cultivators, of course, complain that they ought not to have been so treated. That is what I have to say upon the anna cess. Then again, there was a distinct promise that these local funds would be applied to strictly local purposes. I should not like to trouble the Committee any more upon the misapplication of the local funds, because you have already had evidence of that.

6719. Do you concur in the view expressed by the witness who gave that evidence?—Yes, of Mr. Nowrozjee Furdoonjee.

6720. Do you know whether in addition to the taxation which they pay, people are required in India to contribute services under certain conditions for the assistance of the Government?—Yes.

Mr. *Dadabhai Naoroji.*

11 July 1873.

Yes. That is what I want to put before the Committee. Section 17, of Regulation 12, of 1827, "strictly prohibited the pressing of coolies and begarees"; and it was made "the imperative duty of the magistrate to make instant cognisance of all such offences, and inflict punishment, &c. &c.," or the aggrieved was left to have a civil action. Section 18 makes it lawful for the magistrate, "on occasions of emergency, to compel for public purposes the services of tradesmen, &c. &c. &c., at a rate of remuneration not below the highest they may be in the habit of receiving." Chapter 7, of Regulation 22, of 1827, made provision for emergent occasions requiring the immediate march of troops, or when more than 200 infantry or 100 cavalry are marching through British territory. Rule 4, of Section 42, provided, "Within 10 days reporting the fact with the cause and extent of impressment, and the rates of remuneration allowed to the Governor in Council (and to the Suddar Fojdaree Adaulut)." In 1860, Section 374, of the Penal Code (Act 45), "Whoever unlawfully compels any person to labour against the will of that person shall be punished with imprisonment." By Act 17 of 1862, the clauses of 17 and 18 of Regulation XII of 1827 are repealed. So the existing law upon the point, so far as I can make out, is the above Section 374 of the Penal Code, qualified by Chapter 7 of Regulation 22 of 1827, providing for the emergent occasion of march of troops. If I am correct in the law, as I make out, then there is a large amount of illegal "practice" for forcing labour carts and provisions. There is a loud cry throughout the whole of the Presidency against it. My friend Mr. Nowrozjee has given you ample evidence on this point. I give only one case to illustrate the present state of the law (High Court Reports, Vol. IX., Part I., page 165). Dhori Kalan, having refused to hire his cart to a Government servant, was prosecuted (not on the ground of having violated any law authorising Government officials to demand such service, but) under Section 186 of the Penal Code, as "obstructing a public servant in the discharge of his public functions;" and punished with a fine of four rupees or simple imprisonment for seven days. The case coming before the High Court, they "ordered that the conviction and sentence passed upon Dhori Kalan be reversed, and that the fine if levied, be returned." This shows that there is no law by which a Government official can demand such service, or Dhori would have been prosecuted under it.

Tuesday, 15th July 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Sir Thomas Bazley.
Mr. Beach.
Mr. Candlish.
Mr. Cross.
Mr. Beckett Denison.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Sir David Wedderburn.

C. BECKETT DENISON, Esq., IN THE CHAIR.

Mr. DADABHAI NAOROJI, recalled; and further Examined.

Mr. *Dadabhai Naoroji.* 15 July 1873.

6721. *Chairman.*] WHAT is the particular head that you propose to speak upon to-day?—First I have to put in some Returns that were asked for from me. The first was a Comparative Statement of the Revenue and Expenditure of Travancore and British India (*handing in the same*, vide *Appendix*). Then there is a Statement of Details of Public Works in Travancore for 1869-1870, and for 1870-71 (*handing in the same*, vide *Appendix*). The third is the Settlement Report of Indapore; extracts that I intended to put in and I had not them ready, and I was to be allowed to bring them to-day (vide *Appendix*). Then there is a statement showing the present and proposed assessments for villages belonging to the Indapore talooka (vide *Appendix*). As the Committee's time is short, I am willing to put in certain statements in Appendix for the convenience of the Committee, offering, at the same time, to come back from India next year, and appear before the Committee to be cross-examined.

6722. In putting in those extracts from the Settlement Report of Indapore, are there any observations that you wish to make to the Committee thereon?—I wish to observe that the calculations are based upon the fallacious principle of taking the average of prices without taking into account the quantity of the produce, and also the circumstances and causes which produced rise in prices which are local and temporary; that all the principles upon which the enhancement is based are erroneous ones, and therefore it is unjust to the cultivators. The substance of my remarks I have given last time, and I was asked to put them in to-day.

6723. Do you mean to say that the calculation was not thrown over a sufficiently large number of years?—The calculation is thrown upon the best years out of the 30 years; and with regard to the reasons there given by Colonel Francis, I point out there (in the remarks I have put in for Appendix) that in those reasons he has particularly missed these two important principles in making averages; in fact, I may say generally, that this is a mistake made in all official statistics in taking averages, by merely adding up prices of a number of years or districts, without taking the quantity of either into account. This gives a false idea; for instance, in the Administration Report of the Central Provinces for 1867-68, you will find the average price for rice is given at *Rs.* 2. 12 *a.* per maund; but if the average is correctly worked out, by taking the quantities of each district into consideration with the prices of each district, it will be found that it is only *Rs.* 1. 8 *a.* per maund; in the Administration Report the prices of all the districts are simply added up and divided by the number of districts; but in some places there may be, perhaps, 100,000,000 tons of rice produced and sold at a rupee a maund; in another place there may be 5,000 tons of rice produced and sold at 5 rupees a maund; that will not give 3 rupees as an average.

6724. You mean that if there were perfect means of communication between all the districts of India, the cheapness in one district would be counterbalanced by the dearness in another, or the dearness in one by low prices in another?—That may be the effect where the communication is complete; but I mean, that as the averages are taken at present, and as important financial measures are adopted, such as enhancements of revenue, and so on, upon these averages, these conclusions drawn from such fallacious averages lead to very wrong and mischievous results.

6725. Mr. *Fawcett.*] Your contention, as I understand, would be this, that a rise in the price of agricultural produce may be caused by two circumstances, one of which indicates greater prosperity of the agricultural class, and therefore would show that their rent or their land revenue might be increased; but the rise of prices may be caused by circumstances which indicate great depression in the agricultural interest, and therefore, in this case, the rise of prices would rather show that the land revenue ought not to be increased, but rather decreased; for instance, supposing that, owing to an increase of the population of any country, the price of cattle rises, then agriculturists can afford to pay a higher rent, because the produce becomes more valuable; but, suppose that some disease happens to the cattle and half of them die, under those circumstances a rise of prices would not indicate greater prosperity in the agricultural class, but would indicate the reverse, and in that case would show that rent or land revenue ought to be reduced; and your contention is, that in revising these land settlements, the officers who have arranged them have not taken into account the rise of prices produced by famine and by circumstances which indicate depression to the agricultural interest, and the rise of prices which indicates increased prosperity to the agri-

Mr. *Dadabhai Naoroji.*

15 July 1873.

cultural districts?—Yes; and I have to add only one word more, that there is also the rise of prices that is occasioned by some local temporary causes, such as a quantity of railway works, building, or some public works going on where capital and labour congest, and consequently a rise of prices takes place, because the produce of other parts does not come in freely; these two kinds of causes require to be taken into consideration, before the enhancement can be made upon an equitable principle.

6726. *Chairman.*] But turning for a moment to this particular Settlement Report which I have in my hand, I see in the 148th paragraph these words, "Beginning with 32 seers in the last decennial period of the lease, but little fluctuation occurred during the earlier years, and down to so late as 1861-62, 27 seers was the ruling rate. The general rise of prices which has spread throughout the Presidency dates from this period. Its effect was felt here, 16 seers being the rate in 1862-63, and there has been but little change since. The average price for this period is 26½ seers"?—Yes; there is a fallacy running through the whole of it, just in that manner; he takes for granted that there is a general rise in prices, which is likely to continue, and the average that he has taken of those 32 seers is also fallacious, for the reasons that I have stated; and consequently the whole thing requires to be fairly put forward.

6727. Have you worked out the incidence of taxation proper on the people, as you have been already asked?—Yes; I have got an answer to that question in the words of Lord Mayo, and Lord Mayo also understands the word taxation exactly in the sense in which the Chairman wishes me to understand it, and, consequently, I thought that this would be the best answer I could give to the question, with two short remarks of mine, which I would read. I have got an extract here from Lord Mayo's speech of the 31st of March 1871. Lord Mayo said in that speech: "Mr. Grant Duff, in an able speech which he delivered the other day in the House of Commons, the report of which arrived by the last mail, stated, with truth, that the position of our finance was wholly different from that of England. 'In England,' he said, 'you have a comparatively wealthy population. The income of the United Kingdom has, I believe, been guessed at 800 millions per annum. The income of British India has been guessed at 300 millions per annum. That gives well on to 30 *l.* per annum as the income of every person in the United Kingdom, and only 2 *l.* per annum as the income of every person in British 'India.' I believe that Mr. Grant Duff had good grounds for the statement he made, and I wish to say, with reference to it, that we are perfectly cognisant of the relative poverty of this country as compared with European States; but, as a matter of fact, are the people of India heavily taxed? Figures are not always satisfactory, and calculations of this kind must be, to some extent, open to cavil; but still, as staticians accept the facts that I shall state, we may consider that they represent pretty fairly approximate accuracy. I have made, from reliable documents, a comparative statement of the incidence of Imperial taxation in India and in some European States, England excluded. I have deducted from the resources of the Indian Empire all those sources of revenue which cannot strictly be called taxation. I have deducted land revenue for the reason that it is not taxation, but is that share of the profits of the land which the Government, in its character of chief proprietor, has from time immemorial deemed it right to demand. The opium revenue is excluded, because no one in India pays it. I have also deducted contributions from Native States, the receipts received in the Army, Postal, Telegraph, and all the spending departments; the result is, that the revenue received from taxation proper in India amounts to 14¼ millions, from a population of 150 millions, which gives a result of 1 *s.* 10 *d.* per head per year. I have followed the same investigation with regard to five European States, some of which are not the richest, and I find that while Indian taxation is but 1 *s.* 10 *d.* per head per year, the subjects of the Sultan are paying 7 *s.* 9 *d.*; those of the Emperor of Russia, 12 *s.* 2 *d.*; the inhabitants of Spain, 16 *s.* 5 *d.*; Austria, 19 *s.* 7 *d.*, and Italy 17 *s.* It must be remembered, however, that a shilling bears a larger proportion to the income of a labourer in India than to that of a labourer in any of the countries mentioned, but still there is no such difference between the value of labour here and in Europe as is represented by the difference of taxation that I have described. Notwithstanding, the financial credit of our Empire is far better than that of any of those States to which I have referred. I have mentioned these facts to show that the term, 'crushing taxation' is wholly inapplicable to the countries subject to the authority of the Government of India. At the same time, I am far from saying that this happy state is not right; I believe it is. The greatest security to Government is given by the feeling sustained by the people that they are lightly taxed. And by avoiding as much as possible additions to the burdens of those who contribute to the interests of the State, we add much to the safety of our rule." Now, whether I agree or not with Lord Mayo's views, I am not going to criticise them. I take them for granted, which I understand to be that Indian taxation is only 1 *s.* 10 *d.* per head, and that therefore India is the lightest taxed country in the world. I go further, to meet completely the views of the honourable Chairman, and deduct as much as 10 *d.* as contributed by the well-to-do, leaving for the poor mass of the people only 1 *s.* a head. Now, after granting all this, I have to make one or two remarks, that the very fact that India, though so lightly taxed, yet taxes hard the intelligence of all great Indian statesmen to discover some "new modes of taxation," and add, if possible, another 1 *s.* a head, without "irritating or oppressing," is in itself a conclusive proof that there is in the condition of India and the Indian Administration something seriously and radically amiss and wrong; and that even after such extremely light taxation of only 1 *s.* a head, Lord Lawrence is reported to have said before this honourable Committee, only a few weeks ago, that many of the people were only able to half feed themselves; I do not know the exact words which he used. Now, the second remark I have to make is this: coupled with this, I may put this great financial fact before the Committee: The United Kingdom, out of its "resources" (I use Lord Mayo's word) obtains 70,000,000 *l.*, from which about 27,000,000 *l.* being deducted for interest on the Public Debt, there remain about 43,000,000 *l.* for the ordinary wants of Government. This amount is about 5½ per cent. of the income of the country of 800,000,000 *l.* The British Indian Government

Mr. *Dadabhai Naoroji.*

15 July 1873.

Government, out of its "resources," obtains 50,000,000 *l.*, from which about 8,000,000 *l.* being deducted for interest on public debt, railways, &c., there remain 42,000,000 *l.* for its ordinary wants; this makes 14 per cent. of the income of the country of 300,000,000 *l.*, so that the Indian Government is more than 2½ times more expensive than the Government of the United Kingdom as compared with their respective incomes, while the income of England is 13 times larger than that of India.

6728. You have expressed a wish to correct somewhat you conceive to be misstatements and erroneous inferences on the part of Mr. Laing and Mr. Maclean in regard to the exports and imports?—Yes.

6729. Will you indicate to the Committee the principal errors, as you regard them?—I have got one table of figures here which will show the difference between the exports and imports of the United Kingdom, Australia, and Canada, to show that the imports are, after taking various circumstances into consideration, in excess of exports from 10 to 25 per cent. (*handing in the same*). With regard to the United States, Mr. Maclean remarked here that the condition of the United States was similar to that of India, that the exports were very large compared with imports, just as is the case with India. I have prepared a statement to show that such is not the fact; that leaving alone the peculiarities of the United States, even taking the figures as they are given in Parliamentary Returns, the imports are in excess of exports (*handing in the same*). That is one point. Then, again, Mr. Laing was asked whether the excess of imports was not something like a tribute to England. He answered, that the excess of exports over imports in connection with one country may be repaid by some other country; but the question was for total exports and for total imports; and it is not a fact that the imports are actually equal to the exports, for now it is also tried to make out here (at least Mr. Maclean said) that all that India pays out of the country is just about equal to the opium revenue. I have here a table worked out from the year 1834 of all exports and imports (*handing in the same*). I have taken into consideration, as a principle, that when any country exports (and even by this Table it will be proved), its imports must be equal to exports plus some profits; otherwise no man or nation would export anything. Taking that into consideration, I have taken in this Table about 15 per cent. as addition of profits; and leaving the railway transactions entirely alone, as a matter of business between England and India, the result from 1834 to the present day is, that the exports, plus profits, are more by about 500,000,000 *l.* compared with imports. Now these 500,000,000 *l.* will amount very nearly to this, which I will state: the whole of the net opium revenue, which comes to about 141,000,000 *l.*, I may give up; the whole profits of commerce of 50,000,000 *l.* at 15 per cent., say 7½ millions, as I have calculated, I may give up also, because it is claimed that commerce is the creation of English rule. I deduct that, and even after deducting this whole profit, and after deducting the whole of the net opium revenue, there is still, from the year 1834 up to the present day, something like 200,000,000 *l.* more that are exported by India from its produce itself. Now if it can be shown by Government, or anybody, that the produce of India from 1834 up to the present day has increased so much that it has paid all these 200,000,000 *l.*, and yet the produce per head that was left to the people was still the same, then it would be proved that our condition at present is just only what it was in 1834. If it can be shown that a great deal more is added to the produce of the country since 1834 beyond these 200,000,000 *l.*, that will be considered as the fair result of a good administration, even not allowing any benefit to India from the profits of commerce. Now before 1834 I have not been able to get the exact figures. I have therefore depended upon the official testimony of the condition of India as it is from time to time given out. In 1834 it is well known, I think, that the condition of India, and the ryots especially, was very depressed, and the testimony of the times before 1834 will also show that the condition of India had been all along a deteriorating condition, owing to this very heavy drain from the country. I have here a statement of all this official testimony up to the present time, if allowed to put it in. Now, I do not mean to say that as long as the British rule India, there should not be some drain, because, if we desire, and I do heartily desire, that the British rule should continue long over India, there will be a drain inevitably. But I only say that the British rule is gold, sterling article; but even gold may be bought too dear or misapplied, and consequently I beg to submit to the Committee that, as the Administration is at present conducted, the cost of the British Administration, arising from the continual increase of European agency, causes a drain which India cannot stand, and which keeps it continually impoverished. It diminishes its capital, and therefore diminishes the strength of its labour; and as long as this continues nothing can ameliorate the financial or material condition of India. The policy of treating India as a drudge for England needs to be altered.

6730. In your comparison between imports and exports, have you taken into account the bullion imported into India?—Everything that is imported or exported, bullion, and every possible thing, such as military stores, and all Government stores; every thing is included. I may just say here that the bullion hitherto imported into India is hardly enough for its wants. And in addition to the deficit of 500,000,000 *l.*, England derives a very important benefit in the necessities of the English gentlemen in India, because, with the exception of, perhaps, meat, bread, butter, and native servants, and so on, every farthing that the Europeans earn there is naturally remitted, in one shape or another, for the support of their children or families, or for their clothing, and so on, which they require by habit; and this is an additional benefit to England, besides the 500,000,000 *l.* that I have actually shown as the difference between the exports and imports. Now what I say is this, that England would benefit fifty times more than it does now if we are enabled to consume more of the European manufactures than we are at present. We are at present hardly consuming more than 3 *s.* a head, perhaps. If we were only consuming 1 *l.* per head, you would have a trade with India worth 200,000,000 *l.*, almost equal to the whole exports that you now make to the whole of the world.

6731. Have you made any calculation of what portion of the total revenues of India must necessarily be spent in India on the administration

Mr. *Dadabhai Naoroji.*

15 July 1873.

of India, whether for the Army or Funded Debt, or on any other head of expenditure?—The difference is this: Government must have what it requires for its administration; the Committee has had plenty of evidence as to the various extravagant departments of Government, and the waste of money, and so on. I do not enter into that part; but what I want to do is to go to the fundamental evil, that whereas, in a native Government, whatever is given to a servant or official, every farthing of it remains in the country, and is part of the capital of the country, whatever is paid to a European, a great portion of it goes necessarily to his home; therefore it is so much deducted from the national capital and the national labour.

6732. Sir *G. Balfour.*] Have you been able to fix that amount?—Yes, in this way: these 500,000,000 *l.* give something like an average, beginning from 1834, every five years, of about 5,000,000 *l.* at that time, and during the last seven years the average of the deficit comes to something like an average of 25,000,000*l.* per annum.

6733. *Chairman.*] And the general inference that you draw, and wish to be accepted by the Committee, is that, taking a long course of years of the British administration, the ultimate result must be the gradual impoverishment of the people of India?—Yes, it has been so, and will be so as long as the increase of the European agency continues to that extent. It was said here that the drain was something equal to the opium revenue; if it were so, certainly India would be very thankful if it is able to save all that itself produces, leaving alone even the question of the profits of commerce. If it can get a share of those profits, then India will be more prosperous, and bless the English name.

6734. In order to save time, I will ask you as regards the employment of natives in the public service; do you accept what has been said by previous witnesses as a sufficient statement of your views upon this matter?—No, because there is a great deal said with which I differ, and therefore I am obliged to make this statement out. But as the Committee does not allow me to go through it, I give the substance of it briefly. In 1833 a clause was passed, which is well known to the Committee, as to the employment of natives without any reserve, and Mr. Macaulay then, on behalf of the Government, explained the motives and the objects with which the clause was introduced, and gave all the reasons that India should not be treated as old tyrants acted whenever they had a difficult man to be got rid of, that is, they administered to him a preparation of opium. "We shall," he said in that noble speech, "never consent to administer the pousta to a whole community."

6735. Will you come down to more recent times?—I am coming immediately to that. Then there is the Royal Proclamation, which is well known; and during all this time the law and all the solemn pledges given have not been fulfilled. This has been completely and very candidly acknowledged by the Duke of Argyll, in his speech of 11th March 1869, and I can now only refer to the speech and no more; and it resulted in the passing of the Clause 6 in Act 33 Vict. chap. 3, in 1870, the 6th Clause of the Governor General's Bill, in which rules were to be made in India for the admission of natives without being obliged to come here to get the Commissioners' certificate. This law has been now three years in existence; nothing has been done in accordance with it, and I am afraid that this will be one other dead letter in addition to other broken pledges. That is one thing. Then, leaving the question of the admission into the higher departments of all the services, as was often promised and not performed, I come now to the lower departments in the uncovenanted service. Sir Stafford Northcote sent out a Despatch in 1868, recognising that the natives had an inherent right to these appointments, that Englishmen having the door open to them here by competition, ought not to be introduced there; but, however, with regard to that Despatch also, I am afraid that it is a dead letter all these five years; and from certain Despatches which have come from the Indian Government to the Home Government in connection with the furlough allowance, and so on, I am afraid that the policy of the Indian Government is more to squeeze out the natives than to put more in; I mean in this way, a Return is given by the Indian Government of the number of places which can be filled by covenanted servants or military officers; of these, 1,302 such situations are pointed out which are now filled by Europeans, and I think about 221 which are filled by natives. Now, if these situations are all turned over to the covenanted service and to the military officers, the chances are, that instead of the natives getting more uncovenanted appointments, even these 221 will gradually slip through their fingers, and the process has already commenced; because, in Bombay there was one, Mr. Nana Moroji, third magistrate in the Bombay police, but though this gentleman has performed his duties to the utmost satisfaction, without ever having a word in public raised against his decisions, and though he is acknowledged as a most efficient officer, when a vacancy occurred of the second magistrate's situation, a young civilian, brought from the Mofussil, was brought to fill up that place, and Mr. Nana Moroji was not promoted. This was in accordance with the policy recommended by the Home Government, and I suppose by the Indian Government also, that all such situations should be made over to the covenanted servants and to military officers. In that case, of course, these remaining 221 situations that are even now filled by natives will be gradually squeezed out; so much for the uncovenanted service. Then, with regard to engineering service, when Cooper's Hill College was contemplated here, I wrote to His Grace the Duke of Argyll, addressing the letter to Mr. Grant Duff, of course, objecting to the opening of the college, and giving my reasons for it, that it was only a waste of power that any special engineering institution should be established. However, he was the best judge of that; I only expressed my opinions. The other objection I took was the burden upon India; that it should not be paid from the taxes of India; and the third was, that I stated four or five cases of engineers who actually passed the examination required by the Bombay Government to enter the assistant engineers' department; but, though they passed the examination and were fully qualified, they were never admitted to the dozens of situations that have been filled up afterwards for several years.

6736. We have all this, I think, on our notes of evidence from other gentlemen?—I was told that there would be no burden thrown upon India in that respect. I asked Mr. Grant Duff, in case the number of students proved smaller than it was expected

expected to be, who would pay the deficit. Of course I have not received any answer to that. But my chief complaint was, that a similar provision should be made in India for Indian engineering youth. In India, at present, with great difficulty, one appointment is guaranteed in Bombay, some hope is held out in Bengal, one or two asked by the principal of the Roorkey College, not sanctioned yet, I think, and none in Madras. I will only say, in a general way, though I have full particulars here, that every possible obstacle is thrown in the way of the advancement of natives in the Engineering Department of India. Consequently, that is the only reason why the natives do not take to the engineering line. Then, with regard to the medical service, there is a class of sub-assistant surgeons who are put on an unfavourable footing compared with the apothecaries, whose education is much inferior; here I have full particulars; and it is from the sub-assistant surgeons alone that any have dared to come to England and pass a medical examination here, and yet their position is vastly inferior to these apothecaries in the other department, whose education is much lower, and whose acquirements are much lower, medically, also. Generally we are very unjustly treated in every way.

6737. What have you to say about the Government of India scholarships which were discontinued?—These Government of India scholarships were granted at the request of the East India Association for the special purpose of encouraging native youth to come here to study for all the different liberal professions, and go back as pioneers of civilisation into India; this was the special object, and was expressed in the Governor General's resolution, published in the Government "Gazette," and the scholarships were established for that reason, not merely to enable native youth to come here and to be able to compete in the Civil Service. The ground on which these scholarships were discontinued is, that now, because additional facilities are being afforded to enter the covenanted service, these scholarships are unnecessary. All I maintain is, that the scholarships were created for an entirely different purpose, and ought not to have been discontinued. These scholarships have gone, and yet these facilities, I am sorry to say, are nowhere yet, now that three years have passed away. There were nine scholarships offered; these scholarships were worth 200*l.* each; each local Government was allowed to select one from the higher families, and one from the educated classes, and in the first year they were selected, and they came here and began their studies, some taking to law and others to engineering, just as their inclination prompted them; but at the very end of the first year the scholarships were discontinued.

6738. Did those gentlemen continue here?—They remained here for the time they were allowed to do.

6739. Were the scholarships discontinued without any general notification?—I have not come across any general notification, except what I have seen in his Grace's speech that they were not sanctioned, though announced in India in the "Gazette," and actually granted to several the first year.

6740. What is the present system by which any claims for exemption from Government rent on land are decided?—The chief defect in the system is, that a person has no judicial or legal redress in any claim that he has for exemption of rent; the Government is the judge in its own cause, and these persons were prevented by Section 4 of Act XXIII of 1871 altogether from having any recourse to civil courts; they have no redress in civil courts unless with special permission of Government.

6741. But, as far as my recollection goes, there never was a grant of this kind given, especially if, in the nature of a rent-charge or a jagheer, without the sunnad, and the conditions of that document were plainly stated on the face thereof?—Yes.

6742. Now, there is no question that a civil suit would lie against the Government on sunnads, is there?—I have cases in which there are these regular sunnads, and even with those sunnads they cannot go to a civil court; I will read the law if you wish.

6743. That is your objection, that no matter how granted, no claim will lie against the Government in the civil courts?—That is one great objection.

6744. I believe you wish to say something as to the race feeling between Europeans and natives at present?—I will say that also in a very short compass. Unfortunately it is now exhibited in a form which throws very much discredit on the British name, and that is, that whenever a European criminal is concerned, the jury almost invariably discharge him, and, in some cases, even contrary to the direct charge of the judge; well, this, of course, naturally enhances this race feeling, and produces a great deal of mischief. I have got here a statement of a few cases and of extracts from the reports made by the attorneys general of Madras and Bengal, if they are allowed to be put in. There was one question especially put to me by the Chairman last time, whether I had any more official extracts as to the feelings of the people. I had given one which did not quite satisfy him. I have two others, if I may be allowed to read them. One is from Lord Lawrence, and another from Lord Napier. It is a Minute of Lord Lawrence in 1864, in connection with irrigation; and he says, "India is on the whole a very poor country; the mass of the people enjoy only a scanty subsistence; they are impatient of taxation, except when it is of that peculiar nature to which they have long been accustomed. The tendency of new modes of taxation is to irritate, and even to oppress. We ought to avoid, so far as may be practicable, such fruitful causes of discontent." Lord Napier, in his Minute, dated 14th November 1870, on reduction of the military expenditure, says, "It appears to me that we never had less hold on the affections of the people than at present."

6745. Sir *G. Balfour.*] We are to take that as showing that he did not desire to see the military strength reduced?—Yes.

6746. *Chairman.*] As regards the financial relations between England and India, what do you wish to say to the Committee?—I will not trouble the Committee with any remarks of my own, as much valuable evidence upon this subject has been already given, in which the unfair and high-handed treatment of India by the Government of England has been pointed out. I may only say here, that leaving alone the complaint of all the heavy public debt that is put on India's shoulders for several wars, the least that the British Parliament can do is to guarantee that debt, and help India by the saving thereby made in interest, to clear off this debt in a reasonable time. The case with India is different in point

Mr. *Dadabhai Naoroji.*

15 July 1873.

of the effect of debt. When the people themselves are mostly the fundholders in any country, it is of no consequence whether the debt is paid off or not; but as in the case of India, the debt is largely held in a foreign country, the payment of interest becomes a drain upon the capital and labour of the land.

6747. Mr. *Fawcett.*] In mentioning the taxation of India, you did not include local taxation, did you?—No.

6748. Can you give us any estimate of the local taxation?—Yes; it is about 5,000,000 *l.*, if I remember right.

6749. Does that include all the forms of local taxation, municipal and provincial?—I think that is the total local taxation.

6750. Of course, that ought to be added to the statement that you have given?—Yes; I took only what taxation proper was taken for imperial purposes, as stated by Lord Mayo.

6751. In giving evidence, you assumed a case to show what a great gain it would be to England if the Indian people were well enough off to buy a pound's worth of European goods per head; you said it would lead to a trade of 200,000,000 *l.*; you said, if it were a pound's worth, instead of as now, three shillings' worth; but do they buy as much as that?—I have taken these 3 *s.* per head as representing the total exports from the United Kingdom to British India. What the people buy is, of course, necessarily less than 3 *s.*

6752. But then that includes Government stores; it includes the export of bullion, and everything else that makes up the export?—Everything is included in this 3 *s.*

6753. But I will put this question in order to get an idea as to the amount of the revenues of India that really go to England; have you ever formed an estimate of the amount of European produce which is imported into India, produce of such a kind that it can be fairly supposed to be consumed by the mass of the people, excluding bullion; anything that can be fairly supposed to be used or consumed by the people, anything which ministers to their wants or adds to their enjoyments?—Well, I have not actually worked it out; but I can very easily put in a statement of that; it must be something a great deal less than 3 *s.* a head.

6754. It is not 5,000,000 *l.* a year, is it?—Well, I am not prepared to say that. I have not worked out the figures; it will be very small.

6755. The point that you wanted to bring out, I understand, in making comparisons between the effects of a native Government and the English Government is this, that, taking an official in a native state, even supposing that he receives too large a salary, the people of that native state get at any rate this compensation, whatever it is worth, that the salary will be spent in the country, and therefore it is simply a transfer of wealth amongst the people, and not a loss of wealth?—Yes.

6756. Whereas, with reference to an English official this may happen: a man may receive 3,000 *l.* a year in Calcutta; he may live without any establishment; he may live upon 600 *l.* a year; he may save over 7,000 *l.* a year, return to England, after being in India for five years, with 40,000 *l.*, all of which he will spend in England, and not 1 *s.* of which will directly benefit India?—Yes, and the pension besides.

6757. If he has one?—Yes.

6758. Owing to the increased facilities of communication between England and India, is not what I have just described taking place on a much greater scale than it did formerly?—Yes, I think so.

6759. Men spend a shorter time of their lives in India; they produce the general impression that their only object in going out there is to make money as quickly as possible, and when they have saved sufficient, to return to England and spend it in England?—Yes. It is a triple loss of wealth, wisdom, and work to us.

6760. Therefore what you would say would be this, that the whole of this money that is possessed by these retired officials, the whole expense of the Indian Establishment in London, and many other things, represent a portion of the price which India is obliged to pay for the English rule?—Yes.

6761. Have you ever looked into this point to see how very much the food resources of the people, and the comforts of the people, are diminished in order to enable them to pay what is requisite to pay for enjoying what is described as the advantage of British rule?—That is a question to which I have paid most particular attention, and I say that the poorer people get a very small share of the production; they live on scanty subsistence, as Lord Lawrence says.

6762. What are the exports from India at the present time?—Cotton, seeds, indigo, rice, silk, tea; and in fact the price current of my firm contains, perhaps, nearly 70 different articles, or more.

6763. What is the aggregate amount of those exports?—The aggregate amount of the exports is at present about 50,000,000 *l.* a year, more or less.

6764. Would it not be correct to say that nine-tenths of those exports consist of products of the land, which might be consumed by man; such, for instance, as those that you have enumerated, jute, cotton, tea, silk, and other things; or if that estimate is not correct, what estimate would you give?—I think that at present the average of the last seven years makes nearly a deficit of 25,000,000 *l.*

6765. I do not refer to that; taking the whole of the exports, would it be a correct estimate to say that out of those 50,000,000 *l.* of exports, nine-tenths consist of products of the earth, which might be consumed by man?—I think the whole of it, nearly.

6766. Therefore, so far as the comforts of the people are concerned, as their food resources and the clothing resources are concerned, the case is this, that they export 45,000,000 *l.* worth of produce every year at least, which produce might be consumed by the people, or the land on which this produce is grown might yield other products, which might be consumed by the people; and in return for this great amount of the products of India, the Indian people receive the privilege of paying a tribute to ex-officials; the privilege of paying the salaries of the civil servants; the privilege of having to pay 14,000,000 *l.* or 15,000,000 *l.* for an army, and a very small modicum of European products which can in any way minister to their wants or add to their enjoyments?—Yes.

6767. Without entering into the inquiry what is the pecuniary value of the army to India, or its high-paid civil service, that is really a correct way of putting it, is it not?—Yes.

6768. You wrote to the Duke of Argyll, objecting to the establishment of this Cooper's Hill College, for two reasons; in the first place, that it might throw a charge upon the revenues of India;

India; and secondly, that it would deprive the natives of the chance of being employed as engineers?—Yes.

6769. The first of your complaints, that it would throw a charge upon the revenues of India, the Duke of Argyll made no direct reply to?—He replied, "All students will have to pay for the expenses of their education;" I took that to mean that there would be no charge upon India.

6770. You mean that in his opinion the college would be self-supporting?—Yes.

6771. But, subsequently, Mr. Grant Duff stated in the House of Commons that no charge would be thrown upon the revenues of India?—Yes.

6772. But it does not appear from his answer to the question put to him in the House, whether no charge was to be thrown upon the revenues of India, because he thought the college would be self-supporting, or whether at that time it was in contemplation to ask England to make herself responsible for any possible loss?—Mr. Dickinson's question was, "What will be the charge on the revenues of India of the proposed college for engineers; what the building will cost; what will be the annual cost of the establishment; and whether it is in contemplation to attach any and what retiring pensions in favour of professors or others employed in the institution." The answer of Mr. Grant Duff was, "There will be no charge on the revenues of India on account of the Engineering College; the fees will be slightly in excess of the charges, including interest on the buildings and plant, say on 90,000 *l.* There will be 11 professors and instructors on salaries varying from 700 *l.* to 300 *l.* per annum. Of these, nine will be entitled to pensions under the provisions of the Superannuation Act, and two will not be entitled to pensions. If my honourable friend would like the figures, here they are: Annual sanctioned charge for college, as per regulations of Secretary of State in Council, 18,350 *l.*; interest on buildings, &c., say 90,000 *l.*, at 4 per cent., 3,600 *l.*; total, 21,950 *l.*; fees, 150 students at 150 *l.*, 22,500 *l.*; difference, 550 *l.*" Upon this I wrote a letter to Mr. Grant Duff, saying that I objected even to this superannuation charge, but I received no answer to that also.

6773. Therefore, the condition of the case is, that the Government hopes that the college will be self-supporting, but that if it is not self-supporting, or if its financial position from any circumstances should become unfavourable, India will be then made responsible, and not England?—That is the conclusion that I draw.

6774. And, of course, England could not be made responsible without a Vote in the House of Commons on that Act, and that Act has never been passed, has it?—I think not.

6775. And, therefore, at the present time, India is clearly legally responsible for any loss that may occur?—As a matter of fact, it is all charged to India already. I have the account here in which it is stated.

6776. Looking upon the employment of natives more as a financial question than as a question of political justice between natives and Europeans, do you think that if the appointments were freely open and impartially open, as in the terms of the Queen's Proclamation to the natives, then any reduction in the salaries of civil servants might be made?—I would divide that question into two parts; first, supposing that the natives were paid equally with the Europeans, still the advantage to India would be very large, for there would be what you have already well described as to the saving that would be made to the capital of the country, and that would remain in the country. Leaving that alone, and taking appointments with salaries of above 300 rupees or 400 rupees a month, natives of equal efficiency and integrity can be got in their own country at a much lower salary than what is paid to Europeans, and I think they would be quite satisfied with such salaries; they would perform their duties with equal integrity and efficiency, and a great saving would be made in the economy of the administration.

6777. Then you do not hold the opinion that seemed to be implied in the evidence of Mr. Furdoonjee, that the present scale of salary should be maintained if natives were freely admitted to the Civil Service; but your idea would rather be to obtain two advantages at the same time; namely, that you would make the people of India feel that we were more completely just to them by throwing open appointments to them, and, at the same time, you would arrange the salaries rather with the idea as to what would attract natives who were sufficiently efficient and able for the appointments than what would attract Europeans, and in that way you would obtain a great saving to the finances of India?—There is no difference between my opinion and Mr. Noroojee Furdoonjee in this, that in principle I agree with him, that it is hard that a man should not be well paid for his work; but at the same time, I think that if a lower scale were adopted, natives would be found at a much lower scale competent to perform those duties. I am speaking of all those appointments that go above 300 rupees or 400 rupees a month.

6778. *Chairman.*] Do you happen to know what the number of students in the Cooper's Hill College is at present?—I do not know. From the fees I see that it would be about 28.

6779. Taking the annual charge, with interest for outlay at 22,000 *l.* per annum, the fees received in 1871–72 were 4,000 *l.*, the difference being 18,000 *l.*?—Yes, and the original cost is all debited to revenue. The whole expense has been above 100,000 *l.* by this time.

6780. Mr. *Fawcett.*] I understand that the intention of these nine sholarships, which were established for one year at 200 *l.* a year, was to enable natives of ability to enjoy the advantage of spending time in Europe?—Yes.

6781. It was not necessary that they should all enter the civil service, was it?—No; I can read the words of Sir Herbert Edwards, who first made this proposition, on which those scholarships were granted. He said: "To aid the natives, not merely to enable them to compete for the civil service, but to return in various professions to India, so that, by degrees, they might form an enlightened and unprejudiced class, exercising a great and beneficial influence on native society, and constituting a link between the masses of the people and the rulers."

6782. Then the latter part of the second reason for which they were established, namely, "to create a link between the masses and the rulers," without necessarily being civilians, was altogether ignored in the reason which was given to justify the abolition of these scholarships; they were abolished because it was stated that it was

Mr. *Dadabhai Naoroji.*

15 July

intended to admit natives of India directly to the Civil Service, was it not?—Yes, that was the way; but the Government of India, in its Proclamation, had used very clear language as to what they had established the scholarships for.

6783. Therefore this proposal to admit them direct to the Civil Service was no answer, or only a very partial answer, to the reasons which caused the scholarships to be established?—Not an answer at all.

6784. What compensation did the natives receive for the abolition of these scholarships; how many of them have been admitted direct to the Civil Service?—None; they are not yet admitted.

6785. Therefore the scholarships were abolished on account of a promise, of which promise not the slightest notice has been taken?—The clause has not been acted upon in any way. We have not yet got the rules of the Governor General. It was for that Clause 6 of the Governor General's Bill that these scholarships were abolished.

6786. Do you know whether one reason that was put forward for abolishing these scholarships was the ground of economy; that there had been too many deficits, and that the expenditure was so high that it was necessary to economise?—Well, I have not come across that reason myself.

6787. The administrator who so successfully managed the finances of Travancore was Sir Madhava Rao, was he not?—Yes.

6788. I suppose he would have been very glad to have been employed by the British Government?—I cannot say; I do not know.

6789. Was any proposal ever made to him to enable the British Government to enjoy some of the advantages of his financial skill?—I am not aware. I just know this much (I do not know whether it is correct or not), that it is stated that he had some hope of getting into Mysore; but I am not at all aware whether it is well founded.

6790. Do you know him?—I have seen him once.

6791. But it has never appeared in India that any offer was made to him by the British Government?—No; I have never come across any such statement.

6792. You have referred to the ways in which India is unjustly treated by England in financial relations; I suppose you mean by that that India is made to pay for many things which England ought to pay for?—Yes.

6793. Numerous examples have been given of that; have you any to add?—The very building of the India Office was, I think, employing money here for property to remain here and to be a burden to the finances of India; and there are other smaller items that I should not like to trouble the Committee with.

6794. If you have got them will you state them, because sometimes a small item illustrates a system more than a large item?—I think in this question with regard to the India Office building, when you look at the Colonies, England spends very nearly three millions in aiding them, one way or another, while India has had to pay every farthing that can be possibly brought in as having the least connection with India. In the Abyssinian war we escaped very narrowly, and had only to pay the salary of the troops on service in Abyssinia.

6795. Your contention is, when we build the Colonial Office here (and we suppose that we built a Colonial Office for the benefit of the colonies), England pays for it?—Yes.

6796. We build the India Office for the same reason, and India pays for it?—Yes.

6797. Can you suggest any reason why there should be a difference made in the two cases; why we should not, for instance, say to the colonies, if we think it is justice for India to pay the expense of building the India Office, "You enjoy the inestimable blessings of British rule; you have the great privilege of having a magnificent Colonial Office in London, and therefore we will ask you to pay for it." That is the kind of thing that is said to the Indian people; why is it not said to the colonies?—Not only the Colonial Office, but the whole Colonial establishment, I may add; and that is just the thing that I am most anxious to know about; why it should be so I cannot suggest.

6798. Mr. *Beach.*] You stated, in answer to the honourable Member for Brighton, that the expense of the army was a charge paid by India for the benefit of British rule; I want to ask you whether, when India was an aggregate of separate states, with a head, such as one of the Mogul emperors, a very large expense was not incurred for the army?—I am not at all prepared to go into the question of the army. I do not think that I gave any direct answer to that question; I do not think that I am competent to give any opinion upon it.

6799. We may assume that in any case, whatever Government existed in India, a large expense, or a considerable expense, must be incurred for the army?—But the difference would be this, between a rule by a foreign power and a rule by a native power. In the latter case all the expenditure incurred in the matter, however much the army expenditure, will still remain in the country, going from one hand to the other; whereas, in the case of a foreign power, a large part of that expenditure goes clear out of the country. The only question is, which I am not competent to answer, whether the army is now, as now kept up, and the amount of expenditure as now kept up, is a reasonable one or not, taking things as they are.

6800. Is it your view that a large amount of unnecessary money is spent on public works?—My view is that a large amount is wasted in the construction of public works by inefficiency, and I am afraid by a great deal of corruption; but of course I am not prepared to substantiate anything.

6801. Your view is not that works are undertaken which are not necessary, but that waste is incurred in carrying out the works?—Well, I am not prepared to say whether works are undertaken which are not necessary; I am not competent to answer that.

6802. Would it be the native view that if it were necessary to raise revenue, which of course it must be for purposes of Government, an import duty should be levied?—Well there are various views of different people; what they feel is that the incidence is already heavy enough for them, and they do not know how to pay more to Government; that is the general feeling.

6803. What I was alluding to would be an import duty, with a view of protecting native manufacturers?—Well, those engaged in manufacture, such as the owners of mills in Bombay, would very naturally wish such a thing, so that their

their manufacture may be protected; but I cannot say that that is the general view of the natives, or that I know anything particular on that subject. I can give my own opinion, not that of the natives.

6804. I was asking whether there was any general feeling in favour of it?—My own opinion is that the more free trade we have the better; that is my own personal opinion. Of course there is a variety of opinions; different natives look at the question from different points of view; some would rather save themselves from the salt tax, or other taxation, and get more from import duties; others would say, "No, let us be saved from import duties," each looking at the thing in his own point of view. I am not prepared to say what the general feeling would be.

6805. Mr. *Candlish.*] I understand you to tell the Committee that your view is that England should guarantee the Indian debt?—Yes.

6806. On what do you found that opinion?—I think it would be a benefit both to India and England; to India the benefit would be, that if a portion of its debt is paid off, the interest that is now remitted to a foreign country will be saved, and will be saved to the capital of the nation.

6807. But guaranteeing the debt would not pay it off?—I mean to say that if the debt is guaranteed, and still the same amount of interest that is now derived from the revenues of India be continued to be derived, and the difference between the interest to be paid as guaranteed debt and the interest which is now charged be paid off to sink the debt, it would be a very great advantage to India.

6808. Then what is your view of the advantage to England?—The English advantage would be this: it is often urged that India owes a great deal of money to England, and that England is at the mercy of India on account of England's large claim upon India; now, if all this debt is paid off England would be so much freed from what is described as being at the mercy of India on account of its debt, and India becoming better off will take more of your manufactures.

6809. Do you know the amount of the Indian debt?—I think about one hundred millions. I am not speaking of railways now.

6810. I mean the amount of borrowed money, borrowed for purposes of all kinds?—I was not proposing that the railway debt should be guaranteed, but I should like also the railway debt guaranteed. We should have the same advantage given to us as is given to some of the Colonies, and shall be thankful, and have to pay so much less interest.

6811. Can you tell the Committee the average rate of interest for Indian loans?—The public debt averages 4½ per cent.; the railway debt is guaranteed at 5 per cent.; and I think that the difference that has now to be made up by India, after deducting the traffic, is about a million and a half.

6812. The expenditure on current account would be a million and a half less, if England guaranteed the debt?—If the hundred millions of the public debt is guaranteed by England, the saving will be 1 to 1¼ per cent.

6813. And you would appropriate that to the repayment of the debt?—Yes.

6814. Sir *G. Balfour.*] I understood you to contend against the Cooper's Hill Engineering College, that India was burdened with a liability in which the administrators in India had no voice whatever as to the contract; that it was entirely a home charge created by the Home Administration, and increased by the Home Administration at its pleasure?—I do not think that I urged that reason in my letter; but with regard to that, I may say generally that in all the home charges here the administrators in India have no voice at all.

6815. You must be aware that that is not applicable with regard to a very large amount of expenditure incurred in England on account of stores; the stores are demanded by India, and sent out?—Yes. I mean only such charges as the Secretary of State incurs here on his own responsibility.

6816. Your argument would still hold good when I mention that the Cooper's Hill Estate has already cost 102,000*l.*, and that out of repayments by students we have received a very small sum?—Yes, only 4,000*l.*

6817. Then when I mention to you that the actual expenditure on account of the salaries of professors for the year ending 31st of March 1872 amounted to 10,296*l.*, and that the estimated expenditure for the year ending 31st of March 1873, of the same kind of expenditure, amounted to 17,140*l.*, or nearly 75 per cent. increase, that will tend to confirm your view?—I suppose that is the estimate originally of Mr. Grant Duff, sanctioned by the Secretary of State, of 18,000*l.* a year; the first year they spent less, as there were less professors and less establishment; but they have now complemented it, and brought it up to its full strength.

6818. Still you are aware that increases have already taken place in salaries at Cooper's Hill?—That I do not know.

6819. I understand you to say that Travancore was a native state which well deserved to be put forward as one to be imitated in the administration of the British provinces?—No, I am misunderstood there; my whole object in making the comparison is to point out the initial difference of the two kinds of rule. In a native rule a gentleman like Sir Madhava Rao can do a great deal more than under the British administration; he will not be able to carry on the finances to the same extent in British India under the present policy.

6820. But you mentioned the increased revenue of Travancore as a contrast with our comparatively stationary condition in the other Presidencies. You are aware that Sir Madhava Rao was educated at Madras; that he received his education from English teachers; was trained and brought up as an English student; that his intercourse with many European gentlemen at Madras tended greatly to enlarge his mind and to prepare him for the great administrations which he has carried on, and that almost all his instruction is purely British?—Yes; I know that he was one of the best alumni of his college.

6821. You are also well aware that Travancore was a very backward State?—Yes.

6822. You know of no State so peaceable and yet so backward?—I do not know that.

6823. Since Sir Madhava Rao has been there, the administration has been improving?—Yes.

6824. But, prior to that, for many years the improvements had been almost *nil*?—Yes, that is so, I know.

6825. Travancore is a State which adjoins the Madras Presidency?—Yes.

Mr. *Dadabhai Naoroji.*

15 July 1873.

6826. It has had free communication with it? —Yes.

6827. And the Rajah is subordinate to the Madras Government?—Yes.

6828. When I mention to you that the Madras Presidency has advanced in a greater degree than what Travancore has done, you would admit that good administration may be carried on as well in an English province as in a Native province?—I should be very glad to hear that fact about Madras, though such is not my impression.

6829. When I mention to you that the land revenue of Madras has increased from 3,592,000 *l.* in 1856-57 to 4,440,000 *l.* in 1871-72, you will admit that that increase of revenue is very considerable?—I should like to examine the figures; of course it is a considerable increase, but I am not prepared on that point.

6830. The Madras revenue has increased from, in 1856-57, 5,094,000 *l.* to 7,899,000 *l.* in 1871-72? —Of course I take those facts for granted, but I am not prepared to give any opinion on their character. I have not examined them.

6831. The Chairman asked you on one occasion what was the sum which you thought was a fair expenditure on account of British Administration in India; you did not answer the question?—I want the materials for it, and the materials needed are a complete list of European strength in every department of the service, and then I can fairly say what the cost should be.

6832. But you may take it, that whatever is required for the administration, was money that ought to be spent, and therefore we were anxious to ascertain, in yourpoint of view, whether we were spending more money for administration, or how much of the present money we could save out of present expenditure?—The present expenditure may be all very reasonable, as far as the administration goes, and yet to India it may be very heavy on account of the larger European agency; these are two separate points.

6833. I was very anxious to hear from you what you thought that the civil administration of the country ought to require?—I think what the expenditure of the administration ought to be, you are more able to judge than I am. I would not give any opinion, unless I had more materials at my command, which I cannot get; I tried very much to be prepared to answer that question, but I cannot; but that is taking it for granted that the administration expenses are reasonable ones; but the difficulty lies in the system of administration, in which a large cost is required to be paid by India to England; it is the remittances from India which is the pinch; the whole cause of all our misfortunes.

6834. I understood you also to say that we were spending more money in the general administration of India than we were justified in doing?—Yes, that is my impression; I think that the expenditure ought to be reduced at least 20 per cent. of the total expenditure; but I speak offhand; I am not prepared to go into the figures.

6835. Do you mean of the total expenditure, or only a certain portion of it?—I am taking the whole of that expenditure at 50 millions.

6836. And you think that 10 millions should be struck off?—Yes.

6837. What is the net revenue?—Forty-two millions, I think; and I think that nearly the same per-centage should be struck off there.

6838. Do you think that we could carry on the administration of India with 32 millions?—I am not prepared to answer positively; I would leave that to the Committee to decide.

6839. You mentioned also that it would be a great advantage to India if all the money given in salaries to the officers serving in India were spent in India; you quoted the instance of natives receiving money in the country, and spending it in the country, and you considered that that mode of spending money in the country would be a great advantage to India?—Yes; that is to say, the production of the country remaining in the country.

6840. And your advocacy of employing native agency was for the purpose of advocating its being spent in India?—It must be spent in India then.

6841. When I mention to you that the whole of the salaries paid in the Nizam's territory are spent in that country, and that probably no part of India is so impoverished, you see that no great result is arrived at from that principle?—There may be other serious defects in the administration of that territory which may cause that; but I am not prepared to say that.

6842. Is it not a notorious fact that the people in the Nizam's territory are worse off than in any other part of India?—I never heard of it.

6843. You mentioned that a large portion of the salaries of the European agency was sent home to England?—Yes.

6844. Have you any notion of what amount the pay of the Europeans in India receive?—No, I am very anxious to know that.

6845. And yet you are of opinion that a large portion of the money they receive is sent home? —That must necessarily be so; their pensions are enjoyed here, and a portion of their salaries must be spent here for the support of their children and families. I do not complain of that; but it is the incidence of the foreign rule that is the natural consequence of it, to which I refer, and which it is necessary to keep within bounds.

6846. Lord *E. Fitzmaurice.*] Did I rightly understand your proposal just now, with reference to the Indian debt, to be that the English Government should guarantee the debt at 3 per cent., and that the difference between that rate and the present rate should be used as a sinking fund?—Yes.

6847. Then there would be then no consequent diminution of taxation in India?—Not at present, till this debt is paid off.

6848. Can you state what you consider to be the average price of Indian Stock, taking it over any period of years?—I think it is generally understood to be at present about 4½ per cent. interest; on an average it comes to that; the 5 per Cent. Stock is at different rates, from 5 to 7 per cent. premium.

6849. Do you consider that the difference between the guarantee of the Indian Government and that of the English Government is so great as to compensate for the difference between 3 per cent. and 5 per cent.?—That is just the thing; one will be at the rate of Consols, and the other at the Indian rate.

6850. There are certain holders of Indian securities; they hold a security which, according to your showing, is at a premium, and they would no doubt have a choice; but do you think that they would avail themselves of a choice given them in the way of taking the 3 per Cent. Stock, or do you think that the difference would cause a depreciation

a depreciation in the value of the stock or not?—No; in either view it would be the same, because Government can borrow money at 3 per cent., or they may take it back.

6851. I quite understand that; but do you think that, if this change which you suggest was made, the practical result would be that people would ask to be paid off, or not?—Well, I cannot say; but the practical result would be that there will be a saving of interest to India.

6852. There will be a saving of interest, but no reduction of taxation?—According to my plan at present there will not, but prospectively there will be a great advantage to India; then there ought to be a great reduction of taxation, and it will be a great relief.

Mr. BECKETT DENISON left the Chair, which was then taken by Mr. AYRTON.

6853. *Chairman.*] The difference would not be between the 3 and 5 per cent., would it?—No, about $1\frac{1}{4}$ per cent., I make.

6854. Lord *E. Fitzmaurice.*] The reason I ask the question is this, because you must see, with reference to that plan, that supposing that the alteration of the rate of interest had results which caused a very large number of the stockholders to ask to be paid off, it would make a financial operation of the utmost difficulty on a very large scale; there is a considerable amount of stock in India at the present time at a higher rate than 3 per cent.?—Yes, the whole of it.

6855. If this alteration which you propose, coupled with a choice given to the holders of stock to be paid off, was considered by them to be likely to have results, or to have results not altogether favourable to them, the whole body of them might ask to be paid off; that would involve the Indian Government in a financial operation of very great difficulty; and that was my reason for asking the question just now, as to what you considered the feeling amongst stockholders generally would be with reference to such a proposal?—I say that there would be no difficulty, because Parliament having guaranteed it, it would be something like so much more consols.

6856. That was the reason of my question, whether you considered that the difference of the guarantee between the Indian Government and the English Government was equivalent to the difference in the interest?—As far as I can understand, it would have that effect.

6857. In fact, you mean that it would be accepted, and that the people would not ask to be paid off?—With reference to certain loans there are fixed periods, and they are not to be paid off before that time.

6858. I am not talking of those, but of the other part of the debt. I am asking you whether you think that the stockholders would be willing to accept this proposed change, or would be likely to ask in a body to be paid off, because that would involve the Government of India, or the English Government, in financial operations of very great difficulty. In this case, as I understand you, the alternative which you give might be accepted, but you do not think that that alternative would be accepted?—I feel sure that the English holders of these securities will not demand payment, because they will like to have the security in some shape or other. These are mostly investments for safe income; but of course, as to the English people, you are able to judge better than I can what their feelings would be.

6859. Do you consider that there is a feeling in India with reference to the debt, that there is now "a moral guarantee of the debt," an expression which has been used, I think, before this Committee, that though there is no actual guarantee there is a moral guarantee; do you think that that exists?—If you ask my own personal opinion, I feel that there is a moral guarantee, as far as Parliament is concerned. In the case of any difficulty, Parliament would be hard pressed by all these holders, who would say, "You have not managed the Government of India well, and therefore you have caused us this loss;" that is what the generality of the people may say to it.

6860. *Chairman.*] Is that what you mean by a moral guarantee?—I do not think that Parliament is legally bound to pay anybody for any portion of the Indian debt, but the English people, depending upon the good administration of India by the English Government, and by those whom they send out, would naturally contend that Parliament had not exercised its own power or control sufficiently well, and had thereby caused this loss to them, and therefore Parliament ought to recoup them. That may be urged; whether Parliament would accept such a responsibility or not would be a different question.

6861. Would it not be a complete answer to that moral claim, to say, "You have received a higher rate of interest, because you have not such a claim"?—It may be.

6862. Lord *E. Fitzmaurice.*] Have you considered the effect on consols, generally, of adding such an enormous sum as 100,000,000 *l.* to the National Debt of this country?—I cannot say, but I do not think there would be that necessity of going at once to borrow money, but that a great portion of the existing holders would exchange it.

6863. But if the English Government takes over the whole of the Indian debt as consols, it is 100,000,000 *l.* added to the debt of this country; do not you think that it very probably would have an effect in depreciating the value of stock?—It would have some; I am not prepared to say how much.

6864. Mr. *Lyttelton.*] Are you of opinion that the people of India, generally speaking, are becoming less able to bear taxation?—Yes, I think so; the railway loan and the expenditure for public works have given them some relief wherever it has gone, in consequence of so much capital having been thrown into those parts and works there constructed; but if the payments to England continue, this is drained underground, and the ability again begins to diminish.

6865. In fact you consider that the material prosperity and happiness of India is diminishing year by year?—Yes; that is my decided opinion.

6866. Is not that a very strong reason for cutting off at once the British connection?—No; if the British connection were cut off, I think it would be the greatest misfortune to India; but

Mr. *Dadabhai Naoroji.*

15 July 1873.

what should be done is this: if this British connection only could be carried on at such cost to India as would be reasonable, there would be enough saved in the country to go on adding a little to the capital. At present the British administration is such, that the capital goes on decreasing year by year, but if the European agency were largely diminished, and what is produced in the country was saved in the country, it would be otherwise. If, as is said, India only pays out as much as she gets from opium, India ought certainly to become a rich country in a short time; if it got all the benefits of a commerce of 50,000,000 *l.*, and paid only those 8,000,000 *l.* that it has received from China, it would make such rapid progress that, instead of 40*s.* a head that the income is now, you might make it equal to what it is in England, 30 *l.* a head.

6867. On those conditions alone you would expect prosperity?—Yes; but as long as the present conditions continue the drain will go on increasing, as we see from the year 1834, when it was 5,000,000 *l.* per annum deficit of imports, while it is now 25,000,000 *l.* per annum, taking an average of seven or eight years,

6868. Sir *D. Wedderburn.*] Do you think that that if that guarantee were given by the British Government, to which you have alluded it would induce a great number of natives to invest in the public debt of India?—The natives do not invest because the interest will not pay them, because the capital of the country is very small, and it fetches a much larger rate of interest than they could get in consols; but if prosperity increased and they had more spare capital, they would see the advantage of drawing their own debt to their own country.

6869. You do not consider that their unwillingness to invest in the public debt proceeds in any degree from a doubt of the security, but from their want of capital to invest?—I think both. In the case of some native princes, I know that they do not invest at all; not because they have nothing to invest, but for the other reason; but with regard to the British subjects, I do not think that that is the general feeling; it is more because they have very little capital to invest..

6870. But if this guarantee were given by the British Government, their idea as to want of security would be removed?—Yes, but I do not think that among the British subjects that idea exists much.

6871. But among the native princes does it?—They may say, "It is all the same whether it is the Indian Government or the British Government; if India is cut off from Britain, it is all the same."

6872. *Chairman.*] The interest is so low, that I understand you that the natives do not like to invest their money in these loans?—On account of the interest being so low.

6873. Which results from the good credit of the British Government in India, does it not?—There comes in that moral guarantee, as I think, that the good credit of the British Government is entirely owing to the general feeling that Parliament and the British Government will take care that the affairs of India are well administered; and the lenders of money hardly care to know what is going on in India.

6874. They care to receive their interest, and they have been accustomed to get their interest for a great many years, and they think that they will continue to do so?—Yes.

6875. Therefore the lower the rate of interest the less the natives would be disposed to invest? Yes, but because they have little to invest.

6876. Is it because they do not like so low a rate of interest for their money, or because they can get a higher rate of interest in India?—Yes, the scarcity of money enables them to make higher interest.

6877. They can get higher interest by investing it privately in India, so much higher that they would not consider it worth while to invest in the loan?—Yes.

6878. So that the effect would be that it would all become an English debt?—I should think that the effect would be nearly so; at the same time, if it goes on being sunk, India will in time be relieved of the whole debt altogether.

6879. But the effect will be that it will be an English debt?—Yes; in fact, it is mostly so now.

6880. Mr. *R. N. Fowler.*] What is the current rate of interest in transactions among the mercantile natives of India?—What is considered as current rate among merchants is 9 per cent.; but it is not always a very easy thing to get money at 9 per cent. In the transactions among themselves, the moneyed men make, even on landed property, or anything like the slightest risk, 12 or 15 per cent.; and the moneyed men are getting stronger in Bombay, because the capital seems to have somehow or other disappeared, and is a scarce article.

6881. Of course, the rate depends on the state of the market?—Upon the amount of capital in the country to circulate.

6882. *Chairman.*] Do you know what rate of interest is given in the rural districts?—The poorer cultivators pay as much as 20 or 25 per cent.

6883. What do the rich cultivators pay?—Whoever may borrow will have to pay very high interest.

6884. And do you know whether the yield of the land in proportion to the cost of the labour upon it is such, that the person cultivating can afford to pay a high rate of interest?—No, that is not my opinion; he cannot afford to pay it.

6885. Have you ever gone into a close account of the out-turn of paddy land, and the cost of labour, and what the value of the rice is?—I have gone into it in a certain way.

6886. Then you can state what is the cost of cultivating a beegah of paddy land, and what is the value of the crop, taking any part you please. Take the rice land in the neighbourhood of Bombay, for instance?—No, I could not state that. My test is of a more comprehensive and decisive character.

6887. Or the rice lands in Guojerat, which are much better. Can you state what the out-turn is of cultivating a beegah of land with rice?—I have figures, but I am not prepared to answer that now.

6888. You do not know what the net result is?—The net result is unfavourable, leaving a very small balance to live from hand to mouth; that is the impression that has been left upon my mind in inquiring into the figures of the actual cultivation.

6889. Have you ever heard the natives say that the best return for money is paddy, and next to that sheep, and next to that 12 per cent. interest?

interest?—It may be that they say that; I have not heard of it.

6890. Mr. *R. N. Fowler.*] What is the rate at which our Government lends to the ryots in the opium districts?—I do not know those particulars.

6891. But you say that India is a poor country. There is a great deal of wealth in a few hands, is there not; there are a great number of very rich people?—There are some; but the number is diminishing, in my opinion.

6892. There are a number of natives of enormous wealth?—There may be some very wealthy men, but the term, "enormous wealth," is a very comparative term.

6893. I am speaking of merchants in the large towns?—In Bombay I do not think there is one man worth a million; I cannot say that I can think of anyone just now who is worth a million in the whole of Bombay, where you may perhaps expect the wealthiest men.

6894. Is that the wealthiest city in India?—I cannot undertake to say that.

6895. Sir *D. Wedderburn.*] I gather that your opinion is, that an Imperial guarantee, so far from causing a greater number of natives to invest in the Indian Public Debt, would tend to diminish the number of native investors, because they prefer large returns to security of investment?—The *bonâ fide* investors for perfect security would hardly diminish in numbers, but there is a large amount of transactions always carried on in it which will always keep a certain amount of this debt in India in merchants' hands or in bankers' hands; and for trusts they will always invest very largely; all the bankers have always a certain amount of their investments in these Government securities; but as an investment proper, simply for the sake of getting interest without perfect security, if he found anything better, the native would not invest in them.

6896. Then in speaking of the Imperial guarantee, you draw a distinction between the money invested in guaranteed railroads, and what you called the Public Debt of India; why did you draw that distinction?—Simply because I think Parliament would be very averse to giving that guarantee, though on equitable principles they ought. I think we might ask it; they guarantee colonial railways, and I think Parliament might fairly give us that consideration and indulgence; and inasmuch as India is a very profitable possession to England, instead of costing, as the colonies do, something like 3,000,000 *l.* out of England's own pocket, there is a large addition made to England's national capital, by the number of Europeans that go out to India, and send their savings to this country.

6897. You said that you would be very unwilling to see the connection between India and England severed, because you consider that under the British administration, if conducted at a greatly reduced cost, India might become very wealthy?—Yes.

6898. Without entering into details at present, you consider that such a combination of conditions would be possible?—Yes, quite possible; why certain.

Mr. Nowrozjee Furdoonjee, re-called; and further Examined.

6899. *Chairman.*] Do you wish to state anything with reference to the incidence of the salt tax upon the people of India?—Yes. At my last examination one honourable Member thought that I was exaggerating the pressure of the salt tax on the poorer classes of the people. With reference to this important question, I will lay before the Select Committee the testimony of the highest revenue officers and of the Government of Bombay itself. In the Report made to the Bombay Government by Mr. Pedder, the Salt Commissioner, dated the 10th of July 1870, occurs this important passage, containing the testimony to which I refer. He says: "In June 1867 the Government of India again mooted the question of the equalisation of the salt tax of Bombay with that of Bengal, and the principal revenue officers of this Presidency were once more consulted on the subject. This time the balance of opinion was distinctly opposed to a further enhancement of the tax. It was pointed out that, though the Presidency in general was prosperous, and the wages of labour had risen greatly in the preceding decade, the price of the necessaries of life had risen in a still larger proportion; that a succession of deficient harvests had produced much distress among the poorer classes; that though the construction of railways had lowered the cost of carriage of salt along the main lines of communication, this reduction had been at least balanced by the increased cost of carriage by carts or pack animals where railway carriage was not avilable; that every increase in the excise caused a still larger increase in the retail price of salt, as equal returns upon a larger sum invested in the wholesale purchase must be obtained; that an addition to the cost of a necessary of life tended to raise wages, already so high as to trench on the legitimate returns to capital invested in individual enterprise; that very heavy taxation, especially for municipal and local purposes, had been of late years imposed in this Presidency, independently of an increase of 100 per cent. to the salt tax within 10 years; that there were good grounds for believing that the different enhancements of the salt tax had greatly diminished the amount of licit and even of actual consumption; and that, finally, another enhancement would absolutely debar the future imposition of other taxation for local purposes. These views were embodied in the Government letter of 28th January 1868 to the Government of India."

6900. Upon that you can explain to the committee what are the views of the natives of Bombay as to why they cannot pay as much salt tax as the natives of the presidency of Bengal; I am speaking, not of the town, but of the Presidency of Bombay?—Because they are in a very impoverished condition, and they cannot earn sufficient for procuring all the articles necessary for their food and clothing.

6901. Is that a general view of the people living in the Presidency of Bombay, that they are in a more impoverished condition than the people living in the Presidency of Bengal; is that what we are to understand?—I do not know, compared with the people of Bengal, but speaking absolutely of the Bombay Presidency.

6902. The salt being nearly twice as high in Bombay as it is in the Bengal Presidency?—In Bombay the salt tax is at *Rs.* 1. 13. per maund, and in Bengal 3¼ rupees.

Mr. *Nowrozjee Furdoonjee.*

15 July 1873.

6903. That is exactly double. Now, I should like to know if you have ever discovered what are the peculiar conditions of the inhabitants of Bombay which render them less able to pay a salt tax than the people of Bengal?—The revenue which the ryots, or cultivators of Bombay, pay to Government, is considered to be more than what the people pay in Bengal.

6904. Do you mean than the rent that the people pay in Bengal to the zemindars; if you are speaking of the ryotwarree system, you must compare it with the occupying tenants in Bengal who pay rents to their landlords; do I rightly understand you that the rent paid by the ryots in the Bombay Presidency is more than the rent paid by the occupying tenant in Bengal?—I do not know what they pay to the zemindars, but that is the belief that prevails. A question was put to me by one honourable Member with regard to the consumption and the value of salt, my answer to which will explain more fully the pressure of it. With reference to the questions that were put to me regarding the price and consumption of salt, I beg to state that from prices of produce given in the last Bombay Administration Report, page 363, the price of salt in different districts of the Bombay Presidency varies from *Rs.* 2. 4. to *Rs.* 4. 9. per Bengal maund of 82 lbs., or an average price *Rs.* 3. 8.

6905. Does that mean according to the district measured by the distance from the salt-pans, or the different quality of the salt which you know proceeds from white to black, by gradual transition in colour, which may alter its value, or is it a difference in the salt of the same standard of purity, measured by the distance from the salt-pans?—This difference does not arise from the difference in purity, but from the mere situation of the district. The cost of the consumption of salt in the Poona district is given in the Report of the Commission appointed by the Bombay Government in 1863, regarding the prices of food and cost of living, at 12 annas per annum for each man. At that time the salt duty was *Rs.* 1. 4. per maund; now it amounts to *Rs.* 1. 13., or an increase of 45 per cent.; consequently the enhanced cost of the consumption of salt for each individual amounts to *Rs.* 1 1. 5.

6906. Will you give us the earnings per month of the man thus described as consuming *Rs.* 1 1. and 5*p.* more in value of salt?—The earnings of that man per month range between 2½ rupees and 3 rupees. In 1871-72 the gross salt revenue in the Bombay Presidency amounted to 657,288 *l.* The population of the Presidency is 13,036,609; thus the consumption of salt comes to 1 *s.* per head, including adults as well as infants. Taking a family to consist of four persons on an average, the cost of consumption amounts to 4 *s.* per family.

6907. If you take a family of four people, suppose two are adults, and one a boy, and one a small child, do you think that they all consume that much?—I have taken an average. Taking the income of each family at 6 rupees per month, or 72 rupees per year, the per-centage of salt tax amounts to 2¾ on the income of a whole family, or nearly the same amount as was levied for income tax three years ago. People in better circumstances have been relieved from the burden of the income tax, whilst the poorest classes, who are least able to pay, are still subject to the enhanced salt tax. The Committee will be able to form an idea of the pressure of this tax on the poor from the fact that large masses of the people are able to procure a very scanty subsistence; that many of the people live on half diet, with scarcely any clothing; that their earnings amount to about 3 rupees a month per each individual, and that every farthing of the amount which these indigent people are obliged to pay for salt must necessarily press heavily on their scanty means.

6908. It makes a great difference, when we are dealing with small earnings, whether the monthly earnings are 2 rupees a month or 3 rupees a month. In the official paper that you read the other day you described a very high rate of wages that prevented people making any profit out of their capital; if that be a correct account of the state of things, we are now talking of the low rate of wages of 2 rupees a month, when we ought to be taking it at 4 rupees a month?—I am taking it here at 3 rupees a month.

6909. In an official paper that you read it was stated that the high rate of wages prevented people making any profit out of their capital?—Those were the opinions of the Bombay Government.

6910. But when you speak of those 2 or 3 rupees a month, are you speaking of that high rate to which wages have risen which renders the profits of capital little or nothing?—You will please remember that that remark applied to the year 1868, when the report was made by the Bombay Government, whose opinions were invited by the Supreme Government; since then there has been a considerable fall.

6911. Then now you are speaking of a later date of wages?—Yes; the wages have since declined. With reference to the police, in my last examination I was asked about the strength of the police force and the population of the Bombay Presidency. According to the Bombay Administration Report, the total number of police of all grades employed in the Presidency amounts to 16,877 for a population of 13 millions, showing a proportion of 783 persons. The following remark occurs in the Report for last year: "The numbers thought sufficient by the Police Commissioners have been much curtailed by subsequent reductions, and, in the opinion of all experienced officers, it is thought that the present numbers are below the wants of the country."

6912. Do you know what wages the policemen are paid?—I think 6 or 7 rupees a month.

6913. Have you yet given any opinion upon the income tax?—No, I have not given any opinion upon the income tax.

6914. Have you followed that subject very closely in India?—I have inquired into that subject.

6915. And what is your opinion of the position of people in the towns in India with incomes of 100 or 150 rupees a month; do you think that they suffer from any great weight of taxation in India?—I know the collector of income tax, in one of the reports which he made to the Government, represented very strongly the advisability of relieving the middle classes of the people totally from payment of the income tax, on the ground that it pressed very heavily on them; and his recommendation was, I believe, that all persons whose incomes were under 1,500 rupees should be totally exempted.

6916. Now, having given us your view of the taxation

taxation of people with incomes of 3 rupees a month, what is your view of the proportionate taxation in India upon a person with 3 rupees a month and the income of a person with 100 rupees a month; do you think that the person who has an income of only 3 rupees a month pays relatively very much more than the person on 100 rupees a month?—The person on 100 rupees could afford to pay without so great a pressure as the person on the small income of 3 rupees.

6917. But do you think that proportionably he could afford to pay the same amount of taxation to Government without suffering so much pressure; that is, assuming that the person who has 3 rupees a month pays his 2 or 3 annas to the Government, could the man at 100 rupees a month pay an equal proportion on his income with less suffering from taxation?—In proportion to the difference between these two scales he would feel the pressure according to his means.

6918. Now, as a question of fact, do you think that the people whose incomes are 100 rupees and upwards a month, have any sense of a pressure of taxation upon them at the present time in India, with reference to the Imperial taxation generally?—With reference to the taxation generally, the fact is that taxation has gone on increasing at different periods, and therefore the pressure has also increased in proportion; they feel that.

6919. Do you consider that they are as much weighted with taxation as the people with incomes of 3 rupees a month in proportion to their income?—They might not feel the pressure quite so much, but still there is the pressure.

6920. Do you think that it would be an act of justice between the one class of taxpayers and the other, if persons with an income of 100 rupees a month were to pay an income tax of two or three or four per cent.?—An income tax, as the Committee are aware, is open to such a number of objections that, independently of its pressure and weight, it is a tax that is held in abhorrence by the people of India, on account of its demoralising effects and tendencies.

6921. I am only asking now, as regards the justice of the tax as between one class of taxpayers and another; that is to say, all the people with incomes above 100 rupees a month, and all the people with incomes under 10 rupees a month, whether you think it would be just that people with incomes above 100 rupees should contribute to the public burdens a tax equal to 3 or 4 per cent. of their incomes, leaving the people on small incomes to bear the burdens that you have described as heavy and oppressive; whether, leaving them in that condition, it would not be just towards them, that all persons with incomes above 100 rupees a month, should contribute direct to the State a sum equal to 3 or 4 per cent. upon their incomes?—As a question of justice, I do not know exactly how that can be adjusted.

6922. If you were to put that question to me now, and ask whether I thought it just towards the people of this country, that those who earn 400*l.* as compared with those who earn 40*l.*, should pay from 2 to 4 per cent in income tax, I should not have the least hesitation in saying that I thought it right. I want to know what you think as to the justice of putting a direct tax on people who possess incomes ten times greater than the people who you say are oppressed by indirect taxation?—If it was absolutely necessary that there should be an income tax, then I think that the poor should be exempted and the well-to-do should be taxed; that is what I think. A great deal of evidence has been given before the Committee to the effect that there has been a great increase of wealth and an immense improvement in the condition of the people of the Bombay Presidency, that the cultivators were better off, better fed, better clad and comfortable, free from debt; that they had invested considerable sums of money in gold and silver ornaments for themselves, their wives, and their children, and that the ryots paid the land assessment with punctuality, and outstanding balances were very rare. This description might apply to the state of prosperity which prevailed in Bombay for a short time during an exceptional period. The American War gave a great impetus to the cotton trade, and enriched the mercantile and agricultural classes. But that state of prosperity has passed away. The inhabitants of Western India have again relapsed to their normal condition of poverty and want.

6923. Will you explain why this wealth has passed away?—Because it has been spent and consumed, partly in paying former debts that existed, and partly in indulging in luxuries and comforts of life. That state of things, I assure the Committee, has passed away, and the people have reverted to their normal condition.

6924. Do you mean that all this great influx of wealth that went into India when they sold their produce at four or five times the value, has all been dissipated in luxury and extravagance and speculation, and that there is no trace of it now remaining?—In the interior of the Presidency there is scarcely any trace.

6925. Not even in the accumulations of the copper pots remaining?—I will give the Committee an idea of the condition of the agricultural population such as I have myself seen with my own eyes. I have recently traversed the provinces of Guzerat and the Koncan, and have visited many villages. I have entered the dwellings of the ryots, and inquired into their circumstances and their means. I have examined their clothing, diet, and stock. I will give the Committee a description of their condition from my personal observation. There are four classes of cultivators in Guzerat. First, the pattidars, or farmers, who employ labourers to cultivate their lands under their immediate supervision. They are generally in good circumstances, and live in comfort. They form about one-tenth or one-sixteenth of the population. Secondly, Grassia, Brahmin, Banian, and other classes of landholders, forming about one-tenth of the agricultural population. They are in tolerably good circumstances, and earn sufficient for their maintenance and support. Thirdly, the Koonbees, Rajpoots, and Kachhias, who cultivate their own lands, and are just able to maintain themselves and their families so long as the season and harvest are good. They are in debt, but not to a great extent. They comprise about one-third of the population. Fourthly, Kolees, Bhoees, Waghrees, Doobras, and other castes, who comprise about one-half of the population, are barely able to procure a very scanty subsistence. Many of them are not able to maintain themselves with their families throughout the whole year. Many cannot earn sufficient to be able to

Mr. *Nowrozjee Furdoonjee.*

15 July 1873.

provide decent clothes, bedding, and covering for their protection in the cold and rainy season. They are all more or less in debt. Many of them have no bullocks to plough their fields. Very few of them have two or three copper pots. Their utensils are rude, and made of clay, worth 2 or 3 annas each. A large majority of them live in small, wretched huts, with broken roofs, or thatched sheds. Many of them cannot afford a light or a bed. Their coverlet is torn and tattered; they seldom have a change of clothes; the wearing apparel of their women and children is coarse and wretched. Many of their children were naked.

6926. At what age?—At the age, say of 6, 8, or even 10.

6927. It is not an unusual thing in India for children at 6 years of age to run naked, is it?—There are many, particularly in the cold season, that would be very glad to provide their children with clothes to protect them from the cold, but are unable, on account of their means, to do so.

6928. Are you speaking now of the cold season?—My remarks apply even to the cold season. Most of them do not possess any silver ornaments, much less gold ornaments. Their necessities are so great as to compel them to borrow money at exorbitant rates of interest, ranging from 15 to 36 per cent., passing bonds in many cases at 25 and 50 per cent. premium. They live on coarse food and very famishing diet, consisting of coarse bread or bhurkoo, or porridge made of flour and chhas, or whey or flour and water. When they cannot get such food, they live on a wild creeper, called doree and other herbs, growing on the hedges. About half the number of villagers have cattle, the other half borrow cattle from their neighbours; and in return give their services as labourers in cultivating lands belonging to the lenders. Many who cannot borrow cattle are not able to cultivate their fields. Many ryots consume their limited supplies of corn in a short time after harvest, and if they cannot procure supplies from Bunnias even at 25 or 50 per cent. premium, they are compelled to live on half diet. Many are so poor and helpless, that they go to the fields where corn has recently been reaped, to gather any remnants that might be found, and if they cannot get anything, they are forced to have recourse to stealing corn at night from the barns. Many are obliged to live on wild fruits, or herbs growing in the jungle.

6929. In what district is that?—That is a description of the state of matters which I saw in villages in the vicinity of Ahmenabad, Khaiva, and of the Koncan district between Surat and Bombay.

6930. May I ask you what is the greatest age at which you have ever seen children going about adorned with nothing but gold waistbands and other gold ornaments?—In the towns or villages do you mean?

6931. Wherever you like?—In the hot season little children have no clothes up to about six.

6932. Have you ever seen them beyond that age dressed in gold?—Even in cases beyond that age; but in the cold season those who can afford to wear clothes do.

6933. But I am speaking of those who can afford to wear gold?—But the gold applies only at the cities, where the people are wealthy and can afford to give their children silver and gold ornaments; but even in cities they are not very common.

6934. Did you ever hear of humane Europeans going out to India and presenting their cultivators with clothes, which they looked upon as a great act of tyranny on the part of the Europeans in compelling them to wear them?—No.

6935. You never heard of the humane judge who threatened to put clothing on to the natives in Bengal, and they all jumped up to save themselves from his tyranny?—No, I have not heard of that.

6936. Mr. *Fawcett.*] I suppose what you want to convey is that the fact of children going without clothes in the hot weather would mean nothing whatever, it is the general custom; but the fact that these children of whom you speak were obliged to go without clothes, not only in hot weather but in cold weather, proves the extreme poverty of the people?—Yes.

6937. Sir *D. Wedderburn.*] I suppose you would take this district of Goojerat that you have mentioned as being a district where you would expect to find the people rather better off than the average?—Yes, Goojerat is considered the richest district in the Bombay Presidency.

6938. Mr. *Fawcett.*] This class that you have been describing I understand are the labourers who are employed by the comparatively well-to-do farmers?—Yes, and many of them have small lands and fields and cultivate them themselves.

6939. Does this description apply to many who pay revenue direct to Government?—Yes, this description applies to many who pay revenue direct to Government for the lands that they cultivate. In the Bhimthuree Talooka of the Deccan the number of cattle has decreased, owing to the gradual absorption of the old grazing lands for cultivating purposes.

6940. *Chairman.*] Do you consider that the evidence of an increase of wealth, or a decline of wealth?—Of a decline, and brought about by the short-sighted policy of the Government revenue officers, in taking away all the grazing lands in order to raise a little more revenue, and selling them to ryots for the purposes of cultivation. One great complaint with the agricultural classes is this, particularly in the Deccan, that owing to the scanty rains (it is frequently the case that the rains in the Deccan are scanty, and therefore they are not able to get sufficient produce), remissions are not made. There have been instances in which, owing to a very scanty fall of rain, the produce of the fields has been very small, and out of that small produce the cultivators were not able to pay the revenue due to Government. In such cases formerly liberal remissions were made, but latterly they have been totally discontinued, and remissions are not made.

6941. Do you know the principle upon which the Government proceeds in not making the remissions?—The principle, I believe, is, that there is a fixed assessment, and if the produce is more or less in any particular year, that is no matter for the Government; but the fixed amount of revenue should be paid every year without any abatement.

6942. In former times, when they made a remission for bad years, did they make an increase for good years?—No.

6943. Did they not indemnify themselves by taking more when the harvest was very abundant, for what they had given up when the harvest was less, before the rate was fixed to run over a series of years?—Not unless they had made a new

new assessment. And, again, for even small amounts Government authorities enforce the claim of Government by selling the ryots' lands by auction, and in that way many people are ruined; their lands are sold, and they are cut off from the means of procuring their livelihood. In a great many districts the cultivators are not allowed to cut firewood from the trees, though growing on their own fields, and permission is necessary from the revenue officers, and that permission is obtained in some cases with great difficulty, and in other cases it is not obtained at all without payment; and then the ryots are obliged to keep in repair the boundary marks on the fields, and if, owing not to their fault, but to natural causes, the boundary marks, for instance, are swept away, or are destroyed by others, they are prosecuted and heavily fined for not keeping the boundary marks in good and proper repair. These boundary marks are mounds of earth that are piled up and put up in the corners of the fields; they are of such a nature that they often give way, or are injured, or destroyed, without any intentional fault of the cultivators, and yet they are very often prosecuted, and heavily fined.

6944. Is it not a matter of great moment to preserve the boundary marks in the land where there are no hedges?—The revenue authorities insist upon their being preserved.

6945. Both as regards revenue and as regards ownership of land, to prevent confusion of rights?—Yes.

Friday, 18*th July* 1873.

MEMBERS PRESENT:

Sir George Balfour.
Mr. Birley.
Mr. Candlish.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Dickinson.
Mr. Grant Duff.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Sir David Wedderburn.

S. DICKINSON, Esq., IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE, re-called; and further Examined.

Mr. *Nowrozjee Furdoonjee.*
18 July 1873.

6946. *Chairman.*] WHAT is the next point on which you wish to offer evidence?—The subject of Land Revenue, assessment of land, and its pressure on the agricultural classes. It has been represented to the Select Committee that the land assessment in the Bombay Presidency is not only moderate, but exceedingly low. Mr. Massey declared last year before the Committee, that the rates were "very lenient." In fact, the examination of that gentleman produced an impression that the future income of the State would be compromised by the low assessment of land. With due deference to these officials, I regret to say, their opinions are incorrect. The rates at which the revenue officers of Government have recently assessed the lands in districts in which the 30 years' leases have expired, are not low, but very high, so much so, as to press heavily on the ryots. This I will endeavour to show. That able and zealous officer, Colonel Prescott, Superintendent of Revenue Survey and Assessment in Guzerat, in his report of last year upon the introduction of the Revenue Survey Assessment in the Unkleser Talooka of the Broach Collectorate, says: "Taking prices as a guide, almost all the villages in Unkleser and Hansote inhabited by the superior class of cultivators have been very generally assessed highly, and those inhabited by indifferent cultivators, such as Rajpoots, Mussulmans, and Bheels, have been very moderately assessed." Mr. Dadabhai Naoroji has in his evidence shown the fallacious nature of this guide. The exceptionally high prices which prevailed from 1860 to 1868, owing to the extraordinary impetus given to the cotton trade by the American war, should not have been taken into consideration in fixing the average price of agricultural produce in the Bombay Presidency. In fact, this great fault vitiates the result of the conclusion arrived at by all the survey and settlement officers. Colonel Prescott candidly expresses his misgivings regarding the continuance of high prices. He says: "The cultivators themselves say they are in debt, and I believe many of them are, and I do not hesitate to say that but for the intervention of the moneyed classes who, for a consideration, pay the instalments at a moment's notice, the whole revenue would not have been collected during the last three precarious years. It was, however, collected, and therefore we infer that it was paid without any difficulty at all. I cannot help thinking that prices reached their maximum a short time ago. * * * As long as the precious metals were pouring into this country to pay for cotton, so long prices of necessity remained high, but now that silver is going the other way a fall is imminent, and will continue till some turn of the wheel of fortune brings it back again to India. * * * As America gradually recovers her lost strength, we must anticipate a gradual fall in the price of this staple in the Liverpool market, and Liverpool rules the cotton world. If it is so, then more grain and less cotton will be cultivated, and the price of grain will fall." On the wrong basis to which I have just referred, the survey officers have made an excessive enhancement of the rates of land assessment in different districts ranging from 25 to nearly 100 per cent. For example, the assessment of the Indapoor Talooka was raised 53 per cent., a rate so excessive that Government have not been able to levy this heavy rate in 1868 and 1871.

6947. What do you mean by saying that the assessment was raised 60 per cent.?—Fifty-three per cent. more than the rate of the old assessment.

6948. Can you give us the old assessment and the new assessment?—Yes, I can give you the old assessment and the new one also. I have got before me here a statement showing the names of the districts and the revenue realised by Government in the year previous to the re-assessment, and the amount of the new assessment and the difference and the total increase.

6949. Sir *G. Balfour.*] But dealing with the same area?—The enhancement is chiefly attributable to the increase in the rate, and less to the increased cultivation over the area.

6950. *Chairman.*] Can you give the figures of the area of the old assessment, the area of the new, and the rise?—I have not the figures by me just now, except with regard to one district; but as to the other districts I have some of the reports, and I can give them. I will put in a statement showing the area of the old assessment and the present assessment, and the amount of enhancement.

6951. And the rate of assessment of different produces?—I will try if I can get that.

6952. Will you select the most extravagant talooka, and give those details as an Appendix? —Yes.

6953. Sir *G. Balfour.*] Will you specify in that statement the report that you get it from? —It is the report of the assessment of the Unkleser Talooka by Colonel Prescott, the revenue surveyor and settlement officer in Goozerat.

6954. When was it made?—Last year; I asked for these reports from the India Office, but was not able to get them; I asked them from the Bombay Government, and they would not give them to me. In 21 villages of the Iudapoor Tolooka the assessment has been enormously enhanced, namely, 75 to 149 per cent. In the Bhimthuree Talooka, owing to the enhancement of assessment by 73 per cent., the ryots were unable to pay the revenue, and many distress warrants were issued to recover the amount claimed by Government. In Duskroee Thasra, Kupperwunj, Pardee Mandvee, and other Talookas, many cultivators being unable to pay the enhanced rates were obliged to abandon their lands; and Government have attached and sold the lands of many ryots who could not pay the heavy assessment. In Duskroee Talooka, owing to the inability of the cultivators to pay the enhanced assessment, fields belonging to about 3,000 ryots were lately attached.

6955. Mr. *Candlish.*] How do you know that the circumstances to which you have alluded resulted from the inability of the old occupiers to pay the advanced rate?—From the fact that 3,000 ryots in one district, which I have mentioned, were unable to realise sufficient to pay the amount of the assessment.

6956. How do you know that?—From inquiries which I made on the spot, the prices realised by the sale of their holdings ranged from 2 rupees to 14 rupees per acre. In the Talooka of Dakore, in Kaira, the assessment was enhanced 50 per cent. in 1866, more than half the number of cultivators being unable to pay the increased rates, their fields were attached and sold by Government authorities.

6957. Have you been out on the spot?—No, but I was very near it.

6958. And how do you know this?—From information which I received in the very next district with which the people have connections, and they have fields also in that district.

6959. But you have been told this, or it is public rumour?—I was told by persons who held lands in that district, and whom I saw. In the Indapoor Talooka, owing to the inability of the ryots to pay the amount of the excessive enhancement of the assessment, there was a large balance of revenue, amounting to about 25,000 rupees, which could not be recovered from the ryots last year. In Soopa Talooka, the assessment has been raised in 17 villages at rates ranging from 31 to 100 per cent. Since the settlement of this district, prices of agricultural produce, on the basis of which this great increase was made, have declined more than 50 per cent.

6960. "Produce" is a very wide word; can you mention a few of the articles?—In one district I have got the rates that were current in 1865-66, and the present rates, and I will give them. In the district of Khaira the price of Bajri, one maund of 40 lbs. in 1865-66, was 3 rupees 4 annas, now it is 14 annas. Wheat was 4 rupees and 4 annas, now it is 1 rupee. Tooer was 3 rupees and 8 annas, now it is 1 rupee. Jagree was 8 rupees, now it is 2 rupees. Rice was 2¼ rupees, now it is 12 annas. Ghee was 30 rupees, now it is 13 rupees. Cotton was 30 rupees, and now it is 9½ rupees.

6961. Sir *G. Balfour.*] Is that a fair specimen of the prices both in that year and previous years?—That is a correct account of the prices which I gathered at the place.

6962. And we are to understand that that is a fair representation of prices generally in preceding years as well as subsequent years?—No, the prices have varied at different periods.

6963. Have they varied considerably?—The description that I gave that there is a decline of 50 per cent. during the last five or six years, applies more or less to all the districts.

6964. Then we understand that the 1865 prices are fair rates to take, with some slight variations, as representing the rates for previous years? —This was the period when the prices were highest.

6965. *Chairman.*] Do you say that the last assessment, the enhanced assessment, of which you are complaining, was made with reference to the prices of 1865?—They took into calculation the high prices that prevailed up to the time that the assessment was made.

6966. Sir *G. Balfour.*] You compared the 50 per cent. with reference to the former prices of 1865?—No; this was in the Soopah Talooka, which was assessed I think in 1868, and my comparison is to show the decline of prices between 1868 and the present year.

6967. How many years prices were taken in fixing the commutation rates at which the settlement of 1868 was made?—Prices were taken into account prevailing over 20 or 30 years.

6968. And if we take out the rates during those 30 years, we shall find that the settlement has been made in 1868 upon the average 100 per cent. more than the average that these rates give; is that so?—It was upon the average which was struck by the revenue officers, taking into account the enhanced prices of the exceptional period that I have mentioned that the assessment was fixed.

6969. And we shall find that the settlement having reference to those prices is at the highest proportion that you name?—The enhancement is at the rate that I have mentioned.

6970. Your comparison is not been made with the 1865 rates, but with the average rates of the whole of 30 years?—My comparison of the prices is between 1868 and the present time; I have shown how much decline there has been in the prices since the year in which the assessment was made.

6971. But we are talking of the previous assessments being based on commutation rates of 30 years, and your comparison of the ratio of increase is made between the rates in 1865 and to the rates at the present time?—No, I simply bring to the notice of the Committee the fact of this decline in the prices of 50 per cent. since the fixing of the rates of assessment in Soopa. In the Sholapore district the assessment of several villages has been enhanced from 100 to 300 per cent., so that it is impossible for the cultivators to pay the amount of these exorbitant rates. There are some grave errors in the calculations on which the settlement officers have estimated the value

Mr. *Nowrozjee Furdoonjee.*

18 July 1873.

of the produce of fields. For example, in the Report of the assessment of Chicklee Talooka, paragraph 32, the cost of the cultivation of sugar cane per acre is estimated at 178 rupees 4 annas. From this calculation an important item, namely, the cost of irrigating the land, amounting from 90 rupees to 100 rupees, is omitted. The price of the produce, goor or jaggery, is estimated at 2½ rupees per maund, but as the price has declined to 1¾ rupees, the three years surplus or profit, estimated at 65 rupees, will be reduced to less than 120 rupees.

6972. What is the quantity of the produce?—The quantity of produce is 210 maunds per acre, a maund being about 40 lbs., I think. It appears from Sir George Wingate's Report that "the present assessment of a very large proportion of the Konkan villages is believed to be very burdensome;" it was more than 30 years ago that he expressed this opinion in his report. Notwithstanding this a new survey was made and the assessment of the districts of Rutnagherry and Suverndroog was recently enhanced. The result was utter impoverishment of the ryots and wholesale attachment of their lands by the Collector. In many cases cultivators have been summarily ejected by the revenue officers, and compelled to have recourse to expensive and ruinous litigation in order to recover their property or claims. In such cases the Collector not unfrequently harasses the ryots by vexatiously defending the suit, and dragging the suitor to the highest court of appeal. The conduct of the collector is thus described by Justice Melvill in a case reported in Vol. VIII. of the High Court Reports, pp. 107–109, "The mode of defence is almost invariably as follows: a suit being brought against the collector on account of some revenue exaction or some payment withheld, the collector puts in a written statement in which he commences by pleading the Statute of Limitations, whether or not there is the smallest ground for such a plea. He then proceeds to say that the suit is barred by Act 18 of 1850, which is an Act for the greater protection of magistrates and others acting judicially. Then follows a justification of the Act complained of by a reference to certain sections of regulations and Acts, which as often as not have nothing to do with the matter in question. After the settlement of issues, the Collector obtains as many adjournments as the court is disposed to grant, and finally, having put in little or no evidence, he leaves the court to arrive at the best decision it can with the aid of such books of reference as the judge can lay his hands on, and such knowledge of the details of the revenue administration as he may have acquired in the course of his own service as revenue officer." Again, in Guzerat a very heavy water cess is charged on lands irrigated from wells. It ranges from 9 rupees to 40 rupees per koss, or bag, for drawing water, and is imposed irrespective of the size of the fields. On small holders the cess presses very heavily. There could be no objection to this charge if the well or tank were the property of Government; but the cess is imposed in respect of wells which have been constructed by private enterprise, and on which no charge had ever been levied until the introduction of the revised settlement within the last 10 or 12 years. The Hon. Mr. Ellis, late Revenue Commissioner, N. D., has condemned the impost in these terms:—"I think that it must be admitted that the taxation of wells not constructed by the State is a deviation from the broad principles of the Bombay survey. All wells built hereafter by individuals will be free from taxation. It seems hard that wells similarly built by individuals, but before the advent of the survey, should be placed at a disadvantage, and subjected to heavier taxation for no other reason save that their owners were in advance of their neighbours in employing their capital in agriculture." Colonel Prescott says he has "never been able to recognise the right which the State claims to a higher assessment on land irrigated by wells constructed out of the hard-earned savings of the cultivators." In many districts the heavy assessment imposed on land, and the rigour with which it is exacted, without remission, throw the ryots entirely in the hands of the village Sowcars, and once in debt, he never can free himself. The heavy interest charged upon advances made to the ryot in money and kind absorbs the surplus that remains, after paying the assessment, and the ryot does not live upon his own produce so much as upon the advances made to him by his Sowcar. The systematic and indiscriminate operation of the civil courts aggravates this evil; in that the most usurious interest demanded by the plaintiff has to be allowed without abatement. Besides, owing to the change in the Law of Limitation, agreements for debt, &c., have to be renewed more often than was the case before. Three-fourths of the suits for small debts in all the civil courts of the county are instituted, not with a view to secure their payment, but to secure a renewal of the bond which would otherwise become time-barred.

6973. *Chairman.*] This is another subject altogether to which you are now going?—This is with a view to show that if the Committee thought proper to make a recommendation with regard to an alteration of the law, it would go some way to the relief of the ryots.

6974. Will you pass from that subject, as it is not within our reference?—I will only say that frequent renewal throws upon the poor ryots, first, the heavy burden of the stamps and other charges, and secondly, the charge of compound interest, each time that the renewal takes place. Besides these considerations, the indiscriminate sale of the ryots' property in land, and of his cattle, for arrears of revenue and under civil decrees, often for small sums, tends to confirm with Government sanction this wretched state of indebtedness. For the man who is thus sold out of his fields gives place to the auction purchaser, who in most cases of sales under civil decrees, is the Sowcar or money lender himself. Being unfit, by habits, to cultivate the land on his own account, he lets it to the ousted ryot, who becomes wholly his serf or his slave. The combined effect of all these causes is that excepting Khandeish there is not a district in the Deccan where the peasantry is not helplessly involved in debt to the Marwaree or Brahmin money lender. In the Ahmednuggur district more than half the land is virtually in the hands of the Marwaree Sowcars; and in the Mawall Talooka of the Poona district, Marwarees, and on a smaller scale, the Brahmins have the same hold upon the ryots. A properly framed insolvency law for the Mofussil, and the exemption of land and agricultural cattle and implements from sale, as also discretionary power to the civil courts in disallowing usurious rates of interest,

interest, will go a great way to remove this most unfortunate state of things. I will not detain the Committee on this subject, although it is one of a most important nature, but will put in a memorandum that has been prepared at Poona by the Savajanik Sabha (or people's association), by whom I have been deputed, giving full details, after careful inquiry, with reference to the condition of the agricultural and labouring classes, and the pressure of the land assessment in the Decan, giving a number of facts and figures (*handing in the same*).

6975. Sir *D. Wedderburn.*] What is the reason why Khandeish is an exception to the state of things which you have described as prevailing generally in the Deccan?—The peasantry are not so much in debt there.

6976. Is there any special cause for that?—No, I am not aware of any special cause. I will also put in a short memorandum showing the faults of the Revenue Survey and its shortcomings. In concluding this subject, I may be perhaps permitted to make a few brief suggestions for the consideration of the Committee in order to alleviate the pressure on the landholding and cultivating classes. The first is that Tuccavee advances should be made freely to the landholders and ryots by Government to enable them to purchase cattle, seed, agricultural implements, construct or repair wells, tanks, bhundaras, and to make other improvements.

6977. Mr. *Fowler.*] Have you any estimate to what extent those advances would go?—No, it would depend upon the circumstance of the work for which it is required. It may be small if required for the purchase of a bullock; or larger if for the construction of a well.

6978. But though individually small, would it not go to such an extent that a million or two might be gone before the Government knew where they were?—But they would be repaid; Government would get their money back with interest; and in fact there is a law which is still in force and which enables Government to make such advances, but the regret is that it has not been fully carried out; the advances have not been frequently made.

6979. *Chairman.*] You wish the Government to take the place of the Sowcar?—But they have recognised the principle, and a law has been passed, and it authorises Government to make such advances.

6980. Sir *G. Balfour.*] Is it not the fact that our experience has shown that all these advances have been the cause of the utmost wretchedness and degradation to the ryots?—No, not to my knowledge.

6981. Have we not in Madras diminished these advances to an enormous extent, from the bad results of the habit that we formerly followed there?—I am not aware of the state of things in Madras.

6982. Is it not the habit of the ryots to squander the money so advanced immediately that they get it?—No, I think not in the Bombay Presidency.

6983. Mr. *Fowler.*] What security does the Government get?—The Government gets the security of the land, and everything that the ryot possesses, and also the crops. In the second place I would suggest that cultivators should be exempted from payment of the extra cess imposed on lands irrigated from wells or tanks constructed by them, or by their predecessors. Thirdly, the removal of the prohibition to the ryots to remove earth and stones for building or other purposes, and to cut trees growing on their own lands. Fourth, the restoration of the village commons for pasturage. Fifth, the interest charged by Government to the ryots for overdue instalments of revenue should be reduced from 95 per cent. per year to 9 per cent.; the term for payment of revenue should be extended to four months, and the instalments should be four, and payable as formerly, in January, March, April, and June. Sixth, remissions should be made when crops are destroyed on account of drought, inundation, frost, or other calamity. Seventh, there should be reduction of the enhanced rates of assessment imposed on the recent resettlement of culturable lands. Eighth, the ryots' agricultural implements, cattle, and lands should be exempted from attachment and sale, as enjoined by the Elphinstone code. Ninth, bonds or conveyances by ryots should not be held to be legal unless executed in the presence of a competent Government officer, and the courts should have power to require proof of consideration, and to disallow usurious rates of interest. Tenth, the present law of limitation should be extended from three to six years. Eleventh, a well-considered insolvency law should be passed for the relief of the ryots. Twelfth, the ryots should be exempted from payment of the local cess during the currency of their leases which have not expired. Thirteenth, the power of making disbursements of the local funds in the towns and districts should be vested in committees, two-thirds of whom should be composed of members elected by the contributors. Now I will go to another subject very briefly, namely, the court fees and costs of judicial proceedings, to show how the stamp tax, and court fees, together with the other costs of justice, press on the people. This pressure is excessive, not only on the upper and middle classes of the people, many of whom have been utterly ruined by the action of the civil courts; but it falls with crushing severity on the poorer classes and the masses of the people. According to the statistics given last year to the Committee by Messrs. Harrison and Gay, the income from court fees amounted in cash and stamps for the whole of India to 342,290 *l.* in the year 1856, and in 1870–71 it amounted to 1,803,687 *l.*, being an increase of nearly a million and a half, or 550 per cent. in 14 years. It appears from the last Administration Report of the Bombay Presidency, that in 1871 all the civil courts disposed of 132,888 suits, of the aggregate value of 1,38,54,789 rupees. The bulk of these suits, viz., 122,000, were for sums under 200 rupees each. They, therefore, affected the poorer classes of the people. A very small portion of these suits, viz., one-seventh, were contested cases; the rest were amicably adjusted and withdrawn, or decided *ex parte*. Now, for all these suits the stamp fees amounted to *Rs.* 10½ lacs, and the other costs amounted to nearly the same sum; the total costs therefore came up to near 16 per cent. of the aggregate value of all the suits. To this a large amount must be added for pleaders' costs as between attorney and client; the proportion of costs will come up to near 25 per cent. In appeals and applications for review of judgment, the scale of fees is nearly the same as in original suits. This pressure is so heavy as to produce a disastrous

Mr. *Nowrozjee Furdoonjee.*

18 July 1873.

disastrous effect on the middle and poorer classes of the people. I will adduce the testimony of a Government officer, Mr. W. G. Pedder, Officiating Commissioner of the Nagpore Division, who in his recent Report to Government on local taxation, makes the following observations:—"The practical effect of the Stamp and Court Fee Laws in the Nagpore Division is to add something like two-and-a-half lacs of rupees per annum to the debts of the impoverished and borrowing classes, and that so heavy a pressure of taxation upon those who can least afford to bear it, and who, if an almost universal consensus of opinion may be relied on, are rapidly going from bad to worse under our rule, is a most serious question, and one well deserving the attention of Government." Stamp duty is charged also in criminal proceedings. A poor man cannot make an application or complaint, or file an exhibit even in regard to a petty offence, unless he pay a stamp fee. Besides the heavy stamp and court fees on judicial proceedings a new succession duty at the rate of two per cent. has been imposed since 1870, on the amount or value of all the property in respect of which probate, letters of administration or certificate of heirship is granted by the courts. I will now give some evidence regarding the cost of administration in the Bombay Presidency. The total public expenditure in the Bombay Presidency in 1856-57, was 4,814,356 *l.* In the year 1870-71, it amounted to 8,266,178 *l.* being an increase of 100 per cent. in 14 years. With some exceptions, in every department, there has been an increase in the same or even a greater proportion. The army charges have been enhanced from 1,762,413 *l.* to 3,122,566 *l.*; judicial and police charges from 372,160 *l.* to 904,829 *l.*, being an increase of 300 per cent.; medical charges from 24,236 *l.* to 127,941 *l.*, or more than 500 per cent. It appears from the Bombay Administration Report that the expenditure for the realisation of land revenue, which amounted in 1864-65 to 34 lacs of rupees, has been inhanced to 69 lacs in 1869-70. In the short interval of five years there has been an increase of 35 lacs, or more than 100 per cent. In the Customs Department there was an increase from 6¾ lacs to 8¾ lacs, an enhancement of 33 per cent. Law and justice enhanced, in five years, from 36¾ to 50 lacs, being an increase of 13¾ lacs, or 35 per cent.; medical services from 5⅓ lacs of rupees to 11¾ lacs, or more than 100 per cent.; political agencies and foreign services from 7¾ lacs of rupees to 12 lacs, or more than 75 per cent. In 1858 there were two Revenue Commissioners, 13 collectors and magistrates, and 51 assistants and supernumerary assistants, in all 66 covenanted civilians, employed in the Revenue and Magisterial Department. This year 123, or double the number, of civilians are employed in the Bombay Presidency, at a cost of 14 lacs of rupees per annum. I will show to the Select Committee that a considerable reduction could be made in the Revenue and Magisterial Departments. The total cost of this department amounted to 39 lacs in 1870-71. (In this year there was an increase of 3⅓ lacs over the expenditure of the previous year.) The salaries of the Revenue Commissioners (3,500 rupees) are very high and susceptible of reduction by 1,000 rupees. Their assistants get more than 12,000 rupees. Then there is a large and highly paid Survey Department, consisting of eight superintendents and 40 assistants, with a large establishment, costing more than 7 lacs a year, a District and Talookdaree Settlement Department costing 2½ lacs; total nearly 10 lacs a year. The collectors and assistant collectors have been relieved of a good deal of the work which formerly devolved on them, such as granting remissions on inspection of the crops, inquiring into ryots' petitions, superintending the realisation of arrears, making Tuccaee advances, inducing the ryots to take up lands, superintending the collection of inland customs, excise, and transit duties, superintending the police, forest, and education departments, inquiring into Inams, cash allowances, &c. Consequently, if the revenue and magisterial functions are separated, as suggested by me, the Collectors will, I believe, be able to do the entire revenue work of their respective districts, with the assistance of the mamlutdars and district deputy collectors, and the services, of most, if not all, the covenanted assistants could be dispensed with without impairing the efficiency of the public service. In making the separation of the two departments the Collector might be allowed a moiety of the salary of the combined post of Collector and Magistrate, the other moiety to be appropriated towards the employment of magistrates on salaries ranging from 800 rupees to 1,000 rupees. If the Committee permit, I will hand in a Paper showing the financial effect of the separation which I recommend (*handing in a Paper*). In this statement I have provided for separate classes of judicial officers, namely, 12 district magistrates and 66 deputy magistrates of five grades. Although the scheme is based on the proposal to relieve the Mamlutdars of their judicial functions, yet no great reduction is made in their numbers nor their salaries, in order that these officers might be able to devote all their time and attention to their executive duties. This is a rough outline of the scheme which I venture to submit for the consideration of the Committee. It will show that the entire separation of the executive and judicial functions which I advocate can be effected with advantage to public interests; and that instead of involving any increase, it will effect a saving of about five lacs a year, or nearly one-fourth of the present public expenditure in the Land Revenue Department. This is exclusive of charges on account of revenue survey, land settlement and alienation, amounting to about 11 lacs a year, which admit of reduction to the extent of nearly one-half, or at least one-third. There are three alienation and settlement officers on salaries ranging from 700 rupees to 1,200 rupees each, with a staff of assistants and establishment. From 1856 to 1860 the cost of the Alienation Department, N.D., amounted to about 50,000 rupees per annum. During the last 11 years the cost has, on an average, amounted to about 23,000 rupees per year. In 1869, in reply to inquiries made by the Government of India, the alienation settlement officers reported that all inquiries and settlements of alienated revenues had been very nearly completed, and yet this department is continued from year to year, and its inquiries have been protracted, although two years ago the Government of India asked the Bombay Government to abolish the department and provide for these officers elsewhere as early as possible. These instructions have not been carried out. The revenue

revenue survey and settlement operations have been going on for several decades in the Bombay Presidency at a heavy annual charge, which amounted last year to 12 lacs of rupees, and are likely to continue as a permanent charge, unless Government take steps to bring these operations to a speedy termination, and relieve the agricultural and other classes of the people from anxiety and apprehension. The officers of this department are actuated with the desire of enhancing the land tax and filling the coffers of Government. The enhancements of land revenue and settlement which they have made since 1860 are felt to be very heavy and excessive, as I have already shown. The salaries of the commissioner and deputy commissioner of customs, 42,000 rupees and 18,000 rupees per year are very high, and could be reduced. The salary of the Inspector General of Prisons can be reduced from 1,500 rupees to 1,000 rupees per month, and of the Registrar General from 2,000 rupees to 1,000 rupees. In the year 1856 the number of superintendents and assistant superintendents of police was 18; the salaries of the former ranged from 500 rupees to 800 rupees per month. Now there are 34, or nearly double the number, and the salaries of the superintendents range from 800 rupees to 1,200 rupees. These appointments and salaries should be reduced to the former scale. I have already shown that the salaries of the Director of Education (2,500 rupees) and of the Education Inspectors (800 rupees to 1,500 rupees) are excessively high and admit of considerable reduction. The officers of the Forest Department are also paid very highly. Formerly this service consisted of one conservator and five assistants on small salaries. Now there are three conservators on 1,000 rupees each, three deputies on 700 rupees, and 13 assistants on 250 rupees to 350 rupees, and three sub-assistants. Only one Native, who was sent out from England a few years ago, occupies the higher grade; all the rest of the officers in this, as well as the Police Department, are filled by Europeans. The receipts from forests in the Bombay Presidency, including Scinde, amounted last year to 11 lacs, nearly the whole of which is absorbed by the working and establishment charges, which amount to nine lacs. This is also the case in the other Presidencies and Provinces as shown by the provincial budget estimates of the Forest Department, published last year by the Government of India. The total receipts of 1870-71 for all India were 46½ lacs, and the expenditure was 37¾ lacs. This year the expenditure has been enhanced to 44¾ lacs. I will put in a memorandum which will give the Committee some idea of the practical working of the Forest Department in the Bombay Presidency (*handing in a Statement*). In 1866 there were 130 covenanted civilians employed in the Bombay Presidency; now there are 174, being an increase of 44 civilians. The post of Collector of Bombay was formerly held by an uncovenanted servant on 1,500 rupees; now the salary has been enhanced to 2,500 rupees. In an Official Memorandum by Sir H. L. Anderson on the strength and supply of the Civil Service, annexed to the Select Committee's Report for 1872, page 651, that officer says, "The only representation made as to excessive numbers in the Civil Service has proceeded from Bombay, in which Presidency it may be admitted that, at the present moment, the service is overstocked. The Government of Bombay at the end of 1849, stated it had in its requisitions for 1870 and 1871, applied for 19 more civilians than it actually wanted * * The Bombay Civil Service is, at the present time, numerically stronger by about 20 than it ought to be." In the Bombay Budget for 1870-71, I find a charge of 1 lac of rupees for "Allowances to Civil Servants out of Employ," and in the Budget for 1871-72, there is a similar charge of 60,000 rupees. In 1856-57 the charges of collection of revenue amounted to 32 lacs. In the abstract of revenue appointments prepared by Mr. Gay, and inserted in the Appendix to the last year's Report, the aggregate amount of appointments and establishments for the collection of Land Revenue for the Bombay Presidency in the year 1870-71, is put down at 58,08,871 rupees, and the proportion of the cost of collection to the Land Revenue amounts to 16 per cent., a rate which shows the high cost of the ministration. In naval expenditure there is an increase of 2½ lacs in 1871-72. It includes the State Yacht establishment, costing 18,400 rupees a year. I will now say a few words with regard to the Budget system which has been in existence for some time in the Goverment of India. A Budget is prepared every year by the financial minister, in which the revenue and expenditure of India is given, and the proposals for expenditure in the course of the current year. That Budget used to be submitted to the Legislative Council annually, but last year that practice was discontinued on the ground that as there was no additional taxation to be imposed, it was not necessary to submit any Budget to the Legislative Council. But I submit that it is necessary to provide a check against the increase of expenditure. The expenditure, as the Committee are aware, has gone on increasing from year to year. It has increased from 32,000,000 in 1856 to 52,000,000, an increase of 20,000,000 during the time which has elapsed since the transfer of the government from the East India Company to the direct sovereignty of the Crown. The very fact of such an immense expenditure in this interval of time shows the necessity for a revision of the financial arrangements, and for imposing a check against the expenditure; that check, I submit, could be applied with better effect in India itself, than in this country, and therefore I beg to submit for the consideration of the Select Committee the advisability of recommending a well-devised plan for the preparation and submission of the Budget of British India by an independent and trained financier, and its being laid before a properly constituted Council. The Council as at present constituted is defective, inasmuch as the non-official element is very small, and not such as to be able to exercise a considerable influence in the deliberations of the Assembly.

Mr. *Nowrozjee Furdoonjee.* 18 July 1873.

6984. *Chairman.*] That matter has been brought before the notice of the Committee; perhaps you will therefore pass to some other matter?—I will conclude the statement of my views in a few words, namely, by saying the Budget of India ought to be brought forward before a Council; the basis of that Council should be extended, and a number of properly elected representatives of the people should be appointed, not such as two or three Rajahs, as are now appointed in the Council, who are not British subjects, and

Mr. *Nowrozjee Furdoonjee.*

18 July 1873.

who are not intimately conversant with the wants and feelings of Her Majesty's Native subjects, and who, moreover, being ignorant of the English language, in which the proceedings of the Council are conducted, are not able to understand and follow the debates that take place; but native representatives of a different class, fully competent, understanding the English language thoroughly, and not selected from the class of Rajahs, or tributary princes, but from British subjects, should be admitted into the Council together with a suitable number of European non-official members, and before such an extended Council the Budget should be brought forward from year to year, and each item on the revenue side and also on the expenditure side, should be carefully discussed, and after a full discussion should be voted upon and adopted, so that a check may be provided; and any proposed increase of expenditure may be cut down and kept within proper bounds. Unless that is done I see no hope of a good check being placed on the increase of expenditure. I submit that the very great increase of expenditure that has taken place is one of the defects of the financial administration, and one of the causes of the large deficits and the embarassments of the financial affairs of the British Indian Empire. This is a subject which deserves the careful consideration of the Committee. I now will take the liberty to say a few words with regard to the "Home expenditure," and the financial relations between England and India. I submit that this is a subject that should be duly considered by the Committee with a view to adjust these financial relations on a just and satisfactory footing. At present they are not so. I respectfully submit that with regard to the cost of the India Office Establishment, consisting of the Secretary of State for India in Council and their Establishment (150,000 *l.*), is charged to the Indian Revenues. This charge and a number of other charges, which I will presently mention, should be borne by the Imperial Exchequer, and not thrown on the Indian Treasury; for this reason, that England at present does not contribute a single farthing towards the maintenance of her supremacy over the British Indian Empire. From a Parliamentary Return, which was laid before the House of Commons, and printed by Order of the House on the 24th of February 1871, I find that the Colonies cost a net sum of 3,620,093 *l.* to the Imperial Treasury; and in that cost is included the cost of regular troops, naval charges, and of governors, justices, secretaries, hospitals, barracks, lighthouses, ecclesiastical charges, and a number of other charges. That being the case, as Great Britain is not subject to any charge on account of India, I submit that for the maintenance of Her supremacy over the British Indian empire, it is requisite, as a matter of fairness and equity to the Indian empire, that the cost of the India Office establishment should be borne by the Imperial Treasury in the same way as the cost of the Colonial Office is borne by the Imperial Treasury; and the contribution towards the expenses to the Mission to the Court of Persia, and towards the cost of her Majesty's Establishments in China, amounting in the one case to 12,000 *l.*, and in the other case to 22,422 *l.*, should also be borne by the Imperial Treasury; the mission, and the appointment of all the officers employed in Persia, are entirely in the hands of the Foreign Office in this country; the Government of India has no control over it, and yet India is made to pay the bulk of the cost of that mission; and in the same way the cost of the maintenance of the Royal Lunatic Asylum at Ealing, and the maintenance of lunatics at other asylums, amounting to a large sum, should also be met from the Imperial Exchequer, as also the cost of the Indian troop service and of the passage of troops, amounting to upwards of 330,000 *l.* a year; and the contribution towards the expenses of Her Majesty's ships employed in the Indian seas, amounting annually to close upon 70,000 *l.*, should be borne by England. England devotes several of her Navy for the protection of the Colonies, and for cruising and for the suppression of piracy and slavery, the protection of British commerce, and other purposes, without making any charge on the Colonies; and I submit that if, for similar purposes, she devotes a few vessels for cruising on the Persian Gulf or other waters, the expense should not be charged to the Indian Treasury, but should form a part of Her Majesty's Naval expenses. Then the payment to Her Majesty's Exchequer on account of disbursements in the War Office in respect of British Forces serving in India, including recruiting charges and pay of colonels, amounting to 510,000 *l.*, should also be paid out of the Imperial Exchequer. That will be a small contribution towards the military expenses of British India; but in consideration of the great advantages which England derives from the British Indian Empire, she may justly be called upon to bear these expenses that I have mentioned. They will not amount to a large sum, but they will afford a great relief to the embarrassed state of the finances of India; and on principle, if these expenses are defrayed by the Imperial Exchequer of this country, it will be an act of justice, and would be treating British India in pretty much the same way as England has been treating the Colonies; and also by not attempting to saddle any costs on the Indian Treasury other than what that Treasury may justly be called upon to pay, a great relief would be given, and much of the financial embarrassment would be removed, and also if arrangements were adopted for submitting the Indian Budget to Parliament at a suitable time when members have proper time to devote to it, some further check should be provided, and the budget should not be gone through as a matter of form, but in reality; all the items of expenditure incurred in this country should be carefully examined, and voted upon, so as to provide a perfect check on the part of Parliament over the expenses of the Indian Treasury in this country. I will not detain the Committee longer. In the testimony which I have given before the Committee, I disclaim being actuated by any hostile motives towards the English Government; in fact, I have been nurtured, and brought up under the English Government and it is my firm conviction that it would be a great calamity to India if the connection between India and England were severed. I am an advocate of the permanency of the continuance of that connection, and all my object in giving evidence is that such defects as can be shown to have existed in the mode of administering the finances of India should be pointed out and remedied, in order that the people of India may enjoy to a greater extent the inestimable advantages

tages which they derive from the British rule.

6984.* Sir *D. Wedderburn.*] In reference to your description of the state of debt and misery in which the ryots are, in many parts of the Bombay Presidency, and the Deccan in particular, is it not the case that one cause, at least, of that condition is over-population?—No, I beg your pardon; it is not over-population.

6985. You do not consider that the Bombay Presidency has increased in population of late years, and that that is one reason why the ryots are in a state of poverty and debt?—No, certainly not; over-population is not the cause,

6986. Has the population in the Deccan increased of late years?—Not much.

6987. It has, in some parts of India, very greatly increased of late years, has it not?—Yes, it has in some parts; particularly in the city of Bombay.

Mr. *Nowrozjee Furdoonjee.*

18 July 1873.

Tuesday, 22nd July 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir Thomas Bazley.
Mr. Beach.
Mr. Bourke.
Mr. Campbell-Bannerman.
Mr. Beckett Denison.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. NOWROZJEE FURDOONJEE, re-called; and further Examined.

Mr. *Nowrozjee Furdoonjee.*
22 July 1873.

6988. *Chairman.*] Do you wish to give an explanation of an answer which you gave on the last occasion of your examination?—Yes, I will put in the figured statement, which the Committee wanted me last time to give, in reference to my evidence regarding the enhancement of assessment in the Bombay Presidency, showing the area of the land that has been assessed, the amount of assessment, and the proportion; it is taken from the assessment reports of the Government revenue officers, with one or two explanatory remarks (*handing in the same,* vide *Appendix*).

6989. Is there any explanation which you wish to make with reference to another answer?—In confirmation of my assertion that the exaction of the local fund cess from cultivators in the Bombay Presidency during the currency of the existing leases which have not expired, is in breach of faith, the Committee will be pleased to allow me to quote the testimony of the Bombay Government itself. The last administration report contains the following important declaration:—"The small sum received from the one-ann cess in the frontier districts (of Scinde) is explained by the fact that the settlement at present existing there, which will not expire till 1878, does not admit of the imposition of the cess, in addition to the land revenue, without a breach of faith with the cultivators."

Colonel ALLEN BAYARD JOHNSON and Mr. GEORGE WELSH KELLNER, re-called; and further Examined.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

6990. *Chairman* (to Mr. *Kellner*).] THE Committee were very much struck with the apparent result of the statements which you made when you were last examined, that whilst there was a considerable decrease of the force of men in the army, there was a very large increase in the charge for the army during the last few years; and, therefore, it might be convenient if you would begin by explaining clearly what has been the nature and extent of the decrease of force, according to your view, and what for the same period has been the nature and extent of the increase of charge on account of the force, upon such basis as you may think most convenient to bring the matter clearly under the notice of the Committee?—Perhaps the expenditure may best be compared with that of 1863-64; the strength of the respective periods being also taken into account.

6991. 1863-64 being sufficiently distant from the restoration of order, and the change of the army system?—Yes. The expenditure of the present day could not be subjected to a closer test than by comparison with the expenditure of 1863-64, because that was a year of severe economy, and the total military expenditure was lower than in any year since the Mutiny, taking the charges in England and India together.

6992. Will you be kind enough to state what you make the charges in England and India together for the year 1863-64?—They amounted to 14,760,120 *l.*; the average strength of the European force during the year 1863-64 was 67,712 British soldiers.

6993. Exclusive of officers, and so on?—Exclusive of officers; and the strength of the Natives was 128,253. The European commissioned officers have in all cases been excluded from the returns of strength; for the soldier is the true unit of military expenditure. I propose, in order to get that unit, to take four native soldiers as equivalent to one European soldier, financially, for the purposes of comparison. The number 128,253 divided by four, gives 32,063; that will be equivalent to a total force of 99,775 men in 1863-64. The charges in 1871-72, in England and India together, amounted to 15,678,112 *l.* The force of British soldiers in the country, the average effective strength, was 58,437; and 115,196 Natives. Pursuing the same method of calculation, the native troops made a force equivalent to 28,799, and that gives a total strength of

87,236 men in 1871–72. By this comparison, the reduction in force is 12,539, or a little over 12½ per cent. of the strength in 1863–64. Then I find the cost per man in 1863–64. The total charge per man in 1863-64 was 147·93 *l.*; in 1871–72 the total charge was 179·72 *l.*; showing an increase of 31·79 *l.* per man, or 21·49 per cent. upon the rate for 1863–64.

6994. Now what would have been in due course the diminution of expenditure in the army, supposing things had remained as they were; and what has, in fact, been the increase on the same basis of price?—The decrease of expenditure can never correspond with the reduction of force, because any numerical reduction of force affects directly those grants only which provide for the soldier's pay, food, lodgment, clothing, and equipment, and not the grants for the staff, the departments, and general charges of the army. But setting aside this consideration, and supposing the conditions to have remained the same, the rate of expenditure for the diminished force would be about 12½ per cent. less than in 1863–64, and it would give a decrease of 1,853,871 *l.*, whereas there has been an increase of 917,000 *l.*; that shows an excess of about 2¾ millions to be accounted for, at the outside.

6995. Now, have you examined somewhat in detail the various heads of increase so as to be able to account for that amount in some general classified form?—Yes. I will endeavour to place the several items of increase in distinct groups of —(1.) Charges in England; (2.) Charges for improving the position of the British soldier in India; (3.) Corresponding charges for the Native forces; (4.) General charges for the administration of the army. In the first place, we take the charges in England, because the increase there is very considerable, and the items are only four to bring up the amount. The first is the charge for military stores. The increase in 1871–72 over 1863-64 on account of stores is 737,277 *l.*; 424,197 *l.* of this sum are for ordnance stores. The war *matériel* of armies everywhere at the present day is more costly than in the year 1863, and a large proportion of the outlay for stores in recent years was for the new pattern rifled guns, improved firearms, and equipment, for the British and Indian forces, expensive machinery for the manufacture of gun carriages, projectiles, small arms ammunition, and the like. The next notable item is on account of payments to the British Government for troops serving or having served in India; that is for non-effective as well as effective services, and the increase on that account amounted to 253,048 *l.* Then the charges for absorption of supernumeraries and gratuities to British officers on retirement from the service; also for education of Indian cadets, medical students at Netley, expenses of officers acquiring scientific knowledge, &c., &c., amounted to about 35,000 *l.* Then there are increased charges, amounting to about 100,000 *l.*, for furlough allowances under the operation of new furlough rules, which give increased rates of furlough pay. I may mention that the actual increase of charge on furlough allowances is very much more than 100,000 *l.*; but I have taken 100,000 *l.* as representing the increased charge resulting from the more favourable allowances received by military officers under the operation of the new furlough rules, as compared with the old rules. These four items alone account for 1,125,000 *l.* of the 2¾ millions. Then, the next group of items would include charges for the British army in India; and amongst these, first, is the extra 2 *d.* a day pay, with the additional 1 *d.* on re-engagement, of the soldier. That has been variously estimated. It was estimated at one-third of a million by General Broome, and subsequently it was estimated at 250,000 *l.*, but at the lowest computation it would be 200,000 *l.*; 2 *d.* a day is equal to 3 *l.* 1 *s.* for the year, and that multiplied by the number of British soldiers in the country, *plus* the additional pay for the second term of service, gives 200,000 *l.*; that is on the very lowest calculation. Then the increase of family allowances to British soldiers caused an increase of 22,500 *l.* The good conduct pay to soldiers at earlier periods accounted for 35,000 *l.* The improved scale of clothing accounted for 20,000 *l.*; then increased pay to paymasters, quartermasters, and riding-masters of the British service, 22,000 *l.*; then there were various little items of increase: for instance, the skeleton companies of Engineers, the conversion of one field and one garrison battery into mountain batteries, the addition of trained armourer serjeants to all British regiments in India, instructors of gunnery to each brigade of artillery, prizes for good swordsmanship to British cavalry corps, increased pay for the grooms of British cavalry regiments, amounted to 21,800 *l.* Then the additional cost of hill sanitaria for British troops, 25,000 *l.*; the recruit and convalescent depôt at Deolalee, 6,500 *l.*; the increased charges for musketry inspection, garrison instruction, gymnasia, army telegraphy, and soldiers' institutes, 13,000 *l.*; increased charges for barrack conservancy and supplies, 60,000 *l.*; and the improved scale of medical comforts, 10,000 *l.* All that would account for about 444,000 *l.*, as the additional charge for improving the condition of the British soldier in India. Then there are charges for the Native army, which constitute the next group; the good conduct pay to native soldiers at earlier periods than before, 57,000 *l.*; increased pay to Native commissioned officers of infantry and artillery, 35,000 *l.*; the appointment of second-doing-duty officers to Native corps, 28,000 *l.*; the reorganisation of the Madras Native Army and Bengal Sappers and Miners, 30,000 *l.*; cantonment batta to Native troops on furlough, 15,000 *l.*; compensation for dearness of provisions, 114,000 *l.*; and there are various other items which will be found in the detailed statement, bringing the total additional charges for the Native army to 328,410 *l.* Then there are certain general charges: for instance, the increased cost of transport, 235,000 *l.*; and in 1871-72, the charges for the Looshai Expedition, 133,000 *l.*, and the camp of exercise, 19,366 *l.* The increased pay to medical officers and veterinary surgeons, 23,500 *l.*; the increased charge for administrative medical staff, 11,000 *l.*; the revision of the subordinate medical department, 15,000 *l.*; increased pay to army warrant officers, 15,000 *l.*; abolition of half-batta rates of pay, 53,700 *l.* Then there were the transfer of the Lawrence Asylum, the Derajat Frontier Militia, the Viceroy's and Governor's bands, and the examiners of military and medical funds, amounting to about 38,000 *l.*; and the transfer of official postage (a formal charge on the Military Department, and a formal credit to postal revenue), of 45,000 *l.* These general charges amount to about 600,000 *l.*, and, with the previous groups of charges, bring up the total

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

total to over two and a half millions sterling. There are other increments of charge in the Ordnance manufactories in India, in the purchase of army remounts, in staff salaries; and lastly, through the Staff Corps system of promotion by length of service, instead of by succession to vacancies within a limited establishment. The effect of this has been to raise the cost of the officer no less than that of the soldier. In the year 1862, the establishment of the Indian army consisted of 571 general and field officers to 3,410 captains and subalterns, the whole costing 1,803,400 *l.* On 1st April 1873, there were 1,340 general and field officers to 1,610 captains and subalterns, the whole costing 1,947,124 *l.* Thus, whilst the number of officers has fallen from 3,981 to 2,950, the aggregate cost has increased by 143,000 *l.*—a result due, no doubt, to the abnormal proportion of the higher ranks. The number of officers receiving colonel's allowances has declined from 186 to 172, but must increase in future years. In the present year, 1873, there are (beside local officers) 64 officers of the Staff Corps in receipt of the colonel's allowance, amounting to 71,992 *l.* per annum. It has been computed that the number will increase to 316 in the year 1882, and that in the year 1892 the number of Staff Corps colonels' allowances will rise to 513, at a cost to the State of 577,000 *l.* But with this increase of colonels' allowances there will necessarily be a decrease in the effective list of officers and in the amount of Staff Corps pay.

[*The Witness then handed in the following Statement:*—]

MILITARY CHARGES for 1863–64, compared with 1871–72.

	Increase.	
CHARGES IN ENGLAND.	£.	£.

Besides various increases, resulting from the general rise of prices throughout the country, or from temporary causes, or through the effect of the staff corps system of promotion, which cannot be precisely stated.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

6996. Now have you, in accordance with the wish expressed to you by the Committee, worked out the details of the more material items, showing the exact increase and decrease in a figured statement?—Yes; and I have endeavoured to meet the wishes of the Committee as far as possible. To have fixed a precise value to every measure affecting military expenditure, from the time of the Mutiny to the present time, and to throw the whole into the form of a balance-sheet, would be a work of extreme difficulty; in fact, it would be next to impossible. But I may mention that immediately on receiving the request of the Committee for these further details, I telegraphed to India for the detailed accounts of 1862-63 and 1863-64. Those detailed accounts existed in manuscript only. It was thought unadvisable to forward them, unless the Committee required them through the Secretary of State for India. We were therefore thrown upon such data as were available in the India Office. Colonel Johnson and I have been at considerable pains in preparing the statements which have been circulated amongst the members of the Committee. What we have endeavoured to show, is the average annual increase consequent upon the measures of re-organization and revision detailed in those statements; and to express the difference, in those particular items, between the charges of 1871-72 and the charges of 1862-63 and 1863-64. The statements are not so complete as could be desired, but we have done the best that we could with the materials at our disposal.

6997. Do you think that they are sufficiently complete to give a fair view of the course of increase and decrease, though they may not amount to arithmetical precision sufficient to make up a formal balance-sheet?—Yes; and they give the details as regards the principal grants, that is, the cost of the army, garrison, and administrative staff—grants always likely to be challenged—the pay and provisioning of the army, the medical services, &c.

6998. Will you kindly bring these various statements that you have prepared, distinctly under the notice of the Committee, to explain exactly what each of them represents?—The first series of statements have been marked A. A 1 is "A comparison of the expenditure in England and in India on account of the army in India, for the years 1862-63, 1863-64, and 1871-72, with the increase and decrease in 1871-72 compared with the expenditure in 1863-64."

6999. Does that result in the net increase which you have stated to the Committee?—Yes. In the statement which I have just made, I have endeavoured in a general way to account for that increase in 1871-72, compared with 1863-64, when the reduction of force pointed to a decrease of 1,853,000 *l.*

7000. Perhaps you might give a general total of the increase and decrease, showing the net increase?—The total increase is 1,881,436 *l.*, and the decrease 963,444 *l.*, giving a net increase of 917,992 *l.* over the total expenditure of 1863-64.

7001. Is it more correct to say that the total increase on some items of the account, and the decrease on other items, gives so much?—Yes. Statement A 2, exhibits the changes involving increase and decrease under Grants I., II., III., and IX.; those are the principal grants under which detailed information was requested.

7002. That is given for every year?—Yes; that is, the year denotes the period when these increases or decreases were initiated; but the amount expresses the average effect of each measure upon the annual charges of the army.

7003. Not the mere casual increase arising from the measure coming into force at any period of the year, but what may be called the permanent annual charge resulting from the operation?—Yes; the permanent constant annual charge. We have taken the period of 1871-72 compared with the two years when the expenditure was so low, that is, 1862-63 and 1863-64.

7004. Then it applies to Grants I., II., III., and IX.?—Yes; those are the grants where there is a large amount of the personal charges which were challenged. The statement that I have just given, gives you the general results.

7005. Mr. *Fawcett.*] Do these Tables bring out with sufficient clearness what India gets in return for this large increase of charge?—Yes; I think the statement which I have just given shows how the expenditure has increased, mainly, through the measures adopted for improving the efficiency of the British and Indian forces, and of the military administration generally.

7006. I mean on the face of your Table, do you think it shows or does it state what is the justification of those increased home charges?—No, I do not understand that I am required by the Committee to justify every increment, whether of Home or Indian military charges.

7007. *Chairman.*] Then have you a further explanatory statement showing the details under the several grants?—Yes, there are several such statements; A 3 is "Grant I. Army and Garrison Staff Comparison of Charges for 1862-63 and 1871-72." The next is A 4, "Comparison of Charges for Officers and Office Establishments, Bengal, in 1862-63 and 1872-73 respectively." The next is a similar comparison for Madras, that is A 5; A 6 is a similar comparison for Bombay. A 7 compares the Charges for all three Presidencies, giving the sum of the three. The object here was to show the actual increase or decrease for the officers, as distinguished from the ministerial establishments; and I think it will be observed that in every case the cost of officers has decreased, whilst the office or ministerial establishments have greatly increased. A 8 compares the average salaries of the staff of the Army in 1856-57, and in 1872-73, to show how the increase has occurred, not only in the staff salaries, but also in the military pay.

7008. This enables us to compare the old organisation with the new?—Yes. Statement A 9 gives "Grant II. Administrative Staff; Comparison of Charges for 1862-63 and 1871-72."

7009. What is the next account which you have prepared?—A 10. It gives you, in a little more detail, the charges for each of the Presidencies. "Army Charges: Grant II. Administrative Staff; Comparison of Charges in all three Presidencies in the years 1862-63 and 1872-73 respectively."

7010. That sets out the details somewhat the same for each presidency?—Yes; then the next statement is A 11, "Grant III. Regimental Pay and Allowances. Expenditure of 1862-63 compared with that of 1871-72." That gives you the cost of each arm of the service, with the average effective strength at both periods.

7011. Is that both for Natives and Europeans?—Yes, both for Natives and Europeans.

7012. What is the next Table?—A 12 gives a similar

a similar comparison : "Grant III. Regimental Pay and Allowances. Expenditure of 1863–64 compared with that of 1871–72."

7013. What is the next Table?—The next will be A 13, "Medical Service. Expenditure of 1863-64 compared with that of 1871-72."—(*The Statements were handed in,* vide *Appendix.*)

7014. Then have you prepared any further statement with reference to the Staff Corps, as wished by us?—Yes; these are returns of the Staff Corps and the local services of the Army. The first return is a "Disposition Return of Officers of the Indian Staff Corps and of the Local Services in the three Presidencies on the 1st April 1862;" that is B 1. B 2 is the "Disposition Return of Officers of the Local Service and General List, Indian Army, on 1st April 1873." B 3 is the "Disposition Return of Officers of the Indian Staff Corps in the three Presidencies, on 1st April 1873." B 4 is a "Statement of the Number and Cost of the Officers of the Indian Staff Corps, of those on the General Lists of Cavalry and Infantry, and on the Cadres of old Regiments, in the years 1857, 1862, and 1873 respectively." Then B 5 is a statement of the "Average Effective Strength of the European and Native Army in India, compared with the Established Strength in the years from 1862–63 to 1871–72." This is an abstract of the voluminous returns that I have put in; the Committee requested that I should make an abstract of them, and this is the abstract prepared in accordance with the request of the Committee. The next Statement, B 6, gives the Effective Strength of the Army in India, European and Native, on the 1st of May in each year, from 1862 up to the year 1872.

7015. Then this exhibits, as far as convenient in a short tabular form, a view of the condition of the whole European and Native forces in India during the last 10 years?—Yes. (*The Statements were handed in,* vide *Appendix.*)

7016. As you have already given an explanation of the Grants numbered I. to VI., will you be good enough now to give an explanation of what has taken place with reference to the expenditure, under Grant VII., for Barrack Establishments, Supplies, and Services?—This grant covers all expenses connected with the Staff and Establishments for the supervision of barrack-buildings, the cost of furniture, and other barrack supplies, and all charges connected with lighting, cooling, and conservancy. The strength of the executive establishments, exclusive of barrack serjeants, as they stood in 1861 and 1862, and now, is detailed in the following Table:—

Grades.	1861–62.	1871–72.
Bengal:		
Barrack Masters, 1st Class	20	18
Ditto 2nd "	14	14
Madras:		
Barrack Master	1	–
Barrack Masters, 1st Class	–	4
Ditto 2nd "	–	1
Bombay:		
Senior Barrack Masters	–	2
Barrack Masters, 1st Class	6	4
Ditto 2nd "	6	3
Ditto 3rd "	–	7
Total	47	53

The aggregate expenditure under this grant exhibits a material increase. Omitting 1861–62, a year of extensive changes in the organization of the army in India, the charges rose from 214,657 *l.* in 1862–63 to 285,922 *l.* in 1863–64, and on to 356,459 *l.* in 1864–65; and to 379,590 *l.* in 1868–69, when they attained their maximum. The total barrack charges in 1871–72 amounted to 336,349 *l.*, having been 285,922 *l.* in 1863–64. A portion of the increase is due to changes in the classification of barrack expenditure, which previously to 1864-65 were included in the Commissariat Grant. But there has also been a largely increased outlay, in all three Presidencies, for extensive renewal and repair of barrack furniture, owing partly to the abstention from replenishment of stock in 1862-63-64, partly to the necessity of adapting the fittings and furniture to the improved construction of barracks, partly to the provision of trestle cots, and a more liberal scale of bedding, and other barrack comforts; the cost in all these cases being enhanced by the general rise in the prices for labour and materials throughout the country. Then there has been an increased charge for the better conservancy of barracks, and for stores and apparatus for military gymnasia. The following figured Tables illustrate the variations in the several items of barrack expenditure from 1864-65, the defective compilation of prior years rendering it exceedingly difficult to extend the review further back:—

Executive Establishments.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1864–65	22,437	3,945	6,891	33,273
1865–66	20,394	4,107	7,130	31,631
1866–67 (11 months)	21,684	3,880	6,816	32,380
1867–68	24,285	5,998	7,970	38,253
1868–69	26,075	6,385	8,152	40,612
1869–70	25,758	6,761	8,165	40,684
1870–71	25,714	4,848	7,754	38,316
1871–72	24,359	5,119	7,423	36,900

It will be seen that the charges on account of the executive establishments attained the maximum in 1869-70; those for the preceding year, 1868-69, being almost as high. In 1865-66, the Bengal establishment was reduced by two 2nd class barrack masters, and the number of barrack serjeants has been since diminished by 10; towards the end of 1866-67, the Barrack Department of the Madras Presidency was reorganized and placed on the footing of the other Presidencies, causing the addition of three barrack masters of the first, and one of the second class, and an annual charge of 1,700 *l.*; but this extra charge was partly counterbalanced in 1870-71 by the retirement of the senior barrack master (a colonel of artillery), and the succession of a junior officer. The Bombay establishment was augmented at the close of 1867-68 by one third class barrack master and two barrack serjeants, in connection with the Overland Transport Service. On the whole, bearing in mind that half batta rates of pay have been abolished, that a larger number of commissioned officers of high rank are now in the department, that the pay of

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

warrant and non-commissioned officers has been increased, and postal charges added to the burdens of every department of the military service, the present cost of executive barrack establishments contrast very fairly with that of earlier years.

7017. Mr. *Fawcett.*] It is obvious that before conclusion can be accepted, it is necessary very minutely to inquire into it, because we want to know why all these things have been increased?—It is one particular item, only the cost of the officers, that I now refer to.

7018. If you say that this contrasts very favourably with what has gone before, it means that the money has been well spent. We are not merely an Accounts Committee, but we are a Committee for inquiring into financial policy. You do not state any reason there; you say that several charges have been increased, and therefore the expenditure contrasts very favourably with that of 1862–63, but before you can prove that, you must justify every one of those increases?—I mean that it is favourable by comparison. I mentioned at the beginning of my examination to-day that the expenditure of the present day could not be subjected to a more severe test than by comparison with the expenditure of the years 1862–63 and 1863–64, because those were years of great economy. I say that in this particular item, viz., the cost of the officers of the Barrack Department, the expenditure of the present day contrasts very favourably, because it is only 3,000 *l.* more than the expenditure of those economical years; if you accept that as a fair standard, and consider the great improvements in barrack arrangements during the interval, the Government of India are not spending, in this particular item, more than they did then.

7019. *Chairman.*] Will you proceed with your statement on Grant VII.?—I will give an abstract of the subordinate establishments (including lighting, cooling, and conservancy):—

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1864–65 - -	44,036	13,726	13,158	70,920
1865–66 - -	50,530	16,745	15,839	83,114
1866–67 - - (11 months)	52,177	15,743	18,722	86,642
1867–68 - -	55,926	17,713	21,967	95,606
1868–69 - -	60,888	18,126	21,825	100,839
1869–70 - -	66,894	18,939	23,355	109,188
1870–71 - -	62,370	19,057	21,066	102,493
1871–72 - -	63,309	19,247	15,322	97,888

This abstract of the annual cost of subordinate establishments, including the regular barrack, conservancy, punkah-pulling, tattie-watering, and lighting agencies shows an increase of nearly 50 per cent. Charges which were at 70,000 *l.* in 1864–65, have risen to an average of more than 100,000 *l.* in recent years, the cost of the establishments for pulling punkahs and watering tatties exhibiting an advance of nearly 30,000 *l.* since 1864-65. It may be here explained that prior to the year 1870–71 the practice in the Madras Presidency was to allot a fixed sum annually to officers commanding regiments and batteries to provide for punkah-pulling establishments; but since 1870–71 the State has paid the actual cost of such establishments, as in the other presidencies. The increase in conservancy establishments is due to the entertainment of additional men and higher rates of wages, particularly for troops located at hill stations. The remarkable increase in the cost of pulling punkahs and watering tatties has attracted the attention of Government; measures of reduction have been adopted, and others are under consideration. The cost of establishments for lighting barracks has been considerably reduced by the employment of soldiers in cleaning and lighting the lamps.

Purchase and Repair of Barrack Furniture.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1864–65 - -	78,685	5,651	10,584	94,920
1865–66 - -	65,193	9,731	9,885	84,809
1866–67 - - (11 months)	48,141	9,947	19,912	78,000
1867–68 - -	57,141	6,313	27,999	91,453
1868–69 - -	59,109	6,845	27,189	93,143
1869–70 - -	39,854	5,820	29,469	75,143
1870–71 - -	31,384	4,538	23,686	59,608
1871–72 - -	42,737	5,466	18,898	67,101

In this comparison Madras stands prominent for economy, although it has a larger army to provide for than Bombay. The charges under this head are not susceptible of efficient check or control by the Military Accountant Department. All supplies of new and repairs of old furniture, though paid for by the Military Department, are effected through the agency of the Public Works Department, and the annual requirements have been determined at army head-quarters. The supply of furniture adapted for the modern description of barracks, the provision of new trestle cots, of requirements for soldiers' libraries, reading and recreation rooms, have likewise been creative of additional expense. The unit annual charge per soldier for barrack furniture in each of the three Presidencies is set forth in the following Tables:

	Bengal.	Madras.	Bombay.
	£.	£.	£.
Total expenditure for seven years from 1864–65 to 1870–71, inclusive.	379,509	48,844	148,725
Effective strength of troops for the same period.	252,622	82,521	79,216
Average cost per man per annum £.	1·5	0·5	1·8

Purchase of Bedding and Compensation in lieu thereof.

Years.	Bengal.	Madras,	Bombay.	Total.
	£.	£.	£.	£.
1864–65 - -	55,848	23,817	16,153	95,818
1865–66 - -	43,921	16,281	10,867	71,069
1866–67 - - (11 months)	30,944	2,703	17,414	51,061
1867–68 - -	33,281	6,054	11,742	51,077
1868–69 - -	28,243	4,640	29,427	62,310
1869–70 - -	28,015	3,289	15,871	47,175
1870–71 - -	30,040	6,701	9,517	46,258
1871–72 - -	35,361	6,053	10,190	51,604

These charges vary according to fluctuations in prices, the strength of troops, and the extent and periods of reliefs. Owing to the high price of cotton in 1864–65, the expenditure was at its maximum in that year; since then it has gradually subsided. The rise in 1867–68 in Bengal and Madras is due to the grant of compensation in lieu of bedding to men re-engaging under the new Enlistment Act of 1867; the extra expenditure on this account in Bombay

Bombay was included in the charges of the subsequent year (1868–69), which were further increased by the rise in prices, by extensive purchases of bedding from the surplus stock returned from Abyssinia, and by the grant of additional compensation consequent on a change in the date of issue of bedding to the troops. The causes which have operated in recent years to reduce the charges for bedding and compensation are: the importation since the year 1865-66 of blankets and sheeting from England for the troops in the Bengal and Madras Presidencies, the cost thereof being included in the Home accounts; reduced strength of troops; reduced prices, and the discontinuance in 1868–69, of compensation for bedding to soldiers re-engaging under the Enlistment Act of 1867. The following calculation, which gives the average cost of a soldier's bedding in each Presidency, taken over a period of seven years, exhibits an average charge per head of 0·9 *l.* in Bengal, 0·7 *l.* in Madras, and 1·4 *l.* in Bombay. A revised and uniform scale of bedding for the three Presidencies has recently been sanctioned, with the expectation of an annual saving of 19,000 *l.*

——	Bengal.	Madras.	Bombay.
	£.	£.	£.
Total expenditure for the seven years from 1864–65 to 1870–71, inclusive.	250,293	63,484	110,993
Effective strength of troops for the same period.	252,622	82,521	79,216
Average cost per man per annum £.	0·9	0·7	1·4

Supplies for Lighting and Cleaning Barracks and Hospitals.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1864–65 - -	12,052	10,570	6,746	29,368
1865–66 - -	16,568	10,936	9,329	36,833
1866–67 - - (11 months)	12,446	11,271	10,500	34,217
1867–68 - -	18,579	10,184	13,039	41,802
1868–69 - -	19,368	8,288	11,847	39,503
1869–70 - -	16,290	8,982	11,280	36,552
1870–71 - -	14,980	8,912	10,837	34,729
1871–72 - -	16,649	8,671	11,655	36,975

The cost of these supplies necessarily varies with the market prices of the day. The enhancement of cost in Bengal and Bombay since 1864–65 is equivalent to 41·0 and 74·0 per cent. respectively, while in Madras, the expenditure for 1871–72 evinces a decrease equal to 18·0 per cent., experienced for the most part since 1867–68, consequent upon a fall in the price of oil. Considerable improvements have been made in the mode of lighting the barracks; kerosene is much used, the extra cost of the oil and lamps forming items of increased expenditure.

——	Bengal.	Madras.	Bombay.
	£.	£.	£.
Total expenditure for the seven years from 1864–65 to 1870–71, inclusive.	110,284	69,144	73,580
Effective strength of troops for the same period.	252,622	82,521	79,216
Average cost per man per annum £.	0·4	0·8	0·9

It will be necessary to keep in view, in considering the average unit cost of light as it obtained at each of the three Presidencies from 1864–65 to 1870–71, the formation of reading, recreation, and billiard rooms for the use of the British soldier. The figures given above show that the charge per man for lighting in Madras and Bombay greatly exceeds the corresponding charge in Bengal.

Miscellaneous.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1864–65 - -	21,133	1,663	9,361	32,157
1865–66 - -	20,240	3,103	2,760	26,103
1866–67 - - (11 months)	27,821	3,198	3,720	34,739
1867–68 - -	32,913	4,066	5,132	42,111
1868–69 - -	31,325	7,458	4,399	43,182
1869–70 - -	31,723	8,115	4,909	44,747
1870–71 - -	35,311	6,748	3,865	45,924
1871–72 - -	35,592	6,524	3,765	45,881

From this statement it will be observed that with the exception of 1866–67 (a year of 11 months only), the aggregate expenditure has steadily increased, having risen from 32,157 *l.* in 1864–65 to 45,881 *l.* in 1871–72. The sanction of additional establishments for the supply of water to troops at certain stations in Bengal, and the issue of water filters for the use of barracks at all stations occupied by British troops have materially added to the miscellaneous charges.

——	Bengal.	Madras.	Bombay.
	£.	£.	£.
Total Miscellaneous expenditure for the seven years from 1864–65 to 1870–71 inclusive.	200,467	34,353	34,146
Effective strength of troops for the same period.	252,622	82,521	79,216
Average cost per man per annum £.	0·7	0·4	0·4

The following calculation exhibits the average annual cost per soldier under the head of barrack expenditure. On a review of the charges of the Barrack Department from 1864–65 to 1870–71, that is for seven years, it appears that the average cost per soldier is against Bengal and Bombay, and in favour of Madras. Nor is the difference in the cost trifling, being as 4·5 in Madras to 7·0 in Bombay, and 5·9 in Bengal, a difference not accountable on any theory of prices.

——	Bengal.	Madras.	Bombay.
	£.	£.	£.
Total Barrack expenditure for the seven years from 1864–65 to 1870–71, inclusive.	1,499,722	371,799	556,255
Effective strength of troops for the same period.	252,622	82,521	79,216
Average cost per man per annum £.	5·9	4·5	7·0

It seems more natural to look for the explanation in the vigilance or otherwise of the local administration. The Barrack Department in Bengal has been lately transferred in part to the

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

Public Works Department, and further changes are contemplated which it may be hoped will conduce to the more efficient and economical working of the department, especially as regards the item of barrack supplies and subordinate establishments which imperatively call for careful supervision and rigid check.

7020. Now will you be good enough to give the Committee an explanation of the change which has taken place in regard to Grant VIII., for the Administration of Martial Law?—The expenditure under this grant includes the pay and allowances of officers of the Department for the Administration of Martial Law, and of their office establishments, together with the charges for Courts Martial and Military Prisons. A comparison between the appointments connected with the Administration of Martial Law in India, as they existed in 1861–62, and as they now stand, will be found in the following Table:—

Grades.	1861–62.	1871–72.

Total - - -	24	22

During the years 1861–62 and 1862–63, the expenditure was compiled in a way that precludes comparison with the charges of subsequent years. But from 1863–64 to 1867–68, a gradual increase is perceptible, the charges between those periods having risen from 36,451 *l.* to 44,042 *l.*, due mainly to the promotion to higher ranks of the departmental officers. During the subsequent years, the expenditure was about the same as that of 1867–68, the increase consequent on the reorganisation of the department being met by a larger proportion of absentees on furlough under the new rules, and by reduction in the number of appointments. Whilst the aggregate disbursements in subsequent years varied very little, there is noticeable an increase in Bengal, and a decrease in Madras and Bombay. The increase was chiefly due to the reorganisation of the department under a barrister-at-law, as Judge Advocate General in India, on a salary of 5,000 *l.* a year. This necessitated an alteration in the designations of the then Judge Advocates General and deputy Judge Advocate General in the three Presidencies, to Deputy Judge Advocates General and Deputy Judge Advocates respectively. Further, the appointment of Deputy Judge Advocate General at Army head-quarters, Bengal was abolished prospectively. The other changes in the department were the abolition of one Deputy Judge Advocate General in Madras, consequent on the amalgamation of the command of the Northern with that of the Ceded Districts, and one in each of the Bombay and Madras Presidencies on the reduction of the divisional staff in 1870–71. Further important reductions in the staff of this department have been proposed, and these reductions have been carried out since. There is no longer a barrister at the head of the department; that appointment has been abolished, and the old arrangement reverted to. That will reduce the expenditure.

7021. Now will you be good enough to give an explanation of the change that has taken place with regard to Grant IX, for Medical Establishments, Supplies, and Services?—The charges under this grant comprise the pay and allowances of the supervising medical staff of the British and Indian establishments of medical officers on general duty in the country, of establishments attached to store depôts, and garrison and station hospitals, and the cost of medical supplies purchased in India. The classification of the accounts in 1862–63–64 precludes comparison with the accounts of subsequent years. Since the year 1863–64, the pay and allowances of regimental medical officers have been excluded from this grant, and compiled under Grant III. This accounts for the large apparent decrease, compared with the expenditure of previous years. The expenditure in Bengal exhibits, generally, a decrease, whilst that in Madras and Bombay presents a gradual increase, from 78,735 *l.* and 71,823 *l.* respectively in 1863–64, to 114,909 *l.* and 100,980 *l.* in 1871–72, excluding the expenditure transferred to Grant III. There has been considerable increase in the medical expenditure of the country, chiefly in the *personnel* items, since 1864–65. The causes of this enhancement are: higher rates of staff salary and pay to medical commissioned and warrant officers, and medical subordinates, accelerated promotion after fixed periods of service, reorganisation of the administrative staff (by which the number of medical officers in the country was greatly increased), increased pay to veterinary surgeons, the establishment of lock hospitals, more liberal pay to office establishments, the addition of postal charges, and other items of expenditure incidental to a new and rapidly improving system of sanitation. As a slight set-off against these sources of increase, may be mentioned the transfer of the cost of general hospitals to the civil department, the reduction of certain staff appointments, and the abolition of some of the medical store depôts. The rise in 1864–65, in all the Presidencies, is due to the revised and enhanced rates of pay sanctioned in that year to all medical officers. In that year also, the cost of hospital supplies obtained through the Commissariat was transferred to the grant for medical services. The expenditure in subsequent years will now be noticed under the principal headings. The cost of the supervising staff of the Indian Medical Establishment was as follows:

Supervising Staff, Indian Medical Establishment.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865–66 - -	8,053	5,310	5,244	18,607
1866–67 - - (11 months).	7,564	5,117	5,188	17,869
1867–68 - -	8,851	4,441	5,624	18,916
1868–69 - -	9,813	5,664	5,491	20,968
1869–70 - -	8,658	5,492	5,450	19,600
1870–71 - -	7,979	5,464	5,338	18,781
1871–72 - -	6,972	4,763	5,472	17,207

No

No changes occurred under this heading in 1865-66, as compared with the preceding year. The year 1866-67 included charges for 11 months only. The expenditure for Medical Services attained its maximum in 1868-69, in consequence of the re-organization of the administrative staff, whereby the salaries of the secretaries and statistical officers were improved; owing also to the inclusion of postal charges, and to an augmentation in the office establishment of the Inspector General of the Medical Department in Bengal. Since 1868-69, a decline in the charges is observable chiefly in Bengal, owing to the transfer of the statistical officer, and a portion of the office establishment, to the office of the Sanitary Commissioner with the Government of India. The slight variations in Madras and Bombay were due to ordinary and, for the most part, unavoidable fluctuations.

Districts (Indian Medical Departments).

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	91,164	50,834	33,817	175,815
1866-67 - - (11 months).	71,546	45,050	28,676	145,272
1867-68 - -	71,785	46,883	29,545	148,213
1868-69 - -	66,561	43,434	44,725	154,720
1869-70 - -	57,755	43,202	27,867	128,824
1870-71 - -	61,279	46,450	28,281	136,010
1871-72 - -	53,201	44,126	27,152	124,479

The expenditure under this head varies with the number of medical officers on general duty in India, the variations being more marked in Bengal and Bombay than in the Madras Presidency. The reduction in the charges under this head after 1867-68, was partly the result of the reorganisation of the administrative staff, by which the staff of the Indian Service was reduced, and that of the British Medical Service in India largely increased, in order to place the control of all the British Army Hospitals under charge of British medical officers.

Medical Store Depôts.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	10,279	3,463	8,186	21,928
1866-67 - - (11 months)	10,132	2,955	7,329	20,416
1867-68 - -	12,156	3,674	8,011	23,841
1868-69 - -	13,322	4,570	9,534	27,426
1869-70 - -	12,504	5,340	9,342	27,186
1870-71 - -	9,810	5,215	8,634	23,659
1871-72 - -	9,302	5,567	9,634	24,503

The charges of the Medical Store Depôts exhibit an increase in the case of the Madras and Bombay Presidencies, as compared with those of the year 1865-66, whilst in Bengal there is a decrease. It may be explained that the charge of a depôt in Bengal and Bombay is a substantive appointment; whilst in Madras (with the exception of the Medical Store Depôt at the Presidency) the charge of the depôt forms an adjunct, on reduced allowances, of some other substantive charge. The enhanced rates of pay admitted to medical officers and departmental subordinates have contributed to raise the expenditure in all three Presidencies. The decrease in Bengal in 1870-71, and 1871-72, was due to the abolition of the depôts at Saugor and Umballa. With these reductions, there still remain three depôts in the Bengal Presidency, one for the stations in the Lower Provinces, one for those in the North West, and one for the stations in the Punjaub. The saving by these reductions has been partly counteracted by the higher rank of officers, consequent upon the system of promotion by length of service for both commissioned and warrant grades. In the Madras Presidency, there has been a gradual increase, owing to the promotion of the medical and warrant officers, and to the grant of improved staff allowances sanctioned in General Order, Governor General, No. 370, of 1867. But the extension of railways has admitted of reductions in the number of medical depôts in this Presidency also. The depôts at Bangalore, Bellary, and Trichinopoly, were abolished during the past year, and those at Vizagapatam and Cannanore have recently been closed, thereby ensuring further reduction. As regards Bombay, the Medical Depôt at Ahmedabad was abolished in 1866-67; but there were increased charges by promotion, and by better pay to medical storekeepers and departmental subordinates.

Supervising Staff, British Medical Establishment.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	7,814	2,996	2,537	13,347
1866-67 - - (11 months)	13,852	2,718	1,919	18,489
1867-68 - -	8,741	7,254	4,070	20,065
1868-69 - -	8,392	5,479	4,893	18,764
1869-70 - -	9,716	5,608	5,111	20,435
1870-71 - -	10,571	5,451	5,273	21,295
1871-72 - -	9,596	5,311	5,361	20,268

The increase of charges, since 1865-66, was mainly caused by the appointment of an inspector general and a statistical officer, in lieu of the deputy inspector general who formerly presided over each of the British medical establishments in the Madras and Bombay Presidencies, by augmentation of the office establishment of the inspector general in Bengal, the appointment of an officer of higher rank as statistical officer, and the addition of official postage.

Districts (British Medical Department).

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	24,493	3,360	5,860	33,713
1866-67 - - (11 months)	18,951	2,168	2,413	23,532
1867-68 - -	35,985	12,459	9,820	58,264
1868-69 - -	37,354	18,699	12,485	68,538
1869-70 - -	34,730	17,349	14,784	66,863
1870-71 - -	38,687	15,562	13,527	67,776
1871-72 - -	42,514	18,369	15,302	76,185

The increased expenditure here observable was caused by the re-organization of the administrative staff, the financial effect of which measure will be seen in 1867-68, when the charges in Bengal rose from 18,951 *l.* to 35,985 *l.*; in Madras, from 2,168 *l.* to 12,459 *l.*; and in Bombay, from 2,413 *l.* to 9,820 *l.* There have been no further changes except the addition of official postage.

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

22 July 1873.

postage. The fluctuations which mark the years subsequent to 1867–68 arose from variations in the rank and numbers of British medical officers on general duty in India.

General Hospitals.

Years.	Bengal	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	5,054	- -	864	5,918
1866-67 - - (11 months)	4,775	. -	1,819	6,594
1867-68 - -	2,591	- -	2,351	4,942
1868-69 - -	4.495	- -	2,379	6,874
1869-70 - -	7,261	- -	2,748	10,009
1870-71 - -	236	- -	3,269	3,505
1871-72 - -	- -	- -	2,703	2,703

In 1865-66 the General Hospital at Allahabad was abolished, as was the Depôt Hospital at Kidderpore in 1867-68. The increase in 1869-70, over the disbursements of the previous year, was due to the transfer of a charge from the Civil Department equal to 2,500 *l.*, being in the nature of remuneration paid to Drs. Brougham and Best; to better rates of pay allowed to medical warrant officers; and to the inclusion of the allowances of Drs. Lewis and Cunningham, who were employed on cholera investigations. The Military Department has been relieved of the cost of the Calcutta General Hospital, by its transfer to the accounts of the Civil Department. There was error in the Bombay compilations for 1865-66. The year 1866-67 included but 11 months' expenditure. The subsequent increase in that Presidency, from 2,351 *l.* in 1867-68 to 2,703 *l.* in 1871-72, was caused by higher rates of pay to medical subordinates.

Station Hospitals.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	22,606	1,772	1,089	25,467
1866-67 - - (11 months)	1,998	1,683	719	4,400
1867-68 - -	2,231	7,890	856	10,977
1868-69 - -	1,905	8,501	916	11,322
1869-70 - -	1,685	5,793	696	8,174
1870-71 - -	1,523	6,161	867	8,551
1871-72 - -	1,346	6,189	821	8,356

Charges connected with station hospitals whose establishments are constantly modified to meet the requirements of the time are necessarily of a fluctuating character. In 1865-66, the pay of doolee bearers attached to regimental hospitals, and that of medical subordinates attached to Convalescent and Miscellaneous Depôts, were compiled in Bengal under this head, but have since been charged against Grants III. and I. respectively. A gradual and material decrease is observable in Bengal, principally due to reductions in establishments. In Madras, a system of station hospitals obtains; there are no regimental hospitals, consequently the pay of all medical subordinates, compiled in other Presidencies under Grant III., is compiled in Madras under this grant. The low rate of expenditure exhibited in the two first years is the result of erroneous compilation. The actuals of the present year evince a considerable saving, as compared with 1867–68. The disbursements in Bombay were comparatively moderate, and do not call for special mark.

Miscellaneous.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 - -	856	- -	1,454	2,310
1866-67 - - (11 months)	1,360	32	1,636	3,028
1867-68 - -	2,387	53	1,368	3,808
1868-69 - -	4,400	242	2,067	6,709
1869-70 - -	4,884	599	3,651	9,134
1870-71 - -	5,872	684	4,357	10,913
1871-72 - -	5,942	3,910	3,805	13,657

The Miscellaneous expenditure is also of an uncertain and fluctuating character. It will be observed that of late years the increase has been excessive; lock hospitals, analysis of potable waters, cholera camps, and allowances to increased numbers of students at the medical college, having helped to swell the expenditure; a glance at the above varying actuals will demonstrate how little the expenditure of one year can be accepted as a guide to estimate the next.

Medical Supplies.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865-66 -	81,122	34,566	30,738	146,426
1866-67 - (11 months)	71,757	36,659	45,044	153,460
1867-68 -	76,413	30,921	45,084	152,418
1868-69 -	72,757	30,729	47,159	150,645
1869-70 -	88,787	35,774	42,539	167,100
1870-71 -	80,503	28,640	38,316	147,459
1871-72 -	76,638	26,674	30,730	134,042

The charges for supplies, including the cost of medicines and stores purchased in India, diet for patients, medical comforts, hospital clothing and bedding, &c., exhibit no remarkable variations during the period under review. Although the number of British troops in the country has been reduced, it must be remembered that the scale of diet has been revised and improved, additional bedding has been sanctioned for British Army hospitals, and considerable expense incurred on lock hospitals and cholera camps. These items combined have served to counterbalance any saving in the quantity and cost of supplies. The mitigating or economic effects over all the series of years of the receipts derived from the sale of medical stores, hospital stoppages, &c., must not be lost sight of. Those receipts for the 10 years, from 1862–63 to 1871–72, amounted in round numbers to 390,000 *l.*, giving an annual average of 39,000 *l.*, which reduces the expenditure in 1871-72, for supplies, to about 12,000 *l.* On a review of Grant IX., including all its many and large heads of expenditure, it will be found that its aggregate charges represent a per-centage of 4·27 in 1861–62, and 3·60 in 1871–72, on the gross military disbursements for those years.

7022. Will you be good enough to explain what is the charge under Grant X., for Ordnance Establishments, Stores, and Camp Equipage?—This Grant is next, in point of magnitude, to that for commissariat services, and includes the entire expenditure in India connected with the ordnance administration, viz., the pay and allowances of commissioned, warrant, and non-commissioned officers, the wages of skilled European workmen, of native artificers and labourers, employed in the arsenals, magazines, ammunition depôts, and ordnance

ordnance manufactories throughout the country; also the cost of supplies purchased in India for the manufacture and repair of war *matériel* and camp equipage. The gross expenditure under this grant has increased from 356,873 *l.* in 1862–63, to 599,075 *l.* in 1871–72. The increase has occurred in the charges for ordnance *matériel*, the *personnel* charges being much the same as in 1862–63.

Personnel Charges.

	1862–63.	1871–72.
	£.	£.
Bengal - - - -	112,548	115,344
Madras - - - -	74,464	74,632
Bombay - - -	72,239	83,880
£.	259,251	273,856

An average of the charges *personnel* in the intervening years gives much the same result:—

	Average Annual Charges from 1861–62 to 1864–65.	Average Annual Charges from 1865–66 to 1871–72.
	£.	£.
Bengal - - - -	109,182	111,870
Madras - - - -	76,211	75,410
Bombay - - -	72,565	83,761
£.	257,958	271,041

The increase in the *personnel* charges is chiefly in the Bombay Presidences, owing to the employment of more commissioned officers (in place of warrant officers) as commissaries in charge of magazines, and the creation of a Snider ammunition factory at Kirkee, with skilled European workmen, and a considerable Native establishment. A similar result followed the establishment of the Snider ammunition factory at Dum-Dum, counteracting the saving by reduction of the arsenals and magazines in the Bengal Presidency. A statement of the European officers, engineers, and mechanics, employed in the Ordnance Department in 1861–62 and 1871–72 respectively, will be found in the Appendix of my printed report. The large reserves of ordnance *matériel* of all kinds remaining on the termination of the war of the Mutiny, obviated any considerable replenishment of stock in the years 1862-63 and 1863-64; the expenditure in those years cannot, therefore, be fairly compared with the expenditure in subsequent years. An examination of the outlay in the whole series of years, however, gives the following result:—

Matériel Charges.

	Average Annual Expenditure between 1861–62 and 1864–65.	Average Annual Expenditure between 1865–66 and 1871–72.
	£.	£.
Bengal - - - -	108,814	121,992
Madras - - - -	35,926	38,490
Bombay - - - -	24,996	64,027*
£.	169,736	224,509

*This average is exclusive of the year 1868–69, when the expenditure was abnormally augmented by the adjustments connected with the Abyssinian Expedition.

This Statement shows that the charges for ordnance *matériel* have increased by 12·1 per cent. in Bengal, by 7·13 per cent. in Madras, and by 156·14 per cent. in Bombay. An explanation of this remarkable increase is given further on, but some of the causes may be here mentioned in a general way, viz., modern improvements in army equipment and munitions of war; the arming of the British forces with the Snider, and of the Native army with the Enfield rifle; the extension of local manufacturing establishments, with improved and costly machinery; the increased cost of local supplies consequent upon the general rise in prices throughout the country. Then the expenditure of war *matériel* was increased in 1863-64 by the Sittana Expedition; in 1864-65-66, by the Bhootan campaign; in 1867-68-69, by the Abyssinian War. The expenditure fell in the next two years, but rose again in 1871–72, owing to increased activity in the several ordnance manufactories, and an exceptionally large outlay for local supplies to meet the demand for Snider and Enfield ammunition, for accoutrements, harness, and saddlery. The charges under the subheads of the Ordnance Grant will now be briefly reviewed.

Supervising Staff.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865–66 - -	10,255	9,942	4,553	24,750
1866–67 (11 months) -	8,512	9,162	6,672	24,356
1867–68 - -	10,572	9,337	6,863	26,772
1868–69 - -	11,051	10,049	7,959	29,059
1869–70 - -	11,238	7,702	7,736	26,676
1870–71 - -	10,898	6,400	7,867	25,165
1871–72 - -	10,287	8,897	7,019	26,203

It will be seen that the aggregate cost of the supervising staff gradually increased until 1868-69, when it attained its maximum. In the following years, there was a decrease, but the actuals of the year 1870–71 and 1871–72 are slightly in excess of those of 1865–66. The low rate of expenditure in Bengal in 1866–67 is due to the absence of the Deputy Inspector General on furlough, the discontinuance of the services of the warrant officer attached to the Deputy Inspector General's office on its amalgamation with that of the Inspector General, and a saving in contingent charges. The increase observable in subsequent years is attributable to the return of the Deputy Inspector General, the addition of official postage, increased travelling allowances on account of the Inspector General's tour, and the payment of office rent on the removal of his office into a private building. The decrease in the charges for 1870-71-72 was mainly due to the Inspector General having proceeded on furlough. In the Madras Presidency a considerable decrease is apparent in 1869–70 and 1870–71, as compared with previous years, due chiefly to the Inspector General having proceeded on furlough in the former year, and to the Deputy Inspector General having followed him in 1870-71. The return of the permanent Inspector General raised the charges in the following year. The gradual increase observable in Bombay is the result of promotion in the commissioned and warrant grades, the inclusion of official postage, and the removal of the Ordnance Office to a hired building at Poona.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

Arsenals, Magazines, and Depôts.

Years.	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1865–66 - -	63,002	43,390	50,198	156,590
1866–67 (11 months) - -	61,406	32,023	47,467	147,896
1867–68 - -	67,169	40,948	56,031	164,148
1868–69 - -	70,863	40,660	58,984	170,507
1869–70 - -	65,604	41,536	52,705	159,845
1870–71 - -	55,850	42,849	52,032	150,731
1871–72 - -	54,682	39,737	53,074	147,493

The *personnel* expenditure comprises the pay of all commissioned, warrant, and non-commissioned officers, and subordinate establishments attached to arsenals, magazines, and depôts, and necessarily fluctuates according to the number and rank of the officers present, and the establishment of artificers kept up. In Bengal the expenditure was on the increase to 1868–69, owing to the grant of higher pay to warrant and non-commissioned officers, the appointment of chief civil master armourers, an additional number of non-commissioned officers, and the addition of official postage. Since 1869, the charges have gradually decreased, consequent upon the measures of reduction adopted in the autumn of that year, whereby the magazines at Agra, Saugor, Mooltan, and Dera Ismail Khan were converted into ammunition depôts; the depôts at Delhi and Lucknow, and the siege-trains at Saugor and Mooltan were abolished, thus concentrating the duties of supply in three large and one small arsenal, and five ammunition depôts, in place of three arsenals, five magazines, and six depôts as before. In Madras, the depôt at Vizagapatam has been abolished, and slight reductions have been effected in the number of warrant and non-commissioned officers; but further reductions are practicable in the number of arsenals, magazines, and depôts. The same may be said of Bombay, where no reductions have as yet been carried out. It is a noteworthy fact that whilst the strength of the army in the Bengal Presidency is more than double that of the forces in Southern and Western India, the cost of the supplying agencies in Bombay is the same as in Bengal, and slightly more than the cost of the corresponding establishments in Madras.

	* Strength of Troops, European and Native.	Annual Cost of Ordnance Establishments.
		£.
Bengal - - - -	62,309	54,682
Madras - - - -	27,099	39,737
Bombay - - - -	22,695	53,074

* The strength is calculated by adding to the established complement of British troops half the complements of Native troops, but excluding native cavalry whose requirements from Ordnance establishments are comparatively few.

As the work of arsenals and magazines is for British and Native troops, it seems fair to assume that two Native soldiers are equivalent to one British soldier, for the purposes of this calculation; thus, whilst the cost of the ordnance establishment is 17*s.* 6*d.* per head (of troops) in the Bengal Presidency, it is 1*l.* 9*s.* in Madras, and nearly 2*l.* 7*s.* in Bombay.

Ordnance Manufacturing Establishments.

The Gun Foundry.—There is but one such factory in India; the charges have increased in the two last years, consequent upon the experimental manufacture of bronze rifled guns; the failure of these guns will necessitate a change in the machinery and plant, and probably also in the establishment; attached to the foundry, is a shell factory, where projectiles are now being manufactured on a limited scale for the 9-pounder muzzle-loading rifle gun. The future of this establishment must depend upon the description of guns and projectiles ultimately adopted for the British army. The *personnel* and *matériel* charges of this and the other ordnance factories in India turn upon the extent of the operations in each year, which are regulated according to the current requirements of the public service.

The Gunpowder Agencies.—There are at present three gunpowder factories, one in each Presidency; the recent addition of a third set of incorporating mills has considerably increased the working power of the factory in the Bengal Presidency, and although this has been attended with some increase of charges for labour and material, the rate and cost of production show a tendency to decrease. In the gunpowder agency at Madras, where the finishing apparatus in its complete form is wanting, the rate of production is more than in Bengal.

	Cost per Barrel of Gunpowder.
	£. s. d.
Bengal - - -	2 18 3
Madras - - -	3 2 6

The variations in the amount of charges in the several years in Madras, both *personnel* and *matériel*, are due to the rank of the commissioned, warrant, and non-commissioned grades, the number of workmen employed, and the extent of operations in each year. In the Bombay Presidency, the factory at Kirkee has only recently been completed, and operations have but just re-commenced after an interval of several years.

The Gun-carriage Agencies.—There are three gun-carriage factories, one in each presidency; the *personnel* charges have remained tolerably constant, making due allowance for promotion in the commissioned, warrant, and non-commissioned grades; the *matériel* charges have notably decreased in all three Presidencies, owing to the contraction of operations pending the final decision as to the new pattern of gun-carriages; the question of reducing the number of gun-carriage factories in India is at present under consideration.

The Small Arms Ammunition Factories.

Cartridge, bullet, and percussion cap factories have been maintained for many years past in all three Presidencies. The recent increase of expenditure, both *personnel* and *matériel*, is due to the organization and efficient equipment of establishments, in the Bengal and Bombay Presidencies, for the manufacture of Snider, Enfield, and other small arms ammunition. For the purposes of this

this manufacture, machinery of a special and costly description, with skilled European labour for working it, are necessary. Parts of the machinery are absolutely indispensable, however small or large the outturn required, and hence the economy of maintaining no more factories than will suffice for the requirements of the army. The small arms manufactory at Dum-Dum is capable of turning out 50,000 rounds of Snider ammunition daily, and a like quantity of Enfield ammunition, or a total of 100,000 rounds per diem, being about one-third of the quantity turned out at the Woolwich Factory. Reckoning upon 300 working days, the rate of production would be about 15 millions of Snider ammunition per annum. The annual expenditure for practice is about three millions, the regimental reserve (at 200 rounds per man) about six millions. Thus, the annual rate of production provides the ordinary requirements of the army and contributes six millions of rounds annually to the arsenal reserves, which at present amount to 20 millions of rounds of Snider ammunition (this includes the Snider ammunition lately sent from England). In like manner, the annual outturn of Enfield ammunition is sufficient to leave a reserve after providing for the requirements of the Native troops in the Bengal Presidency. The arsenal reserves already exceed 12 millions of rounds. The small arms ammunition factory at Kirkee is capable of turning out 35,000 rounds of balled and 7,000 rounds of blank cartridge per diem, a rate of production sufficient to leave an ample reserve after providing all the requirements of the British troops in the Madras and Bombay Presidencies. The grand arsenal at Bombay is capable of producing 14,000 rounds of Enfield ammunition daily. Under these circumstances, it was considered that the small arms ammunition factories at Dum-Dum and Kirkee would suffice for all three Presidencies, and the machinery intended for the factory at Madras was accordingly diverted to that at Dum-Dum. In suggesting the addition of the cartridge factory at Madras, it was intended that the bullet and cap factories should also be suppressed, but the bullet factory, with the laboratory and percussion cap factory for the manufacture of Enfield cartridges, is still retained at a cost of about 5,000 *l.* per annum. The further maintenance of this establishment is now under the consideration of the Government of India.

The Timber Agency.

The purchase of timber for the purposes of the Ordnance Department, formed part of the duty of the gun-carriage agency at Futtegurh and the arsenal in Fort William, until the appointment of a special timber agent in the Bengal Presidency with the pay and allowances of a third-class commissary of ordnance. Hence the increase of *personnel* charges in 1867-68. The decline in 1871-72 was caused by the absence of the timber agent on furlough, and the employment of fewer workmen consequent upon the diminished purchases of timber during the year. The *matériel* charges, in all three Presidencies, necessarily vary according to the value and quantity of the timber purchased, the purchases being dependent upon the ruling prices of the day, and the requirements of the Ordnance Department.

The Saddlery and Tannery Agency at Cawnpore was established in 1856-57 on a limited scale, the requirements of the force then maintained in the Bengal Presidency being, for the most part, obtained from England. With the subsequent increase of European troops, and the increasing capability of the agency to supply leather equipments, the local charges have gradually increased, but the army in India has been made comparatively independent of supplies from Europe. Excepting the year 1867-68, when the charges were abnormally increased by supplies for the Abyssinian Expedition, the cost of the *personnel* of this Agency was about 4,000 *l.* per annum up to the year 1868-69 inclusive. The subsequent expansion of the operations of the Agency, with a corresponding diminution in the indents for leather accoutrements on England, has had the effect of still further increasing the local charges in recent years.

Fire Engine Department (Bombay).

The slight increase in the cost of the Fire Engine Department in 1867-68 as compared with previous years, is due to the grant of increased rates of pay to the lascars, and the sanction of an engine establishment for the Poorundhur sanitarium. At the close of 1869-70, orders were issued for the introduction into the Bombay Presidency of the system, obtaining in Bengal and Madras, of entrusting the care and management of fire engines to regimental authorities, and the establishments in Bombay were accordingly discharged at the end of the year.

Camp Equipage Department.

Years.	Madras.	Bombay.	Total.
	£.	£.	£.
1865-66	4,892	4,492	9,384
1866-67 (11 months)	4,256	4,113	8,369
1867-68	6,248	4,550	10,798
1868-69	4,516	4,769	9,285
1869-70	4,537	4,877	9,414
1870-71	4,478	4,747	9,225
1871-72	4,979	4,790	9,769

In Bengal there are no separate establishments maintained in the Ordnance Department for the care of camp equipage, an establishment of lascars being attached to regiments for the purpose. The expenditure in the other presidencies exhibits but little variation, with the exception of the year 1867-68, in which the charges in Madras are high, contrasted with other years. This would appear to be the result of erroneous compilation, as there is nothing to warrant any increase in that year. The expenditure in 1871-72 exhibits an increase as compared with the charges in 1865-66, the result of the appointment of an additional warrant officer, and an increased Native establishment in Madras. In Bombay the increased expenditure is mainly due to the pay of the lascars having been increased.

Harbour Defences (Bombay).

The increase observable in the expenditure in 1867-68, as compared with previous years, is owing to the higher rank of the officer in charge, and increased pay to non-commissioned officers. In 1870-71 the permanent incumbent proceeded on furlough, and an officer of junior rank was appointed in his place, causing a decrease in that year. The separate appointment in connection with the harbour defences has been lately abolished.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

Charges of Matériel (including all Stores and Ordnance Supplies).

Years.	Bengal.	Madras.	Bombay.	Total Gross Charges.	Less Receipts.	Total Net Charges.
	£.	£.	£.	£.	£.	£.
1865-66 - - -	115,728	29,537	44,715	189,980	76,796	113,184
1866-67 (11 months) -	92,103	36,171	41,708	169,982	70,270	99,712
1867-68 - - -	138,786	38,952	110,452	288,190	99,147	189,043
1868-69 - - -	127,831	37,115	217,906	382,852	346,487	36,365
1869-70 - - -	128,975	53,366	84,934	265,275	248,319	16,956
1870-71 - - -	108,683	39,800	101,286	249,769	199,025	50,735
1871-72 - - -	141,836	35,092	148,290	325,218	187,422	137,796

This statement exhibits the outlay for ordnance *matériel* of all kinds from 1865-66 to 1871-72, and although the expenditure in connection with the manufacturing establishments has been incidentally noticed in the preceding remarks, it is desirable to present the entire *matériel* expenditure in one view. The expenditure must needs vary according to the requirements of the public service from time to time, and these are determined upon the well-considered suggestions of the responsible departmental officers. In the earlier years, 1861-62-63, when, owing to the ample reserves in hand, purchases were limited, and when the army was in course of reduction, the expenditure was naturally on a reduced scale, being about 120,000 *l.* per annum. In 1863-64, the expenditure rose to 163,000 *l.*, owing to the replenishment of stock having become necessary, and to the war charges in connection with the Sittana expedition. In 1864-65, the expenditure was still higher, viz., 212,000 *l.*, for further replenishment of stock and the expenses of the Bhootan campaign. There was a decrease in the next two years, but the expenditure of 1867-68 amounted to 288,190 *l.*, or more than double that of 1861-62-63, and exceeding the expenditure of 1865-66 by 98,210 *l.* Of this increase, 23,058 *l.* occurred in Bengal, 9,415 *l.* in Madras, and 65,737 *l.* in Bombay. Much of the excess expenditure in Bengal and Bombay was due to the extensive purchases of local stores to replace supplies to the Abyssinian expeditionary force. The renewal of camp equipage, of which the reserves had fallen much below the regulation complement, caused an additional outlay of 32,700 *l.* in Bengal and Bombay over the actuals of 1865-66. The slight increase in Madras is owing mainly to the purchase of saltpetre for the gunpowder agency, for which no expenditure was incurred in 1865-66. In 1868-69 the expenditure was 382,852 *l.*, being 94,662 *l.* in excess of that of the previous year. The increase in Bombay, amounting to 107,454 *l.*, was due to the replenishment of stock issued for the Abyssinian expedition, and also to the re-purchase of stores which were returned on the termination of the campaign. In Bengal, on the other hand, there was a decrease of 10,950 *l.*, owing to a smaller outlay for camp equipage after the expenditure of the previous year. The slight decrease in the Madras Presidency may be said to be due to ordinary fluctuations. As a natural consequence, the expenditure in 1869-70 (265,276 *l.*) exhibits a considerable reduction. The decrease in Bombay was 134,972 *l.*, the previous year's expenditure having included Abyssinian transactions. There was a slight increase in Bengal (1,145 *l.*) and Madras (16,252 *l.*), the latter being due to the manufacture of a larger number of tents to meet increased demands. In 1870-71, the charges (249,769 *l.*) were less by 15,507 *l.* than those of the previous year. There was a decrease in Bengal and Madras of 33,859 *l.*, due to less expenditure for camp equipage and local supplies. There was an increase of 18,352 *l.*, due chiefly to the purchase of stores for the harbour defences at Bombay and Aden, and partially to increased disbursements for the purchase and repair of camp equipage. In 1871-72, the expenditure rose to 325,218 *l.*, exceeding that of the previous year by no less than 75,449 *l.*, the result of an increase of 33,153 *l.* and 47,004 *l.* in Bengal and Bombay respectively, and a decrease in Madras of 4,708 *l.* Of the increase in Bengal, about 27,300 *l.* occurred in the item Local Supplies to Arsenals, Magazines, and Depôts, and was due chiefly to payments for stores returned by other departments; and 10,000 *l.* in the item Local Supplies to Manufacturing Establishments, but there were minor savings in other items. The increase in Bombay is due chiefly to larger supplies of local stores to arsenals and magazines, to meet the demands of other departments, and more extensive purchases of timber, the expenditure on these accounts having amounted to 142,121 *l.*, against 89,989 *l.* in the previous year; there were savings, however, in other items.

7023. Will you be good enough to give an explanation of the change that has taken place in Grant XI., for Ecclesiastical Services?—This grant comprises only the charges sanctioned by the Government, from time to time, for spiritual ministrations to British soldiers of the Presbyterian and Roman Catholic Churches. The charges of the ecclesiastical establishments of the Church of England are separately exhibited in the civil accounts of the Indian Government. The charges for Presbyterian clergymen have fluctuated with the number of Highland regiments in India. Those for Roman Catholic places of worship, which include lighting and other expenses, and allowances for the priests, exhibit but little change during the period under review, for although the number of British troops in India has been reduced, increased grants-in-aid have been made for spiritual ministrations at the new hill stations and elsewhere. It will be seen, however, that the gross expenditure under this grant declined from 25,448 *l.* in 1862-63, to 20,640 *l.* in 1871-72.

7024. Will you be good enough to give an explanation of the operations under Grant XII., for Education?—The expenditure under this grant comprises the pay and allowances of the supervising staff of regimental schools, and the cost of educational establishments and orphanages maintained for the children of soldiers in the hill sanitaria and plains of India. The military educational staff appointments in 1861-62 and 1871-72 respectively, are given in the following Table, and indicate a small increase.

	1861-62.	1871-72.
Bengal.		
Superintendent, Army Schools - - -	1	1
Assistant - - ditto - - - -	0	1
Madras.		
Superintendent, Army School - - -	0	1
Bombay.		
Superintendent, Army School - - -	1	1
Assistant - - ditto - - - -	1	1
TOTAL - - -	3	5

The

The expenditure for the first two years was not compiled correctly, whilst that shown subsequently included arrear charges properly belonging to prior years. As regards Bengal, it may be explained that prior to 1867-68 charges on account of the Lawrence Military Asylum, though debitable to the Military Department, were audited and passed in the Civil Department, and the disbursements were not always debited to the year in which they were made; hence, the expenditure exhibited in any one year represented rather the sum adjusted between the Civil Military Departments than the sum actually paid. This circumstance accounts for the excessive fluctuations observable prior to 1867-68. The subsequent comparative uniformity of charge followed naturally on the audit of a military disbursement by the Military Account Department. In 1869-70, a revised and increased scale of salary was laid down for the Superintendent of Army Schools in Bengal, a full surgeon was appointed to the Lawrence Asylum (previously held as an additional charge), and arrear expenses to the amount of about 1,400 *l.* were brought to account. The increase in Madras, in and subsequent to the year 1867-68, was chiefly induced by the appointment of a Superintendent of Army Schools, who went on furlough at the end of 1870-71. In Bombay the rate of expenditure was very irregular over the whole series of years, the increase subsequent to 1865-66 being due chiefly to the assistance granted by Government to the Bombay Educational Society on behalf of the Byculla Orphan Asylum. The enhancement of expenditure in 1867-68, 1868-69, and 1870-71, was caused by the inclusion of arrear changes in those years, and the presence of a larger number of children at the aided institutions. The rise in the expenditure for military education throughout India, from 17,288 *l.* in 1862-63 to 34,711 *l.* in 1871-72, is the result of the liberal encouragement afforded by the State for the supervision of regimental schools, for Roman Catholic and other orphanages, for the Lawrence Military Asylums, and for the promotion of educational efforts generally.

7025. Will you now proceed to Grant XIII., for Sea Transport Charges, and state what has happened in reference to that grant?—This grant comprises the expenditure, in India, for transport of troops proceeding to and from England, or moving in course of relief between the different ports in India; also the cost of medical comforts, bedding, and special clothing supplied for the use of troops at sea. The expenditure in 1861-62 and 1862-63 was not debited against this grant, and, indeed, appears to have fallen out of the military accounts altogether. In those years also, the reliefs between England and India were on a very limited scale. In 1863-64, it was arranged to relieve annually a brigade of artillery, one regiment of British cavalry, and five regiments of British infantry, and there was a consequent rise in the charges for transport until 1867-68, when the Overland Troop Transport Service was organised. The employment of these transports has obviated to a considerable extent the chartering of private vessels; and as the expenditure on account of the transport service occurs for the most part in England, there has been a considerable diminution in the charges for sea transport in India. But in order to a correct appreciation of this growing branch of the public expenditure, it is necessary to review the charges for transport in England and in India together, for the years prior and subsequent to the organisation of the Troop Transport Service. The following statement exhibits the total charges for transport by chartered vessels:—

Years.	Charges for Sea Transport by Chartered Vessels		Total.
	In England.	In India.	
	£.	£.	£.
1863-64 - -	174,357	286,855	461,212
1664-65 - -	182,244	354,853	536,827
1865-66 - -	280,417	340,945	621,362
1866-67 - -	272,901	295,638	568,539
1867-68 - -	159,048	161,191	320,239
1868-69 - -	145,359	179,302	324,661
1869-70 - -	53,465	149,510	202,975
1870-71 - -	49,850	112,563	162,413
1871-72 - -	19,828	70,212	90,040

The working charges of the Government Transport Service were as follows, exclusive of the cost of construction, which amounted to 1,032,028 *l.*:—

Charges for Government Troop Transports, excluding Cost of Construction.

Years.	In England.	In India.	Total.
	£.	£.	£.
1867-68 - -	{ 3,885 / 144,735 }	33,064	181,684
1868-69 - -	276,295	172,739	440,034
1869-70 - -	224,730	115,445	340,175
1870-71 - -	264,927	80,212	345,139
1871-72 - -	258,089	42,615	300,704

The total expenditure for sea transport by chartered vessels and Government transports, in England and in India together, were—

Years.	Chartered Vessels.	Government Troop Transport.	Total.
	£.	£.	£.
1863-64 - -	461,212	- -	461,212
1864-65 - -	536,827	- -	536,827
1865-66 - -	621,362	- -	621,362
1866-67 - -	568,539	- -	568,539
1867-68 - -	320,239	181,684	501,923
1868-69 - -	324,661	449,034	773,695
1869-70 - -	202,975	340,175	543,150
1870-71 - -	162,413	345,139	507,552
1871-72 - -	90,040	300,704	390,744
£.	3,288,268	1,616,736	4,905,004

On examination of the last statement, it will be found that from the years 1863-64 to 1866-67, or before the institution of the Government Transport Service, the expenditure for sea transport in England and in India together averaged 546,985 *l.* per annum. The expenditure from 1867-68 to 1871-72 gives an average of 538,057 *l.* per annum; but if to this be added a charge of 8 per cent. for interest and depreciation on the cost of constructing the transports, the average annual expenditure will be 620,619 *l.*, or more than 13 per cent. in excess of the expenditure in the years prior to the establishment of the Government Transport Service.

7026. In this do you take into account the additional three months of maintenance included in the sea transport as compared with the Red Sea transport?—No.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

7027. But somebody has to pay for those three months?—India has not to pay for that, because the arrangement with the British Government is that India should pay the troops and feed and care for them, from the time of their leaving England up to the time of their return to the English shores. If a regiment be carried home in six weeks instead of four and a-half months (as before) the time gained is in favour of India.

7028-29. So that you save both ways?—Yes, India maintains the relieving and relieved troops at sea for shorter periods, than when the reliefs were effected by sailing ships round the Cape of Good Hope.

7030. That would amount to six months?—It would be about that.

7031. That does not appear in this Statement; that when they went over sea by the Cape, say for eight months, the maintenance of the troops was included in this cost; now they are only maintained for two months?—No, the Statement compares only the payments for transport by chartered vessels and by the Government troop ships, the cost of rationing the troops on the voyage being included in both cases. The comparison is between actual payments for specific services, and does not take account of the duration of the voyage, and the other considerations that surround the question.

7032. In the contract the maintenance of the troops was included?—Yes.

7033 They were maintained eight months under the old system as included in this charge, and the two months under the new?—Yes.

7034. Therefore, to make an equal comparison, you would have to add six months maintenance of the troops, if you were taking it as a mere question of cost to one Government or other; it does not come into the comparison, but it is a fact notwithstanding?—No doubt it is an important fact, taking the duration of the voyage by the two systems of transport, as far as India is concerned.

7035. As far as somebody is concerned, either England or India; one is the cost of transport plus six months of maintenance, to compare it fairly with the actual cost of the other?—(Colonel *Johnson.*) India has the absolute benefit of the troops in her own garrison towns when in India. (Mr. *Kellner.*) And India maintains the troops for shorter periods than before, on the outward and homeward voyage. But on the other hand, the rates of freight by the old sailing ships were, as a rule, lower than the present rates of steam vessels; and it may be assumed that the Government would now, in any case, on military grounds, effect the relief of troops between England and India by steamers rather than by sailing ships. Then again, the advanced sanitary opinions of the present day require more liberal accommodation for troops than formerly. So that the practical question, as regards cost, is, whether it be cheaper to effect the reliefs by Government transports, or by private steamers with a scale of accommodation in accordance with modern sanitary requirements; this would involve a nice calculation, for which the needful data are not immediately available. But there are, of course, other besides financial considerations in determining the relative advantage of maintaining a well equipped Government transport service, or depending upon steam companies and shipowners for the hire of steamers as required. To resume the subject of reliefs. The present arrangements for the annual relief of European troops serving in India include one brigade of artillery, one regiment of cavalry, and four regiments of infantry, involving an annual charge for the transport (both ways) of just double that force, in addition to the cost of transport of invalids and time-expired men returning to England, and of the drafts for regiments in India. The increase in the transport charges is due also to the late reductions in the European force in India. Thus, in 1865-66, seven light field batteries were broken up, and two British infantry regiments sent home. Another infantry regiment followed in 1866-67, two regiments of cavalry and two of infantry in 1869-70. A brigade and five batteries of Royal horse artillery returned to England in 1871. All these changes, being irrespective of the annual reliefs, necessarily increased the expenditure. The state of trade, and the prevailing rates of freight, affected the cost of transport by chartered vessels. The fact of no artillery batteries having been relieved in 1863-64 accounts for the low expenditure in that year. The next lowest figure is that for 1867-68, owing to a considerable decrease in the number of drafts from England consequent upon the reduction in the strength of cavalry and infantry regiments in India during the previous year. Then, again, the European and Native troops in British Burmah and Aden are relieved every three years, increasing the charges for sea transport in the years in which the reliefs occur. These circumstances account for the variations in the expenditure for sea transport charges, and partly also for the charges having increased, notwithstanding the reductions in the European force in India. A closer investigation of the increase is now being made, and for this purpose the annual charges will be tested by the number of troops carried by sea, in each year, between England and India, and between the several ports in India, British Burmah, the Straits Settlements, and Aden. All the needful data are not immediately available, but are in course of collection, and will be exhibited in the Appendix to my book. Meanwhile the following Table will show the number of troops conveyed to and from England in 1864, 1865, 1866, and 1867, by chartered vessels, and from 1867-68 to 1870-71 by the troop transports:—

Years.	Number Conveyed to India.	Number Conveyed from India.	Total.
Round the Cape by Chartered Vessels:			
1864-65	6,747	8,814	15,561
1865-66	5,383	8,863	14,246
1866-67	7,768	6,503	14,271
By the Troop Transport overland route:			
1867-68	9,603	8,409	18,012
1868-69	10,891	6,766	17,657
1869-70	–	–	24,482
1870-71	10,169	9,513	19,682

So far as the returns may be relied upon, the average rate per head of troops in the years 1865, 1866, and 1867 was 21 *l.* A return made to Parliament in May 1871 gives a rate of 19 *l.* 4 *s.* per adult passenger for the year 1867-68, but the rate would be higher by the inclusion of expenditure in India, interest on capital, and insurance.

7036. Mr.

7036. Mr. *Fawcett* (to Mr. *Kellner*).] Have you made any estimate of what the real average cost is each year with the troop ships?—I am endeavouring to do it now from returns that I have at the India Office.

7037. Mr. *Fowler*.] As regards troop ships, for taking out the troops to India, are they paid out of the English revenues?—Out of the Indian revenues.

7038. But they are under the orders of the navy, are they not?—Yes; there is a department of the Admiralty which manages them.

7039. Then the system is, that the money is paid from the Indian revenue to the Admiralty, and the Admiralty spends it?—Yes.

7040. *Chairman*.] Now, if you please, we will go to Grant XIV., for Miscellaneous Services; what has been done under that grant?—The expenditure under this grant is liable to considerable fluctuation, embracing, as it does, casual and extraordinary charges, not strictly appertaining to the other grants. A comparison of the expenditure from year to year is therefore difficult, irrespective of the difficulties presented by the various methods of classification observed, prior and subsequent to the year 1865–66. The principal charges are on account of compensation for dearness of provisions and forage in the Madras and Bombay Presidencies; the corresponding charges in Bengal being separately exhibited under the Commissariat Grant IV. It will be seen from the detailed statement in the Appendix of my printed report, that these items of charge have fluctuated very considerably, ranging, in the Madras Presidency, from 200,447 *l.* in the famine year, 1866–67, to 88,367 *l.* in 1870-71; and in the Bombay Presidency from 114,347 in 1865–66, to 78,742 *l.* in 1868–69. These results are entirely due to the rise and fall in prices, and fluctuations in the strength of troops. As the subject of compensation to Native troops for dearness of provisions has been examined under the Commissariat Grant, it is not necessary to enter into further details here. In 1868–69 the charges on account of the Sanitary Commission were transferred to the Civil Department, which relieved this grant to the extent of about 15,000 *l.* On the other hand, the effect of the order obliging officers to qualify in the higher standard of examination in the Native languages, as a condition of continuing in the service, was to increase the Moonshee allowance. Considerable changes were incurred also in the years 1870–71 and 1871–72, in the purchase of land required for the extension of the military cantonment at Morar, of land at Beejapore, for the lines of the 4th Goorkahs, and of land at Raneekhet and Chukrata, besides compensation for land at other places. New charges have also arisen, viz., the cost of the Derajat frontier militia, compensation for payment to purchase regimental retirements, charges on account of the Torpedo Committee, and loss by exchange transactions. The actuals of the past year (1871–72) aggregated 433,740 *l.*, but included extraordinary charges to the extent of 152,653 *l.* on account of the Looshai expedition, and the Delhi camp of exercise. Excluding these extraordinary charges, there would remain 281,087 *l.* against an average annual expenditure of 449,676 *l.* between the years 1865–66 and 1867–68, and of 361,585 *l.* between the years 1868–69 and 1870–71, the decrease being due chiefly to more favourable seasons, and a consequently diminished expenditure on account of compensation for dearness of food to troops and cattle.

7041. Now will you be good enough to state what changes have taken place in Grant XV., for Volunteer Corps?—The capitation allowances to volunteers, with the staff allowances of European commissioned and non-commissioned officers attached to the different corps of volunteers, are included under this grant. It is only after the year 1865–66 that the charges will admit of comparison. In that year the number of volunteers in India aggregated about 1,135 men, and the expenditure amounted to 4,140 *l.* Since then the strength of the force has more than doubled; there is a tendency to further increase in numbers, and the actual expenditure during the year 1871–72 amounted to 6,951 *l.*

7042. What has been the expenditure under Grant XVI., Rewards for Military Services?—This grant includes the expenditure connected with good service pensions to European commissioned officers, annuities and gratuities for meritorious services and for the Victoria Cross to European non-commissioned officers and men; also, the Order of British India and Order of Merit pay to Native soldiers. During the years 1861—63, the expenditure under this heading was not separately exhibited. A considerable decrease is observable in comparing the expenditure of 1863–64 with that of recent years, the expenditure having fallen from 18,770 *l.* in 1865–66, to 10,102 *l.* in 1871–72. The percentage of expenditure under this grant on the gross military disbursements was ·14 in 1863–64, and ·08 in 1871–72, notwithstanding that the extension to India of the practice obtaining at home of granting good service pensions involved an extra annual charge (in India) of nearly 3,500 *l.* The decrease in the expenditure under this grant occurs chiefly in the Order of British India and Order of Merit pay, owing to the diminished number of holders of these distinctions, and to the transfer to the Pension Establishment of several recipients whose allowance is included under Grant XVIII., Military Pensions.

7043. In Grant XVII., for Retired Officers, what has been done?—The expenditure under this grant comprises the pay of retired officers resident in India, and necessarily fluctuates with the number of officers present in the country. In the year 1862–63, there were 52 retired officers of the Indian army in India, and the expenditure amounted to 29,720 *l.* In the year 1871–72, there were only 39 retired officers, and the expenditure amounted to 12,236 *l.*

7044. With regard to Grant XVIII. for Military Pensions, can you state what has occurred?—This grant comprises the expenditure in India on account of pensions to European and Native commissioned, non-commissioned officers, and men, and medical and army warrant officers; pensions for wounds, and family pensions to the heirs of deceased Native soldiers. The expenditure necessarily fluctuates with the number of pensioners, the annual rate of invaliding, reductions in the strength of the Native army, the employment of troops in the field, &c. The expenditure exhibits a steady decrease since the year 1862–63, when it stood at 648,585 *l.*; that rate of expenditure was the natural result of the extensive reductions in the Native army, whereby the pension list was abnormally augmented; there was but little change in the gross expenditure for military pensions up to 1865–66, but the actuals of later years show a marked decrease; in 1871–72 the expenditure fell to the minimum of 567,359 *l.*, the per-centage on the

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

22 July 1873.

total army expenditure being 4·72, against 5·18 in 1862-63; a large portion of this decrease however is due to the transfer to the Civil Department of certain pensions formerly debited to military services, and also to the exclusion from the military accounts of the pensions payable to Native troops of the Hyderabad contingent from the revenues of the Berars.

7045. As regards Grant XIX., for Widows' Pensions and Compassionate Allowances, what has occurred?—The expenditure under this grant is on account of pensions and compassionate allowances to the widows and children of European officers. The actuals of the past year (1871-72) amounted to 18,449 *l.*, being slightly in excess of the expenditure of 1863-64, namely, 17,421 *l.* The low rate of expenditure for the years intervening between 1863-64 and 1870-71 is due to the adjustment in the home accounts, and omission from the Indian accounts, of payments to widows admitted to Lord Clive's Fund prior to the passing of the Indian Government Act of 1858.

7046. By which that fund was abolished and absorbed into the general revenues of India?—Yes.

7047. With regard to Grant XX., for Superannuations, Pensions, and Gratuities, what has occurred?—This grant includes the expenditure on account of superannuation, pensions, and gratuities to uncovenanted servants employed in the several offices of the Military Department. The disbursements are small, and call for no special remark except that those exhibited for the first two years of the series are incomplete, owing to the defective system of classification in force at that time. The actuals of the past year amounted to 19,473 *l.* against 15,699 *l.* in 1863-64, 20,051 *l.* in 1864-65, and 20,151 *l.* in 1865-66. The comparatively larger amounts for these years are due to the revision of office establishments in the Military Department, by which a large number of *employés* was transferred from the Effective to the Pension Establishment.

7048. Those are the whole of the grants for the army?—Yes.

7049. They contain amongst them the whole of the expenditure?—The whole of the charges in India. In the general statement that I have put in to-day, I have brought together the charges in England and India, to present to the Committee, at one view, the whole of the charges on the revenues of India for military services.

7050. *Chairman* (to Colonel *Johnson*).] Will you be good enough to state when the first practical step was taken to introduce the system of the staff corps into India?—In replying to the question of the formation and organisation of the Indian staff corps, I ask permission to refer to my evidence of 2nd May, Question 3192, in which I promised Sir George Balfour to trace the connection between a letter written by Lieutenant Colonel Norman to Sir C. Wood, and the formation of a commission presided over by General Lord Hotham, whose Report took into consideration the establishment of a staff corps as a means of providing for the efficiency of the Indian military, and, to a certain extent, Civil Service. In reply to Sir George Balfour's question, I said that I was unable to state with any certainty what the exact connection between the letter, the formation of the commission, their Report, and the issue of the Royal Warrant might be. Since then I have gone into the matter. The question of the best mode of supplying officers for the detached duties of the public service had long before 1857 been frequently discussed. The evils of the system hitherto in force of withdrawing officers, not permanently, but for unlimited periods, from their regiments was fully admitted; limits had been laid down as to the number of officers who might he withdrawn; the number of regimental officers had been increased throughout the army for the purpose of this supply, and the question of forming a separate and detached staff corps for the purpose had often been discussed. I have been unable to trace the actual Minutes of the Court of Directors in which such a measure is mooted, but I have no doubt of the fact that the idea had been entertained. Any how, up to 1857 nothing had come of it, and the mutiny broke out when the old and vicious system was in full, and even aggravated, force. In that year the Court of Directors sent a Despatch to Lord Canning, dated 25th November 1857, instructing him to appoint a Commission. (I have taken these earlier facts almost entirely from a Parliamentary Paper, dated 1859, which was submitted on the organisation of the Indian army, a large bulky Blue Book.) In that year, 1859, the Court of Directors sent a Despatch to Lord Canning, dated 25th November 1857, instructing him to appoint a Commission to inquire into the proper organisation of the army in India. One of the points on which special inquiry was ordered to be made was, How can the demands for European officers for staff and detached employment be best provided for without injuring the efficiency of regiments. Lord Canning did not appoint a Commission, but caused inquiry to be made by circular. This was done, and a large body of information collected. (The whole of that information I may say is in the Blue Book of 1857.)

7051. What steps were taken after that?—In the meantime, in July 1858, Her Majesty had formed a Commission (of which the Secretary of State for War, General Peel, was Chairman) to report on several points, first, on the terms on which the army of the East Indian Company was to be transferred to the Crown, what the force should be, and how it should be maintained and organised. Though the point was not specially referred to them, the Commission in their Report drew attention to the injurious system referred to already. They say, "The evil has arisen from the number withdrawn from staff and other duties and civil employment." They add, that for the remedy of this evil various schemes have been suggested, viz., first, the formation of a staff corps; second, the system of seconding officers who are on detached employ according to the practice on the line army; third, placing the European officers of each presidency in general lists for promotion. On these points a further reference, it was suggested, should be made to India. The Commission, I should add, in reporting on the alteration of an Imperial or local European army, had been divided, the majority being in favour of the former; and in respect to the question, how officers were to be supplied for permanent Indian duty, that is, as I understand it, for the duty now performed by the staff corps, they considered that "regulations could be drawn up for retaining in India officers of the line army, whose services might be required by the local Government, and that officers of the line would undoubtedly qualify themselves for employment in India, if such employment

ment and all the advantages attending it were open to them." This Commission, I may add, had before them the information which, as I have already said, Lord Canning, in furtherance of the instructions of the Court of Directors had procured in India, "supplemented by a Minute of his own." At the same time, a Committee in the Punjaub, consisting of Sir John Lawrence, Sir H. Edwards, and, I think, Colonel Cole, recommended a staff corps, taking as their basis the suggestions to that effect by General Sir John Jacob.

7052. What was the next step taken?—The Report of the Royal Commission was reviewed by the Political and Military Committee of the Council of India, who, in June 1859, submitted their opinion thereon to the Secretary of State. With respect to the staff corps question, they expressed their agreement, generally, with the views of Lord Canning, which were expressed in the Minute I have referred to, which was briefly to second officers withdrawn from civil duties. Lord Canning had already (*i.e.*, in July 1859), called on the Military Finance Commission, sitting in Calcutta, for their opinion as to the practicability or otherwise of forming a staff corps; they submitted in the following year their views on this and cognate points. They proposed to form very large corps of all arms, between 4,000 and 5,000 strong, composed of each branch of the army, European and Natives, and to withdraw officers therefrom for detached duties of all kinds on the seconding system, their absolute removal from the corps, following a certain term of separate duty. From the date of this Report it is probable that it did not reach England till the latter half of 1860, but it is clear that during the year 1858-59 and 1800, the question of forming a staff corps for India had received very much consideration there and in this country. Meanwhile, it appears that the Secretary of State had been giving the matter his personal consideration, and sought the opinion of Lieutenant Colonel Norman, the Deputy Adjutant General of the Bengal Army, then at home on furlough. By Sir C. Wood's desire, this officer, whose administrative capacity and practical experience in all military duties of all branches of the service in peace and war, were notoriously of the highest order, submitted in considerable detail his views on the various points connected with the amalgamation of the Imperial with the Indian Army. They will be found at pages 180 to 191 of the Parliamentary Return of 24th May 1860.

7053. Will you state shortly what his recommendations were?—In them he recommends the system of having an unattached list, which though generally shadowing it out, still differs in some important particulars from the staff corps, as it was subsequently formed. Lieutenant Colonel Norman's letter was dated February 1860. Later in the same year a committee was appointed for the purpose of preparing suggestions as to the various detailed measures which it might be advisable to take for effecting the amalgamation of the European forces of the Indian army with the general army of the Crown. A memorandum of several of the points which appeared to demand the committee's attention was furnished to them, to which, however, they were desired not to confine themselves. The committee consisted of Lieutenant General Lord Hotham, Lieutenant General Sir C. Yorke, Lieutenant General Clarke, Brigadier General Russell, Colonel Sir P. Melvill, Lieutenant Colonel Wetherall, and Lieutenant Colonel Norman. The second of these points referred to the establishment of a staff corps. The committee submitted their report in August 1860, and laid down the rules they would propose for the formation of a staff corps, or list for India.

7054. Have you got the rules which they laid down?—I will furnish them; one member, Colonel Melvill, of the Bombay army, attached a note to the report, dissenting from the remainder of the committee as to the advisability of forming a staff corps in the manner suggested, and proposed as an alternative, the formation of three unattached lists, the nature of which he sketched out at some length (*see* page 212, of Pear's collection). In January 1861, a Royal Warrant was issued, forming the Bengal, Madras, and Bombay Staff Corps, following in most particulars the recommendations of the committee. This Royal Warrant was given effect to in India in April 1861. How far the Secretary of State was influenced in his views by those held by Colonel Norman, Lord Halifax only can say with authority; nor can I pretend to say what special weight Colonel Norman possessed with the committee, of which he was the junior member; but I may say that public opinion in India generally, ascribes to him, and I believe justly, the credit of having taken a very leading part in bringing into working order an army, the main part of which had been disorganized for four years; one of the principal measures employed being the formation of the staff corps of 1861.

7055. Now, can you state the precise basis that was adopted for forming the Staff Corps?—Yes; with respect to the exact organization of the Staff Corps, I should observe that it is very difficult to keep the question separate from others which, though apparently closely connected with, are independent of it; as for example, the questions of the organization of the Native army, the disposal of unemployed officers, the abolition of a great European force, &c.

7056. There are two totally different questions there; one is the formation of a permanent establishment, with the principles of permanent administration; and the other is the temporary question of dealing with the officers then in India and in an abnormal state, resulting from the utter disorganisation of the army?—Yes.

7057. Was there any attempt at separation between the organization of the Staff Corps as an institution in itself, and the indemnity that might have to be given to the officers then in employ in India under the old system?—The Staff Corps, on its formation, was employed solely with the object of officering the Native army, and of providing officers for the other civil and military requirements of the Indian administration.

7058. What were they principally?—There is no actual code or *résumé* of Staff Corps rules brought up to date.

7059. But what I want to know is this: the corps is formed; it would seem to consist of certain elements, namely, of the number of persons to be in it, their relations to one another, and their mode of payment, and ultimate retirement; can we get the rules relating to that?—I give the rules as I go on. The Staff Corps was formed expressly for the supply of officers of the Native army of India, and for those appointments of different kinds, political, civil, &c., held by officers, and comprehended under the general name of staff employment. There were thus two

Col. A. B. Johnson and Mr. G. W. Kellner.

22 July 1873.

great divisions of employment for officers of the staff corps. 1st. Purely military, as in regiments of the Native army, and army departments. 2ndly. Various civil appointments, as political, public works, and so on. Appointments coming under those heads could only be held by staff corps officers, that is officers who joined the Indian service for continuous service in India. I would say here that when I speak of the Staff Corps as implying Indian service, I include the local service, that is officers of the old Indian service who have not joined the Staff Corps, but who are equally eligible if otherwise qualified for Indian staff employment. The officers eligible for admission to the Staff Corps on its first formation were officers of the British and Indian armies then on staff employ in India, and not having the substantive rank of colonel. Staff employ was interpreted to mean civil and political appointments of every description, and appointments in all public offices and departments, appointments on the general and personal staff, the appointments of commandant, second in command, and adjutant of irregular and local corps, and of adjutant, interpreter, and quartermaster of existing local European and Native corps. It was added that so soon as the proposed changes in the organization of the regular Native regiments shall have come into operation, the whole of the officers who will be personally attached to them will be on staff employ. Officers so employed and desirous of entering the staff corps were, if they had held their appointment for a year or upwards, admitted at once without further probation; so also were those who had served permanently on the staff within the past three years. Those who had held them for less than a year were to be admitted only after passing the probationary period and test to be thereafter laid down. Government claimed the right of rejecting the application of officers whom they did not deem in all respects fit for the Staff Corps. Six months was allowed for officers to make their election. The future conditions of admission to the staff corps were that the officer should be below the rank of regimental field officer; have served three years with a regiment, of which two must have been in India, and have passed the prescribed test in Hindustanie. (The obligatory period of regimental service in India was later held to include the year's probationary service with a Native corps.) An officer fulfilling these conditions, and having obtained the consent of the Commander in Chief, and the certificate of his commanding officer, that he had efficiently performed his regimental duty for the specified period, might then be appointed, on probation, for a fixed period, his permanent admission being dependant on his passing the prescribed tests for the branch of the Indian service for which he may have been selected. During this probation the officers may at any time withdraw, and return to their regiment in which, during their probation, their promotion is going on, without prejudice to their interests. When permanently transferred to the Staff Corps their names, of course, ceased to be borne on the strength of their original regiment; meanwhile their vacancy was filled in their corps by promotion or appointment, the officer so promoted or appointed becoming supernumerary on the candidate for the staff corps returning to his original corps. (I do not think that has occurred twice or three times during the whole time that the Staff Corps has been in force.) The promotion in the Staff Corps was regulated as follows: Ensigns, when permanently transferred to the Staff Corps, to have the rank of lieutenant; other officers took with them their regimental rank; officers of 12 years' service, of which four must be in the Staff Corps, to be captains; after 20, of which six in the Staff Corps, majors; after 26, of which eight in the Staff Corps, lieutenant colonels; five years' service in the Staff Corps as lieutenant colonel giving the brevet rank of colonel. On the first formation of the corps, past service was permitted to count in the case of officers admitted at once, as if it had been performed in the Staff Corps, but only one step could be given at once; two years being required to elapse before the second was given. As thus: A captain of 26 years' service entering the Staff Corps on its formation, entered as major, and not as lieutenant colonel; he only became lieutenant colonel after two years' further service, or 28 years in all; notwithstanding that, on his entrance, he had fulfilled the full staff service of eight years qualifying for promotion. Officers of the Staff Corps are, however, eligible for brevet rank, and take their places on the general gradation list in common with the rest of the army; those holding military appointments taking military command according to their army rank, whether as respects the army at large or as amongst themselves. Exchanges were permitted between officers of the British line and Staff Corps, if under the rank of field officers, provided they were of the same rank, and the exchanging officer was qualified for admission to the corps. I may mention here that the names of officers entering the Staff Corps continued to be borne, for the purposes of regulating promotion, on the cadres of the Native regiment to which they originally belonged, but an officer exchanging from the Staff Corps into the British line was removed from the cadre, and promotion made in his room. Officers entering the Staff Corps cannot claim any particular class of employment, as the Government of India reserves a discretional power to employ them in such manner as they may think best. No change was made in the system under which certain appointments were made by the Government and others, or nominations to them by the Commander in Chief. The Government reserved the right of employing Staff Corps officers in any Presidency, but ruled that appointments to the Native line regiments of any Presidency should only be made from among the officers of that Presidency.

7060. Does there not seem to be a very remarkable difference in the organization of this corps and the army in India; was not the basis of the Indian army, that no person could be appointed to rise to a rank or position unless there was a position vacant in the army for him to take, was not that the basis of the organization of the Indian army?—The change was, that whereas formerly all promotion had been by succession, thereafter it became promotion by length of service.

7061. Was not the very basis of the Indian army that no person could have any rank or position except by virtue of an office under the establishment; that is to say, that a person could not be a captain unless there was a captaincy for him to take?—Quite so. They got promotion, by succession, to a vacancy in a fixed establishment.

7062. There must be a vacancy?—There must be a vacancy or they could not succeed.

7063. And

7063. And therefore the measure of the promotion and the complement of officers was the sanctioned establishment, and the vacancies occurring in that establishment; was not that so?—Quite so.

7064. Then, under the new system, it was proposed to entirely abolish that, and to have officers attaining rank, without any reference whatever to their having any duties to perform; was not that so. An officer went into the Staff Corps, and if he was there a certain number of years, he rose from rank to rank; but there was no guarantee that there were any duties for him to perform corresponding with that rank; is not that so?—No: For instance, now, no officer is admitted to the Staff Corps except when there is an actual vacancy in the Staff Corps, and on its formation the number of appointments to be filled was far greater than the number of officers admitted to the Staff Corps.

7065. But I am speaking of the promotion; being once admitted, was he not promoted, without reference to the question whether he had any duties to perform corresponding to the rank which he is to receive?—Yes; but at the same time provision was made that if an officer remained three years unemployed he was put on half pay.

7066. But if he was employed under this system, in what was formerly called a subaltern staff office, he might, under those rules, as you have read them to us, be a major?—Yes.

7067. Or even a colonel?—Yes; only there is a discretionary power as to how to employ officers of certain ranks. Under the old system you would not have appointed a field officer to a subordinate position in the Commissariat, for instance.

7068. Under the new system, he gets a higher rank without there being any vacancy in the higher rank, which was not the case under the old system?—Just so.

7069. There was no classification of captains' appointments, and majors' appointments, and colonels' appointments in the new Staff Corps, so that a person could not be captain, major, or colonel unless there was an office vacant which entitled him to that position?—Yes.

7070. Therefore, he was getting rank and pay without any reference to the duties to be performed?—Yes.

7071. You stated that no one now enters the Staff Corps unless there is some vacant appointment in the Staff Corps to take up; but was that the state of things when the Staff Corps was first established, or was anybody allowed to go into the Staff Corps without reference to the actual vacancies then existing?—The rule was not laid down; but, as a fact, it was not necessary that it should be then; because, as I have said, the number of appointments was far greater than the number of officers, under the early rules, qualified to enter the Staff Corps.

7072. Mr. *Fawcett.*] But does the fact, that a person is only admitted to the Staff Corps when there is a vacancy, depend on practice, or on a distinct rule, which cannot be disobeyed?—A distinct rule.

7073. Who passed that rule?—The Secretary of State, in concert with the Government of India.

7074. Mr. *B. Denison.*] What determines the number of officers to be selected for staff appointments?—There is nothing to determine it, except the number of positions that there are to be filled; there is no fixed establishment.

7075. *Chairman.*] The number of appointments that officers may hold, in fact?—Yes.

7076. Mr. *Fawcett.*] But there is no rule which regulates the number of persons in the staff corps, or civil employ and military employ?—No rule.

7077. Therefore, that being the case, it gives unbounded opportunity, does it not, to admit as many people as you like. Suppose that a Secretary of State suddenly wanted to admit 30 additional men into the staff corps, there would be no difficulty in India in finding 30 different employments, for instance, in the public works, so that it is in fact in the discretion of the Secretary of State?—Yes, it is left discretionary; the discretion being the good of the public service.

7078. What they suppose to be the good of the public service?—Yes.

7079. Mr. *B. Denison.*] Take the Bengal Presidency; now, are there actually a greater number of officers in all employments than there were in the old days, when there were 74 regiments from which they were all drawn?—No.

7080. Under the old system, the maximum number of officers would be 74, multiplied by 26, to a regiment; that would include the whole fund of officers from which the Government had the selection for staff appointments. The number of agents, with their complements; 74 only represent from the Native infantry.

7081. Of course, it would be plus the artillery and cavalry?—Yes; the Secretary of State in 1864, speaking of the system of promotion, wrote: "The system of promotion by length of service introduced into these corps was the only system suited to their position and circumstances. It was impossible to fix any number of establishments for these corps, inasmuch as the requirements of the service, and the number of staff appointments, must vary from time to time;" that is the principle on which the system of promotion by length of service, rather than by succession, was established.

7082. *Chairman.*] Does any discussion arise as to the practice and the possible effect of taking officers into the staff corps up to the rank of a field officer, as regards the relation of officers so coming in to those who have been already serving in the Staff Corps for many years, and who entered in the beginning, as was originally intended, as ensigns or lieutenants?—No, I do not see how that would affect it.

7083. If a captain of six years' standing were examined, and went into the Staff Corps, would he not expect to be given an appointment to which a junior officer, who had been in the Staff Corps for 10 years, would naturally expect to succeed, and how would those relative claims be adjusted?—Practically that has been put an end to by a later rule that no officer shall enter the Staff Corps of more than seven years' service.

7084. Is it now the system that he enters it at the bottom?—If he enters it before seven years, which he must do, he enters as a lieutenant, and then of course he takes his position according to his length of army service.

7085. Then he supersedes a certain number of officers already in the corps?—Yes.

7086. But not many?—Not many; but he only supersedes them in the way in which he has already superseded them, as a senior lieutenant in the British line.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

22 July 1873.

7087. They may by particular study have fitted themselves for the particular service they entered into which he has not chosen to go, but he enters it later, and supersedes those who are his juniors?—But they were his juniors before he entered it, in the army.

7088. Mr. *B. Denison.*] You spoke just now of exchanges being permitted between officers of the Staff Corps and officers in British regiments. Do you know to what extent those exchanges have taken place?—At first there were several from the officers who joined the new line regiments. I mean officers of the Indian army who had gone into the new line regiments; but the number that exchanged otherwise has been very small.

7089. What place did these officers take in the Staff Corps?—They took exactly the position that their rank gave them in the gradation list. There is no going down; there is no fixed establishment; you cannot go to the bottom; it is army rank as much as any; more, in fact.

7090. There was always a restriction, was there not, as to the number of officers who could be taken away from the European regiments for the Staff Corps?—You mean under the Company; yes, the same restriction that there was with the native regiments; the officers of the old European regiments doubled the officers of the native regiments.

7091. That rule, I suppose, is most strictly adhered to under the present system, that there must always be a full complement of officers with the regiments?—That is a matter of discipline which the Government of India does not interfere with, unless some case of gross scandal requires it; the Commander in Chief looks after that.

7092. As a matter of practice, are there a considerable number of officers taken from the European regiments for staff appointments?—The only appointments which they can hold, are limited appointments in the Army Staff; that is the Department of the Adjutant General, the Quartermaster General, and personal staff.

7093. *Chairman.*] Except for those, they have to leave the active service of the line to go into the Staff Corps?—Yes.

7094. What furlough rules were made on the establishment of the Staff Corps?—With some trifling modifications, the furlough rules of 1854 were adopted as the furlough rules of the Staff Corps, 20 months being substituted for 15 months as the period during such leave for which appointments might be retained. The Indian pension list was adopted for the Staff Corps for officers entering it from the old Indian service. Those from the British line are to receive, after service in India: 20 years, 191 *l.* 12 *s.*; 24 years, 292 *l.*; 28 years, 365 *l.*; 32 years, 456 *l.* 5 *s.* The periods of service, include the proportion of leave of absence laid down in the furlough regulations, namely, two years in 20, three years in 25, four years in 30. Subsequently, in two additional pensions were added, namely, after 35 years service, including five years furlough, 600 *l.*; after 38 years service, including six years furlough, 750 *l.* No difference is made in respect to this between leave of absence taken in Europe or elsewhere in or out of India, or whether it be on sick certificate or on private affairs. The pay of the Staff Corps was fixed at unemployed pay:—

	Monthly in India.			Daily out of India.		
	Rs.	*a.*	*p.*	*£.*	*s.*	*d.*
General Officers	1,295	5	–	1	5	–
Brevet-Colonel and Lieut.-Colonel	827	14	–	1	–	–
Major	640	14	–	–	16	–
Captain	364	1	6	–	10	6
Lieutenant	225	12	–	–	6	6

pending the establishment of rates of remuneration for the several staff appointments. The succession to colonels' allowances or off-reckonings was provided for in the Staff Corps, according to the seniority of officers as lieutenant-colonels in the Staff Corps. A certain proportion of the senior officers were to receive colonels' allowances, the number being eventually one for every 30 officers on the Staff Corps; but it was ruled that this number could only be filled up as the establishment of colonels on the old footing diminished, so that the aggregate number of officers receiving colonels' allowance at one time should never exceed the regulated number of colonels' allowance for each presidency. But to commence this limited establishment it was ruled that officers after serving 12 years as substantive lieutenant colonels, and having 38 years service, were to be placed in receipt of the allowance in such numbers as to complete the fixed establishment of one to every 30; when that number was complete the off-reckonings would only be allowable by succession in order of seniority. Provision was made for a half-pay list for the staff corps for officers of the staff corps who did not wish to retire, but who were unable to return to India, and officers removed from the effective list of the staff corps, having served three years therein in India, and not entitled to pension, are to be placed on a half-pay list on the same rate of half-pay and on the same conditions as officers of similar rank in the British army. Such officers gave an effective step in their cadres, but were eligible to return to effective service without however coming again on their cadre list; the cadres being, you understand, the body in which the local officers who did not join the staff corps remained and got their promotion. Unemployed general officers of the staff corps were only permitted to draw Indian pay, or 1,295 rupees, for three years from date of promotion; after that period they were restricted to 1 *l.* 5 *s.* a day "out of India" pay. It was further provided that officers of the staff corps under the rank of major general, whom the Government may not see fit to employ in any capacity, shall not draw pay for more than four years; one year on the Indian scale and three years on the out of India scale; after that period they are to be placed on half-pay, or such pension as they may be entitled to. Her Majesty reserved the power of removing officers from the effective list of the staff corps through the Secretary of State for India.

India. In framing the staff corps, the equal rights of Indian officers, who might not join the corps to hold appointments, were secured appointments on the general staff being held by officers of either service, British or Indian, staff corps or local. As admission to the staff corps was a matter in a great degree of selection, and was governed by certain rules for finding that selection, there was necessarily a good deal of discussion as to the individual claims of persons desirous of entering it; I mean as to whether the appointments they had held, or the periods for which they had held them, qualified for admission, and so on; it would be tedious to give any *résumé* of the very numerous rulings on these minor points, particularly as they were of a purely temporary character, having no kind of application now, and in no way affecting the principle of the staff corps system. The main point insisted on, and which did actually guide all admissions, was that no officer should be finally appointed to the staff corps who had not already served in a staff appointment within a certain period, and who had not qualified in the languages; though complicated at first by the several classes of officers from whom the staff corps was to be formed, the ultimate source was to be Her Majesty's land forces serving in India, and it was in this view accordingly that the conditions of admission were laid down. I think that I have now given a summary which includes all the points of any importance in connection with the establishment and maintenance of the Indian staff corps.

7095. Now will you be good enough to state what changes have taken place since the formation of the staff corps?—It was, of course, quite impossible to lay down at the outset what the strength of the corps should be; as that must, of necessity, depend on the number of employed local officers not belonging to the staff corps. As their numbers diminished, those of the staff corps must correspondingly increase. The number of officers who entered the staff corps on its formation, that is, the number shown on the 1st January of the succeeding year 1862, was 1,338, as follows: General officers, 3; lieutenant colonels, 29; majors, 312; captains, 588; lieutenants, 406; making a total of 1,338. The number of Indian officers not of the staff corps on the same date was: cavalry, 306; infantry, 2,523; total 2,829; or a grand total of 4,167. The proportion of the staff corps officers to local did, however, increase in a remarkable degree; but this point will be dealt with later. Early in 1864 a very important step was taken in connection with the corps in the laying down of the tests to which candidates for admission to the corps are to be subjected in the Military Department. These were followed, a little later, by tests for candidates for civil employment. These rules laid down the procedure to be followed by an officer desirous of entering the staff corps.

7096. Was there any rule by which an officer could qualify himself, and then be presented to the Government as a person qualified, so that he would have any moral right to be put in the staff corps; or was it competent to the governors and other civil authorities in India to select any one they pleased and give him an appointment, and then give him a time within which to qualify himself to hold that appointment, notwithstanding any number of persons who had already qualified themselves?—Admission to the staff corps is now conditional on this, that there is no other officer qualified to hold the office that is vacant.

7097. Was that so at that time?—No; and I must say that no officer has a right to claim, absolutely as an indefeasible right, admission to the staff corps.

7098. If an officer now qualified himself by special study to enter the staff corps, can he do that of his own accord, and if so, what becomes of him?—No, he cannot enter in that sense of his own accord. Perhaps I had better mention the mode in which he would act; the first step an officer has to take to enter the staff corps, is to pass a certain test in the languages, which is called the language test. He would then apply for an appointment to the Commander in Chief, who, I presume his character being good, and on his furnishing certificates of health and character from his commanding officer, would put him on his list to appoint to the first vacant second doing-duty-subalternship in a Native regiment, either cavalry or infantry.

7099. Supposing he wished to go into the civil employments held by military men, what would he do then?—He would apply then to the civil department in which the line of appointment that he wished to take rested.

7100. Is there any rule laid down or published, which gives him any moral guarantee whatever that his application will be granted; has the Government pledged itself in any way, that if he makes such an application and has fulfilled all the requisite qualifications, he will have any preference and will be considered in any way; or is he merely in the position of an applicant?—He is merely in the position of an applicant; but on the other hand, it is an application tempered by the fact that there is a considerable want of properly qualified officers to take up the Indian appointments.

7101. Is it the fact that, notwithstanding that there may be any number of applicants, it is quite competent to the Commander in Chief, or the Civil Governor, to take any officer he pleases out of the Queen's officers and give him the appointment for which there are so many applicants, though the person to whom it is given has no special qualification at all, leaving him to qualify at some future time?—No, he cannot get the appointment until he has actually passed every qualifying test.

7102. Not even temporarily?—He must first of all pass through a Native regiment, and be in it a year, without being appointed to the simplest civil appointment which you are referring to, as I understand.

7103. May he not be appointed to the Native regiment, without having any qualifications to hold his appointment until he qualifies himself?—Yes; the only qualification that he requires is, that he shall show that for two years he has been an excellent regimental officer, that he has passed his examination for promotion, that he has taken the trouble to study and pass in languages.

7104. But is it necessary for him to pass the test of any languages before he can hold the office temporarily?—Yes, before he can hold the shade of a staff corps appointment, he must pass in the higher standard of the language test, which is really a sufficiently stringent examination.

7105. But was it not the practice of certain persons to appoint officers on condition that they would

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

22 July 1873.

would qualify themselves in six or 12 months?—Not in regard to languages, I think.

7106. Are you quite sure about that?—Yes, I am quite sure of that; during the mutiny there was of course a very great demand for officers of every sort to command and serve these regiments that were hastily raised; in fact the condition of passing with regard to many of these officers could not be insisted on; the time was urgent, the necessity for the services was extremely pressing; when the Staff Corps was formed these officers were all of them holding appointments which had been decided to rank as staff corps appointments as qualifying for admission to the staff corps; those officers who had not been passed were granted a certain time in which to pass.

7107. But are we to understand, then, that no person can be nominated to an office belonging to the Staff Corps, or to the Staff Corps, unless he has fulfilled the special qualifications that are requisite for the office to which he is appointed?—Yes, except that the Governor General may have a certain proportion of his aides-de-camp unpassed officers; but for the public services they require special qualifications, and they must be fulfilled.

7108. Will you kindly go on with your statement?—The changes which have taken place in the constitution of the staff corps are, so far as its present *personnel* is concerned, very considerable; but in all other respects, very trifling. It was ruled in 1862, that the right to retire on the pension of their ranks under the regulations of 1796 was not applicable to the Staff Corps; but officers declaring that they had been misled on this subject were permitted to revert to the old local service, in which, of course, the privilege still existed. The regulations of 1796 were regulations by which officers who had fulfilled a certain number of years' service might retire on a given rank, notwithstanding that they had not attained it, but staff corps promotion gave that rank within the number of years; consequently, if this rule had not been abrogated, the system of pensions which has been laid down would have been set at nought, and they would have claimed the pension of a higher rank than they were entitled to under the rule of 1796, of having fulfilled a certain number of years' service. In 1862 the rule regarding the succession to off-reckonings was issued; it was then laid down that the senior officers of the staff corps who had attained the rank of colonel, and had served not less than 12 years in the substantive rank of lieutenant colonel, should succeed, according to seniority, as lieutenant colonels to the reserve of colonels' allowances, available under the operation of the measures for regulating the succession to colonels' allowances of those who did not accept the general retiring scheme of August 1861. Staff Corps officers holding any staff appointments were exempted from the Queen's regulation, which compels an officer to vacate it on promotion to a certain rank. In 1864 it was ruled that officers should only be removed from civil appointments by the Government of India, or by the presidency to which they belonged, and not by the local Government, who might possibly object to having unemployed officers on the finances. In 1864 the test order and the regulations for probationary service were laid down.

7109. Was the relation of the staff officers to the other officers a subject of inquiry?—Yes, there was a commission appointed, of which Lord Cranworth was president, to report on the general question of whether by the formation of the Staff Corps the Parliamentary guarantee had been infringed in any particular; the commission considered that one measure involved infringement, viz., the suppression of regimental officers by the promotion of their brother officers under the Staff Corps Rules. On another point the commission was doubtful, namely, the regulation by which 12 years is made the period of service in the grade of lieutenant colonel. The Secretary of State, in view of directly remedying the first by the grant of brevet rank to all Indian officers alike, placed all in respect to army rank on precisely the same footing, and thereby removed all supersession or the possibility of it.

7110. What year was that?—In the year 1864 all Indian officers were placed, in respect to army rank, on precisely the same footing.

7111. You mean all the officers of the old army of the East India Company?—Yes, and all officers serving in India. Notwithstanding this decision, an address to the Queen was moved and carried on 2nd May 1865, praying that Her Majesty would be pleased to redress all such grievances complained of by the officers of the late Indian armies, as were admitted by the commission on the memorial of Indian officers to have arisen by a departure from the assurances given by Parliament by 21 & 22 Vict. c. 106 (the Henley Guarantee), and 23 & 24 Vict. c. 100; accordingly, a commission of seven general officers, presided over by Sir John Aitchison, was appointed by Her Majesty, to inquire whether the measures taken by the Secretary of State on Lord Cranworth's Commission Report had been effectual and sufficient. The commission reported that, as regards the first of these, the measure had not been sufficient, as the names of staff corps officers had been retained on the regimental cadres to regulate promotion, a measure which Lord Cornwallis's Commission had declared to be no infringement of guarantee.

7112. Mr. *G. Duff.*] That was carried against the Government?—Yes.

7113. By a vote in the House of Commons; the Government opposed the address?—Yes; I have already said that Sir John Aitchison's Commission considered that the grant of brevet rank was not sufficient. The second commission considered that though for officers promoted since 1st January 1862 twelve years' service for colonels' allowances was a fair period, yet for those promoted prior to that date 10 years should be the term allotted for succession to the allowances. There were other points, but I refer to these two as being those only having connection with the staff corps. On the report of Sir John Aitchison's Commission, Lord Cranborne, then Secretary of State, declined to remove the names of the staff corps officers from the regimental cadres, but, instead, threw open the staff corps to the whole Indian army, without probation, or qualification, or restriction of any kind. That is, it was accepted as a fact that equality of army rank did not remedy army supersession, unless there was at the same time an equality of pay. Further, all limit as to the number of colonels' allowances was removed, and they became a certainty to every officer of the old Indian army who attained to 12 years' substantive rank as lieutenant colonel. Simultaneously, two additional pensions of 600*l.* and

and 750 *l.* a year were added to the pension list, attainable after 35 and 38 years respectively.

7114. *Chairman.*] Then the result of Lord Cranborne's arrangement was to make the whole army move on with the efflux of time, without reference to its having any duties to perform?—Practically the whole army; very few remained local; that is to say, very few did not join the staff corps. It was decided in the same year that officers joining the staff corps under this order would not be liable to be placed on half-pay upon any grounds other than such as would have justified their removal from the effective strength of the army had they not joined the staff corps. In 1868 the new furlough rules were introduced, which, however, are not applicable solely to the staff corps, but to the local service, and to those of the British line holding certain positions. In the same year it was decided that, on special and purely public grounds, no officer should be admitted (except by exchange) into the staff corps whose service exceeded seven years, or thereabouts, or whose rank was higher than that of subaltern. I do not think that there are any further changes affecting the constitution of the staff corps. There are possibly several of minor importance, such as the retention of appointments during prolonged absence, and such like, which, however, have a purely temporary and indeed personal effect.

7115. (To Mr. *Kellner.*) Now can you state how many officers were thrown into this new system by Lord Cranborne's order?—I find that in 1866 there were 1,485 officers in the staff corps.

7116. In the year before, how many?—One thousand four hundred and three. Then in 1867, they were 2,197; and in 1868, they were 2,401—being about one thousand in excess of the number of officers in 1865.

7117. That would show practically the operation of the order?—Yes.

7118. (To Colonel *Johnson.*) Then all these officers were suddenly given a scheme of promotion and pay who had never received or ever dreamt of receiving it?—The staff corps was framed without any idea of such a swamping as it received in 1866. The staff corps as framed, is the staff corps of the future.

7119. Has any rule been laid down now by which the appointments shall be classified, and by which promotion, and salary and retirement shall be dependent upon the duties performed; because you have described to us a system which has no reference to duties performed?—Any officer who is unemployed for a certain time, except those brought in without qualifications in 1866, is liable to be removed if he is unfit for the performance of his duty.

7120. That is, if he is doing no duty; but the question really has reference to the particular duties performed; a person may remain in subordinate employments now with a comparatively small salary, and yet with the efflux of time he may rise to high rank and have a high retiring pension when he goes away?—Yes, it is quite possible; but if you take really the relative number of field officers (those are the officers spoken of always as officers of high rank), it is not greater than you will find in the Royal Artillery at the present day, or it will not be.

7121. Is there any rule by which the ultimate pay and retirement shall depend upon the service that the person has done, and the actual salary that he has received in the appointment that he has held in the public service?—No.

7122. Then the two things are entirely separated, because they are not based one upon the other?—The salary is based on the work done, but not the regimental pay.

7123. Nor his promotion?—No.

7124. Nor his retirement?—Nor his retirement.

7125. Therefore, if this were presented as a parallel with the civil employment of any office in this country, a man who would remain a second-class clerk, for instance, in the India Office, if he retired at the end of 30 years, if he was not promoted, would only get the two-thirds, or whatever proportion it might be, of his salary as superannuation, as a second class clerk; but according to your view, although a second-class clerk, when he retired he would receive the rank and retiring pay of an Under Secretary of State, for instance?—Having performed the whole services which the Government requires of him for that period.

7126. Having performed inferior services?—But that always rules the pension system in the military service; a man might be a lieutenant for 26 years and then get the pension of a lieutenat colonel.

7127. In the old system he could not go from an ensigncy to a lieutenancy unless there was a lieutenancy vacant; he could not go into any other rank unless there was vacancy in that rank, and could not get any retiring pension except in that rank in which his service was?—His length of service ruled it there, and not the rank.

7128. What was the length of service in the regular army when he did not get anything by his rank?—I can't tell you that, but he gets exactly the same now; the pension rules are absolutely untouched; they are not affected in the slightest degree by the formation of the staff corps.

7129. Do you mean whatever his rank in the staff corps, he will get the same pension as formerly?—Whatever his length of service is. It is by service that the promotion is regulated, not by rank.

7130. Do you think that the new system has a tendency to keep officers in India, so that they may retire with better pensions than under the old system, at the higher rates of pension for the staff corps?—If you mean the two new rates, 600 *l.* and 750 *l.*, it could not possibly operate in that way as regards officers of the staff corps or the local service, because the higher pension of 750 *l.* a year falls in exactly with the period at which they are entitled to their colonels' allowances. But those two additional pensions were given for the future to induce officers who will hereafter attain their colonels' allowances by succession only, and not by length of service, to retire at an earlier date, and so to get rid of them before they are too old; to prevent them holding on for off-reckonings, in fact; and the same applies to the artillery in the present day.

Friday, 25th July 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Beckett Denison.
Sir George Balfour.	Mr. Dickinson.
Sir Thomas Bazley.	Lord Edmond Fitzmaurice.
Mr. Beach.	Mr. Robert Fowler.

Mr. Bourke.	Mr. Lyttelton.
Mr. Campbell-Bannerman.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Colonel ALLEN BAYARD JOHNSON and Mr. GEORGE WELSH KELLNER, re-called; and further Examined.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

7131. *Chairman* (to Colonel *Johnson*).] HAVE you any statement to make in reference to your evidence on the last occasion?—In my answer to Question 7058 I said, "There is no actual code or *résumé* of Staff Corps Rules brought up to date." Since I said that, I have received from India the Military Rules and Regulations, which have just been completed, and I should be glad to put in Chapter 1st, Section 4, which gives all the rules and the tests now existing. (*The same was handed in*, vide *Appendix.*)

7132. Sir *C. Wingfield.*] You say that under Lord Cranborne's Despatch of 1866, all officers in the local lists were allowed, without any qualification, to join the staff corps; and you say that previous to that time there was a limitation to the number of officers in the staff corps who could rise to colonels' allowances; that is to say, 1 in 30?—Yes.

7133. When these local officers were admitted under Lord Cranborne's orders, why was it necessary to withdraw that limitation?—On the formation of the staff corps the rule for the attainment to colonels' allowances was, that there should be a limited establishment of the latter to which officers should succeed as vacancies occurred. To create this limited establishment, in the first instance, officers after serving 12 years as substantive lieutenant colonels, and 38 years' service in all, were to be placed in receipt of the colonels' allowances until the regular establishment of 1 in 30 of the whole was complete.

7134. Therefore it was clearly intended, on the first formation of the staff corps, that the number of colonels and colonels' allowances should not exceed 1 in 30 of the strength of the staff corps?—Yes.

7135. Was it not clear at the moment that the local officers were admitted *en masse* in 1866, that limitation of 1 in 30 was abandoned; why was it not enforced in regard to them?—In attempting to redress the grievances that Lord Cranborne's Despatch was intended to meet, it was difficult to avoid embarrassment, from the circumstance of the two bodies of officers being under different conditions of service; and the question arose how they were to be treated in regard to the succession to colonels' allowances. It had been already arranged that officers of the staff corps should succeed according to seniority, at the rate of 1 in 30; but bringing in those who came in in 1866, they would have to be placed above the officers who had already come in under certain specific conditions of succeeding by seniority.

7136. That is to say, some would?—Yes; that is to say, there would be extensive supersession of officers who had entered the staff corps under certain conditions. It seemed necessary, therefore, to revert to the temporary rule which was made at the commencement of the system of colonels' allowances, and put all on the same footing of succession in 38 years.

7137. But these local officers admitted in 1866 were still local officers under a limitation as to the number who could rise to colonels' allowances?—Yes, a number fixed with reference to the reduction made in the number of colonels.

7138. What was the number?—Fifty-eight colonels' allowances, I think, in the infantry; but I am not quite sure.

7139. So that they have got an enormous boon in joining the staff corps?—No doubt, a very great boon.

7140. With regard to those officers who still are on the local lists, what is the rule with regard to their promotion to colonels' allowances?—Exactly the same.

7141. They also rise without limitation in numbers?—Yes.

7142. You have seen the correspondence of General Broome and General Hannyngton, and subsequently Sir Henry Durand's conclusions on reviewing the controversy between those two officers. Sir Henry Durand says, that in the year 1882 there will be 500,000*l.* paid for colonels' allowances, and in the year 1892 nearly a million. Have you formed any opinion upon that?—No, it is so entirely an actuarial question, that I do not consider myself competent to form an opinion of any real value upon it. According to General Hannyngton's calculation, there will be 513 staff corps officers drawing colonels' allowances in 1892, receiving 577,059*l.*, that is allowing for proportion

proportion of deaths, but not for men going on pension in the interim.

7143. But one thing is certain, that the number ultimately drawing colonels' allowances will be very great?—Undoubtedly; and the number that, supposing they all live, will succeed to colonels' allowances in a given time, can be determined specifically, but the difficult part of the question is, as to what number would have retired under the old rules, or may retire now before succeeding to colonels' allowances; allowance has to be made for the reduction on that score, for which we have really no data.

7144. But the colonels' allowances hold out a great inducement to a man to cling on to the service, do they not?—Unquestionably.

7145. Are there many officers of the staff corps now who are not employed at all?—Yes, a considerable number. We have put in a return showing exactly the number.

7146. Many of these officers in the staff corps are doing general duty, are they not?—A good many.

7147. Do you class them among the employed?—Among the unemployed. The general duty officers are field officers; that is, attached to stations, not to regiments. The captains and subalterns are attached to regiments. Of the lieutenant colonels unemployed in India there are 47, and there are 53 majors, 25 captains, and 3 subalterns; total 128.

7148. Doing duty?—Doing duty. Then there is a certain number who, even if in India, would be probably unemployed, that is to say, on furlough, but not holding appointments in India: 40 lieutenant colonels, 29 majors, 39 captains, and 4 subalterns, total 112.

7149. With regard to some of these men, officers of a higher rank, field officers who are doing what is called general duty at a station, the reason is that they could not be employed with regiments; there is not room for them in the regiments?—Partly that there is not room, partly that they are not qualified for employment.

7149*. But then did not the Home Government, about two or three years ago, issue a Despatch, saying that employment was to be found for all officers, and that those officers whom the Government pronounced utterly unfit for any employment at all, should be compulsorily retired?—Yes, but then that is, after all, too broad. There are a great many officers that you cannot turn out of the service summarily, whom, at the same time, it is not expedient or politic to place in command of regiments, or in the positions for which their rank would qualify them.

7150. Do you know how many officers have been compulsorily retired under that Order?—I could not tell you on the instant, but the information is obtainable; very few.

7151. Do you consider that, if a calculation were made of every officer's prospects of attaining the colonels' allowances, and his prospects were capitalised and part were paid down to him at once, that would operate as an inducement to many men to go?—I cannot say whether it would be so to many men; it would certainly to some. But till an offer is made no one ever knows how very few men will accept it. It is quite common to hear men say that, if some slight inducement were offered them to go, you would clear the service of all unemployed and discontented men; but, when the offer is made, even if it is quite liberal, as liberal as they have anticipated, there is always something at the last to induce them to reconsider their decision and to hold on for off-reckonings, or the better pay of India.

7152. But the longer you delay that, and the nearer these men are to colonels' allowances, the less temptation you offer them?—Yes; you buy their off-reckonings, I suppose, at their absolute value.

7153. Take a staff or local officer attached to a Native regiment: supposing he, from any unavoidable cause, overstays his leave, under the former regular system, he would simply have lost his pay; now, he loses his appointment, does he not?—No. Lately a rule has been laid down, that under no circumstances will an officer lose his appointment, except by special removal. If he comes home for, we will say, two years' furlough, and the Secretary of State sees reason to give him an extension of a year or any period, he continues to hold his appointment, but not to receive the pay of it. The object of that rule is to prevent men putting themselves out of employment, and so increasing the bulk of unemployed officers.

7154. But it was shown, was it not, by Sir George Balfour, in some question that he put, that, on the 1st of July 1871, there were upwards of 500 officers acting for others in the Native regiments?—I have not heard that, nor have I seen the calculation.

7155. Were they acting only for men on leave of absence in England, or are officers ever taken now from the Native regiments to fill other appointments, just as was the case in the old army?—They are in this way: that an officer, before he can enter any civil department, or any department non-regimental, has to pass through a certain probation, which is rarely extended beyond a year; for this purpose he might be taken away from a regiment, his appointment being filled by an acting officer of the same regiment probably for that year; but the full pay of the appointment would go to the officer acting for him.

7156. But then many young officers use these Native regiments as merely resting-places to getting a civil appointment, do they not?—Certainly; it is part of their civil probationary service; it is necessary before entering into a civil department, that you should pass a year with a Native regiment.

7157. Therefore a proportion of the officers are men who do not look to the regiment as their home, but are expecting to be taken away from it as soon as possible?—I think you may generally say that the officer who is absent, acting in a civil appointment, will be the second wing subaltern, who is the reserve of the corps.

7158. In the present constitution of the Native army you seem to have, to some extent, the evil of the old system; that is, that the young officers are all looking to get away from the regiment?—I think not; that applies to very few. I think that the present officering of the army is far more stable than it was under the old system; in fact, it is actually what we may consider a very stable form of organisation.

7159. Do you consider that there is now a more permanent connection between officers and men than

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

than there used to be?—I consider that there is, certainly, than there was in the old Native line regiments, from which we all tried to get away and stay away.

7160. When these regiments were first formed, I think, it sometimes happened that a man of inferior rank in the army was higher placed in the regiment than a man of superior army rank?—That may have happened in a few instances; it is not the rule, and very far from being the rule. Great care is taken in that respect.

7161. What proportion of officers belonging to the local lists are now employed in the regiments?—The total number of officers of the local service, or the general list so employed, is 236; of the staff corps, 873.

7162. With regard to those officers who are called general list officers, that is those who entered between 1858 and 1861, it was clearly made known from the first, was it not, that they had not any vested right to rise to the rank of colonel without limitation of number?—They were told that they were under no fixed conditions of service, that they were liable to any changes that might be made by Government at any future time. When the Order was passed, allowing any officers who had entered the staff corps on and before 1866 to succeed to colonels' allowances in a fixed time, those of the general list who had done so, of course, equally came under the operation of that rule.

7163. When they were allowed to join the staff corps?—Yes.

7164. But with regard to those who have not joined the staff corps, had they a right to rise to colonels' allowances without limitation, or are they subject to restriction?—I think they are not subject to any.

7165. With regard to those officers who entered the service between 1858 and 1861 that are known as the general list officers, I wish to know whether those among them who have not entered the staff corps are under any limitation as to colonels' allowances?—I am not quite confident on the point, but I can ascertain from the India Office whether any, and if so what, rule has been laid down in the matter; but I should say that they will succeed as those who entered the army before 1866.

7166. Sir *G. Balfour.*] Under what rules do you suppose that they will succeed to colonels' allowances?—Under the rule of length of service; that is my impression at present.

7167. That length of service being 38 years?—Yes.

7168. And that they will fall in in the same category with all those who were admitted to the staff corps in 1866?—That is my impression.

7169. Sir *C. Wingfield.*] But you admit, I suppose, that the Government is free to lay down any rule that it pleases in regard to those officers, they having entered subject to any changes?—Yes; the Government has power to lay down any rule that it pleases.

7170. And ought not the intention of the Government in regard to them to be announced as soon as possible?—It possibly has been already, but may have escaped my attention.

7171. Sir *G. Balfour.*] In the meantime these officers have been promoted to the rank of captains under the 12 years' rule, have they not?—No; they are promoted to captains upon vacancies in cadres, and they succeed to a majority under the 20 years' rule.

7172. Then do you hold that none of the general service officers who entered in 1858, and subsequently, have been promoted to the rank of captain under the 12 years' rule?—I do not think so. I have very little doubt that they only succeeded to vacancies on cadres.

7173. Were these officers attached to any cadre?—No; but on vacancies occurring in any of the captaincies of the cadres, the senior general list officer was promoted on that list to a captaincy; the result is now, that there is no lieutenant in the general list of the Bengal army, but also no major, though there they been any number of vacancies to the majors in the different cadres; they succeed to the majority under the 20 years' rule.

7174. Have any of these several service officers attained the rank of captain under 12 years?—They certainly would if a vacancy had occurred in a cadre. In point of fact, they have all attained their captaincies under 12 years', most of them under 10 years' service.

7175. They would have superseded those officers who had joined the staff corps?—Yes; they have superseded those officers who had joined the staff corps.

7176. Sir *C. Wingfield.*] I see that Sir Charles Wood in, his Despatch of 1864, mentions these general list officers as 679 in number at that time; then a good many entered the staff corps; have you any idea what number remains now?—There are on the general list 167 in Bengal, 83 in Madras, and 47 in Bombay, 297 in all.

7177. And you cannot tell us exactly whether any or what rule has been laid down regulating their rise to colonels' allowances?—No; I cannot say at present.

7178. Sir Charles Wood says in his Despatch in 1864, "and to every officer, including the cadet, who entered the service as late as December 1861, his promotion through every grade, with the pay thereunto belonging, as if the whole Native army of India had been kept up, is assured, and his right to Indian pension is maintained." That seems to bear out your view, that the rule of promotion that had been laid down by this Despatch is assured to them, but it still leaves open the question of colonels' allowances?—Yes, it does.

7179. Because at that time colonels' allowances in indiscriminate numbers had not been extended to the local army?—No, they had not; that was the work of two years later.

7180. Sir Henry Durand, in his minute, calculated that the amount payable for colonels' allowances in January 1892, would be over a million; you put it about half that?—I have simply quoted General Hannyngton's latest calculation, a calculation made subsequently to the discussion there was.

7181. Does that include all the officers, staff, local, and everybody; or merely staff?—The staff corps only.

7182. Then you must make an addition to that for locals?—Yes.

7183. He says that on the 1st of January 1892 over a million will be paid for colonels' allowances, that is to say, on the entire army staff and local?—I cannot give you the corresponding figures for the local service for 1892. (Mr. *Kellner.*) I have a list here, showing the number

number of local officers who will be eligible, if they survive, for colonels' allowances.

In the year	1874	- -	29 officers.
,,	1875	- -	4 ,,
,,	1876	- -	23 ,,
,,	1877	- -	7 ,,
,,	1878	- -	26 ,,
,,	1879	- -	10 ,,
,,	1880	- -	17 ,,
,,	1881	- -	16 ,,
,,	1882	- -	10 ,,
,,	1883	- -	40 ,,
,,	1884	- -	22 ,,

This takes no account of probable casualties, by death, &c.

7184. Sir *C. Wingfield* (to Mr. *Kellner*).] How many will be drawing colonels' allowances in 1884, do you calculate?—That has not been worked out; it is a very difficult problem. General Hannyngton has only worked it out in the case of the staff corps, and his calculation goes to show that whilst there are now 64 officers of the staff corps in receipt of colonels' allowance, amounting to 71,992 *l.*, the number will increase to 316 in the year 1882, and to 513 in the year 1892, at a cost to the State of 577,000 *l.* In addition to this, there will be the local officers in receipt of colonels' allowance, whose number has not yet been computed. Of course, with this increase of the colonels' allowance, there will be a decrease in the effective list of staff corps and local officers, and consequently in the cost of effective pay.

7185. Then on what point did General Hannyngton and General Broome differ in their calculations?—General Hannyngton held that by General Broome's method of calculation, the ultimate growth of colonels' allowances was greatly exaggerated; also, that the saving by the proposed measures for accelerating retirement would not be the sum of the effective pay of the retiring officers (as assumed by General Broome), but the pay of the survivors of them only.

7186. However, General Broome persevered in his views, did he not?—Yes.

7187. (To Colonel *Johnson*.) Now, a staff corps had, before the Mutiny, frequently been talked of, to remedy the evil of the practice of withdrawing men from their regiment, keeping them away from their regiment, and then sending them back as lieutenant colonels to command it. I could perfectly understand the object of a staff corps at that time; but after the Mutiny, when in Bengal, at all events, your Native army had disappeared altogether, what was the use of creating a staff corps; why might you not have officered your new regiments from cadres, and have let the cadres work themselves out?—You could have done it, but the question was how to provide for the future supply of officers for those regiments.

7188. You might have commenced a staff corps with officers drawn from the Royal regiments, might you not?—Yes, that might have been done.

7189. And left the old East India Company's officers where they were, in their cadres, and taken them from their cadres to fill the different appointments as before, until the cadres had worn themselves out?—In one regiment then you would have had two different systems of promotion, one for the cadres officers, the other for the staff corps officers taken to fill the junior appointments.

7190. But I would take these officers from the Royal regiments only?—But they would have been under a different rule of promotion, as the staff corps rule, from the officers who were rising in their cadres. One set of officers would be rising by seniority, another by prescribed periods of service, in the same corps.

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

25 July 1873.

7191. But the officers rising in their cadres would come to an end, and the new staff corps would have been there to take their place?—That, I suppose, might have been done.

7192. I mean that your staff corps for the future was to grow out of young men taken in the first two years of their service from the Royal regiments, and for the different civil, military, and political appointments, and officering the regiments, you could have taken the men as you wanted them out of the cadres, leaving them to rise and get promotion in their cadres, and have employed them exactly as before?—That could have been done, but it would have been productive, I think, of very considerable confusion for a great number of years, which, when the staff corps was formed was not contemplated or likely.

7193. *Chairman.*] The honourable Member's question goes to ask you what difficulty there would have been in carrying on the two systems; supposing they were each on this basis, one the old system of withdrawing the officers into the staff corps as they were wanted, which could be no injustice to them, because it was exactly what had been going on, and the other, a new system to supply the youngest appointments at the bottom of the whole corps, by withdrawing young men from the Queen's Army in the first three or four years of their service while they were still at the bottom of their regiments, they qualifying then to go into the staff corps if they wished to go into it; there would have been no confusion there, because the old system would have gone on as it had done, and the new system applying only to the Queen's regiments, and junior officers could not be said to interfere with the regular course of promotion?—It would not interfere with the regular course of promotion in the local service.

7194-95. Nor in the Queen's service?—I do not mean that there would be any inconvenient interference with the promotion in the Queen's regiments owing to their being taken away.

7196. Nor could there be any confusion of system, because these young men would go in with the full knowledge of the conditions, that they would only supply the new growth; those who newly came in from the Queen's army would only supply the new growth?—When I spoke of inconvenience in the same regiment, I did not refer to the old Indian local corps, or cadre, or the Queen's regiment, but to the corps in which these two classes were serving.

7197. Sir *C. Wingfield.*] It would have left these officers in their cadres, using them from their cadres as they had been before?—But there would be soldiers under their command of some sort or other, and the officers commanding those soldiers would be under two different classes of promotion. The only regiment that would have existed, would have been what you call the Irregular; that is the regiment on the new organisation of seven or six officers.

7198. And the officers would have been taken to officer it from the cadres, as they have been taken for the last 50 years?—Four or five of these officers, or some such proportion, would have been under one form of promotion, that is the cadres; the others who were forming the growth of the staff corps would be receiving the promotion which might be laid down for them.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

7199. The young men taken from the Royal regiments could not have trodden on the heels of the cadre officers, they would have been so much junior to them?—No, I suppose not.

7200. *Chairman.*] The honourable Member is putting this question to you; why would you not keep up the cadre officers for the purposes of promotion, rank, and pay, as defining their interests to the great Tontine as it were, of the Indian Army, without reference to the fact whether they had soldiers to command or not?—That could have been done.

7201. Sir *C. Wingfield.*] When the staff corps was formed, the *raison d'être* of a staff corps was gone, was it not, the Native army having disappeared?—The staff corps was to be the corps of the future. It was not merely intended to fill a gap to arrange for the disposal of the officers thrown out of employ, but to form a solid basis on which hereafter the Indian army should be officered, and the appointments which had been held as a rule by military men should continue to be supplied from that class; and not merely for the next 10, 20, or even 30 years, but for the great future.

7202. But if that principle had been in view, ought they not then to have defined what appointments should be held by officers of a certain rank?—It was hardly practicable, because they had at the same time to deal with existing circumstances in which a large number of officers of very considerable standing, but of junior rank, would have to enter the staff corps. Their field of selection would have been unduly restricted if they had laid down any specific grades.

7203. Sir Charles Wood, I see, gives as the main reason for the formation of a staff corps the evil of withdrawing officers from their regiments for staff employment. There ceased to be any evil in that when your Native soldiers had disappeared, did there not?—The object of the staff corps was to provide for the two classes, for the regimental officers and for the civil officers. The object of forming the staff corps was to have one corps from which men should go to any class of employment that the Government required; men joining regiments became staff officers, *ipso facto.*

7204. I do not think any calculation was made at the time of what the requirements for the civil service would be; the Government did not say, "for the civil duties of Oude, the Punjaub, the Central Provinces, and the other civil administrations we require so many officers," did they?—I do not know that they did; but that is a matter probably that was discussed in Committee; so that, of course, I cannot speak with any knowledge on the point.

7205. Sir *G. Balfour.*] At the present moment is it not the fact that officers of different conditions of service are now serving as officers of the Native regiments?—Yes.

7206. And that you have got staff corps officers, general list officers, and Native infantry officers, all three, serving in the same corps?—Yes; and extremely inconvenient it is.

7207. Will you describe what the inconvenience is?—The inconvenience is, that you have quite young officers rising in the local service to very high rank, whilst still very young, and it becomes either necessary to employ them in positions which are not quite desirable for them, that is, in very junior positions in the regiment, as lieutenant-colonels, or as young officers to put them over older officers.

7208. But does not that apply to staff corps officers who have actually obtained rank in the staff corps superior to that which they hold in the cadres?—Yes, and that was met by the rule of giving equal army rank to all officers in the army.

7209. But did we not, by forming the staff corps, force upon the Government the necessity of giving to all officers of the local service, as well as the European force, local rank?—At any rate, the Government accepted it as being necessary.

7210. But was it not the fact that the Government did bestow local rank upon every officer in India?—Yes.

7211. Is it not the fact also that very serious inconvenience was caused from that local rank arising out of the staff corps formation, whereby officers of the European regiments actually doing duty as captains with their regiments, became senior to the lieutenant colonels of the regiments, and sometimes took command of a station over the regimental colonel?—I do not remember a case of the sort, but no doubt it might occur.

7212. Was it not the fact that very important changes took place in Madras when the staff corps officers superseded their former regimental colonels?—I believe so.

7213. Was not that an evil arising out of the staff corps formation?—Yes, I am quite prepared to admit that you cannot introduce a new system without some inconveniences.

7214. Sir *C. Wingfield.*] Does it happen now that a local officer serving in a regiment with staff corps officers sometimes leaps over their heads?—Yes.

7215. But I thought that the brevet rank that was given by the rule of Sir Charles Wood obviated that?—By no means; these local officers get their promotion in 12 and 14 years to lieutenant colonels.

7216. And when a staff corps officer becomes a regimental lieutenant colonel in the cadre he is knocked off?—Yes.

7217. That creates a sudden rise?—You run through the majors now in a year and a half, or two years, whereas formerly you took seven years.

7218. So that a captain in a cadre may be a lieutenant colonel at a leap?—No, he must go through the majors; for instance, in the gradation list of majors there are 10 local officers only receiving real promotion; so that a junior instead of waiting for the 26 line steps gets his promotion to lieutenant colonel in 10 steps, or fewer, as the case may be.

7219. Does not that sudden promotion of a local officer in a regiment lead to his getting higher rank than the men over him in the regiment, and certain changes in the regiment?—It may.

7220. Does that happen frequently, and thereby interfere with the permanent connection of officers with their regiment?—I think not; the permanent connection with the regiment has been very carefully guarded; great pains have been taken to keep officers as long as possible with regiments, and I think on the whole it will be found that they do remain a very considerable period with them.

7221. Sir *G. Balfour.*] With regard to that portion of your evidence on the subject of the cadres of Native infantry regiments, can you give us any information as to the average number of officers

officers serving in Native regiments on the 1st of January 1861?—No.

7222. Are you not aware that in many instances the cadres have been so reduced that some regiments have only four; four in Bengal, five in Madras, and four in Bombay actually serving with battalions of Native infantry?—The cadres could not have been so reduced; the numbers of officers serving with regiments may have been as low as that.

7223. You understand that I am speaking of officers actually serving with regiments?—Yes.

7224. And is it not the case, that the average number present for each regiment was $7\frac{2}{3}$ in Bengal, $10\frac{1}{2}$ in Madras, and $9\frac{2}{3}$ in Bombay; that was the return furnished by the adjutant-general of the army, on the 1st of January 1861, to the commission of which I was a member?—Yes.

7225. So that the necessity for forming the staff corps did not then exist; they might have been allowed to die out?—I think there is some confusion in the question between cadres and regiments. The number of officers you say in the cadres were four, five, and four in the three Presidencies; whereas the cadre consists of all the officers borne on the regiment for promotion.

7226. I said actually serving with Native infantry?—That would hardly affect the question of the creation of a staff corps.

7227. There were 155 battalions of Native infantry with regularly formed cadres?—Yes.

7228. And there were a large number of Natives that did not form a portion of these 155 battalions?—Yes, what we call irregular corps.

7229. I am speaking now of the average number of officers who were serving with all the battalions which were then in existence; and I am drawing a distinct line between the number of officers on the cadres and the number of officers serving; when I mentioned to you how very few officers there were on an average serving, might not time have been taken before forming the staff corps in 1861?—I dare say that it was not absolutely necessary to form a staff corps actually for immediate and present use, but as reorganization was absolutely necessary, it seemed desirable, as I understand it, that a system should be at once introduced for the future needs of the army, and of the service in India generally.

7230. But you are aware that no such reference had ever been made by Lord Canning's Government to the Secretary of State, as to this staff corps formation?—I believe that is so.

7231. And that the formation of the staff corps, under its present constitution, was entirely a project at home without any previous sanction of the Government of India?—I am not prepared to say exactly that, because I do not know really what went on; Lord Lawrence lately informed me that he had, in communication with other officers in India, suggested the idea of a staff corps somewhat similar to that which is now in force.

7232. Did you understand that he suggested the formation of a staff rising in rank by length of service:—No, I had no idea of the details of his proposal.

7233. Then, are you aware of any recommendations from India which correspond at all with the present staff corps system?—No.

7234. You are aware that Sir Charles Wood, in his Despatch of the 18th of January 1861, distinctly stated, "I am of opinion that a very considerable saving will thus be effected by forming a staff corps, as nearly one-half of the charge for the regular regiments consists of the pay and allowances of officers." Do you understand that the cost of officers now serving with regiments is less than the cost of officers who were serving with the regiments on the regular system?—If you mean now, I believe not.

7235. You consider that that expectation, therefore, has not been realised?—Not at present.

7236. Do you expect that in the future it will be?—Certainly, I believe it will be.

7237. Under what change of circumstances?—When the corps assumes its normal proportions.

7238. Have we any calculations in existence to show that?—A very careful and, I believe, a very accurate one by General Hannyngton, as to the number of officers that will hereafter form the staff corps, and to which the officers now in it must eventually come.

7239. Have you that statement with you?—I have the result of it; General Hannyngton says that the normal state of the staff corps, the tendency to which the staff corps is now coming, is that of a strength of 2,400, which will be the requirements of the service hereafter; there will be 300 lieutenant colonels, 458 majors, 757 captains, and 885 lieutenants.

7240. Does he state how many of these will be serving with Native regiments?—No; but we may assume that of the 600, I think, allowed for civil service in this calculation of 2,400, the majority will be officers of considerable standing, and will be out of proportion to the officers with regiments; that the proportion of captains and lieutenants with corps will be therefore very considerable; there will be probably three field officers and four captains and subalterns with each regiment.

7241. Do you consider that the cost of these officers will be less in future than the cost of officers who are actually serving with the regiments on the regular system?—I believe that now they are more expensive than they will be.

7242. Mr. *Bourke.*] And will go on so for some time?—Yes.

7243. Sir *G. Balfour.*] But even under General Hannyngton's statement we shall still have the cost of officers serving with the battalions greater than before, shall we not?—I will look into that.

7244. You are aware that several officers obtained the colonels' allowances under 38 years' service?—Yes.

7245. Do you know how many there were?—No.

7246. That was under what provision; under the order of 1866, was it not?—Under the order of 1866 some did; officers who were promoted to lieutenant colonels before 1861 succeeded in 10 years to the off-reckonings, if there was a vacancy in the number.

7247. Colonel Marryatt is an instance in point; he obtained his colonels' allowances after an interval of 12 years, being then under 34 years service?—I have forgotten the facts of the case.

7248. Are you aware of these instances to which I refer?—I have no doubt about them.

7249. (To Mr. *Kellner.*) I have not been able to realise the established strength of the European force in 1862-63; will you kindly explain

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

plain to the Committee how you make out that strength; I observe you make up the strength 69,732?—Yes.

7250. Do you consider that to be the correct strength?—Yes; that is the strength which I have made out from the returns of the Adjutant General and Quartermaster General, it is the average strength during the whole year. The established strength is 69,324, and that is taken from the Budget Estimate.

7251. Is that taken from my own statement?—Yes.

7252. I see that I stated the strength then at 69,324, but you are aware that I assumed reductions to a very considerable extent which were never realised?—Yes.

7253. Of 22 troops of European cavalry?—Yes.

7254. And also a European regiment of infantry, and I assumed the strength of the artillery at a very low figure as compared to the then established strength, did I not?—Yes.

7255. If we make the corrections for those, could you not give us what the actual established strength was?—I have endeavoured to do so, but have not been able to get the data, they are not to be had at the India Office; I wrote to India for them, but with no better result.

7256. Have we not got them in the English Army Estimates?—Yes, they are there, I have no doubt; but I have throughout gone upon the statements prepared in India of the strength actually in India.

7257. You are aware also that the number of regiments for which I calculated the Budget of 1862–63, were fewer than what was actually then maintained?—Yes.

7258. You are also aware that the strength of a cavalry regiment in the Budget which I prepared for 1863 was very considerably below the established strength then maintained?—Yes.

7259. Are you prepared to admit that the calculation which the Army Estimates show is more correct than the 69,324 which you have given?—I have merely copied those figures of established strength from the Budget of the year, in the first three years, because I have not been able to obtain any other data for those years; but for all the subsequent years I can vouch for the figures, having worked them out myself from 1865-66 down to 1871–72. Would you wish the 69,324 to be corrected by any returns in the War Office?

7260. The Committee would desire to establish the difference between the European strength of the present day and the European strength of 1862-63?—In this statement you will observe that I have endeavoured to place the average effective strength in each year with the established strength, the established strength being taken from the Budget of the year; and the fact that the established strength was understated in the Budget for 1862–63 is clear from this very statement, which shows that the average effective strength was in excess of the so-called established strength.

7261. The strength which I have calculated, as correcting my former strength, is this; there are 2,801 non-commissioned officers, rank and file, to be added to the 69,324, and in addition to that to compare with the strength of the present day, there are 829 belonging to the Lahore light horse, &c.?—The Lahore light horse is included in my statement of the effective strength.

7262. What is your strength?—Sixty-nine thousand seven hundred and thirty-two.

7263. Then the difference between 69,324 and your numbers is the Lahore light horse?—No; 69,732 includes the light horse; the established strength does not.

7264. Does the strength which I gave, 69,324, include the Lahore light horse?—I think so; I think there was no question of the abolition of the Lahorse light horse when the Budget of 1862-63 was submitted.

7265. And does that include the 22 troops of cavalry which I assumed would be struck off?—No, it does not.

7266. Or the European regiment of infantry which went home in January 1863?—No, I think it is stated in the Report that it does not include that.

7267. And, therefore, the strength has to be corrected to that extent?—The strength has to be corrected to that extent.

7268. Would you endeavour to look over the strength in India, and put in a correct statement of the established strength in 1862–63?—Yes; I have the effective strength; the details are completely given here, and they might be checked; they have been very carefully compiled.

7269. With regard to the Native strength, you have also stated the established strength of Natives to be what, in 1862-63?—One hundred and thirty-four thousand two hundred and forty-six. I have taken that from the Budget simply, not having any other data for those three years, 1862–63, 1863–64, and 1864–65, I have taken the established strength from the Budget for the year, but the effective strength I have taken from the Army Head-quarters' Returns.

7270. Did you include the regiment of Bengal Native cavalry, which I assumed would be reduced?—No, I think not; but the fact is I have taken the established strength without any examination; I have adopted the figures from the Budget for the year; but I am quite aware of the Report which contemplated all these reductions.

7271. And that subsequent to my departure they were not carried out?—Quite so.

7272. In comparing the total cost of the army for 1862–63, which you have stated at 14,892,849*l.*, we have to compare a much larger strength of establishment than we have at the present day?—Yes.

7273. And larger than the strength that you yourself were giving?—In comparing the strength I have taken the effective strength of the two periods 1862–63–64 and 1871–72, that is, from the Returns made up from the Army Head-quarters' Statements.

7274. The effective strength diminished the cost by the amount of men actually deficient?—Yes.

7275. If we had more regiments in 1862-63 than what the strength stated gives, the cost of the army will relatively be reduced?—Yes. Do I rightly understand that you would wish the comparison to be made, not upon the effective strength, but upon the established strength, as between the two periods?

7276. The Committee would wish to see the actual established strength actually maintained, irrespective of any assumption in the Budget?—I will endeavour to work it out.

7277. And will you then show the relative difference between the established strength of the present

present time and the established strength at 10 years ago?—Yes.

7278. As well as the effective strength of the two periods?—Yes.

7279. In the statement which you prepared here of the total cost of the army, I observed that the Medical Department for 1862-63 is stated at a considerably larger sum than in subsequent years?—Yes.

7280. Will you explain what the cause of that was?—There was a larger number of medical officers with regiments, and the Medical Grant was then charged with the pay of medical officers, whose pay is now charged to the Regimental Grant III.; that has been explained at length already.

7281. Will you explain the cause of that difference?—The pay of medical officers was in 1862-63 charged to the Medical Grant; now it is charged to the Regimental and other Grants, according to the employment of the officers with regiments, or on other duties.

7282. Then we have to increase the expenditure in 1862-63, under Grant III., for the regimental pay and allowances, by the amount of the pay of the medical officers charged in another Vote?—Yes.

7283. And if we made that allowance, the calculation would then be uniform for the three periods?—Yes.

7284. Now, seeing the variations in the amounts charged, will you be good enough to explain the particular items; for instance, taking the Ordnance Establishments, there has been a large increase there?—Yes, there has been a very large increase.

7285. In what items have these taken place mainly?—In all the items, but the increase has occurred for the most part in Bombay; the Government of India called upon the Bombay authorities for an explanation of the very large increase in ordnance expenditure, but the returns obtained from Bombay do not explain the increase quite so satisfactorily as is desirable, and the matter was under inquiry when I left India. In 1863-64 the personal charges were in Bengal 106,838 *l.*; in 1871-72 they amounted to 115,344 *l.*, an advance of about 8,000 *l.* per annum. In Madras, the establishment charges are much the same now as then, being 74,632 *l.* now, and 74,712 *l.* in 1863-64. In Bombay the personal charges of the Ordnance Department have risen from 70,000 *l.* to nearly 84,000 *l.*, and that is owing to the increase of the staff salaries of the ordnance officers, and the improved pay to the warrant grades; in fact, to all classes of establishments; but the most notable increase is in the charge for the supplies. The increase in Bombay is from 25,346 *l.* in 1863-64 to 148,000 *l.* in 1871-72.

7286. And in Bengal what has been the increase?—From 102,000 *l.* to 141,000 *l.* In Madras it is much the same, 34,688 *l.* in 1863-64, and 35,000 *l.* in 1871-72.

7287. And the total increase altogether from 1863-64 of the ordnance establishment to 1871-72, has amounted to how much?—Nearly 200,000 *l.*

7288. When did the stores from Europe cease to be charged in India?—In the year 1866-67.

7289. If we add on, therefore, the cost of stores which are charged at home instead of in the Indian Budget since 1866-67, it will make the returns very much more, will it not?—Yes.

7290. Can you say how much further increase it would have brought it to?—I should think the ordnance stores in 1871-72 cost about 400,000 *l.*, 424,000 *l.*, I think. That would have to be added.

7291. Would you endeavour to send in a statement to the Committee to show an uniform charge by adding the stores now paid for in England to the charges in India, so as to compare with the other year for the Ordnance Grant; you may as well make up that statement complete?—Yes, if I have materials I will do it; we have been at some disadvantage in not having any details of the accounts of 1863-64; we have them from 1865-66 up to the present day.

7292. You have them sufficiently stated in Colonel Broome's Report of March 1869, have you not?—Not in sufficient detail, I think; all that we have had is the account laid before Parliament, and the classification and arrangement of the accounts were entirely different in 1863-64 from what they are now.

7293. Will you endeavour to supply that want from the India Office, and add on the cost of stores?—Yes.

7294. Now with regard to the commissariat and the cost of that department, will you state what that has increased from?—The executive establishments in Bengal in 1863-64 cost 109,000 *l.*; in 1871-72 they cost 103,000 *l.*; that is a decrease of 6,000 *l.* In Madras the establishments cost 44,000 *l.*, and now they cost 45,000 *l.*; that is an increase. In Bombay they cost 36,000 *l.* in 1863-64, and they cost 44,000 *l.* now; an increase of 8,000 *l.*

7295. Does it apply in the same manner to the cost of malt liquor; is that included in the relative statement prepared?—No, it is not included

7296. What has been the cost of malt liquor charged for in England since 1866-67?—That would be in the English accounts. I have a statement here of the charges for malt liquor, giving an average annual outlay of 295,000 *l.* between the years 1866-67 and 1870-71.

7297. And then if you add that amount to the Indian charges, it will make the commissariat charges a very considerable increase?—Adding 295,000 *l.*, it brings up the amount to 2,224,000 *l.* in 1871-72 against 2,299,000 *l.* in 1863-64.

7298. Then, besides malt liquor, is there any other item now paid for in England which was formerly paid for in India; rum in Bombay, for instance?—Yes; rum for the troops in the Bombay Presidency is sent out from this country.

7299. Will you also add that portion of the expenditure?—Yes.

7300. Now, with reference to the prices of provisions, you have drawn up a statement, showing the comparative cost of European rations of the present day, and of 10 years ago; is that cost less now than formerly?—It is less in some articles; I made that up to the year 1870 only.

7301. We will take the average rations altogether, irrespective of the items: will you state that?—It was *Rs.* 8. 8. 1. in Bengal in 1870; and in 1863 it was *Rs.* 9. 2. 5.

7302. Then it is satisfactory to find that we are rationing the European soldier at a cheaper rate than we did 10 years ago?—Yes.

7303. And the soldier's food has not fallen off in any respect, has it?—No; on the contrary, it has been improved, I think.

7304. So that there has been a considerable economy in obtaining supplies of provisions for the European soldiers?—Yes.

7305. Looking to the large increase which has taken place in the compensation paid to Native

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

25 July 1873.

troops for dearness of provisions, can you give us any explanation of that contradiction that the European soldier's rations have been lessened, and yet this compensation for dearness of provisions increased?—In the arrangements for bread and meat, the substitution of the home system for the contract system has tended mainly to reduce the cost of the European soldier's rations.

7306. But the bread and meat of the European soldier's rations is fully equal to what it was 10 years ago, is it not?—Yes.

7307. Therefore, there has been no falling off in that respect?—No; but it is obtained more cheaply by the home agency.

7308. Will you explain what you mean by the "home agency"?—The substitution of commissariat bakeries and slaughter-houses, in place of obtaining the bread and meat by contract as before.

7309. In fact the commissariat arrangements are improved very considerably?—The commissariat arrangements are improved in that respect.

7310. Still the fact remains the same that we are able to obtain supplies at a cheaper rate than formerly?—Yes.

7311. Now will you explain the cause of this large increase for compensation for dearness of provisions to Native troops?—It is granted under an old regulation of the Indian Government, whereby, whenever the price of grain exceeded a certain limit, the soldier was promised the difference of cost in the way of money compensation.

7312. But seeing that a falling off has taken place in some years, can you account for that decrease as compared with other years?—It would depend very much upon the year; years of famine and years of plenty would account for the rise and fall of the compensation.

7313. But do you understand that there has been the same care taken to look over that kind of expenditure that there has been to look over the commissariat for the European troops?—No, I am afraid not. It is my individual impression only that that charge has been allowed to grow through some want of care, but it is impossible to say. The prevailing rates for wheat, rice, and other grains are ascertained by the documents prescribed in the regulation, that is, the price currents of the day; these are given by the subordinate Native officials in each locality, and the claims of the soldiers to compensation are paid upon those price currents without further question.

7314. But looking at the care which was taken to exercise control over that most difficult of all expenditure in earlier years, do you consider that the same care has been taken of late years to overlook that kind of expenditure?—No.

7315. And do you consider that if we enforced and looked carefully into the certificates given for the price of grain we could effect still more reduction than has been effected?—The Government took up the question some months ago, and issued circulars to all the civil functionaries throughout India, directing their attention to the growing expenditure under this head; I believe the effect has been good and the charges have been very considerably reduced.

7316. I observe in the Estimate for 1873-74, a very considerable reduction here?—Yes.

7317. You consider that that is due to the efforts of the Government to reduce this expenditure?—Yes, that has caused increased attention on the part of all concerned, that is to say, the military commanding officers, and also the civil district officers.

7318. Do you remember the great efforts made by Colonel Hobday the examiner of the Commissariat Accounts, in order to examine all the accounts of that kind with promptness and exactness?—I have always heard of his being a very good commissariat officer.

7319. And that no commissariat charges were allowed to accumulate beyond two days?—Yes.

7320. Was not that an excellent system?—Yes.

7321. Has that system been pursued of late years in respect of promptness of examining the commissariat charges?—I think there has been sufficient promptitude, but I have a general impression, from matters that have come up from time to time, that the check of the accounts has not been so stringent as is desirable.

7322. And have you taken measures as Accountant General of the military expenditure to endeavour to re-establish that exactness and order?—Yes, the Government have taken it up, and endeavoured to impress all officers with the necessity for exactness and promptitude in dealing with expenditure of this character.

7323. And have you established the same exactness in the commissariat accounts as there was formerly?—I think they are pretty well up now. The Government had occasion to find fault with the delays of the department in connection with the Looshai expedition, but there has been improvement since, I think. Certain irregularities were brought to light in the Bengal and Bombay Commissariat, but inquiry was duly instituted and measures adopted for preventing their recurrence.

7324. You will prepare a statement to reconcile the commissariat charges in India in the later years with those in the former years, when the various stores were paid for in India which are paid for in England now?—Yes.

7325. With regard to the medical department, what is the difference with regard to that expenditure. You have already explained in connection with that the charge for the medical officers of regiments being included in 1862-63 in that vote; but with regard to the medical supplies, what has been the case?—I find that in the medical department the establishments have decreased. The Inspector General's Indian Medical Department cost 18,365 *l.* in 1863, and it costs now 17,207 *l.*, but the cost of the British Medical Department has largely increased. Then the charges of the districts', Indian Medical Department amounted to 146,558 *l.* in 1863-64, and in 1871-72 they amounted to 123,929 *l.* In the medical store depôts there is an increase. But it is chiefly the British medical establishments that have caused the large increase under this grant.

7326. Will you explain under what heads that increase has taken place?—The Inspector General and Deputy Inspectors General; and then we have a large reserve of staff surgeons and assistant surgeons of the British Medical Department. These together have caused an increase of 72,000 *l.* per annum since 1863-64.

7327. Have the ranks of the British Medical Department Establishment largely increased?—Very largely increased. The number of inspecting and staff surgeons was 26 in 1863-64, it is 99 now; but I think that Colonel Johnson is familiar with the details of the British Medical Department. (Colonel *Johnson*.) There is a British Medical staff, exclusive

icers, whose pay

inspectors general
connected with the
than trebled in the
ve very largely in-
t they have trebled.

to Mr. *Kellner*).] Will
s an idea of what the increase
the British Medical Staff has
al alone?—We have now one in-
general, one secretary, and one statistical
cer; six deputy inspectors general, four staff surgeons major, three staff surgeons, and 40 staff assistant surgeons, making a total of 55 officers. In 1864 there was one inspector general of hospitals, two secretaries, two deputy inspectors general of hospitals, five staff surgeons, and eight staff assistant surgeons, a total of 18 officers.

7330. (To Colonel *Johnson*.) Have any representations been made by the Government of India objecting to this large establishment?—It was strongly opposed by the Secretary of State at the time that it was introduced; it was introduced in the teeth of the India Office.

7331. And what representation has been made from India?—I believe the entire question of the double staff is under immediate consideration, and in course of time, I have no doubt, that communications will be made to the Secretary of State with a view to its remedy.

7332. In that way we may look forward to a considerable reduction of expenditure, may we not?—In the Military Estimates.

7333. (To Mr. *Kellner*.) Will you tell us what the cost of the whole Medical Department in India was in 1863-64 as compared with the latest date?—In 1863-64 it was 388,901 *l.*; in 1871-72 it was 421,500 *l.*

7334. The earlier year included medical supplies from home, did it not?—They are rather mixed up, it does not clearly distinguish between the supplies in 1863-64.

7335. But in 1864-65 they are charged as payable in India?—Yes.

7336. Therefore, assuming the account in 1863-64 to have been made up in the same way, we may compare the charge in 1863-64 with the charge in 1871-72?—Yes.

7337. Will you be good enough to give a supplemental statement so as to make the whole charge of that department uniform?—Yes.

7338. In addition to that, what transfers of charges have taken place from the Medical Department to the Civil Department?—I do not think that there is anything more but those of regimental pay and allowances of the medical officers and the stores.

7339. Was there not a transfer of the general hospitals from the Military Department to the Civil?—Yes, the general hospital in Calcutta.

7340. Then we have to compare that item also, in order to have a correct idea of the relative charges in different years?—Yes. In 1865-66 the general hospital at Allahabad, the depôt hospital at Kidderpore in 1867-68, were abolished, and the general hospital at Calcutta was transferred to the Civil Department.

7341. And in 1862-63 did the Medical Department vote bear the charge for dieting European soldiers in hospitals as at present, or was that item charged in the Commissariat?—I think it was, but I am not sure.

7342. Will you verify that item for 1862-63, so as to make it uniform?—Yes.

7343. Now with reference to barrack establishments and supplies, there has been a very considerable variation, especially of late years, in the cost of the barrack establishments?—Yes.

7344. Will you be good enough to explain the variations?—The charges in the barrack department in Bengal establishments amounted to 23,500 *l.* Previous to 1864-65 a large portion of the barrack charges was included in the Commissariat Grant, and some charges were in the Public Works Department.

7345. Do you remember what charges were in the Public Works?—I think some of the conservancy, the furniture, and fixtures.

7346. Was not it the case that the Public Works repaired the furniture of the barracks, but the Commissariat paid the whole of the charges?—Yes.

7347. Therefore the Commissariat bore the cost of that?—Yes; it is chiefly in supplies and in the subordinate establishments for punkah pulling, tattie watering, and lighting, that the increase occurs in all three Presidencies. The barrack masters and barrack serjeants are much the same; at least the increase is scarcely appreciable now as compared with 1863-64; but the subordinate establishments cost much more. The increase for punkah pulling was 18,453 *l.*, and for tattie watering, 4,189 *l.*, in the Bengal Presidency.

7348. With what charge do you compare the punkah pulling charge?—1863-64.

7349. What was it in 1865-66?—£. 30,902, in the Bengal Presidency.

7350. And in 1871-72?—£. 42,928 *l.*; in 1863-64 it was 24,475 *l.* You will observe that it has increased from 24,000 *l.* to 43,000 *l.*

7351. And the total charge for the subordinate establishments in 1863-64 was how much?—£. 42,849; and in 1871-72 it was 63,309 *l.*

7352. And the total charges for barracks have been brought together in 1863-64 and 1873-74?—I must mention that in 1872, a large portion of the charges were transferred to the Public Works Department, to which they belonged formerly.

7353. What sum do you estimate has been struck off the military expenditure and charged to Public Works?—In 1872-73, the expenditure was lowered by the transfer to the Public Works Department of the charges for barrack establishments and furniture in the Bengal Presidency, which amounted to 70,000 *l.* in 1871-72.

7354. Therefore, in order to compare the present expenditure of the barrack establishment with that of former years, we must make allowance for that transfer?—Quite so; but in 1871-72, the transfer had not taken place; that year bore the full charge.

7355 And therefore the year 1871-72 can be compared with prior years?—Yes.

7356. But the expenditure of 1872-73 and 1873-74 must be corrected for that purpose?—Yes, by simply adding up the charges in the Public Works Account.

7357. Will you also make a correct statement in regard to that?—Yes.

7358. Have we any transfer from Grant III. on account of the Hyderabad Contingent?—Yes, 309,854 *l.* was the last charge for the Hyderabad Contingent in 1865-66.

7359. Then in order to obtain a correct view of the cost of the Native troops, we must add that amount to the charges in subsequent years?—Yes, that has been done in this statement; 1863-64 includes the Hyderabad Contingent; the total charge for the Hyderabad Contingent was about 300,000 *l.*

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

25 July 1873.

7360. And therefore the military expenditure since 1865-66 has been lessened by that amount?—Yes.

7361. But the Hyderabad Contingent is still maintained?—Yes.

7362. And it costs fully that sum?—Yes, but it is now paid out of the revenues of the Berars.

7363. Was not the money passed in the Estimates up to 1865-66 also recouped out of these revenues?—Quite; they formed no part of the receipts of the Military Department.

7364. But the money was recovered from the Berars, and credited to the Government of India?—Yes.

7365. But the military expenditure was increased by the cost of the Contingent?—Yes.

7366. Therefore the military expenditure was augmented in a greater degree in the earlier years than was necessary?—Yes.

7367. Have you any other forces charged to the Military Department for which subsidies are received by the Government?—Yes, very considerable; there are the two regiments of Deolee and Erinpoorah infantry, the Malwa and Meywar Bheel corps, the Bhopal battalion, and the Nepaul escort; they all cost about 125,000 *l.*, and the cost of these corps is partly met by contributions from Native States, which are credited to the general revenues.

7368. Then the military revenues bear the cost of those corps, and the general revenues received money which is not shown as a set off against military expenditure?—Yes.

7369. That is exactly the same system as was followed with regard to the Hyderabad Contingent?—Yes.

7370. Therefore we ought to deduct the cost of all these corps now, as we must have done the Hyderabad Contingent in former years, to arrive at the true result?—Yes.

7371. Would you be able to show us what the result of that operation would be, either eliminating these corps, or crediting the military receipts with the money paid?—Yes.

7372. With regard to the military expenditure, what particular increases have notably taken place affecting the European portion of the force during the last few years?—There is the additional two-pence a day to the British soldier, with the penny on re-engagement. I would say, on the lowest computation, that that is 200,000 *l.*

7373. Was it ever calculated at a larger amount than that?—It was calculated by General Broome at a third of a million.

7374. Did you include the bounty money as well?—General Broome included kit money and compensation for clothing and bedding, but I am not aware of the details of the calculation; and to be on the safe side, I propose to say 200,000 *l.*

7375. Can you state what the amount of the increase for the bounty and kit money in 1867-68 was?—The bounty and kit money was 44,130 *l.* in 1865-66, it was 25,239 *l.* in 1866-67, in 1867-68 it was 162,023 *l.*, and in 1871-72 it was 19,181 *l.*

7376. Therefore we pay less now for bounty and kit money than we did in 1865-66?—We do.

7377. Can you account for the large sum that was paid in 1867-68?—That was the year in which the additional pay and bounty was granted to the British troops.

7378. Can you account for the large amount?—I do not think that I have got the details.

7379. (To Colonel *Johnson.*) Can you explain the increases in 1867-68 on account of bounty and kit money?—No, I cannot.

7380. Was it not that the European oldier in India was all[illegible] the end of ten yea[illegible] years?—I forget.

7381. (To Mr. *K*[illegible] enough to put in a[illegible] Yes.

7382. Now did tha[illegible] had been increased by [illegible] bounty and kit money?[illegible] 2 *d.* a day, and the penny f[illegible] There are a number of soldiers in [illegible] and do receive the additional pe[illegible] granted on re-engagement, although that has stopped now. I calculate that the 2 *d.* a d[illegible] plus the penny for the second term of service, would be 200,000 *l.*

7383. That was incurred upon the organization of the regiments as they then stood?—Yes.

7384. What change took place in 1869-70, by which a very considerable saving was effected in the strength?—I think the changes in the organization, and in the number of officers, were given in the previous part of my evidence. But although the tendency of the reorganization was towards economy, the fact remains that each battery and each corps costs more now than it did then. For a British cavalry regiment with seven troops of 32 officers and 515 men, the estimated cost was 37,194 *l.*, and the cost of a British cavalry regiment at the present day with 28 officers, and 445 men, is more; it is 38,800 *l.*

7385. But my question is this: with regard to the increase which was caused to the military expenditure by the additional 2 *d.* a day, and by the bounty and kit money being increased, taking the change of organisation in 1869-70 by the infantry being made into fewer regiments, though there are the same number of privates, has the whole of the increased expenditure caused by the 2 *d.* a day been more than counterbalanced by the diminution of expenditure caused by the reorganisation of the European regiments?—That question would require a calculation.

7386. Have you ever looked into the fact that a very large reduction was effected in 1869-70 by the altered organization of the European infantry?—Yes, but the altered organization did not reduce the cost of a regiment; the cost of a regiment of British infantry, with 10 companies, 39 officers, and 919 men, was 34,810 *l.*, and with 8 companies, 33 officers, and 885 men, it is 36,053 *l.*

7387. What is the whole cost of the infantry of the 50 regiments in 1870-71?—The total charge for British infantry in 1870-71 was 1,783,437 *l.*

7388. Then, we had the same number of privates in the latter year that we had in the earlier years, but being consolidated into fewer regiments, there was a great reduction which took place in the expenditure?—Yes, but there were several increments in other directions besides the soldier's pay.

7389. Have you ascertained whether that diminution of expenditure by the improved organization, more than counterbalanced the increase of 2 *d.* a day?—I have not.

7390. Will you show the comparative cost of the infantry at the present time with that of 1867-68?—Yes, I will endeavour to do so.

7391. And the cost, rateably, per private at the present day, as compared with that of 1867-68?—Yes.

7392. Then the change of the organization in the cavalry regiments is this, that it is now six troops instead of eight in 1862-63, and seven in 1867-68, is it not?—Yes.

7393. And

y organization is
of 10 companies in

nomy in that direction,
ct considerable saving?
happen to have my Report of the
h 1862, if not, will you be good
ive it in for the consideration of the
rman?—I have No. 7,259 A of the 18th of
arch 1862.

7397. Will you also submit General Norman's Memorandum, No. 386, dated 18th of March 1862?—That is a record of the India Office; I can do that, subject to the approval of the Secretary of State.

7398. Would you also hand in to the Committee the letter from the Government of India, of the 4th of March 1862, giving the opinion of Lord Canning on the subject of the military expenditure of India?—Yes; I will apply for it at the India Office.

7399. Mr. *Fawcett.*] I understood from your evidence last time that a man was paid if he was employed in Civil duty, according to his rank in the staff corps?—No, he is not; when he is exclusively in Civil employment, he receives the Civil salary attached to that appointment.

7400. Independently of what his rank may be?—Independently of what his rank may be.

7401. But, then, how is that adjusted; would not a major general of the staff corps, who was employed in Civil work, get more pay than a lieutenant in the staff corps doing the same work?—No, he would get the pay of that appointment, and no more; but if he were in military staff or regimental employ, then his rank, of course, would give him superior allowances to an officer of lower rank.

7402. Mr. *Bourke.*] Or if he were in Public Works employ?—He would draw the military pay of his rank in addition to the staff pay of the appointment.

7403. Mr. *Fawcett.*] Public works not necessarily military?—Not necessarily military.

7404. Then it may happen that there are two officers of the staff corps employed in exactly the same kind of public works, that the one is a major general, and the other is a lieutenant, and although they are doing exactly the same kind of thing, of course the major general would receive three or four times as much pay as the other; he would receive the military pay?—Does your question refer to Civil duties, because there is an essential distinction between the payments for Civil and military duties.

7405. What I understand you is, that when they are employed in purely Civil work, they simply receive the pay of civilians; but public works, as I understand you, are an exception?—For public works or military duties there would be a difference. Supposing a lieutenant colonel on 1,000 *l.* a year were in an appointment, and a lieutenant were doing exactly the same duty, and the staff salary attached to this duty were 600 *l.* a year, the lieutenant colonel would get his 1,000 *l.* plus the 600 *l.* staff salary, making 1,600 *l.*; the lieutenant would get his 300 *l.* military pay, plus the 600 *l.*, making only 900 *l.*

7406. Mr. *Bourke.*] Here is a Despatch of Sir Charles Wood's which explains it. He says that the Committee of Secretaries, appointed by the Government of India, observes that "The Royal warrant for the formation of the Staff Corps in India, after fixing the scale of pay to be received by officers attached to them while in India and when out of India, further provides that every officer, when in actual employment, will also receive, in addition to the above pay, such a sum as will make his total pay and allowances up to the sum assigned by the Governments of India, with the approval of the Secretary of State for India in Council, as the consolidated pay of the office which he may hold. Having consulted the several Governments as well as the chief political and military officers of the Government, the committee propose for adoption the following principles: (1.) That the salaries of military officers holding appointments connected with the Civil administration of the country should be consolidated and fixed, without reference to the rank of the incumbent. (2.) That in the case of military officers in staff employ, a certain salary should be fixed for every appointment, and that the incumbent should receive such fixed salary in addition to the Staff Corps pay of his own rank. (3.) That this latter principle should apply to the Department of Public Works." That is what you mean?—Yes.

7407. Mr. *Fawcett.*] Then the point I wish to bring out is this. Suppose there are two staff officers, one a major general and the other a lieutenant, and they are both draughted off to superintend some public work, for instance, in the construction of a railway bridge; although they are doing exactly the same kind of work, one would be paid a great deal more than the other?—Yes.

7408. Therefore you have Civil work carried on in India upon this principle, that you pay a man not according to the work that he does, but according to his military rank?—Yes, to a certain extent.

7409. But then does not it strike you that that must necessarily lead to great extravagance if you once introduce into industrial undertakings the principle of not paying a person according to the kind of work that he does and the skill that it requires, but according to a rank to which he rises simply through seniority?—It is an incident of Indian Administration. There are large bodies of military officers who must be employed, and the pay must keep pace with the promotion to higher military rank.

7410. But is not that an incident that must necessarily lead to great expenditure; is it not very much the same kind of principle as if you employ persons, we will say, in writing for a newspaper, and you draft off so many whom you do not pay for the value of their contributions, but according to University degrees or according to seniority; you pay them, in fact, independently of the duty?—Yes.

7411. Does this not also happen often with the staff corps, that a man enters it as a civilian, and he has never spent any time in the army?—He must serve a certain period with a Native regiment.

7412. How long?—Three years.

7413. He serves three years and then rises step by step, and becomes ultimately a major general, although every bit of his time except the three years which he originally served he may be engaged in Civil work?—Yes.

7414. And therefore, without having the smallest experience of military duties during all the rest of his life, he may occupy in the army the position of a major general?—Yes. (Colonel *Johnson.*) Under no circumstances is an officer

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

of the staff corps who is attached to civil duty liable to military duty.

7415. (To Colonel *Johnson.*) There are certain persons in the staff corps; one set of them at once become civilians and always must remain civilians, and the other set become military officers?—Practically it is so.

7416. But by law, is it so?—Not by law.

7417. There is nothing now to prevent a man who has every hour been engaged in Civil work, having obtained the rank of major general, being to-morrow deputed to do the military rank of major general?—No; Sir Henry Lawrence, for instance, was deputed to do military duty, and it would have been a great pity if there had been any law preventing the Government from availing itself of his great abilities. The rule which is apparently desired to be laid down, that there should be a legal prohibition, would have prevented Sir Henry Lawrence from being employed on that military duty.

7418. It is exactly the same position as this in England; you might find great genius among the volunteer officers, and it comes to this, that a man who had been three years a lieutenant in a volunteer corps, and who might then go into a bank, or into business and become a brewer, might be advanced step by step, and then at last become a major-general in the army?—Yes.

7419. And do the work of one?—He could only do the work if the Government selected him for that special duty, and they would not do it unless he had shown some extraordinary qualifications to justify his selection.

7420. What reason is there why these men who are brought into the staff corps to hold civil employment, and who, it is contemplated, should remain as civilians (because you admit that, as a rule, they do so), men whose life becomes virtually a civil life, because they happen to have been three years subalterns in the Native army, should obtain the same rank and the same pay as those doing active military work?—No good reason, I think, and it would be a great advantage to the staff corps and to the service, in my opinion, if, when any officer had been detached for a certain time to civil duty, he were removed from the army, and ceased to be in it either titularly or actually.

7421. You must admit, therefore, do you not, that the present system must entail very unnecessary charges on the revenues of India?—That I am not able to say; as a rule I think a civilian employed in civil duties as a civil engineer, or as a civilian in the covenanted service, is more expensive, at least as expensive, as the ordinary military officer; so that if you had not a military officer to undertake these duties, you would require to use the more or equally expensive agency of the absolute civilian.

7422. Then comes this result, which must lead to defective administration, that you have to employ men, and pay them according to their rank and not their work?—It is anomalous; it is not greatly done, but where it is done it is partly due to the preference which the Government has for employing an officer under any circumstances, to leaving him unemployed, and paying him all the same.

7423. Supposing a man goes into the staff corps, and is unemployed a great many years, he still obtains his rank, does he not?—Under the regular rules of the staff corps, no officer who remains unemployed for three years can remain in the staff corps.

7424. Supposing [illegible] him, what then?—[illegible] as to the men I mea[illegible] not under the rules o[illegible] of the staff corps as i[illegible] would be quite impos[illegible] remain unemployed fo[illegible]

7425. There is nothin[illegible] is there?—No; but it is [illegible] regulations.

7426. A man in that position w[illegible] rising, will he not?—Under the reg[illegible] would be removed on to the half-pay or pens[illegible] list *ipso facto.*

7427. (To Mr. *Kellner.*) According to your figures, what proportion of staff officers were unemployed at any particular time?—There were 128 staff corps officers unemployed in India on the 1st of April 1873.

7428. And how many in England?—One hundred and forty-two; making together 270.

7429. Mr. *Bourke.*] The way to ascertain really the unemployed officers in the staff corps and the local force together is, is it not, to take the unemployed officers in the staff corps and the local forces, in the first instance in India, and then to take those that are in England that have no appointments in India?—Yes.

7430. Those put together will give you 392, I think?—Yes, there were 128 officers of the staff corps, and 87 officers of the local service, unemployed in India. These, with the 177 unemployed officers in Europe, give a total of 392, exclusive of 39 officers permitted to reside in Europe by a recent order.

7431. Now, those in England, but having no appointment in India?—There were 65 local and 112 staff corps officers so situated on the 1st of April 1873. Add to these, 39 officers permitted to reside in Europe under the operation of the new order, and you have a total of 216 officers unemployed in England.

7432. Mr. *Fawcett.*] Now, what proportion does that represent of those who are in the corps?—That would be 431 officers out of 2,922, or about one-sixth, who are unemployed in England and in India. I am not taking the colonels and the general officers; they are non-effectives; they are not supposed to be employed, and cannot be employed.

7433. Those 431 represent officers who might be employed, but are not employed?—Some of them are on furlough, but they have no appointments in India.

7434. That does not, of course, represent men who are away on temporary leave?—No.

7435. You may say that that represents, in one aspect, men who are being paid for by India for whom there is no employment?—Yes; you may consider them as a reserve of officers for military and other duties.

7436. It is like a bank having 2,900 clerks actually employed in the bank, and 431 living in idleness who, if business happens to increase, will be ready at hand; that is what it comes to, is it not?—These are a reserve for times of war, and any emergency that may arise in India.

7437. It is just the same as if a banker, because his business may increase under a financial crisis, should have them ready at hand; I mean that is the position of the thing, whether justifiable or not?—Yes. (Colonel *Johnson.*) They are really there, because it was decided to maintain a certain number of officers in their old position, whether required or not.

7438. (To Colonel *Johnson.*) It does not represent

permanently on
eadily decreasing

y hold?—They are
receipt of colonels'
receipt of colonels'

the general officers receive
receipt of the colonels' allowances?
years they receive about 1,200 *l.*
in India, and after that they receive at
rate of 1 *l.* 5 *s.* a day wherever they are.

7442. And what do the colonels receive?—About 1,124 *l.* a year.

7443. Permanently?—Yes.

7444. Then general officers in time will get the colonels' allowances?—The general officers in time will certainly succeed to them.

7445. Then all these men who may be described as men who are or will be in the receipt of 1,100 *l.* a year are doing nothing?—Not all doing nothing; a good many, of course, are employed in divisional and other command, but not a large proportion.

7446. Then they receive something extra, do they not?—When they command a division they do.

7447. They are in this position, that they have 1,100 *l.* a year for doing nothing, and if they are doing anything, they are paid something extra?—You can hardly say that it is for doing nothing. It is for having done a great deal.

7448. At the time it is for doing nothing?—At the time they have no duties.

7449. Then you are virtually not limiting the number of men who can enter the army, and after having served a certain time they get this allowance?—We have limited the number of men in this sense, that no man is to be admitted except where there is an absolute vacancy, as I explained on Tuesday, in an appointment for him to hold.

7450. Still, whatever is the kind of work that is done after being once admitted, he gets this position?—Yes; but you must consider, that under any circumstances, you must pension an officer; and if he succeeds to these colonels' allowances, he never comes on the pension list, and to that extent the pension list is decreased.

7451. But still he does get the 1,100 *l.* a year?—He does get the 1,100 *l.* a year, but after 38 years' service for it.

7452. You do not, perhaps, wish to give any evidence on the question of the military expenditure of India, so far as it is influenced by the Horse Guards?—No; I do not think it is a subject upon which I am sufficiently up. It would be better taken up by the officials of the India Office, through whom the communications entirely take place; the Government of India is not directly concerned in the negotiations.

7453. You are aware, are you not, of this fact, that on more than one occasion the military authorities in India have addressed themselves to carry out economies in military expenditure, and they have referred their recommendations to the Secretary of State; the Secretary of State at once communicates them to the Horse Guards and to the War Office?—He communicates them ultimately to those departments, certainly, after consideration in the India Office, I presume.

7454. Therefore we arrive at this fact, do we not, that the military expenditure, since the amalgamation of the army, is virtually controlled to a very great extent, not by the Secretary of State for India, or by the Governor General, but by the military policy pursued at the Horse Guards and the War Office?—It is controlled by the policy pursued at the War Office, certainly, to a great extent.

7455. And changes may be carried out, for instance, in the British Army, which are not directly brought up by any considerations with regard to India, and those necessarily very often affect military expenditure in India, do they not?—Yes; but I guard the point about the changes not being necessary for India, to this extent, that though India does not initiate them, still, if the authorities at home considered that the British army requires such and such, it may be admitted that the British army which is serving in India requires it just as much as the portion of the British army which is serving in the colonies, or elsewhere.

7456. But that would not necessarily follow with regard to an army serving in England and India; I mean, that it ought to be looked into most carefully by an independent authority, ought it not?—I think that the opinion of the Indian authorities should always be taken before any great measure, involving heavy expenditure, is incurred.

7457. But as a matter of fact, under the present system, it is not necessary, is it, to consult them?—I do not know what the etiquette between the Secretary of State for India and the Secretary of State for War is, but I am inclined to think that it is not considered essential.

7458. Have you looked into the matter at all of the price which England charges India for recruits?—No.

7459. Mr. *Campbell-Bannerman*.] You are not aware of the practice between the two offices in this coumtry, the War Office and the India Office?—No; I should have said "practice" when I used the word "etiquette."

7460. Sir *G. Balfour* (to Mr. *Kellner*).] With regard to one of your statements in regard to the increased cost of military expenditure on account of the postage, can you afford us any information about that?—It was an estimate made in India upon data derived from the Postal Department. It took account of the postal charges of all the military offices and establishments and departments throughout India, and it was estimated roughly at 45,000 *l.*

7461. And what is the amount included in the Budget of 1873-74, as to the cost of postage?—It is scattered over different grants. I think we could find it from the accounts of the Postal Department, probably.

7462. Will you be good enough to ascertain whether that statement of the Post-office charges from the Budget of 1867-68 is correct (*handing it to the Witness*)?—Yes.

7463. Will you read out the amounts for the different years?—In 1867-68 the total charges were 34,743 *l.*; in 1868-69 they were 44,403 *l.*; in 1869-70 they were 41,463 *l.*; in 1870-71 they were 46,603 *l.*; in 1871-72 they were 28,921 *l.*; in 1872-73 the estimate was 25,727 *l.*; and in 1873-74 the estimate is 18,167 *l.*

7464. Can you give any explanation of the great variations in that statement?—No; it is a matter of adjustment between the Military and the Postal Departments. The Postal Department raise a charge against the military, and it is verified by the heads of departments, and the charge is admitted against the Military Department by credit to postal revenue.

Co *A B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

7465. Have you any explanation to give how it was that that charge became a military one, seeing that at the very time that this became a charge against the military expenditure in India, the postal charges ceased in England to be charged against the departments?—No; I am not aware. It was an order of the Financial Department.

7466. Can you account for no portion of that charge appearing in the Military Budget as actual expenditure; is it that the whole of these sums read off are estimates and not actuals?—No; I fancy that the postal charges are included in the item of contingencies.

7467. For the different departments under each Vote I see that the postal items are all stated separately?—In the Estimates, but not so in the Accounts.

7468. Can you account for the letters of the Military Department only costing now one-third of that which they cost a few years ago?—No, I am unable to say how that is. (Colonel *Johnson.*) I think the explanation is that the heavy papers now instead of being sent by letter-post are sent as parcels.

7469. (To Mr. *Kellner.*) Can you give any explanation of how it is that the Post Office Department should charge to the different establishments of the Government in India that which they do not charge in the Post Office in England?—No. (Colonel *Johnson.*) It was an Order of the Financial Department, which was decided by the Council as a rule to be followed.

7470. (To Mr. *Kellner.*) Do you exercise any control over that?—The local Controllers of the three Presidencies exercise a control over these as they do over other military charges.

7471. Are not the variations in amount liable to throw out all calculations of military expenditure?—Yes.

7472. But you will verify that statement?—Yes. I am aware that the charges for 1870–71 were specially noticed and considered, and the Returns of the Postal Department seemed to verify the charge. About 1871–72, I am not sure.

7473. Do you know whether the Post Office accounts show the amounts debited against the different departments, military and civil?—Yes, they do.

7474. In 1865 you are aware a very useful Table of data for calculating the cost of European soldiers was prepared by the late Colonel Broome?—Yes.

7475. Have you prepared any such statement for late years?—Yes, I have prepared a similar statement for 1871–72.

7476. Can you place that before the Committee?—Yes.

7477. Is that prepared upon the same principle?—Very much upon the same principle, but I think it includes the whole of the military expenditure, and I am not sure that General Broome did so; I think it was intended to divide the whole of the expenditure between the Native army and the European army.

7478. Would you consider that a fair Table by which to arrive at an approximate conclusion as to the cost of the forces?—I think it is as fair as any that I have been able to devise as yet, but of course it is susceptible of great improvement; I hoped to subject it to the scrutiny and examination of public accountants here, with a view of getting a good formula for calculating the relative cost of the British and Native soldier in India; but such as it is, I shall be very happy to lay it before the Committee.

7479. It doe[illegible] buildings?—No.

7480. Could yo[illegible] cost of the army, t[illegible] repairs in 1871–72[illegible] and military works [illegible] the charges recorde[illegible] counts.

7481. Have you bee[illegible] military expenditure on which[illegible] culated?—I think so.

7482. Will you also show the st[illegible] different classes of troops used for that?—[illegible]

7483. Is the average taken of all ranks, merely non-commissioned officers and men?—Non-commissioned officers and men; in every case the European commissioned officers have been excluded.

7484. In respect to Grant III., have you not also lessened the expenditure under Grant III. by a very considerable reduction of the cost on account of the engineer officers?—I think their pay now occurs in the Public Works Department.

7485. Then nearly the whole of the pay previously charged on account of the engineer officers is, with the exception of a small item, transferred out of the Military Budget?—Yes.

7486. And that effected an apparent reduction of many thousand pounds, did it not?—The difference between 30,000 *l.*, say, and 13,000 *l.*

7487. Will you state what the charge on account of engineer officers in any one year was?—It was 38,218 *l.* in 1865-66 for the Royal Engineer Service.

7488. That is the total cost?—Yes.

7489. And what is the charge now in the last Budget, 1873-74, on account of engineers?—This is only for the pay of the officers, 2,559 *l.*; that is for Bengal.

7490. And for Madras?—£. 256; and in Bombay, 839 *l.*

7491. That has also been the means of making an apparent decrease in the military expenditure?—Yes.

7492. An honourable Member asked you a question with regard to the total cost of the Medical Department of India for regimental as well as for staff officers. Have you made up any statement of the total cost?—If you mean the Regimental Medical Staff, No; because the Regimental Medical Staff is charged to Grant III, and the Departmental Staff to the Medical Grant.

7493. Therefore we have never had before us, at one view, the total cost of the Medical Establishment for India?—No.

7494. Do you consider that a million sterling would be an approximate amount for the whole of that establishment?—Taking the regimental medical officers with the rest, I should think so.

7495. Perhaps you will put in a statement to show the total cost of the Medical Department, including the cost of the medical officers attached to the Commander in Chief, and including the supplies from home as well?—Yes; the pay of all ranks of the medical services, including the medical subordinates, has been largely increased.

7496. Perhaps you will classify the expenditure, so as to show in one view the whole cost?—Yes.

7497. You and Colonel Johnson have been asked several questions connected with the cost of the Staff Corps. What do you calculate has been the increased cost in the Native infantry, say by the increased charge of pay on account of European

onsider 20 per
s compared with
have never made
no doubt that the
yearly with the
instance, we have
s with Native regi-
r than there were on
rs ago, and naturally
increase of charge from that

ering that in many cases there
full colonels and one lieutenant-colonel,
es captains attached to Native battalions,
ould you consider that the estimated increase would be about 20 per cent.?—I could not say that exactly. I have never made any calculation with the object of ascertaining what the proportion of increase would be; but I am quite clear that there must be an increase by reason of the higher rank of the officers employed. The colonels do not get more pay than the lieutenant colonels. There were 372 field officers of the staff corps and local service, with Native regiments, on the 1st of April 1873, 257 lieutenant colonels, and 115 majors.

7499. Then, besides these, are there a portion of these officers at home?—There are some at home.

7500. They receive a portion of the pay which they ought to receive in India?—Half Staff Corps pay, and half the staff salary.

7501. Then, in order to show, in one view, the total cost of European officers, will you be good enough to add the pay that they receive in England, so as to show it in a clear manner?—Yes. One other point, I think, has not been brought before the Committee, namely, that military officers in civil employ have their entire pay charged to the Civil Department when in India; but when on furlough in Europe, the whole of their absentee allowances are chargeable to the Military Department.

7502. Does that account for the large increase which has happened in the Home Accounts, whereby the furlough pay of military officers has increased of late years by nearly 250,000 *l.*?—Yes, the effect of the furlough rules has been to bring a larger number of officers home; they are attracted by the more favourable terms of furlough allowances; larger numbers come home both from military and civil employ; the increased number of officers on furlough, on higher furlough allowances than before, have increased the Home charges.

7503. Then do you expect that that increase of cost in the military expenditure will continue in future years?—The Government have given every attention to reducing the expenditure for some time past; every effort has been made to reduce it; but it seems to increase in spite of all efforts for reduction,—by circumstances of war or famine, by improvements in arms, equipment, and drill, and by the various measures already enumerated for ensuing the efficiency and contentment of the soldier. The British forces, for instance, were armed, first with the Enfield, then with the Snider, and possibly there will be a change to the Martini-Henry. These are all elements of additional expense. In the same way, the arms of the native troops have been changed three times. Stating my own individual opinion, however, I must admit that the expenditure is susceptible of reduction under ordinary conditions. I should also mention here, that various reductions proposed by the Government of India have not been adopted. Notably, the reductions in the Native army, which have been constantly under consideration since the autumn of 1869. It was then proposed by the Government of India to reduce the Native cavalry in Bengal from 19 to 18 regiments, and the infantry from 49 to 45 regiments; but so to increase the complement of each regiment as to effect an annual saving of 27,210 *l.* without touching the effective strength of the Bengal army. For the Madras Presidency it was proposed to organize two efficient Silladar corps from the four existing regiments, and to reduce the Native infantry regiments by eight, causing a reduction of 6,200 men, and a yearly saving of 179,000 *l.* For the Bombay Presidency, the proposed reductions included one regiment of Native cavalry and four of infantry, with a saving of 77,600 *l.* and about 3,000 men. The total reduction of force proposed by these measures was 9,200 men, with an annual saving of 283,833 *l.* The proposals did not commend themselves to the Secretary of State for India. Whereupon the Government of India, in June 1870, submitted other proposals, reducing the Native cavalry regiments by three (one in each presidency), and the infantry regiments by eight (two in Bengal, two in Bombay, and four in Madras), with a further reduction of 40 sepoys in each of the remaining Madras infantry regiments, and of 36 sabres in the Bombay cavalry corps. By this scheme there would have been a numerical reduction of about 8,700 men, and an annual saving of 230,287 *l.*, but it was not adopted, namely, on the ground of the unequal incidence of the proposed reductions. Further correspondence passed between the Home and Indian authorities, and the whole subject has now been remitted to the Government of India, with instructions to propose a comprehensive scheme for the organization and disposition of the Native army.

7504. Then I will call your attention to an important Despatch of the Secretary of State. Will you be good enough to read the 29th paragraph of the Despatch of the 26th of January 1869?—"I entertain sanguine hopes that a careful investigation would show the practicability of effecting a considerable saving in the annual expenditure, without in any way impairing the efficiency of the military establishments, that it might be reduced at least to the scale of 1863-64, or it might even be possible to bring the whole military charge in India (including stores) a million and a half below the present amount."

7505. Who signs that?—That is signed by the Duke of Argyll, Secretary of State for India.

7506. At that time what was the military expenditure estimated to be in England and India?—The estimated expenditure for 1868-69 in India was 12,913,478 *l.*

7507. Since then you have effected reductions in the expenditure of India to a considerable extent?—Since then the expenditure has fallen.

7508. And will you endeavour to show to what extent it has fallen?—Yes.

7509. In consequence of that Despatch efforts were made, were they not, to effect reductions in the expenditure in India?—I think the subject had attracted attention previously. The Despatch was received in India before I was appointed to my present office, or had anything to do with the military department; but I think that the reduction of expenditure had attracted attention; at all events in the autumn of 1869 important measures of reduction had been initiated by the Government of India.

7510. But still the injunction of the Secretary of

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

25 July 1873.

of State was attended to, and good results have followed it?—No doubt there has been a general effort to reduce military expenditure. (Colonel *Johnson.*) It was more from the state of the finances in India, which had attracted attention, that these measures of reduction were taken in hand, than from the instructions of the Secretary of State; and, although undoubtedly the Secretary of State's instructions received full and early consideration, yet the actual measures were taken in consequence of what appeared to be a serious deficit in the finances of India.

7511. (To Colonel *Johnson.*) Can you state in what direction you think reductions have been proposed or could be effected?—There has a great deal of correspondence been laid before the House showing what the proposals of the Government of India were for effecting reductions in 1869-70, which I could hardly repeat as they are at great length; but they were very considerable and they were not carried out to the extent that the Government of India recommended, especially in regard to the Native army. I believe that the reductions there proposed amounted to 100,000*l.*, for which allowance was taken in the Estimates of the year 1870, but which never were effected. I believe that reduction could still be made to that extent, and in the direction indicated by the Government of India, in the Native army, but not in the European.

7512. For instance, there was one reduction proposed by Sir William Mansfield, the Commander in Chief, in his Minute of the 14th of September 1869, at page 70 of Parliamentary Returns No. 467 of 1871, in which he called attention to the great expenditure which the Central India horse involved in reference to the numerical strength, and he then strongly advised a very considerable reduction in that small body of cavalry; can you explain why that was not carried out?—I cannot explain the exact reasons, but it was considered with great care, I was given to understand, by the Government in the Foreign Department, and they decided that it was inexpedient to make a change in that instance.

7513. Will you look to other portions of his Minute where he strongly points out the large cost of the portion of the Medical Department to which we have adverted, and will you say what measures have been taken on that?—Measures were at once taken on that, and the matter has been under consideration, report, and careful inquisition, for the last two or three years. The result, I believe, will be very shortly before the Secretary of State, which it is believed will result in decided military economy.

7514. In respect to the organisation and formation of the European troops in India, the Secretary of State for War at once, on the recommendations of the Indian Government, made a very important change with reference to the organisation of the European infantry and cavalry, by which a considerable saving was effected; could we effect any further reductions in the same direction?—Do you mean in the number of the European troops?

7515. Maintaining the same number, but changing the number of companies and increasing their strength?—If you mean reducing the companies to six, I should say not unless the Government at home considers it desirable for the whole army. I do not think it is desirable to have an independent organisation for the troops in India.

7516. That [illegible] 1861-62, that [illegible] Colonies, in Ind[illegible] uniform strength [illegible] then you are awa[illegible] that we have not r[illegible] organisation, and f[illegible] place, and in each [illegible] change?—Is it inte[illegible] the change has taken p[illegible] in which the troops are employ[illegible] taken place throughout the army[illegible]

7517. No; that the uniformity [illegible] tion and strength of a British regimen[illegible] strongly insisted upon 11 years ago, but that [illegible] year has passed in which we have not had a varying strength in India and the Colonies?—Strength I will admit may vary greatly, organisation, I am inclined to think, should not.

7518. At the time that we made the change in India from 10 to eight companies, was it not the fact that we had at that very time in establishment 10 companies to a regiment in the Colonies?—I do not know.

7519. Seeing that we have varied the strength already, what objection is there to further varying it?—Unless the change in organisation is carried out in England as well as in India, I do not think that a change is desirable; I see no equal objection to a change in strength.

7520. What objection is there to a reduction in the strength of the cavalry so as to have the same strength in a regiment as we had in 1861-62, and then have fewer regiments?—I do not know whether we could afford to lose a cavalry regiment from India. The number of European cavalry regiments is not great; and where you have horse artillery, it is rather desirable that you should have European cavalry to take the field with them. You cannot well break up a regiment of cavalry, its numbers are too small; and on grounds of discipline it is objectionable to do so. But if it could be done, I would rather see the economy made by a reduction of regiments and an increase of strength than in any other way.

7521. Now, with regard to artillery, do you see any opening for reduction of expenditure there, seeing that a garrison company has six officers to 70 gunners?—I am not prepared to give an answer off-hand on that point.

7522. Does it not seem strange that the aggregate pay of the officers should be even equal to, if not greater than, that of the men?—Yes, it sounds so; if all the officers are present with the garrison battery it sounds excessive.

7523. But we may suppose that the whole establishment is sometimes present?—Practically six officers never have been present with the garrison battery, I think one may safely assert.

7524. Still the proportion is very large?—The proportion is large certainly for the purposes of a garrison battery.

7525. With reference to the artillery, do you see any opening for reduction in the large number of colonels and lieutenant colonels that we have in India?—That is a point I am not prepared to give an opinion upon.

7526. The number of colonels and lieutenant colonels in the artillery in India is much greater than it ever was before the Mutiny?—That is a thing which one accepts as a part of the British organisation. So long as you have a British army employed throughout the world without a local army, wherever British troops are, so long, I think, you must take your organisation from the head-quarters in England.

7527. Do

e brigades of
ia as at home?
are.
batteries to each
ndia as compared
Fewer, I think.
ssarily give us a
ters of brigades in
the organisation which we
ot the same organisation which
?—You have the same number
ers to your brigade.

31. But, considering that we might have ver brigades with more batteries to each brigade, you could diminish the number of your field officers?—Only by diminishing your brigades.

7532. Seeing that we have an average of eight batteries to each brigade at home and only five in brigade, we could affect a reduction by increasing the number of batteries?—Yes.

7533. (To Mr. *Kellner.*) That would effect a large reduction?—Yes.

7534. The artillery expenditure is very considerably greater than it was in former years?—Yes; very much more.

7535. Now, with reference to your strength or effective strength, it is quite clear that does not include the boys of the Madras and Bombay Presidencies?—I think not.

7536. Will you see whether your established strength does not include the boys of Madras and Bombay?—I will.

7537. The number of these boys being between 3,000 and 4,000 necessarily increases the apparent strength of the Madras and Bombay army?—Yes.

7538. Will you make that correction, and correct your figures in your statement, so as to bring it all out?—Yes.

7539. *Chairman.*] Are the boys included in what is called the complement of the regiment, or are they in addition?—They are in addition; but we take count of them in the estimates.

7540. But when you speak of the established complement of a regiment, are they included?—They are included.

7541. Sir *G. Balfour.*] Do you think that you included them in Bengal, when you had them in the Eurasian battery, for instance?—I cannot say

7542. When the Governor General of India fixed the strength of the army in 1861, you will observe, at page 153 of Blue Book No. 467 of 1871, that he "did not include the boys of Madras and Bombay in the strength of those regiments?—Yes.

7543. Therefore, in drawing up any comparative statement, it is quite as well to adhere to the form which has been in use before?—Yes.

7544. Then will you be good enough to try and prepare your statement, so as to show the relative strength in 1861 and the present day?—I will.

7545. Then again, I will hand you in a statement of the established force in 1863–64, upon which the Budget Estimates for that year were prepared; will you look at the Military Budget Estimates for 1863–64; you will observe there that the strength of Europeans and Natives differs from the strength which you have given; will you be good enough to compare that, and try and reconcile the statements?—Yes.

7546. And will you also bring them out so that we may have exact comparisons of the strength of the different arms?—Yes.

7547. Then I observe, that in your statement which you have prepared, you have included invalids and veterans, and some officers?—Invalids and veterans, but not the officers, I think.

7548. Will you verify that, and bring out the statement, so as to have an exact comparison of the numbers lately used, with the numbers in previous times?—Yes.

7549. (To Colonel *Johnson.*) I observe that we have had different statements given in of the strength of the European force, and that Mr. Kellner has given in the actual European strength at different dates; have you any statement of the strength in February 1870?—No; except what has been given in by Mr. Kellner.

7550. Would you recognise that (*handing a paper to the Witness*) as a return furnished by the Military Department?—I do not know it by sight.

7551. Would you be good enough to take charge of it, and see whether the figures are given there correctly, and hand in a statement for the information of the Committee?—I will see at once whether it corresponds with the only returns that I recognise, namely, those that were handed in the other day; I have no figures beyond those which Mr. Kellner has produced, which would be of the slightest value to the Committee whatever.

7552. Will you take these and verify them?—I do not think it is possible to give anything more accurate than has been given already.

7553. (To Mr. *Kellner.*) Will you hand a statement of the whole effective European strength in 1870?—Yes.

7554. And will you see whether the boys are included in the return of established strength which I have just handed to Colonel Johnson?—Yes.

7555. I think you were called upon to prepare a statement of the cost of the army just before the Mutiny, and you have prepared it, and it is in the India Office?—Yes.

7556. Will you be able to obtain that and hand it in, and will you correct it as far as possible so as to show all the forces which were employed in India at that time?—Yes.

7557. And likewise to show the home expenditure as well?—Yes.

7558. Will you include in that statement the cost of the Hyderabad Contingent and the different contingents?—Yes.

7559. I think you have in your posession a Minute which I wrote in November 1860?—Yes, I have.

7560. Will you hand it in to the Chairman?—Yes.

7561. Will you also be good enough in drawing up that statement to endeavour to show the effective force of Europeans and Natives as well as the established strength of the forces?—Yes.

7562. It will be a difficult thing to prepare with any degrce of accuracy, at least I found it so; and therefore, will you do your best to make it as accurate as possible?—Yes.

7563. In now closing my questions, I would ask you to endeavour to supplement your answers by as full and detailed statements of strength and cost as you possibly can, in order to bring before the Committee, in a simple and clear view, the military expenditure and the military strength; will you have the kindness to do so?—Yes.

EXAMINATION BY SIR G. BALFOU

Mr. *G.W. Kellner.*

7564. (To Mr. *Kellner.*) As I was unable to be present at last day's examination, and was not able to put any questions, I ask whether in addition to the notes already given, you could add explanations and figured statements, so as to make your notes to take in the whole period, as far as the accounts or budgets will permit of, the series of years from 1861–62 to 1873–74, using estimates or totals when actuals or details are not available?—The figured statements already submitted to the Committee, include the military charges of India from the year 1862–63 to the year 1871–72. The Accounts for 1872–73 have ere now been completed in India, and a revised estimate for 1873–74 will be shortly due. On my return to India in the autumn, I will complete, for the use of the Committee, the comparative statement of military expenditure to the year 1872–73, with the revised Estimate for 1873–74, and the Budget for 1874–75.

7565. Will you be good enough to detail the expenditure for the head-quarter staff in 1872–73, separately from that of the divisional brigade and garrison staff, with the like expenditure to 1862–63, so as to show the extent of augmentations and of decreases in the two items in the respective Presidencies, as well as in all India; also showing the increases and decreases that have taken place in the artillery staff under Grant I. It appears as if the decreases that have been effected in the army and divisional staff have been mainly in the army and divisional staff of Madras and Bombay, and in Bengal that a large increase has taken place?—This is shown in detail, in a statement submitted by me on Tuesday last, comparing the cost of the officers separately from that of the ministerial establishments. The estimated cost of the officers of the Adjutant General's Department at the two periods was as follows:—

	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1862–63 - -	26,706	11,879	17,548	56,133
1872–73 - -	15,424	8,446	7,589	31,459

The figures for the Quartermaster General's Department are—

	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1862–63 - -	20,531	12,953	10,431	43,915
1872–73 - -	17,492	12,947	11,011	41,450

The figures for the Divisional and Brigade Staff are—

	Bengal.	Madras.	Bombay.	Total.
	£.	£.	£.	£.
1862–63 - -	92,591	52,073	53,745	198,409
1872–73 - -	80,252	41,027	42,640	163,919

It will thus be see
in every case in th
quarters, divisional,
has been considerabl
nisterial establishmen
new staff appointments for mu
garrison instruction, army tele
nastics.

7566. Will you also show the relative st
of the forces to the different divisions of the ar
subsidiary stations to the several Presidencies
and in all India in 1862–63, as compared with the strength to 1873–74 and intermediate years, so as to show the great decrease that has taken place in the total military force?—I have no means at present of preparing any returns of strength beyond those already submitted to the Committee, but I shall be glad, on my return to India, to prepare such a detailed statement as is required of the strength of the European and Native Forces in India for 1862–63 and 1873–74 respectively.

7567. Still on examining the expenditure in 1862–63 with that of late years, I am struck with the large increases that have been made to the salaries of the head-quarter staff, but the office establishments appear to have increased to a remarkable extent?—In the case of the Adjutant General of the Army, the Chief Inspector of Musketry, and possibly in a very few other cases, the staff salaries have been increased, and the higher military rank of the staff officers at the present day has necessarily raised the charges for military pay and allowances. The additions to the number and pay of the Ministerial Establishments were made on the urgent representations of the heads of departments, and I was lately assured that, so far from being susceptible of reduction, they are barely sufficient for the rapidly increasing business of the head-quarters offices.

7568. Will you furnish the Committee with a comparative statement of the salaries paid to staff officers under Grant I., and the outlay for establishments, for each Presidency, and for all India, so as to show the total charges, and the respective increases for a series of years, including the earlier and later years?—The statements A 7 and A 8 submitted on Tuesday last, compare the present staff salaries in the Bengal Presidency, and the cost of Ministerial Establishments in all three Presidencies, with the experience of 1862–63 and 1856–57. If further details are required, they could be obtained from the Military Account Department in India.

7569. Under Grant II., I observe charges in the account of the Account Department, but on examining the charge in 1873–74 with that of 1862–63 and 1863–64, I cannot perceive that any decrease has been effected; on the contrary, taking the Bengal charge, and allowing for the expenditure that has lapsed since 1862–63 and 1863–64, there is an actual increase; and yet, under the changes in the constitution of the department in 1864, a large saving was held out as effected by the abolition of the independence of the head of the department; can you explain this?—A comparison of the cost of the Military Account Department in all three Presidencies in

1862–63

following re-

			Ministerial Establishments, Rent, and Contingencies.	
	-63.	1873-74.	1862-63.	1873-74.
	£.	£.	£.	£.
nance Depart-	9,885	5,480	5,600	5,651
troller Military Accountant, &c.	16,307	14,842	30,307	25,217
Examiners, Pay Department.	8,344	7,184		22,414
Examiners, Commissariat Department.	7,110	6,640	16,717	17,061
Examiners, Medical Department.	3,822	4,728	864	3,316
Examiners, Ordnance Department.	3,028	3,647	6,362	8,902
Circle and Pension Paymasters.	39,325	18,827	26,062	22,983
TOTAL - - £.	87,821	61,348	85,912	105,544

It will thus be seen that, whilst the cost of the officers of the Military Account Department has decreased by 26,000 *l.*, that of the ministerial establishments has increased by 20,000 *l.* The establishments had not been fully formed in 1862-63, and needful revisions and augmentations have had to be made since, with a view to the efficient examination of the Public Accounts.

7570. I also ask whether you can supply, under Grant III., the strength in officers and men, and totals thereof, so as to show at one view the established strength of the several arms of the service provided for under Grant III., as stated at page 7 of your copy of the notes; also showing, as far as you can, the like establishments and strengths of the several arms of the service for the several Presidencies and for all India, in the years intermediate between 1862-63 and 1873-74; the figures and establishments of corps for 1861 being added, with the arms and strength as proposed by the Government of India in 1861?—Any returns of strength, beyond those already laid before the Committee, would have to be prepared in India, whither I have lately forwarded for revision and completion certain returns framed in the India Office.

7571. The figured statements of the notes explanatory of Grant IV. show the total charges for provisioning expenses, but as you appear to blend the outlay for reserve stock with the charge for provisions, can you separate the two items, and fill in the charges for them in the earlier and later years, as far as the budgets and articles are available, supplying explanatory notes as to the nature of the supplies for which these respective charges are incurred?—The statement No. 41 of my printed note gives the outlay for reserve stock separately from provisions for Europeans, in each year, and in each Presidency. I regret that I have not now the means of giving further details of the actual payments for bread, meat, tea, coffee, groceries, and fuel. But I will place at disposal of the Committee these printed state-

Mr. *G. W. Kellner.*

ments showing the average cost of each of the articles forming the soldier's ration in the principal stations of the Army in India, in each of the years from 1857 to 1870. These will be found to illustrate sufficiently the variations in cost, in various parts of India, in different years.

7572. Can you also detail the mode of making up the expenditure at page 50, appended to which you strike the average of the annual rate per man for rationing European soldiers, and also explain the difference between the amounts of provisions consumed, and the total outlay incurred for laying in supplies, also filling up, as far as practicable, the details for the earlier and later years?—These are statements altogether outside of the regular accounts of military expenditure. They give the number of men rationed in each year, and the prevailing rates of cost of the articles composing the ration. There can, therefore, be no correspondence between the average rates thus deduced and the annual State outlay for commissariat supplies, having regard more especially to the reserve stock of tea, coffee, and groceries constantly maintained at all the army stations in India. I now place at the Committee's disposal these statements of the average cost of the soldier's ration at the several army stations for a series of years.

7573. In your notes on commissariat expenditure, you enter the figured statements for malt liquor in two different places; now could you bring these figures together, and in addition, show the expenditure incurred in England and actually charged in the Home Accounts, instead of in the India Accounts, since 1865-66 inclusive, down to 1873-74; also explaining the difference between the outlay for malt liquor actually provided, and that of malt liquor consumed, the quantities laid in, wasted, and consumed being, if possible, stated?—Up to the year 1865-66, the cost of malt liquor, paid partly in India and partly in England, was altogether adjusted in the Indian Accounts, the record in each year being for the malt liquor actually received and brought to account. Since the year 1866-67, the entire cost has been paid in England and charged off in the Home Accounts. Thus the record in the earlier period differs in character from that of the later period. The following figures recently prepared from the records of the India Office, show the annual outlay for malt liquor since the year 1866-67. These include all charges, excepting a portion of the freight which is paid in India:—

	Cost.	Number of Hogsheads.
	£.	
1866-67 - - -	311,209	82,566
1867-68 - - -	322,090	88,121
1868-69 - - -	262,841	81,839
1869-70 - - -	308,081	106,689
1870-71 - - -	275,370	100,642
1871-72 - - -	248,598	93,035

I beg,

Mr. *G. W. Kellner.*

I beg, further, to place at the disposal of the Committee these printed statements of the consumption and wastage of malt liquor in the several Presidencies of India from 1864-65 to 1871-72.

7574. The expenditure for rum and arrack is shown, but only for all India, and not for the Presidencies; the fact of rum for Bombay being of late years obtained from England and charged in the Home Accounts, and not, as in former years, in the Bombay Accounts, is not stated; will you be good enough to fill up the explanations and give the figures; will you also explain whether the outlay for rum and arrack represents the consumption or merely the outlay for stock laid in, explaining what you consider to be the causes of variation between the expense of different years, also between the cost of stock laid in and that consumed?—The expenditure in India, on account of rum and arrack, is exhibited separately for each Presidency in Statement No. 41 of my printed note. The expenditure in England for rum sent out to the Bombay Presidency in recent years was as follows:—

	£.
1867 - - - -	1,820
1868 - - - -	5,880
1869 - - - -	5,766
1871 - - - -	6,821
1872 - - - -	5,285
1873 - - - -	3,384

The Government outlay for rum and arrack is more than recovered by the sale of the spirits to canteens in India.

7575. In your notes to the Appendices you refer tothe variations in the cost of feeding elephants, camels, bullocks, mules and horses, also to the charge for dearness of forage, but you nowhere give any statement of the numbers of the animals maintained for the Commissariat; can you supply the Committee with the details as to numbers of all cattle, and endeavour to show the numbers maintained in the earlier and later years of the series for 1862-63 to 1873-74?—The number of army cattle maintained by the commissariat will have to be obtained from India, as the detailed returns are not available here.

7576. At page 13 of your notes you show the total compensation paid for dearness of provisions. and of forage, could you separate these items, and also exhibit the respective amounts for each Presidency as well as for all India, and supply the charge, either actual or estimated, for the years, to complete the series, also for 1862-63 to 1872-73, explaining what measures have been in force for ascertaining the market rates which regulate these charges, and what defects there have been in checking them, and what measures have been taken to ensure an adequate check in future?—The annual payments on account of compensation for dearness of provisions and forage in the three Presidencies were as follows (no compensation for forage occurs at Madras, as the cavalry horses in that Presidency are fed by the commissariat):—

	Beng					
	Provisions.	For				
	£.	£				
1862-63	9,555	-				
1863-64	14,962	-				
1864-65	35,749	-				
1865-66	66,054	1,459	144,605			
1866-67	92,085	18,230	204,963	104,573		
1867-68	47,617	3,469	122,254	87,647		
1868-69	76,024	14,245	113,406	82,230	11,69	
1869-70	139,510	57,434	135,198	112,128	24,366	
1870-71	73,731	14,135	89,301	110,525	15,265	302,957
1871-72	25,385	1,865	85,787	72,947	8,273	194,257

As already stated in my previous evidence, there has been laxity in dealing with these charges in the past; but the Government have lately directed the commanders of troops and the civil officers of districts to check the price currents in future, and to keep the expenditure for compensation within proper limits.

7577. The outlay for the purchase of live stock has varied considerably; can you give the Committee any statement of the number and value of live stock purchased, in the respective Presidences as well as for all India, and the rates of charge for the different animals in each year, and could you connect the outlay for these purchases with that in 1862-63 and to the later years of the series?—This information will have to be obtained from India.

7578. In your notes you show the total charges for transport included under the Commissariat vote, in one item under one head; will you be good enough to hand in a fuller detailed statement of this one head, broken up into the several heads under which the charges are incurred, and show the amounts charged for transport for the several departments; also supplying details of the charges which will furnish the Committee with the means of judging of this large item?—The required statement has been prepared for the year 1871-72, and is now placed at disposal of the Committee. A similar statement is under preparation for the year 1872-73.

7579. The charge for feed of horses is shown at page 14, but only for all India. Can you show the charge for the several Presidencies as well; also the number of horses to each Presidency and for all India, for each year. Also connecting this information with that of the earlier years, and bringing down the details to 1873-74. Can you also furnish a statement of the average cost of feeding horses for each year, in the form used for the Commissariat and Cattle?—The average cost of feeding elephants, camels, bullocks, and mules in the several Presidencies is given in statement No. 43 of my printed note. A similar statement for army remounts could be sent from India; it would, in fact, exhibit for each Presidency what I have shown for all India in page 14 of my note.

7580. The miscellaneous charges of the Commissariat and Cattle Department, at page 14 of your notes, appear to be very excessive, and the details of these charges in the Appendix show the items in Bengal and Bombay to be exceedingly large. Can you explain more fully than you have done the cause of these large outlays, and for what quantities of particular articles the charge is incurred;

of control
re?—The
considerlast year,
iny.
requested to hand
established strength
of India, and of the
d to show the ranks, the
mpanies, and batteries, so as
a contrast between the strengths in 1861,
62 and 1863 with the strengths in the
3–74, and in the intermediate years; and
on, will you now hand in statements of
effective strengths of each Presidency from 1st May 1861, and show the batteries and regiments of the different arms, European and Native, and the monthly strength and average monthly and annual strengths, with an abstract of the total forces for each Presidency, and for all India, for the whole series of years?—The detailed statements prepared by me of the strength of the European and Native forces in India from 1861-62 to 1871-72 are now placed at disposal of the Committee; they exhibit the strength in each month of each year, in each of the Indian presidencies, and the average for each year.

7582. Be so good as to explain to the Committee the mode followed in compiling the returns of strengths, what ranks are included in the numbers, and how you arrange for reconciling the great differences between the strengths in the returns of the Adjutant General and Quartermaster General?—The returns include non-commissioned officers, rank and file, of all arms. The discrepancies between the Adjutant General's and Quartermaster General's returns have proved very embarrassing; but omissions in one set of returns have been corrected by the other, or by the army lists or muster-rolls of the period, and, generally, those figures have been adopted which exhibited the least probabilities of error.

7583. Have you found great discrepancies in the returns of strength prepared by the Adjutant General and Quartermaster General, and have you found that the Adjutant General of Bengal omitted for many years the strength of the Punjab and Central India Forces?—The discrepancies have been considerable in some cases, owing to omission of corps and batteries in India, or *in transitu* between India and Europe.

7584. You may remember that in my time I experienced great difficulty in compiling the strengths of the Army of India, and that the errors in the figured statements of the returns of the head-quarter offices were subject of complaint by the Secretary of State; have you also found great difficulty in ascertaining the strengths of effectives, sick, absent, and establishment?—I remember the difficulty in your time, and I have myself experienced it in recent years.

7585. Now, looking at the great financial bearing which accurate returns must have, so as to enable you to curtail expenditure in rations, for hospital diet, for malt liquor, for spirits, and other purposes, what measure do you suggest to ensure returns being accurately prepared?—The course that occurs to me is to fix the responsibility for these monthly returns of strength upon some one officer at army head-quarters. They should be prepared by him from the returns of batteries and regiments, and then checked by the Military Account and Medical Departments, through information always available in those departments. After reconciliation of differences and correction of errors, the monthly returns should be published in general orders, as an authentic record of the strength of the European and Native forces in India.

7586. Do you remember that on Lord Canning's call on me for suggestions for remedying the defects in the Indian military returns, that I suggested the appointment of a statistical department for specially compiling the returns that the head-quarter offices needed, and that the Government of India and of England required; can you now state your views as to the way accurate returns can be compiled?—I do; and the formation of a Statistical Department would, doubtless, have obviated the difficulties since experienced in ascertaining the actual strength of the Army, at any period during the past 10 years. I am of opinion that the appointment of a responsible statistical officer at Army head-quarters, checked in the manner suggested in my reply to the preceding question, would go far towards insuring the accuracy of the returns in future.

7587. Looking at these figures of the effective strength of the European Army of India, the difference between the effective strength and the established strength appears in some years to have been very great; have you observed that difference, and will you point out some of the most remarkable differences in strength?—The differences between established and effective strength vary at different periods of the year, and are influenced by various causes. According to the returns already submitted by me to the Committee, the average differences in each year were as follows:—

	Established Strength of European Troops in India.	Average Effective Strength of European Troops in India.
1865-66 - - -	67,131	62,857
1866-67 - - -	62,454	59,720
1867-68 - - -	62,210	55,237
1868-69 - - -	62,350	55,756
1869-70 - - -	61,995	56,772
1870-71 - - -	60,425	56,694
1871-72 - - -	60,453	58,437

The Abyssinian War, and visitations of epidemic disease, would partly account for these differences; but in the year 1872–73, and in the current year, the effective strength more nearly accords with the established strength of the British forces in India.

7588. Is it not a great financial question to maintain as few head quarters of brigades of artillery and regiments of infantry and cavalry as possible, and does it not appear as if the effectives would have allowed of a great decrease in the number of head quarters?—No doubt, from a financial point of view, it would be advantageous to concentrate the British forces in India in fewer brigades of artillery, and fewer regiments of cavalry and infantry, because you would thereby save the most expensive part of the military organization.

7589. Is it not the case that the mere pay and charge of rations are alone saved by the number

Mr. *G. W. Kellner.*

of privates being deficient to the established strength, and that this saving is only a fraction of the total sum which is permanently incurred for the higher ranks and for the establishments attached to the corps, and will you state approximately the difference between the total liabilities per private on a full strength private with the approximate saving effected by keeping corps below the established strength?—Yes. Supposing the effective strength of the 50 British infantry regiments now in India were short of the established strength by 2,000 men, the saving to Indian revenues would be the pay, rations, clothing, and personal charges of those 2,000 men. But the saving would be much greater by the withdrawal of two British infantry regiments, because it would include the pay of the commissioned and non-commissioned officers, staff, and regimental establishments, whilst the garrison of India would be reduced by less than 2,000 men.

7590. Seeing this great loss, and looking at the great deficiency in the effective strength of corps equal in some years to the strength of four regiments; for instance, in January 1871, the infantry strength was greatly below the establishment; would it not tend to great economy to diminish the number of corps and companies of infantry in India, and by strong depôts at home keep up the remaining corps to the full strength?—No doubt, the diminution of regiments and companies of infantry would tend to economy, if it could be effected without reducing the effective strength of the European force in India.

7591. Has your attention been yet given to the great cost in England for preparing recruits for service in India, and do you not consider it possible to reduce the charge very considerably by making special arrangements for raising, training, and dispatching recruits for service in India; the old Warley depôt of the India Government was most economically formed, and yet it was very efficient, its only defect being the short period the recruit was kept at home?—I believe that by a provisional arrangement with the War Office, the present charge upon Indian revenues is 136 *l.* for a cavalry recruit, and 63 *l.* for an infantry recruit, whereas the average cost of supplying recruits from the Warley depôt under the East India Compauy was 26 *l.* per man. Looking to the experience of the Warley depôt, it would no doubt be financially advantageous to establish recruiting depôts in this country with special relation to the British forces in India.

7592. I beg to draw your attention to the Reports of the two Recruiting Commissions of 1859 and 1866, on the latter of which I served; you will find that both Commissions reported most favourably on the facilities of obtaining recruits for service in India. The fact also of the regiments sent to India to quell the mutiny being filled up at once, and far more completely than for the war in the Crimea, appears to show that by specially raising men for Indian Service would allow of great decrease in the present charge for recruits?—Yes, the instances cited attest the popularity of the Indian Service amongst the classes who recruit the British Army.

7593. Be so good as to explain the system of supplying the soldiers with free rations of food, and whether it is the same as for the Army at Home and in the Colonies?—Without entering into the complications of the subject, I may say, that the British soldier, in pay and stoppages, has been bet[illegible] example, [illegible] lieu of be[illegible] pensation [illegible] nies he wa[illegible] bread and meat ra[illegible] 3½ *d.* for rations, [illegible] groceries. Practical[illegible] rations to a considerable [illegible]

7594. State the articles co[illegible] rations in India, its calculated cost, a[illegible] statements showing its actual cost at th[illegible] stations of India, and the average c[illegible] India and for the different Presidencies, [illegible] the statements be prepared for as many ye[illegible] past as practicable, connecting if possib[illegible] these statements with the like statements for 1862-63?—The articles composing the soldiers' daily ration are bread, meat, rice, tea, coffee, sugar, salt, vegetables, and firewood. The calculated cost is 12 *s.* 8 *d.* per man per month, but the actual cost is more, as will be seen from the statements now submitted. At Bombay, for example, the actual cost in the year 1870 was nearly 30 *s.* per month, and at Aden 32 *s.* 10 *d.*

7595. Be so good as to supply the Committee with rates of prices for as many other articles of food for man and beast at the several military stations, with a view to show the variations of prices in India?—The required statements are now submitted.

7596. Has any inquiry been instituted as to whether the dearness or cheapness of provisions and other articles of food at some stations, or in some districts, have not an important bearing on the cost of troops located in those districts?—Yes, the subject has frequently engaged the attention of the Government of India.

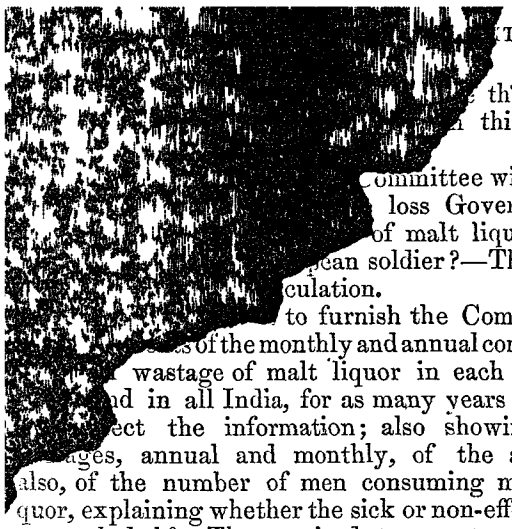
7597. You are aware that when directing the Military Finance duties in India, I endeavoured to ascertain the prices of articles of food by circulating the statements of cost of food supplies throughout all India, thus keeping alive the attention of all concerned with military expenditure; has this practice been discontinued, and if so, with what good or bad results?—Yes, and the discontinuance of the practice is much to be regretted.

7598. Looking at the varying rates of cost of the European soldiers' rations for the many years for which the rates are shown in these statements, can you say whether on comparing the total charge for the rations at the dear and cheap stations, by multiplying the number of men by the rate per head, the cost of rationing the whole of the European soldiers is greater or less now than in former years, and endeavour to illustrate your statement by using the strengths in the distribution returns of the army?—The rates fluctuate with the rise and fall of prices, in seasons of famine or of plenty; but on the whole, I believe that the British soldier's ration in Bengal costs less now than formerly, but rather more in the Madras and Bombay Presidencies. I will endeavour to obtain any further explanation that may be required by the Committee on this point.

7599. Is not the Army Expenditure considerably increased by the Government of India supplying the European soldier in India with malt liquor at reduced cost?—Yes.

7600. Explain the system under which the European soldier is supplied with malt liquor, and the changes in regulations since 1861-62; and state whether the European officers are entitled

or



they for-
this point
Committee with any
loss Government
of malt liquor for
pean soldier?—This will
culation.
to furnish the Committee
s of the monthly and annual consump-
wastage of malt liquor in each Presi-
d in all India, for as many years as you
ect the information; also showing the
ges, annual and monthly, of the above;
also, of the number of men consuming malt liquor, explaining whether the sick or non-effectives are excluded?—The required statements are now submitted.

7603. Is not the Government a gainer by supplying the soldiers with rum and spirits, and that this is in contrast with the loss sustained by supplying malt liquor?—Yes, there is a considerable gain by the retail of spirits, and loss by the sale of malt liquor. Mr. *G. W. Kellner.*

7604. Explain the system in force in India at present and in former years for supplying spirits, and show, by statements, the charges incurred for laying in stocks of spirits, the cost of charges, the recoveries from the men, and the gain to Government, and the rate per head gained on each European soldier, and if possible show the number of men consuming spirits in each Presidency and in all India?—This information can be obtained from India; the needful data are not available here.

LIST OF APPENDIX.

APPENDIX.

Appendix, No. 1.

MEMORANDUM by Colonel *Crommelin*, R.E., C.B., on certain points of his Evidence. Appendix, No. 1.

IN my answers to Questions 91, 92, 107, 242, I led the Committee to understand that there had been no considerable failure in the construction of barrack buildings at Allahabad. I was under the full belief at the time that my answers were quite correct, being in total ignorance of the serious defects which had been brought to light since my departure from India in 1871, and with which I have only just become acquainted since my return.

I find, however, that the papers regarding these defects* have been duly submitted to the Secretary of State, and that the special Committee has been put in possession of the statement (sent by the Government of India in telegram, dated 10th March 1873) of "the expenditure since 1863 in construction of "barracks which are unoccupied, because they have given way, "or are pronounced unsafe, or too hot for habitation by soldiers," and which statement shows that 22,500 *l.* was the estimate for repairing damages, due to bad roofs and other defects of construction at Allahabad.

* Despatch to Secretary of State, No. 41, dated 8th April 1873, and papers therein referred to. Despatch to Secretary of State, No. 30, dated 27th February, and papers therein referred to. Telegrams from and to Secretary of State, recorded as Proceedings, March 1873, A. 75–77.

Again, the answers to Questions 40, 41, 42, 75, 204, 306, explain that, according to the best calculation that I had the means of making at the time of my examination, the Government of India had still to contemplate an outlay of only 1¼ millions on additional new barracks for European troops throughout India.

It would, however, appear from some very late investigations that no less a sum than four millions has been calculated as the prospective demand for accommodation of every description, the bulk of which is for new buildings. This estimate will have to be carefully revised; still it seems probable that the prospective outlay will amount to more than double the figure stated in my evidence. I think that some of the Members of the Committee were under the impression that my figures were over-estimated.

Lastly, in Answers 156 and 248, I gave it as my impression that it would be probably found that the disaster at Saugor was not so serious as the Special Committee had reported it to be. The subsequent report of Colonels Hutchinson and Taylor, who were specially deputed to Saugor to examine the buildings, confirms the verdict of total condemnation recorded by the Committee.

As I was an official witness, and as my evidence (although given in perfect good faith according to my knowledge at the time) might mislead the Committee on important points, I would suggest the desirability of this Memorandum being sent to the Under Secretary of State for India (who is a member of the Special Committee), in view of his laying it before the Committee, as my explanation of the questionable points which I have brought to notice.

(signed) *T. H. Crommelin*, Colonel,
Royal Engineers.

Simla, 4 June 1873.

Appendix, No 2.

Note.—A regular census of this Province was taken during the year 1872, but the results are not yet known. The above figures, however, have been gathered from annual returns prepared by Thoogyees, or revenue collectors, for the purpose of assessing the Capitation Tax within their respective circles; a nominal roll of every man, woman, and child residing within each such revenue circle is one of the returns which has to be submitted to District Officers, and as these returns are usually tolerably correct, they afford a fair means of ascertaining the number of the Population.

There are no Native States attached to or in Political relation with this Province.

MADRAS.

Appendix, No. 3.

PAPER handed in by Mr. *Grant Duff*, M.P.

REPORT of CASES where the COUNCIL for INDIA has been OVERRULED by SECRETARY OF STATE. Appendix, No. 3.

27th October 1858 -	Letter to Great Indian Peninsula Railway Company, stating that Secretary of State was prepared to admit the principle of arbitration in cases where it was doubtful where the cost of land should fall on Government, or as an item of cost of construction on railway company. Modification proposed by Council, agreeing only to refer to legal adviser in such cases, negatived by Lord Stanley.
26th May 1859 - -	Report by Revenue, Judicial, and Legislative Committee recommending modification of present system of a covenanted Civil Service in India, so as to permit Secretary of State to appoint to posts requiring special qualifications persons possessing them; adopted by Council, but Lord Stanley declined to give effect thereto.
30th August 1859 -	Military Despatch to India, No. 302, paragraphs 4 and 5. Proposed permission to men who did not avail themselves of offer of discharge previously given, but remained on in hope of bounty on transfer of Indian Army to Crown being ultimately conceded, to take their discharge; sanctioned by Sir C. Wood, only in event of Government of India having given a pledge to that effect.
13th July 1860 - -	Letter to Mr. Coulson, instructing him to draft an Act confirming certain appointments to offices of persons not belonging to Civil Service, and relaxing rule prohibiting such appointments; negatived by Council, but directed by Sir C. Wood to be sent.
14th March 1861 -	Case of Meer Jafir Ali. Distribution of private property of late Nawab of Surat. Letter agreeing to refer case to Judicial Committee of Privy Council; negatived by Council, but ordered by Sir C. Wood to be sent.
30th April 1862 -	Letter to Horse Guards, permitting Indian officers in non-purchase corps to exchange into purchase corps; negatived in Council, but ordered by Sir C. Wood to be sent.
12th April 1867 -	Political Despatch to India, No. 69 of 1867, refusing to reinstate Maharajah of Mysore, but recognising his adopted son as heir to the throne; sent by order of Sir S. Northcote.
5th November 1868 -	Letter to Civil Service Commissioners, inquiring whether they could suggest any modifications in the regulations to meet the cases of the candidates who, having gone through the prescribed course of study, fail to pass the final examination.

INDIAN CIVIL ENGINEERING COLLEGE, COOPERS HILL.

[The nearest Post Town is Staines. The nearest Railway Station is Egham. The nearest Telegraph Station is Englefield Green.]

PROSPECTUS for 1873.

Staff of the College.

President - - - - - -	Lieutenant Colonel G. CHESNEY, R.E.
Professor of Construction - -	CALLCOTT REILLY, Esq., Mem. Inst. C.E.
Professor of Hydraulic Engineering and Mechanism.	W. C. UNWIN, Bac. Sc., Assoc. Inst. C.E.
Professor of Mathematics - -	Rev. J. WOLSTENHOLME, M.A.
Professor of Applied Mathematics -	A. G. GREENHILL, Esq., B.A.
Professor of Surveying - - -	Major W. H. EDGCOME, R.E.
Professor of Experimental Science -	HERBERT MCLEOD, Esq.
Instructor in Geometrical Drawing -	Lieutenant G. S. CLARKE, R.E.
Instructor in Surveying - - -	Major E. H. COURTNEY, R.E.
Instructor in Architectural Drawing	T. H. EAGLES, Esq. B.A.
Instructor in Freehand Drawing -	S. T. G. EVANS, Esq.
Lecturer in Hindustani - - -	COTTON MATHER, Esq.
Lecturer in Geology and Mineralogy	Professor P. M. DUNCAN, M.A., F.R.S.

The Coopers Hill College has been established under the orders of the Secretary of State for India in Council, in view to the education of civil engineers for the service of Government in the Indian Public Works Department.

2. Admission to the College is obtained by competitive examination, to which all British born subjects between the ages of 17 and 21 years on the 1st day of July 1873 and of sound constitution, who can produce satisfactory testimonials of good moral character, will be eligible.* If this evidence should be *primâ facie* satisfactory, applicants will be allowed to compete; but further evidence will, if necessary, be required from the successful candidates. Intending competitors will be required to furnish satisfactory evidence on these points to the Civil Service Commissioners, not later than the 15th June.†

3. The course of special education for the candidates selected by this competition extends over three years, and all the students who pass through it successfully, including such of them as, instead of entering the Coopers Hill College, prefer to undergo their course of preparation elsewhere, and succeed in psssing the same final test of qualification as the students of the college (vide paragraph 18), will be appointed to the Indian Public Works Department as assistant engineers, second grade, the salary of which grade is 4,200 rupees (about 420 *l.*) per annum, and will be provided with a free passage to India.

4. The

* In 1874 and succeeding years, the maximum age for admission will be 20 instead of 21 years.

† The needful forms of application, with instructions for filling them up and as to the nature of the evidence required, may be obtained from the Secretary, Civil Service Commissioners, Cannon Row, Westminster, S.W., at any time after 1st May 1873.

4. The competitive examination for 1873 will be held in July under the orders of the Civil Service Commissioners, and will embrace the following subjects:

(1.)	English (Composition, History, and Literature) -	750
(2.)	Mathematics (pure and mixed) - - - -	2,250
(3.)	Latin (translation from and into) - - - -	1,000
(4.)	Greek ditto - - - - - - - -	1,000
(5.)	French (translation from and into, and dictation) -	750
(6.)	German ditto ditto - - - -	750
(*7.)	Inorganic Chemistry - - - - - - -	700
(*8.)	Heat and Light - - - - - - - -	700
(*9.)	Electricity and Magnetism - - - - -	700
(*10.)	Geology and physical geography - - - -	700
(11.)	Mechanical drawing of geometrical figures, plane and solid, use and construction of scales, perspective -	500
(12.)	Freehand (figure and landscape) drawing - -	500

5. Of these subjects, two will be compulsory, viz.:—

(1.) English composition to the extent of a candidate's being able to write grammatically and with correct spelling. An exercise will also be given in writing English from dictation.

(2.) The following branches of mathematics, viz., arithmetic, algebra, geometry (first four and sixth books of Euclid), mensuration, plane trigonometry, and statics, in each of which the candidate will be required to show competent proficiency. An aggregate of 1,000 marks will be assigned to these branches.

The examination in English literature will be limited to the following authors:—

Shakespeare - - - -	King Lear.
Bacon - - - - -	Advancement of Learning.
Milton - - - - -	Paradise Lost, Books III. and IV.
Pope - - - - -	Essay on Man.
Scott - - - - -	Old Mortality.

The examination in English history will be limited to the period A.D. 1650 to A.D. 1714.

6. A deduction of 150 marks will be made from the marks gained by a candidate in each subject, except mathematics and mechanical drawing, at the competitive examination.

7. The 50 candidates who, qualifying in the obligatory subjects, obtain the highest aggregate number of marks, will be eligible for admission to the College.

8. Such of them, however, as may prefer to pursue their studies elsewhere will be allowed to present themselves for the final examination in 1876 (*see* Paragraph 3). Persons who adopt this course will be required to produce satisfactory testimonials of good moral conduct during the interval between their passing the competitive examination and the final qualifying one; they must be in a sound state of health, and have passed not less than eight months under a civil or mechanical engineer. This condition must not be held to be a mere formal one. No person will be admitted to the final examination who does not satisfy the Secretary of State that he has served the required time under an engineer who is engaged in practice adapted to afford his pupils opportunities for gaining practical experience of a really useful kind, and, further, that he has turned those oppootunities to proper account.

9. The college course extends, as above stated, over three years, each divided into three terms, with vacations of four weeks at Christmas, two weeks at Easter, and seven in the Summer. The Easter Term begins on or about the 18th January, and lasts for 12 weeks. The Summer term begins about 14 days afterwards, and ends about the 29th July. The Autumn term begins on or about the 16th September, and ends on or about the 20th December.

10. An annual charge of 150 *l.* will be made for each student, in three payments of 50 *l.* per term, which must be paid in advance to the Accountant, India Office. It is to be particularly noted that the student is required to produce the accountant's receipt for his fee on joining the College at the beginning of each term.

11. But in the case of a student whose parents or guardians may represent their inability to defray the whole of this charge, payment of a part not exceeding 20 *l.* per term, or 60 *l.* per annum, can be deferred, and effected by deductions from the student's salary during the three first years after his admission to the Government service. In such case he will be required to signify beforehand his own consent to the arrangement, and security must be given for payment of the deferred portions of the College fees, in the event of the student failing to enter the Government service. The needful form of application for admission to the benefit of this rule will be obtainable at the Public Works Department of the India Office.

* No candidate may take up more than three out of these four subjects.

Appendix, No. 4.

Office. Under this arrangement the total charge payable at the time for board, lodging, and instruction, may be reduced to 90 *l.* per annum.

12. The College fees include all charges for tuition, board, and lodging, with washing, but not for medical attendance. Students are required to provide their own class books and drawing instruments, which are for the most part limited to such as will be necessary afterwards for pursuing the profession of an engineer. Drawing paper, drawing boards, surveying instruments, are provided at the College.

13. Of the nine terms into which the college course is divided, it is intended that two terms at least in the third year, with the intervening vacation, shall be passed by the student under a civil or mechanical engineer, or partly under each. The fees to the engineers under whom the students are thus detached will be paid by the Indian Government, and an allowance of 5 *s.* a day will also be made to the student, for lodging money and in lieu of commons while absent from the college during term time.

14. The obligatory subjects of study at the college are—

Mathematics, pure and applied, with the mechanics of engineering.
Theory and practice of construction.
Elementary principles of architectural design.
Surveying.
Mechanical drawing and descriptive geometry.
Chemistry, physics, and geology.
Hindustani, and history and geography of India.
Accounts.

The optional subjects taught are—

Higher mathematics in extension of the obligatory course.
Natural science, ditto.
Architecture, dito.
French and drawing.

15. The proficiency of the students in the studies pursued is tested by periodical examinations, and by assigning values to the drawings, surveys, notes, &c., executed by them while at the college, as well as to the work done while detached under civil or mechanical engineers.

16. A certain minimum of qualification is required in each of the obligatory subjects, as well as a certain minimum of average proficiency in all those subjects taken together, as tested by the aggregate marks gained; but students are encouraged to pursue more particularly those branches of either the obligatory or voluntary course for which they may show special aptitude.

17. This qualifying standard of proficiency as above defined, and as fixed for each year, is to be attained by the student at the end of the first and second year, failing which he will not be allowed to remain at the college.

18. A final examination will be held during the last term of the third year, which will be conducted by special examiners not connected with the college. This final examination, in addition to paper work and *vivâ voce* questioning, will embrace exercises in surveying, drawing, designing, and estimating, which will occupy some weeks in execution. It will also include Latin, Greek, French, and German as optional subjects, the marks gained in which are included in the aggregate required for qualification, although no instruction is given in them at the college. The whole subjects of examination are divided into four branches, viz:—

I. Engineering, including drawing, architecture, surveying, and accounts.
II. Mathematics, including the mechanics of engineering.
III. Natural science.
IV. Hindustani, and history and geography of India.*

19. The proficiency of the students is recorded separately in each of these branches, in order of merit.

20. In such branches of study as may be fixed upon from time to time, the course will be completed at the end of the second year. In such cases the marks gained by a student in his second year will be carried forward to his credit in the final examination.

21. All the students who attain the prescribed qualifying standard at the final examination will be appointed to the public service on the terms already stated. They will be required to embark for India in the month of October following. Their salaries will begin from the 1st October.

22. A library

* Further particulars regarding the course of studies and distribution of marks allotted at the final examination will be found in the Syllabus of College Lectures, published by Messrs. W. H. Allen & Co., Waterloo Place, S W., and to be had of any bookseller, price two shillings.

22. A library, laboratory, model-room, gymnasium, and workshop are attached to the college. Students making use of the laboratory are supplied with the needful apparatus. They are required to provide their own hand tools in the workshop.

23. The sole responsibility for the discipline and management of the college and for the general superintendence of the studies is vested in the president.

24. The students are distributed in sections, containing about ten each, under personal charge of one of the professors or instructors selected as tutor by the president, to whom the tutor is responsible for exercising a certain degree of personal supervision over each student in his division, and for conducting ordinary correspondence with the student's friends.

25. Each student is provided with a separate room furnished, and with fuel and light, also with the necessary attendance. He is required to supply his own bed linen and towels. Meals are taken in hall. Additional articles required will be supplied from the college kitchen at a fixed tariff, under such rules as may from time to time be made. Wine is not included in the ordinary fare, but is supplied at cost price from the college cellar.

26. A special service has been provided for members of the college at the adjacent church on Englefield Green.

27. Every student will be expected to go through a course of exercise in the gymnasium.

28. Students are required to wear academical dress, under such regulations as may be prescribed by the president.

Endowments.

The following scholarships and prizes are available to the students of the college :—

(1.) From the Coopers Hill Endowment Fund, established by the civil engineers of the Indian Public Works Department. This fund furnishes at present seven annual scholarships or prizes of from 50 *l.* to 30 *l.* thus appropriated: two scholarships of 30 *l.* each, tenable for one year, for students of the first year; two scholarships of 40 *l.* each, tenable for one year, for students of the second year; one exhibition of 50 *l.* open to students of the third year. All these will be awarded for proficiency in engineering. Two more scholarships of 30 *l.*, tenable for one year, are also provided, the appropriation of which will be notified hereafter.

(2.) Argyll Scholarship in Natural Science of 30 *l.*, tenable for one year, presented by the Secretary of State for India while holding that office, open to students of the second year.

(3.) Baker Scholarship in Applied Mechanics of 25 *l.*, tenable for one year, presented by Major General Sir W. E. Baker, K.C.B., R.E., Member of the Council of India, for so long as he shall hold that office, open to students of the second year.

(4.) President's prize of 20 *l.*, given by the president of the college, for proficiency in Indian history and geography, open to students of the second year.

(5.) Prize of 15 *l.* for proficiency in accounts, given by the members of the Indian Public Works Accounts Department, open to students of the second year.

(6.) Mr. G. W. Allen, proprietor of the *Pioneer* newspaper, published in India, offers an annual prize of 25 *l.* for a subject to be specified hereafter.

(7.) College prizes of books and instruments are given in the other subjects of study.

Particulars regarding the Indian Public Works Department.

29. The engineer establishment of the Indian Public Works Department, in which successful students in the college will be entitled to appointments, consists of the staff of engineers, military and civil, engaged on the construction and maintenance of the various public works undertaken by the State in India. According to a Return prepared in 1870, the staff comprises 896 officers, of whom 363 were military men, and 533 civilians. This branch of the public service is of comparatively recent origin, and its expansion has been rapid, the total strength of the department having been—

In 1840	113
In 1850	183
In 1863	545
In 1867	602
In 1868	747
In 1869	896

30. The department is supplied from the following sources :—

(1.) Officers of Royal Engineers.

(2.) Other officers of the Indian Army who have passed the qualifying examination.

(3.) Passed students of Government Civil Engineering Colleges in England and India.

Appendix, No. 4.

(4.) Civil engineers in practice of approved qualifications appointed direct by the Secretary of State or Government of India.
(5.) Deserving subordinates promoted.

31. The head of the whole department is the Public Works Secretary to the Government of India, whose salary is 42,000 rupees per annum. There are also four deputy secretaries, each in charge of one of the four branches into which the business of the department is divided; viz., buildings and roads, irrigation works, railways, and accounts. The whole expenditure controlled by the department was estimated for the year 1870–71 at about 7½ millions sterling, thus distributed, and is now considerably larger:

	£.
Military works	1,488,208
Civil buildings	710,179
Irrigation works and embankments	2,388,953
Roads and miscellaneous works of public improvement	1,298,560
State railways	1,229,800
State outlay connected with guaranteed joint stock railways	359,860
£.	7,475,560

32. The various ranks of the department are as follows:—

	Salary per annum. Rs.
Chief engineers, first class	30,000
" " second class	24,000
" " third class	21,600
Superintending engineer, first class	19,200
" " second class	16,200
" " third class	13,200
Executive engineers, first grade	11,400
" " second grade	9,600
" " third grade	7,800
" " fourth grade	6,600
Assistant engineers, first grade	5,400
" " second grade	4,200
" " third grade	3,000
Apprentices	1,200

[*Note.*—Ten rupees are nearly equivalent in value to one pound sterling.]

33. There are usually two chief engineers in each province, one at the head of the roads nd buildings branch, and the other of the irrigation branch of the department; but in he smaller provinces all the public works are under the superintendence of a single chief ngineer. According to a return prepared in 1871 there were then, in all, 17 chief engineers or the 12 provinces into which, for administrative purposes, British India is divided, of whom six had charge of the buildings and roads branches, and five of the irrigation ranches respectively of their provinces; five were chief engineers of smaller provinces, nd one had charge of a State railway. Again, six of these chief engineers were in the rst class, and the remainder in the second and third classes. The chief engineer is also sually secretary to the Provincial Government in the Public Works Department. The arge State railway department is of recent formation; all the officers serving in this branch f the Public Works Department are under the direct orders of the Government of India, xcept in the case of railways supervised by the Governments of Madras and Bombay.

34. Each province or class of works within a province is divided into circles, under uperintending engineers. The same return shows that there were then altogether 55 officers f this rank in the department, of whom 22 had charge of circles of buildings and road orks, 12 of circles of irrigation works or lines of canals, 12 of miscellaneous works, and of lines or portions of lines of State railways. [The railway branch of the department as since then been largely developed.]

35. The superintending engineers are divided under the regulations of the Public Works ode in equal proportions among the three classes.

36. The actual execution of work is conducted by the executive and assistant engineers. he sanctioned establishment of these officers (as well as of the higher ranks), varies from me to time according to the requirements of the public service, but it is provided by the egulations that of the aggregate number maintained at any time the assistant engineers all be 60 per cent. in excess of the executive.

37. Of

Appendix, No. 4.

37. Of the total number of executive engineers sanctioned for any province, it is provided that $\frac{3}{16}$ths shall belong to the first grade, $\frac{4}{16}$ths to the second and third each, and $\frac{5}{16}$ths to the fourth. Of the assistant engineers attached to a province, one-third belong to the first grade, the remainder with the apprentices to the other two.

38. Civil engineers appointed to the department from the new civil engineering college enter as assistants, second grade. They will either be placed at the disposal of the Government of India, and will be posted on arrival to one of the ten provinces under the more direct administration of that Government,* or else they will be sent in the first instance to Madras or Bombay.

39. Promotions from one grade or class to another are dependent on the occurence of vacancies in the sanctioned establishment, and are regulated in the following way:

40. Promotions of their assistant and executive engineers in Madras, Bombay, Bengal, North-west Provinces, and Punjab, are made by the Governments of those provinces respectively, but the promotions of the officers of these classes serving in the seven smaller provinces are made from one general list by the Government of India.

41. Promotions to superintending and chief engineer are made on one general list for all India, except in Madras and Bombay, where the vacancies in all grades are filled up by the Local Government from the officers serving under them respectively.

42. Promotions in the railway branch of the department are also made by the Government of India, except in Madras and Bombay.

43. Promotion is made wholly by selection; mere seniority is considered to confer no claim to it.

44. Further particulars regarding the regulations at present in force for this branch of the public service, as to leave, pensions, &c., will be found in the Appendix hereto annexed.

APPENDIX.

EXTRACTS from the CIVIL LEAVE CODE and PENSION REGULATIONS, showing the Chief Rules applicable to Officers appointed to the Public Works Department from the Civil Engineering College.

LEAVE OF ABSENCE.

Chapter I.

Section 3.—Leave of absence can never be claimed absolutely, as of right. Nothing in these rules must be understood to limit the free discretion of the Government to refuse or revoke leave of absence of any description, at any time, according to the exigencies of the public service.

Chapter II.

Section 4.—In these rules "active service" includes, besides time spent on duty, privilege leave of absence. "Pay" means substantive pay. "Salary" is the sum of pay and acting allowance.

Chapter III.

Section 5.—The amount of furlough and of special leave with allowances is limited to six years. All the rules in the Code are subject to this limitation. Furlough and leave with allowances on private affairs are counted as furlough under this section.

Section 6.—(*a.*) The amount of furlough "earned" by an officer is one year for every four years of his active service.

(*b.*) The amount of furlough "due" to an officer is the amount which he has earned, diminished by the amount of furlough or special leave with allowances which he has enjoyed.

Section 7.

* Bengal; North-West Provinces; Punjab; Oudh; Central Provinces; Burmah; Berar (Hyderabad); Mysore; Rajpootana; Central India.

Appendix, No. 4.

Section 7.—(*a.*) To an officer who has rendered three years' continuous service since his last return from leave, furlough for not more than two years may be granted, as follows:—

First, on medical certificate,—unconditionally;

Secondly, without medical certificate,—subject to these provisoes:—(1) That the furlough be due to him; (2) that he have rendered eight years' active service; (3) that the whole number of officers absent on furlough and special leave do not exceed the limit appointed by the Government of India.

(*b.*) Furlough granted under this section may, on medical certificate, be extended to not more than three years.

Section 8.—(*a.*) To an officer who has not rendered three years' continuous service, furlough for not more than one year may be granted on medical certificate.

(*b.*) Furlough granted under this section for less than one year may, on medical certificate, be extended to not more than one year.

Section 9.—An officer on ordinary furlough has a lien on his substantive appointment, or on a substantive appointment of a like character and not less pay. Ordinary furlough includes (1), The first two years of each separate period of furlough under Section 7; (2), So much of furlough under Section 8 as may be due, provided the officer having rendered six months' continuous active service.

Section 10.—An officer on ordinary furlough is entitled, subject to the limitations prescribed in the next paragraph, to a leave allowance equal to half the average salary which he has earned during so much of his continuous active service as is within the three years preceding the day on which he gives up office.

The maximum leave allowance on ordinary furlough is, if paid at the Home Treasury of the Government of India, 200 *l.* a quarter, and if paid in India, 666⅔ rupees a month. There is no minimum limit.

Section 11.—An officer on furlough, other than ordinary, is entitled to 120 *l.* a quarter paid at the Home Treasury, or 400 rupees a month paid in India, or to one quarter of the average salary defined in Section 10, whichever is less.

Chapter IV.

Section 12.—Special leave on urgent private affairs may be granted at any time for not more than six months, provided that an officer who has had special leave must render six years' active service before he can again have such leave.

Section 13.—An officer on special leave has a lien on his substantive appointment, or on a substantive appointment of a like character and not less pay.

Section 14.—For the first six months for which an officer is on special leave, whether the six months be included in the same leave or not, he is entitled to the leave allowance admissible under Section 10. Thereafter he is entitled to no leave allowance.

Chapter VI.

Section 18.—Privilege leave may be granted as follows:—After 11 months' uninterrupted duty, for not more than one month; after 22 months' uninterrupted duty, for not more than two months; after 33 months' uninterrupted duty, for not more than three months.

Before privilege leave can be granted to an officer, he must record a declaration that he has no intention of retiring or of taking furlough, special leave, or leave on private affairs or medical certificate, within three months on his return to duty. Though not absolutely debarred by this declaration from applying to retire or to take such leave within the three months, he should, if he does so, explain fully his change of mind.

Section 19.—(*a.*) If less than the whole amount of privilege leave admissible under Section 18 be at first granted, the rest may be granted afterwards, either at one time, or in instalments: provided that no privilege leave may be granted under this clause after less than six months' uninterrupted duty.

(*b.*) Duty qualifying for fresh privilege leave begins at the end of the leave first granted; and further leave under clause (*a*) of this section, though not counting as duty, does not interrupt duty for fresh privilege leave.

(*c.*) Fresh privilege leave, if admissible under Section 18, may be granted in combination with leave under clause (*a*) of this section: provided that no length of duty can, under any circumstances, qualify for more than three months' privilege leave.

Section 20.—An officer on privilege leave has a lien on his substantive appointment. He has also a lien on his officiating appointment, so long as it is not resumed by an officer having a superior lien on it.

Section 21.—An officer on privilege leave is entitled to a leave allowance equal to the pay or salary which he would earn if he held or officiated in the appointment on which he has a lien.

Chapter IX.

Section 22.—No kind of leave can be granted in continuation of any other kind; but any leave may be retrospectively changed for any other kind or amount of leave which might at first have been granted: provided that the grant or extension of furlough under this rule (otherwise than on medical certificate) is subject to Proviso 3 in Section 7 (*a*).

SUPERANNUATION ALLOWANCES AND PENSIONS.

Allowances on Retirement.

6. On production by an applicant of such medical certificates as shall satisfy the Government under which he may be serving of his incapacity to serve longer in India, he may be allowed—

I. Under 15 years' service, a gratuity not exceeding 12 months' salary.

II. After 15 years' service, one-third of his average (and of his personal allowance, if any) during the previous five years; provided that in no case shall a pension be granted exceeding the sum of 3,000 rupees per annum, whatever the amount of salary, nor of 2,000 rupees per annum, if the salary shall not exceed 12,000 rupees per annum.

III. After 25 years' service, one half of his average salary (and of his personal allowance, if any) during the previous five years; provided, however, that in no case shall a pension be granted exceeding 5,000 rupees per annum, whatever the amount of salary, nor exceeding 4,000 rupees per annum, if the salary shall not exceed 12,000 rupees per annum.

7. After 30 years' service or upwards, a pension may be granted, without production of medical certificate, of the same amount and subject to the same limitation as that sanctioned for 25 years' service on medical certificate. This pension, as the reward of faithful efficient discharge of duty for 30 years, is termed a good service pension.

8. Pensions of the full amount authorised in paragraphs 6 and 7 are to be granted only as the reward of approved service. In any case in which an uncovenanted servant, without having incurred the penalty of removal from Government employ, shall nevertheless, in the opinion of the Government under which he has been serving, not be entitled to the full amount of pension, the local Government will make such a reduction in the amount of pension as it shall consider just.

9. The foregoing rates of pension and gratuity are applicable also, without the production of a medical certificate of unfitness for service, to officers discharged on reduction of establishment.

Service towards Pension.

10. Dismissal for misconduct entails forfeiture of the benefit of past service.

11. Service as a substitute does not count towards pension.

12. Periods of absence on other than privilege leave and preparatory leave shall not count towards pension; nor shall preparatory leave be allowed to count as service, if it is granted in addition to leave on medical certificate to an officer who has enjoyed leave of the latter description on two previous occasions.

13. The whole of service in virtue of which pension is claimed must have been passed in an eligible grade and on a permanent establishment; but claims barred by this rule will be specially considered if the promotion from an ineligible grade was bestowed as a reward for meritorious service or for good conduct.

14. The period of service must be continuous; but, in case of the abolition of the office held by an officer, and his being subsequently employed by Government, his first period of service is to be taken into account.

Gratuities.

15. When an officer is discharged with a gratuity under these rules on reduction of establishment, the gratuity will not be given to him in one sum, but in monthly instalments of a month's pay until the full amount is paid. Should he be re-employed before or after the period for which gratuity is allowed, he will have the option of refunding the gratuity and recovering his former service, or of forfeiting that service by retaining the gratuity. In the latter case, any balance of gratuity remaining undrawn at the date of his re-employment may be paid to him.

Appendix No. 4.

Payment of Pensions.

16. Payment of pension will commence from the date on which the applicant ceases to be borne on the establishment, or from that of his application, whichever may be the later date.

17. No pension shall be payable in arrear for a period exceeding six months, without the express sanction of Government obtained through the civil paymaster, unless the cause of the suspension of payment shall have been the neglect, order, or act of some public officer, and beyond the control of the pensioner, when the civil paymaster, on a reference being made to him, shall exercise his discretion in passing arrears for payment, or submit a representation of the case for the information and orders of Government, as he shall consider proper.

18. An officer shall, on retirement, have the option of drawing his pension either in India or from the Home Treasury. After exercising his option on retirement, he may, at a subsequent period, change the place of payment from India to England, or *vice versâ*. This change can, however, be allowed but once. The payments will be made at the rate of exchange which is annually fixed in communication with the Lords of the Treasury for the adjustment of transactions between the British and Indian Exchequers.

Appendix, No. 5.

PAPERS handed in by Mr. *Seccombe*, C.B., 21st February 1873, with reference to his Evidence on the 12th March 1872. Appendix, No. 5.

LISTS furnished by the Governments of *India*, *Madras* and *Bombay*, of OFFICERS and MEN who are receiving PENSIONS as well as SALARIES in *India* from INDIAN REVENUES; also of Persons who are in the receipt of more than one Pension in *India* from Indian Revenues; and of Persons entitled to Pensions from Imperial Revenues who draw Salaries from Indian Revenues.

The further information to be supplied by the Government of India, will be furnished hereafter.

(No. 389 of 1872.)

Government of India.—Financial Department.—Accounts.

To His Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Simla, 10 October 1872.

WITH reference to your Financial Despatch of the 26th March last, No. 133, we have the honour to forward a list of officers and men drawing pensions as well as salaries from the Military Department, with other particulars required by your Grace, and to state that similar information regarding civil and naval officers is being prepared, and will be supplied hereafter.

We have, &c.

Government of India.—Financial Department.

Enclosure to Despatch No. 389, of 1872.

Office Memo. from Colonel *B. E. Bacon*, Officiating Secretary to the Government of India, Military Department, to the Secretary to the Government of India, Financial Department (No. 524), dated Fort William, the 20th September 1872.

WITH reference to the communication from the Financial Department, No. 3208, dated 6th May 1872, the undersigned is directed to forward the accompanying copy of a letter from the Controller of Military Accounts, No. 877 I, dated 18th September 1872, and of the list therewith received of officers and persons in India who are in receipt of pensions and salaries from Indian Revenues, required by the Right Honourable the Secretary of State, also copy of the communications marginally noted, and to state that it is regretted that the matter escaped attention so long. From the Military Department, Nos. 421–23, dated 13th September 1872.

2. It is concluded that the two returns required by Her Majesty's Government will be compiled in the Financial Department.

From Colonel *F. D. Atkinson*, Controller of Military Accounts, to the Secretary to the Government of India, Military Department (No. 877 I), dated Calcutta, the 18th September 1872.

WITH reference to Military Department docket No. 820 ($\frac{\text{Pensions}}{\text{Officers}}$), dated the 14th May 1872, I have the honour to submit a list of European Military Commissioned and Non-Commissioned Officers and Uncovenanted Officers and men in India who are drawing both pay and pension debitable to the Indian Revenues.

2. In the list are also included those who are drawing more than one pension from Indian Revenues, with the amount of each pension and salary shown against their names.

3. Pay and allowances and staff salary are included in the item "Pay" in the list.

4. Absentees from the country, whether on leave or otherwise, have been excluded from the list.

5. In respect to those drawing salary in addition to pension, whether from the British or Indian Revenues, no portion of the latter is deducted from the former.

6. I regret very much the delay that was caused by the neglect of the clerk in whose hands the papers were placed.

LIST of Commissioned, Non-Commissioned, and Uncovenanted CIVIL OFFICERS and MEN who are receiving PENSIONS as well as SALARIES in *India* from INDIAN REVENUES; also of those who are in receipt of more than One Pension in India from Indian Revenues, and of these entitled to Pensions from Imperial Revenues who draw Salaries from Indian Revenues.

LIST of Military and Uncovenanted OFFICERS and MEN in *India* drawing both PAY and PENSION debitable to the INDIAN REVENUES.

Fort William, 18 September 1872.

F. D. Atkinson, Comptroller of Military Accounts.

Appendix, No. 5.

From Colonel *B. E. Bacon*, Officiating Secretary to the Government of India, Military Department, to the Controller* of Military Accounts, Secretary to Government, Fort St. George,† Military Department, and Secretary to Government of Bombay,† Military Department; (Nos. 421–23), dated Fort William, the 13th September 1872.

THE lists of officers and persons in India who are in the receipt of pensions and salaries from Indian Revenues, which the Right Honourable the Secretary of State requests in his letter (No. 133), dated 26th March 1872, might be furnished with as little delay as possible, being urgently required, I am directed, in continuation of (Nos. 820, 821, and 822), dated 14th May 1872, to request that * they may / † His Excellency the Governor in Council may be moved to cause them to be submitted without further delay, together with an explanation of the delay which has occurred in complying with the requisition, as the Right Honourable the Governor General in Council considers that the information should have been long since furnished.

(No. 149 of 1872—Military Department.)

To the Right Honourable the Secretary of State for India.

My Lord Duke,

ADVERTING to your Grace's Financial Despatch to the Government of India, dated 26th March 1872, No. 133, we have the honour to forward the accompanying List of European Pensioners in Government employ in this Presidency drawing salaries from Indian Revenues.

Proceedings of Government, 26th August 1872. Nos. 420, 421. No. 11, in the packet.

2. It will be observed from the list that Mr. G. Stevens is the only individual in receipt of pension for services rendered in two different capacities, viz., as Overseer, Commissariat Department, and as Manager in the Deputy Judge Advocate General's Office.

3. The only persons entitled to pensions from the Imperial Revenues, who are in receipt of salaries from Indian Revenues, are Chelsea Out-Pensioners, from whose salaries no deduction is made on account of their stipends.

We have, &c.

Ootacamund, 31 August 1872.

(signed) *Hobart.*
F. P. Haines.
A. J. Arbuthnot.
J. D. Sim.

(True Copy.)

H. Milner, Colonel,
Officiating Secretary to Government.

Appendix, No. 6.

PAPERS handed in by Mr. *Seccombe*, C.B., 21st February 1873, with reference to his Evidence on the 28th April 1871.

Appendix, No. 6. STATEMENT furnished by the GOVERNMENT of INDIA, showing the TRIBUTES and CONTRIBUTIONS paid by NATIVE STATES to the GOVERNMENT of INDIA.

Aitchison's Collection of Treaties, Engagements, and Sunnuds, with Index. Eight volumes.

The additional information called for from the Government of Bombay will be furnished hereafter.

(No. 25 of 1873.)

Government of India.—Financial Department.—Accounts.

To His Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 10 January 1873.

WITH reference to paragraph 4 of your Grace's Despatch in this department, No. 142, dated 4th May 1871, we have the honour to forward a copy of the papers mentioned below, containing a statement showing the tributes and contributions paid by Native States to the Government of India.

2. The authority for the collection of the several tributes and contributions from the petty States is not to be found in any one set of papers, but in a multitudinous mass of correspondence. The papers published in Aitchison's Treaties, with the additional information given in the Statement, will, it is hoped, be found sufficient for the requirements of the Select Committee of the House of Commons.

3. A further communication will be made on receipt of the additional information called for from the Government of Bombay.

We have, &c.

Government of India.—Financial Department.

Enclosure to Despatch No. 25 of 1873.

OFFICE MEMORANDUM—By *C. E. Buckland*, Esq., for Officiating Under Secretary to the Government of India, Foreign Department (No. 10 P.), dated 3rd January 1873.

IN continuation of the office Memorandum from this Department, No. 343 P., dated 5th February last, the undersigned is directed to forward the accompanying schedule of payments made to the British Government by the Native States and petty chiefships in India, together with a copy of a letter* to the Bombay Government, from which it will be seen that the information regarding the States in that Presidency is even now not quite complete.

* No. 2372 P., dated 21st December 1872.

Appendix, No. 6.

From *C. U. Aitchison*, Esq., Secretary to the Government of India, Foreign Department, to the Secretary to the Government of Bombay (No. 2372 P.), dated 21st December 1872.

WITH reference to the entries regarding Mahee Kanta contained in the schedule enclosed in your letter, No. 6128, dated 25th October last, I am to call attention to the fact that, under the head of authority under which the payment was fixed, it is not sufficient to refer to the dates of Colonel Ballantyne's settlement. Reference is needed to the letters of Government authorising the commencement of that settlement, and sanctioning it when it was completed, or to the engagement on which it was based.

2. I am to observe also that a lengthy correspondence and much delay in fulfilling the requisition of the Financial Department has been caused by the fact that in the original letter, No. 4552, dated 23rd September 1871, the Government of India was referred to a letter which contains by no means a complete or accurate statement of the information required. So far as was possible from the items of information supplied by degrees, a statement—that appended—has been prepared in this office, and I am now to request that it may be examined and completed, so that when it is forwarded for submission to the Indian Finance Committee of the House of Commons, there may be no room for doubt that it contains every payment to the British Government from the Native States and political Jagheers in the Bombay Presidency, on whatever account the payment may be made.

3. I am, by the way, to ask whether the payment of Chowth, from Cambay, as entered in the above-mentioned schedule at *Rs.* 26,731. 4. 8., includes the item of *Rs.* 1,156. 5. 2. entered in Bombay Government Selections, No. XXVI., new series, under the head of Collections "on account of home tax and cess on certain trades made direct by the Mamlutdar of the Chowth of Cambay." It would be instructive also to state the cause of the diminution of the item of Chowth from the amount at which it was entered in the schedule attached to the Treaty of 1802, viz. 60,000 rupees.

(A True Copy.)

D. Barbour,
Officiating Under Secretary to the Government of India.

SCHEDULE to accompany OFFICE MEMORANDUM from Foreign Department to Financial Department No. 10 P., dated 3rd January 1873.

I.—RAJPOOTANA.

No.	Name of State.	Amount of Tribute or Contribution.	REMARKS.
		Rs. a. p.	
1	Oodeypoor - - -	2,00,000 – –	By Article VI. of Treaty, No. 1, dated 13th January 1818 (page 11 of Treaty, Vol. IV.), the tribute payable annually was fixed at three-eighths of the revenue of the actual territory of Oodeypoor. In 1826 when Colonel Sutherland was officiating as Political Agent in Meywar, he recommended to Government that, as the State was involved in financial embarrassments, the tribute should be fixed at three lakhs of rupees. This recommendation was acceded to by Government, and the tribute continued to be realised at that amount until 1846, when the same officer, while holding the appointment of Agent in Rajpootana, recommended, for several reasons, a further reduction in the tribute from three to two lakhs of rupees. Government sanctioned the recommendation in letter No. 1360, dated 25th June 1846, copy of which was sent to Financial Department by docket No. 1361 of the same date.
	Ditto - - - -	50,000 – –	This is a contribution from Oodeypoor for the maintenance of the Meywar Bheel Corps (See page 6 of the Treaty Book, Vol. IV.).
	Jeypoor - - - -	4,00,000 – –	Eight lakhs per annum was the payment fixed by Treaty of 1818, No. 10, in Vol. IV. of Treaty Book. This was reduced to four lakhs by the Treaty of 1871. (Copy was attached to the Office Memorandum, No. 343 P., sent to the Financial Department on the 5th of February 1872.)
	Jodhpoor - - -	98,000 – –	Under Article VI. of Treaty, No. 13, dated 6th January 1818, the tribute was fixed at 1,08,000 rupees. In 1847 the State obtained a remission of 10,000 rupees in consideration of the cession to the British Government of its rights to the province and fort of Omercote. See papers sent to the Financial Department with docket No. 1341, dated 17th June 1847.
	Ditto - - - -	1,15,000 – –	Contribution for Erinpoora Irregular Corps. See Treaties IV., page 43.
	Boondee - - -	1,20,000 – –	*See* Treaties IV., page 64, and Engagements therein referred to.
	Kotah - - - -	1,84,720 – –	*See* Treaties IV., page 72.
	Contribution from Kotah *for Deolee Corps.*	2,00,000 – –	Under Article VI. of Treaty No. 25, dated 10th April 1838, the expense of the force to be maintained by Kotah was limited to three lakhs of rupees. In cosequence of repeated remonstrances the payment for it was reduced to two lakhs in 1844. (Treaties IV., page 71.)

I.—RAJPOOTANA—*continued.*

No.	Name of State.	Amount of Tribute or Contribution.	REMARKS.
		Rs. *a.* *p.*	
	Jhallawar	30,000 – –	Under Treaty No. 26, dated 8th April 1818. (*See* Treaties IV., pages 88 to 90.)
	Doongurpoor	27,387 8 –	Under Agreement, No. 51, dated 29th January 1820 (page 172 of Treaties, Vol. IV.). The amount is paid in Salim Sahee Rupees 35,000, equivalent to Company's Rupees 27,387-8, Treaties IV., page 167.
	Pertabghur	56,387 12 –	*See* Treaties IV., page 187.
	Banswarra	39,129 – –	Or 50,000 Salim Sahee Rupees. Under the terms of Article IX. of Treaty of 1819 (*see* Treaties IV., page 183) the amount was raised to the amount of 50,000 Salim Sahee Rupees in the correspondence which was sent to the Financial Department by docket No. 1390 P., dated 4th July 1871.
	Serohi	6,881 – –	The annual tribute realisable from the Rao of Serohi was 15,000 rupees. In consideration of His Highness' loyal conduct during 1857, Government sanctioned the reduction of the tribute by half in letter No. 5142, dated 18th December 1857. (*See* Treaties IV., page 57.)* In 1868 a further concession was made to the Rao by Government letter, No. 640, dated 22nd June of that year, in permitting him to pay his tribute in Government Rupees instead of Bheelaree Rupees, at the rate of 91·12 rupees per cent. According to this rate the Rao now pays *Rs.* 6,881-4.
	Shahpoora	10,000 – –	*See* Treaties II., page 62.

II.—CENTRAL INDIA.

	Holkar	1,19,076 2 8	Before the mutiny Holkar contributed to Mehidpoor Contingent *Rs.* 1,11,213 12 2 " " Malwa Bheel Corps - 7,862 6 6 Total - - - *Rs.* 1,19,076 2 8 In 1865 Government (by No. 785, dated 11th September 1865, addressed to the Agent to the Governor-General for Central India, copy of which was sent to the Financial Department by docket No. 786, of the same date) agreed that this contribution should be capitalized by the payment in commutation thereof of 23,81,520 rupees in ten years, at the rate of 2,38,152 rupees annually to be invested in Government 5 per Cent. Securities in His Highness' name, the interest of which should be assigned to the British Government.
	Bhopal	2,00,000 – –	*See* Treaties IV., page 309.
	Punnah	9,955 – –	*See* Treaties III., page 230.
	Chirkaree	8,583 9 6	*See* Treaties III., page 232.
	Dewass, senior branch Dewass, junior branch	33,600 – – (*Halee Rupees.*)	On account of the United Malwa Contingent, Treaties IV., page 335. The figure, 35,600 rupees, there mentioned, should be altered to 33,600 rupees.
	Gwalior	20,000 – –	This amount was paid by the State of Amjeera for the maintenance of the Malwa Bheel Corps, and is now paid by Maharaja Scindia, to whom, after the mutiny, Amjeera was made over.
	Ali Rajpoor	1,474 3 2 or 1,500 – – (*Halee Rupees.*)	Paid as a contribution towards the maintenance of the Malwa Bheel Corps.

100	Khirusra	2,366 – –		
101	Joonaghur	28,394 – –		
	Ditto	21,610 – –	Represents the amount to which the British Government is entitled under the Engagement of 1822, whereby it undertook to collect the dues of the Nawab from the remainder of Kattywar on condition of receiving one quarter to cover the expense of the collection. Treaties VI., pages 371 and 397.	
102	Bontwa	29,642 – –	Permanent settlement of Colonel Walker in 1807-8. Treaties, Vol. VI., pages 364-5 and 379.	
103	Umrapoor	511 – –		
104	Porebunder	21,202 – –		
	Ditto	15,000 – –	Represents the half share of the Customs of the Port of Porebunder which was ceded by the Rana in 1809 to purchase the right of British protection. *See* Treaties VI., pages 375 and 421. The amount so payable was at first fixed at 24,083 Company's rupees, but was reduced to 15,000 rupees by paragraph 15 of despatch from the Court of Directors to the Government of Bombay, No. 6 of 9th February 1853.	
105	Bhowunggur	139 – –	Permanent settlement of Colonel Walker in 1807-8. Treaties, Vol. VI., pages 364–5 and 379.	
	Ditto	52,000 – –	Revenue due by the Thakoor for his villages in the districts of Dundoka, Rampoor, and Gogo, under Art. I. of the Engagement of 1860. Treaties VI., pages 416 and 374.	
	Ditto	69,006 – –	Revenue due by the Thakoor for the Gaekwar's share in Bhownuggur. The payment of this revenue was transferred to the British Government on account of the Gaekwar by the Engagement of 8th November 1808, Treaties VI, pages 411 and 374; and the Gaekwar had already ceded it to the British Government as a means of defraying the expense of the subsidiary force. *See* Treaties VI., page 327; the amount payable is 74,500 Surat rupees, equivalent to 69,006 Company's rupees.	

III.—STATES IN THE BOMBAY PRESIDENCY—*continued.*

No.	Name of State.	Amount of Tribute or Contribution.	Authority for its Levy.	REMARKS.
		Rs. *a.* *p.*		
	Cambay - - - - -	26,731 4 8	Represents the "chowth" or one quarter of the revenue which the Peishwa used to receive from this State, and which he ceded to the British Government by Article IV. of the Treaty of 1802. Treaties III., page 64. The amount at present is stated at *Rs.* 26,731 4. 8., in the Schedule attached to letter from Bombay Government, No. 6128, dated 25th October 1872.	
	Ditto - - - - -	11,970 8 7	Represents the British share of the Customs collections receivable under an engagement concluded by the Bombay Government in 1856, copy of which is appended. The amount in 1870-71 is, in the above-mentioned letter, stated at *Rs.* 11,970 8. 7.	
	Baroda - - - - -	7,351 8 –	The equivalent of Broach, 9,000 rupees, the amount of "chowth" which the Peishwa ceded by the Article IV. of the Treaty of 1802 above-mentioned.	
	SATTARA:			
	Akulkote - - - -	14,592 – –	Letter of Bombay Government, in the Judicial Department, No. 1428, dated 11th May 1868, and Resolution of Bombay Government, in the Judicial Department, No. 1777, dated 19th June 1868, fixing 14,592 rupees as the amount which the Raja was to pay in lieu of the Contingent of Horse, which he was bound to provide by the engagement of 1820. See Treaties VI., page 28.	
	Punt Suchee of Bhore -	5,876 – –	The equivalent of Chandwud 5,500 rupees which used to be paid by this petty State to Sattara under the denomination of "Peelkhana Khurch," and which was transferred to the British Government on the lapse of Sattara. *See* letter from Bombay Government, No. 6128, dated 25th October 1872.	
	Chief of Juth - - -	6,400 – –	Resolution of Bombay Government, No. 3004, dated 16th October 1867, fixing 6,400 rupees as the amount payable in lieu of the Contingent of Horse, which this Jaghiredar was bound to furnish under the engagement of 1820. Treaties VI., page 59.	
	Chief of Phulton - -	9,600 – –	Ditto. Treaties VI., page 69.	
	SOUTHERN MAHRATTA:			
	The Putwudhun Jaghiredars.	49,429 11 –	*See* Treaties VI., page 147.	
	The Gorepuraz Jaghiredars	2,617 14 –	Ditto - ditto, page 149.	
	The Chief of Kati (in Kandeish)	125 8 –	The Bombay Government, in enclosure to Letter, No. 6108, dated 25th October 1872, state that the authority for this payment cannot be traced.	
	REWA KANTA:			
	Barrea - - - -	9,336 4 –	*See* Treaties VI., page 534.	
	Loonawarra - - -	10,471 7 –	Ditto - ditto, page 535. The equivalent of the Balasahee 12,000 rupees, which the State is bound to pay, is now stated by the Bombay Government to be *Rs.* 10,471 7., and not *Rs.* 10,653 6. 11., the sum mentioned in the Treaty Book. *See* enclosure in letter from Bombay Government, No. 3000, dated 22nd May 1872.	
	Mahee Kanta - - - -	- - -	Authority still to be mentioned. The Bombay Government has been asked to indicate it.	

IV.—STATES IN THE SOUTH OF INDIA.

No.	Name of State.	Amount of Tribute or Contribution.	Authority for its Levy.	REMARKS.
		Rs. a. Tribute		
1	Travancore - - -	7,83,111 - 10	Under Article III. of the Treaties, dated 17th November 1795, and 12th January 1805. (Treaties, V., page 312.)	For the expense of three battalions of Sepoys, one company of European Artillery, and two companies of Lascars, and for one additional regiment of Native Infantry. *See* letter from the Resident, dated 2nd September 1806, enclosed in letter from the Government of Fort St. George to the Government of India, dated 31st October 1806.
		Pescush		
		13,319 8 -	Under a koulnamah from the Nawab of the Carnatic, dated 11th Rujjub 1180 A.H., 1764 A.D.	By this koulnamah the Nawab of the Carnatic made over to the Raja of Travancore the villages of Shencottah and the Pagoda of Cape Comorin in return for the annual nuzzerana, and the established peshcush according to custom formerly observed during the time of the Rajas of Trichinopoly. The peshcush was stated at 4,000 Tormacooly Chacras and a large elephant with tusks fit for sowaree; the nuzzerana for Shencottah at 3,000 Madura white Chacras; and that for the Pagoda at Cape Comorin at 700 Madura Chacras. The equivalent for this is Company's *Rs.* 13,319. 8.
2	Cochin - - - -	2,00,000 - -	Under Article II. of Treaty, dated 6th May 1809, the sum payable was 2,76,037 rupees (*See* Treaties, V., page 323). But the amount was in 1818-19 on the representation of the Raja as to the amount which his territory could pay, reduced to two lakhs by the Madras Government, acting on the authority conveyed direct to that Government by the Court of Directors in their Despatch of 20th November 1816, paragraphs 48 to 58. (*See* letter from Madras Government to Government of India, dated 8th September 1818, and to Madras Government from Government of India, dated 17th October 1818.)	
3	Nizam's Government—on account of Mahratta chouth.	1,08,110 - -	The equivalent for Hyderabad 1,20,000 rupees, which the Nizam is bound to pay under Article IX. of Treaty of 1822. (*See* Treaties V., page 93.)	

V.—FEUDATORY CHIEFSHIPS IN THE LOWER PROVINCES OF BENGAL.

	Cooch Behar - -	*67,700 15 -	* *i.e.*, half the annual revenue which is paid to Government under Article IV. of the Treaty of 5th April 1773, for which *see* Treaties, I. page 150.	
	CHOTA NAGPOOR:			
	Sirgoojah - -	1,891 10 8	Paragraph 13 of letter from Agent to the Governor General for South Western Frontier, No. 6, dated 12th June 1852.	Amount fixed for five years in February 1825 at 3,200 rupees per annum, including the payments of Jushpoor and Odeypoor.
	Jushpoor - -	775 - -	15 Ditto - ditto - - - -	A feudal dependency of Sirgoojah.
	Oodeypoor - -	533 5 4	17 Ditto - ditto - - - -	Ditto - ditto -
	Korea - - -	386 2 2	19 Ditto - ditto - - - -	Amount fixed for 10 years at 400 rupees local currency = Company's *Rs.* 386. 2. 2. in 1847.
	Chang Bhukar -	386 2 2	20 Ditto - ditto - - - -	Ditto - ditto -
	Gangpoor - -	500 - -	22 Ditto - ditto - - - -	Amount fixed for five years in 1828.
	Bonai - - -	200 - -	47 Ditto - ditto - - - -	Amount fixed for five years in 1820.

The propriety of revising these temporary settlements is now engaging the attention of the Lieutenant-Governor of Bengal.

FEUDATORY CHIEFSHIPS IN THE LOWER PROVINCES OF BENGAL—*continued.*

No.	Name of State.	Amount of Tribute or Contribution.	Authority for its Levy.	REMARKS.
		Rs. a. p.		
	Cuttack Tributary Mehals:		By letter, No. 347, dated 11th April 1837, the Bengal Government conveyed to the Agent to the Governor General for the South-western Frontier Agency sanction to his recommendation that these two estates should be transferred from his jurisdiction to that of the Superintendent, Tributary Mehals of Cuttack; and in No. 8, dated 22nd April 1837, the Agent to the Governor General for the South-western Frontier informed the Superintendent of the Tributary Mehals, Cuttack, that the tribute of Atmullik was 450 rupees, and that of Boad 750 sicca rupees=Company's rupees 480 and 800 respectively.	
	Atmullik - - -	480 9 -		
	Boad - - -	800 - -		
	Dhenkanal - -	5,099 - 9	Letter of 14th March 1805, from Secretary to the Commissioner of Cuttack to the Collector of Pooree, fixing the payment of these States in perpetuity at a certain number of cowrees, which payment has since been commuted into the equivalent in Company's rupees.	
	Burrumba - -	1,397 15 5		
	Joremoo - - -	661 7 11		
	Hindole - - -	551 3 11		
	Nursingpoor - -	1,455 8 3		
	Nyaghur - - -	5,525 4 1		
	Runpoor - - -	1,400 13 2		
	Talchere - - -	1039 10 5		
	Ticurreah - -	882 - -		
	Atghur - - -	2,800 - -	Ditto - - ditto - - ditto - -	The amount commuted came to *Rs.* 7,198. 6. 7., but by No. 272, dated 9th August 1853, the sanction of Lord Dalhousie, as Governor of Bengal, was conveyed to the Superintendent's proposal that the amount should be reduced to 2,800 rupees, *i. e.*, one-third of the annual rental.
	Khundpara - -	4,211 8 -	Ditto - - ditto - - ditto - -	The amount of kahuns of cowrees, originally payable by this chiefship, should be 19,100, not 24,100, as is entered in the Treaty Book, Vol. I., page 190.
	Nilgiri - - -	3,900 7 8	Ditto - - ditto - - ditto - -	The amount commuted came to *Rs.* 5,991. 14. 8., but by letter dated 8th September 1809, Government in the Revenue Department granted the Rajah of Nilgiri a compensation of *Rs.* 2,107. 12. 3. per annum, on account of the loss of duties formerly received by him from pilgrims. And the letter from the Commissioner of Cuttack to the Collector, when conveying this grant and authorising him to deduct the amount from the Rajah's peshkush, showed that the amount was stated in Arcot rupees = to Company's *Rs.* 2,091. 7.
	Keonjhur - -	976 11 11	By Clause 2 of the Treaty of 16th December 1804, the Rajah agreed to pay 12,000 kahuns of cowrees, which is equivalent to Company's *Rs.* 1,976. 11. 11. As a reward for his services in 1857-58, the Government of India remitted 1,000 rupees per annum from the abovementioned annual payment.	
	Mohurbhunj - -	1,067 11 9	Clause 2 of the Treaty of 1st June 1829 (Treaties 1, page 184), fixed the tribute of this State at sicca rupees 1,001 = Company's *Rs.* 1,067. 11. 9.	

VI.—FEUDATORY CHIEFSHIPS IN THE PUNJAB.

No.	Name of State.	Amount of Tribute or Contribution.	Authority for its Levy.	REMARKS.
		Rs. *a.* *p.*		
	Kuppoorthulla - -	1,31,000 – –	Treaties, Vol. II. page 373.	
	Chumba - - -	5,000 – –	By Sunnud CXXIX., dated 6th April 1848 (pages 374, 381, and 382 of Treaties, Vol. II.), the Chumba territory was assigned to Raja Siree Sing and to his heirs male, &c., on payment of a yearly tribute to the British Government of 12,000 rupees. In 1854 the Raja made over the sanitarium of Dalhousie to the Government, and in consideration of this, his yearly tribute was reduced by 2,000 rupees. In 1867, in consideration of a further cession of land, a further reduction, amounting to 5,000 rupees, was made from his yearly tribute. The sum now paid by the Raja is 5,000 rupees.	
	Mundee - - -	1,00,000 – –	According to terms of Sunnud CXXVIII. dated 24th October 1846. Treaties, II., pages 374 and 379 to 381.	
	Sokeit - - - -	11,000 – –	According to terms of Sunnud CXXX., dated 24th October 1846. Treaties, II., pages 375 and 383–4.	
	Kahloor (Belaspoor) -	8,000 – –	This is the nuzzerana paid by the Chief for the Pergunnah of Bussee Bucher-too, the transfer of which to him was sanctioned by Government in 1867.	
	Bussahir - - -	3,945 – –	*See* Treaties, II., page 317.	
	Hindur (Nalaghur) -	5,000 – –	This amount is paid under the terms of the Sunnud granted to Uggur Sing on the 19th January 1860. No. XCV. (pages 335 of Treaty, Vol. II.)	
	Baghul - - - -	3,600 – –	*See* Treaties II., page 318.	
	Joopul - - - -	2,500 – –	Ditto - - page 319.	
	Koomharsain - -	2,000 – –	Ditto - - pages 319–320.	
	Bhujjee - - -	1,440 – –	Ditto - - page 319.	
	Mailog - - - -	1,450 – –	Ditto - - page 321.	
	Bulsun - - - -	1,080 – –	Ditto - - page 321.	
	hami - - - -	360 – –	Ditto - - page 320, altering 40 workmen to 20.	
	Kothar - - - -	*1,000 – –	*See* Treaties II., page 320 - - -	* The amount of 1,080 rupees therein entered has been corrected by the Commissioner of Umballa in his letter No. 475–3777, dated 8th November 1872, 80 rupees having been remitted by order of Government, No. 15, dated 28th July 1843, on account of land taken up for the Cantonment of Subathoo.
	Komhiar - - -	180 – –	Ditto - - page 322.	
	Mangul - - -	72 – –	Ditto - - page 323.

	Nandgaon	46,000 – –		

Appendix, No. 7.

PAPER furnished by Mr. *E. F. Harrison*, and referred to in Question 5299 of Session 1872.

STATEMENT showing the Cost of the INDIAN NAVY in the Year 1861-2, as compared with the Expense of the New Establishment of the BOMBAY MARINE, including Pensions and Charges for Naval Protection.

Charges for Indian Navy, 1861-2.	£.	£.
Vessels and Boats:		
Pay	130,419	
Contingencies and repairs	32,038	
Commissariat supplies	50,139	
Stores	24,556	
Coals	7,891	
		245,043
Dockyard and Other Establishments:		
Pay	36,167	
Contingencies	2,810	
Stores	1,363	
		40,340
Wages of Artificers and Stores:		
Master builder's department	3,749	
Steam factory	6,825	
		10,574
Miscellaneous:		
Establishment at Bassadore	1,058	
Telegraph messages	10	
Allowances of senior naval officer at Aden	664	
Ditto - - ditto - - in Persian Gulf	599	
Bounty and crimpage money, &c.	3,382	
Dockyard police	1,025	
Surveys	1,035	
Pensions	5,493	
Passage money	2,771	
		16,037
Charges in England:		
Retired pay	16,668	
Furlough pay	10,398	
		27,066
		339,060
Deduct,—		
Marine Receipts in Bombay in 1861-2		35,562
Net Marine Charge £.		303,498

Bombay Marine Charges, &c., 1871-2.	£.	£.
Marine administrative establishments		7,151
Dockyard superintending establishments		12,453
Marine pay and allowances		27,921
State yacht (this vessel is also used as a dispatch boat)		1,365
Wages of Artificers:	£.	
Builder's department	16,152	
Steam factory	31,549	
Marine storekeeper's department	3,359	
Dock master's department	2,265	
Miscellaneous	158	
		53,483
Purchase of ships and vessels		900
Ditto - - victuals for crews		13,513
Ditto - - coal and fuel (purchased in India)		2,977
Coal and steam agencies		1,124
Timber and stores purchased in India		30,021
Charges for the survey schooner "Constance"		3,822
Pensioners		3,115
Miscellaneous charges in India		3,447
Charges in England:		
Retired pay to officers of the late Indian Navy		40,078
Furlough pay		100
Stores		48,866

Balance of contract for construction of two monitors		19,479
Contribution towards expense of Her Majesty's ships employed in the Indian Seas		31,628
Advances of pay and passage money to officers proceeding to India		612
Expenses of an officer studying gunnery		31
		304,058
Deduct,—		
Marine Receipts in Bombay, 1871-2		43,846
Net Marine Charge £.		260,212

Note.—The contribution towards expenses of Her Majesty's ships is exceptionally small this year, partly from the full amount due not having been paid within the year, and partly from the force maintained not having been at the full strength; the amount due for the year was 66,484 *l.* On the other hand the payment of 19,479 *l.* for monitors is quite exceptional, and the charge for retired pay of officers of the Indian Navy is subject to gradual reduction.

STATEMENT showing the MARINE CHARGES of BENGAL, MADRAS, and BRITISH BURMA, for 1861-62 and 1871-72, with an ABSTRACT of the TOTAL MARINE CHARGES during those Years:—And a STATEMENT of the COST of MILITARY TRANSPORT.

A. This column shows the cost per man merely of sleeping wards and dining-rooms.

C. This column gives the cost per man of the full accommodation required by a regiment of infantry for auxiliary purposes, and comprises such buildings as canteen, quarter guard, orderly-room, &c. &c.

Appendix, No. 10.

PAPER handed in by Colonel *Crommelin*, R.E., C.B.

EXTENT OF BARRACK ACCOMMODATION PROVIDED FOR BRITISH TROOPS.

STATEMENT showing approximately the Extent of Barrack Accommodation for European Soldiers (Unmarried and Married), of all Arms of the Service, in New Buildings Completed and in Progress, and in Old Buildings, at each Station in the Bengal Presidency, including the Stations occupied by Bombay and Madras Troops in Central India, Central Provinces, Hyderabad, Rajpootana, and Burmah.

N.B.—Lower floors of double-storeyed barracks are calculated upon as being occupied, deductions being made at end of Statement for unfavourable Stations. All new barracks in progress have been calculated as if completed with two storeys, except in the few cases where the progress in the lower floors has been trifling. Warrant and Non-commissioned Officers are not included in the Statement.

7 *January* 1871.

STATIONS AND GARRISON.	New Double-storeyed Barracks for Unmarried Men.		Old Buildings for Unmarried Men.	Married Men.		TOTAL.	REMARKS.
	Completed.	In Progress.		Completed.	In Progress.		
BENGAL:							
FORT WILLIAM 1 Regiment Infantry, and 1 Company Garrison Artillery.	–	–	889	140	–	1,029	The auxiliary accommodation is complete.
DUM-DUM 6 Companies of Infantry.	–	–	(*a*) 949	60	–	1,009	(*a*) Accommodation required for only six companies, or 480 men. There is, therefore, an excess for 469 men. Auxiliary accommodation complete.
BARRACKPOOR 2 Companies of Infantry. 2 Batteries, and Head Quarters Brigade of Artillery.	(*b*) 420	(*b*) 84	(*c*) 252	(*d*) 46	–	802	A good deal of auxiliary accommodation is required at Barrackpoor. (*b*) This may be considered an unfavourable station, therefore a deduction must be made for the lower floors to the extent of 240 men. (*c*) Accommodation required for only two companies of infantry, or 160 men; there is an excess, therefore, for 92 men. (*d*) Ten of the quarters are temporary only, and must be replaced. It will be eventually necessary to provide new barracks for the two companies of infantry.
DINAPOOR 1 Regiment of Infantry. 1 Battery of Artillery.	–	–	956	(*e*) 143	–	1,099	The temporary barracks for the regiment of infantry will ere long have to be replaced by permanent buildings. (*e*) The married quarters are in excess by 25. There is a good deal of auxiliary accommodation.
CHINSURAH Depôt.	–	–	(*f*) 581	–	–	581	(*f*) This depôt has, I believe, been abandoned. The accommodation must be deducted.
HAZAREEBAUGH 1 Regiment of Infantry.	–	–	735	105	–	(*g*) 840	(*g*) The station is to be abandoned. The accommodation must be deducted.
BERHAMPOOR	–	–	200	–	–	200	I believe there is accommodation here for more than 200 men, but the station is to be abandoned, and the accommodation must be deducted.
DARJEELING	–	–	126	14	–	140	New barracks will have to be built for whatever force is sent to this station.
TOTAL for BENGAL	420	84	4,688	508	–	5,700	
NORTH-WEST PROVINCES:							
ALLAHABAD 1 Regiment of Infantry. 1 Battery of Artillery. 1 Garrison Battery.	1,320	252	–	122	–	(*h*) 1,694	(*h*) Nearly all the auxiliary buildings here are completed, and the station is a doubtful one as to climate. All the lower-floor accommodation may be deducted to the extent of 720 men.
ALLAHABAD FORT Detachment.	–	–	200	–	–	200	I think it may safely be said that there is accommodation for 200 men in the Ellenborough Barrack.
MORADABAD Detachment.	–	66	–	–	–	66	There is temporary accommodation for about two companies here in hired buildings. Foundations of several barracks commenced, but work stopped.
CHUKRATA 1 Regiment of Infantry.	828	–	–	34	68	930	The accommodation here is in semi-permanent cottage barracks. Auxiliary accommodation has only lately been set in hand.
KAILANA Depôt.	–	–	–	10	–	10	This depôt adjoins Chukrata, and is intended for 700 men.

STATEMENT showing approximately the Extent of Barrack Accommodation, &c.—*continued.*

STATIONS AND GARRISON.	New Double-storeyed Barracks for Unmarried Men.		Old Buildings for Unmarried Men.	Married Men.		TOTAL.	REMARKS.
	Completed.	In Progress.		Completed.	In Progress.		
NORTH-WEST PROVINCES—*continued.*							
MEERUT 3 Field Batteries of Artillery. 1 Garrison Battery. 1 Regiment of Infantry. 1 Regiment of Cavalry.	–	–	1,000	85	–	1,085	There is at present at Meerut full accommodation for the garrison noted in column 1; but it has been determined to remove the infantry out of the artillery lines, and to provide new barracks for this arm. A number of the small barracks, in which the infantry are now accommodated, are to be pulled down, so as to clear the area for the artillery. I have only calculated for the number of barracks that will remain standing. If the infantry force is to be reduced to a wing, it may be possible to have the whole garrison in existing buildings, as the two new infantry hospitals will be available; and there are various buildings of kinds at Meerut. We may have, however, something to build for the infantry, but not much. Some married men's quarters will have to be built for both cavalry and infantry. The present quarters of the cavalry are to be taken up for the single men of the regiment.
AGRA 1 Field Battery of Artillery. 1 Regiment of Infantry.	226	–	450	65	–	741	I think that some additional accommodation will be required for both artillery and infantry; perhaps a full-company barrack for infantry, and a half-company barrack for the artillery; also a few quarters for married men of infantry. The auxiliary accommodation is nearly sufficient.
AGRA FORT	200	–	–	–	–	200	The accommodation here is fairly complete.
RANEEKHET 1 Regiment of Infantry.	–	144	285	–	40	469	The two double-storeyed barracks will probably be used as the hospital. The existing buildings for unmarried men are only temporary barracks. A complete set of cottage barracks for the whole regiment have been set on hand.
BAREILLY 1 Field Battery of Artillery. 1 Regiment of Infantry.	–	–	816	72	–	888	The artillery are fairly accommodated, except a few families. The accommodation for infantry is sufficient for eight companies; but about 60 family quarters are still wanted. Auxiliary accommodation fair.
CAWNPOOR 1 Battery of Field Artillery. 1 Regiment of Infantry.	750	86	132	109	13	1,090	The infantry regiment are in the remodelled double-storeyed barracks, and are fully provided for; some auxiliary accommodation still wanting. The artillery are in old buildings, and are also well provided for. Some auxiliary accommodation wanting.
BENARES 1 Wing of Infantry. 1 Battery of Field Artillery.	–	–	600	–	–	600	There is sufficient accommodation in old temporary buildings for the garrison noted in column 1; but a new cantonment is contemplated. I will not, however, deduct the accommodation in old buildings, as it may prove convenient to occupy the old cantonment for some time longer.
ROORKEE	–	–	500	–	–	500	There is accommodation here for about 500 men, but the station is to be abandoned; deduction must therefore be made.
MUTTRA	–	–	500	–	–	500	Same remark applies as per Roorkee; but the barracks are more temporary.
FUTTEHGHUR	–	–	250	–	–	250	Same remark as per Muttra.
SHAHJEHANPOOR	–	–	500	–	–	500	Same remark as per Roorkee. The buildings here are good.
TOTAL for NORTH-WEST PROVINCES	3,324	548	5,233	497	121	9,723	

STATEMENT showing approximately the Extent of Barrack Accommodation, &c.—*continued.*

STATIONS AND GARRISON.	New Double-storeyed Barracks for Unmarried Men.		Old Buildings for Unmarried Men.	Married Men.		TOTAL.	REMARKS.
	Completed.	In Progress.		Completed.	In Progress.		
PUNJAB:							
PESHAWUR 3 Field Batteries of Artillery. 1 Garrison. 2 Regiments of Infantry.	640	–	2,074	296	–	3,010	This must be considered an unfavourable station, therefore 320 must be deducted for lower floors. Four new double-storeyed barracks have been completed. The married men are in old buildings, and I fancy that, under any circumstances, several new quarters must be built. The accommodation for existing garrison in old buildings is fair, and sufficient in extent. All the old buildings will be abandoned if new project of fort is carried out.
NOWSHERA	–	–	1,000	105	–	1,105	There is more than sufficient accommodation for the regiment quartered here. The excess may be taken at 150 men.
RAWULPINDEE 1 Garrison Battery of Artillery. 1 Field Battery of Artillery. 2 Regiments of Infantry.	198	198	1,368	110	–	1,874	If both storeys are occupied as dormitories, I do not think that much more will be required here for unmarried men. More quarters are wanted for the families. The auxiliary accommodation is nearly complete.
MURREE Hill Depôt.	72	36	266	120	–	494	The auxiliary accommodation is satisfactory. The extra work to be done here will depend on strength of the force that may be fixed for the station.
ATTOCK 1 Garrison Battery of Artillery. 2 Companies of British Infantry.	–	–	185	16	–	201	The garrison is fairly accommodated, but I think that new buildings will be eventually required.
MOOLTAN 1 Field Battery of Artillery. 1 Garrison Battery of Artillery. 1 Regiment of Infantry.	–	396	537	113	–	1,046	The returns do not satisfactorily give the details of accommodation in old buildings, but I believe that the garrison is fairly accommodated, and that, when they get the new barracks now in progress, they will be well off.
FEROZEPOOR 1 Garrison Battery of Artillery. 1 Field Battery of Ar-Artillery. 1 Regiment of Infantry.	378	–	997	172	–	1,547	The accommodation here is very fair; not much remains to be done.
BALOON Depôt.	–	525	–	–	–	525	The five new double-storeyed barracks that have been commenced will, when modified, suffice for the depôt; family quarters have to be provided, also auxiliary accommodation.
MEEAN MEER 3 Field Batteries of Artillery. 1 Regiment of Infantry.	–	–	1,240	120	–	1,360	Accommodation satisfactory.
SEALKOTE 1 Field Battery, Artillery. 1 Regiment of Cavalry. 1 Regiment of Infantry.	–	–	1,011	84	–	1,095	If the cavalry regiment is located here, a new set of barracks must be built for them, otherwise the accommodation is sufficient for infantry and artillery.
JULLUNDUR 1 Battery, Field Artillery 1 Regiment of Infantry.	330	198	492	65	–	1,085	When the new barracks are finished there will, I think, be sufficient accommodation for single men. Some family barracks and auxiliary accommodation will remain to be completed.
DELHI Wing of Infantry. 1 Field Battery.	506	–	–	74	–	580	The accommodation here is sufficient.
UMBALLA 2 Batteries of Artillery. 1 Regiment of Cavalry. 1 Regiment of Infantry.	–	–	1,944	144	72	2,160	Here, too, the accommodation is nearly sufficient.
DUGSHAI 1 Regiment of Infantry.	–	144	770	88	8	1,010	The old buildings will last for a long time if the roofs are thoroughly repaired. Excess accommodation for 200.

STATEMENT showing approximately the Extent of Barrack Accommodation, &c.—*continued.*

STATIONS AND GARRISON.	New Double-storeyed Barracks for Unmarried Men.		Old Buildings for Unmarried Men.	Married Men.		TOTAL.	REMARKS.
	Completed.	In Progress.		Completed.	In Progress.		
PUNJAB—*contd.*							
SUBATHOO - - - - - 1 Regiment of Infantry.	–	–	382	96	–	478	I think there must be some mistake in the returns about this station, for the full regiment is fairly accommodated. I think some additional barracks and auxiliary accommodation must be provided.
KUSSOWLIE - - - - Depôt.	72	–	356	52	24	504	The new barracks might accommodate 24 more men in the lower storeys by arranging for mess-rooms, either in transepts or verandahs. Not much more required here, unless the strength of depôt is increased.
JUTOGH - - - - - Mountain Battery of Artillery.	–	–	96	–	–	96	The unmarried men are in old bungalows. Quarters for 12 married men and auxiliary accommodation required.
CAMPBELLPOOR - - - - 1 Cavalry Regiment.	–	–	411	10	–	421	This station is to be abandoned. The barracks have been much injured by earthquake, and are not trustworthy, I fancy.
LAWRENCEPOOR - - - - 1 Battery of Artillery.	–	–	144	16	–	160	These barracks have been a good deal injured by earthquake, but they will come into use for new station.
DERA ISMAIL KHAN - - 1 Company.	83	–	–	–	–	83	I believe this station is to be abandoned.
FORT LAHORE - - - -	–	–	200	7	–	207	Accommodation sufficient for garrison.
UMRITSUR - - - - -	–	–	264	16	–	280	Unoccupied.
FORT GOVINDGURH - - 1 Company of Infantry.	–	–	188	20	–	208	I believe some auxiliary accommodation is required.
TOTAL for PUNJAB -	2,279	1,497	13,925	1,724	104	19,529	
OUDH:							
LUCKNOW - - - - - 3 Batteries of Royal Artillery. 1 Regiment of Cavalry. 2 Regiments of Infantry.	396	–	2,248	325	–	2,969	The old barracks at Lucknow will require considerable repairs. The accommodation in all respects is sufficient.
FYZABAD - - - - - 1 Battery of Field Artillery. 1 Regiment of Infantry.	–	–	1,008	74	22	1,104	One new full-company and four new half-company double-storeyed barracks have just been commenced, but not too far progressed to necessitate completion. The old barracks were some years ago reported shaky; but, if properly looked after, will no doubt last some years longer. The accommodation is in all respects fair.
SEETAPOOR - - - - - 1 Battery of Field Artillery. 1 Wing of Infantry.	264	132	468	53	–	917	The old barracks were some time ago reported shaky, but with ordinary care should last much longer. The accommodation is in all respects fair. When all the new barracks are completed, there will be excess accommodation for about 300 men.
TOTAL for OUDH -	660	132	3,724	452	22	4,990	
CENTRAL INDIA:							
MHOW - - - - - 2 Light Field Batteries of Artillery. 1 Regiment of Cavalry. 1 Regiment of Infantry.	288	240	1,300	135	–	1,963	The returns are not satisfactory. I have given the numbers in old buildings from my own calculation of what the accommodation is. A deduction of 240 must be made on account of lower floors. A good deal remains to be done here.
INDORE - - - - - 1 Company of Infantry. Detachment of Artillery.	–	–	68	–	–	68	Here again the return is unsatisfactory. I fancy there is sufficient accommodation for the unmarried men, but that quarters are required for the families.

STATEMENT showing approximately the Extent of Barrack Accommodation, &c.—*continued.*

STATIONS AND GARRISON.	New Double-storeyed Barracks for Unmarried Men.		Old Buildings for Unmarried Men.	Married Men.		TOTAL.	REMARKS.
	Completed.	In Progress.		Completed.	In Progress.		
CENTRAL INDIA—*contd.*							
GWALIOR FORT - - 1 Garrison Battery of Artillery. Wing of Infantry.	396	264	–	72	–	732	There is still a good deal to be done in the Fort; as the position is high, I have calculated upon the occupation of lower floors.
MORAR - - - - - 2 Field Batteries of Artillery. 1 Garrison Battery of Artillery. 1½ Regiments of Infantry.	280	1,650	708	64	104	2,806	Returns incomplete. A good deal remains to be done here. Eight hundred and seventy must be deducted for lower floors.
NOWGONG - - - - -	–	750	252	70	–	1,072	The old buildings in old cantonment will be abandoned. No more new buildings will be required for the men, but additional auxiliary accommodation is wanting.
JHANSIE - - - - -	–	–	525	47	–	572	Station to be abandoned; buildings very bad.
SEEPREE - - - - -	–	–	124	12	–	136	- Ditto - ditto - ditto.
TOTAL for CENTRAL INDIA - - -	964	2,904	2,977	400	104	7,349	
CENTRAL PROVINCES:							
JUBBULPOOR - - - - 1 Battery of Artillery. Wing of Infantry.	–	252	690	52	–	994	One hundred and twenty men must be deducted for lower floors. The old barracks are not very satisfactory buildings; 150 must be deducted for excess accommodation in old buildings.
SAUGOR - - - - - 1 Battery of Artillery. Regiment of Infantry.	660	396	996	130	–	2,182	Four hundred and eighty must be deducted for lower floors. I expect that all the old buildings must be abandoned; at any rate, a deduction of about 700 men should be made. The old married quarters are very bad.
KAMPTEE - - - - - 2 Batteries of Artillery. 1 Regiment of Infantry.	–	–	910	173	–	1,083	It will not be necessary to do much here if the garrison is reduced. If the present garrison remains, some of the old buildings must be replaced by new ones.
CHINDWARRA DEPOT -	–	–	31	2	–	33	Abandoned, I believe.
ASSEERGURH - - -	–	72	85	20	–	177	
SEETABULDEE - - - -	40	–	–	–	–	40	A good deal to be done here.
TOTAL for CENTRAL PROVINCES - -	700	720	2,712	377	–	4,509	
HYDERABAD:							
TRIMULGHERRY - - - 3 Field Batteries of Artillery. 1 Garrison Battery of Artillery. 2 Regiments of Infantry. 1 Regiment of Cavalry.	420	214	2,130	337	–	3,101	Two hundred and ninety-four must be deducted for lower floors; about 300 must be deducted for old barracks abandoned. The cavalry barracks have been condemned, and are being replaced by new ones. The garrison is fairly accommodated, but a good deal remains to be done.
TOTAL for HYDERABAD - -	420	214	2,130	337	–	3,101	
RAJPOOTANA:							
NUSSEERABAD - - - - 1 Battery of Artillery. 9 Companies of Infantry.	198	546	420	105	–	1,269	Deduct 340 for lower floors. I am not sure about the accommodation in the old barracks. The new buildings are in a bad state. It is difficult to say what more accommodation is required until after my approaching visit. Deduct 132 for old artillery buildings.
NEEMUCH - - - - - 1 Battery of Artillery. Wing of Infantry.	396	132	344	30	–	902	Deduct 240 for lower floors. I believe that the old buildings will not long be serviceable. Family quarters required.
TARRAGHUR - - - - 1 Company.	–	–	20	–	–	20	Barrack for convalescents in Tarraghur.
TOTAL for RAJPOOTANA - -	594	678	784	135	–	2,191	

STATEMENT showing approximately the Extent of Barrack Accommodation, &c.—*continued.*

	Completed.	In Progress.		Completed.	In Progress.		
BURMAH:							
RANGOON 2 Garrison Batteries of Artillery. 1 Regiment of Infantry.	–	–	1,488	67	–	1,555	The return from Burmah is not very intelligible. I do not understand how there can be accommodation for 1,488 single men. I think 500 should be deducted. The old buildings have been condemned, and must shortly be replaced.
THAYETMYO 1 Garrison Battery of Artillery. 1 Regiment of Infantry.	–	–	750	75	–	825	There is only a wing of infantry at Thayetmyo, although it has been thought proper to arrange for a whole regiment. I do not think much more is required here.
TOUNGHOO	–	–	482	78	–	560	The accommodation here seems complete.

Appendix, No. 11.

PAPERS handed in by Mr. *Thornton*.

EXPENDITURE since 1862–63, in Construction of BARRACKS at STATIONS since abandoned as MILITARY STATIONS.

STATION.	AMOUNT SPENT IN				REMARKS.
	Construction of New Works.	Improvement of existing Buildings.	Temporary Accommodation.	TOTAL.	
	£.	£.	£.	£.	
Chinsura	-	5,272	-	5,272	A depôt, abandoned on the introduction of the system of embarking all troops from Bombay.
Berhampore	-	15,541	-	15,541	Abandoned in consequence of the re-distribution of the Force. The Barracks, which were in good condition, were utilised as a Civil Hospital.
Rajghaut (Benares)	-	214	-	214	Abandoned in consequence of extreme unhealthiness. It had only been occupied as a Military Post during and immediately after the Mutiny.
Azinghur	-	-	231	231	Abandoned on the concentration of the Force in Oude.
Goruckpore	-	-	2,495	2,495	
Nagode	-	1,065	-	1,065	Abandoned in consequence of the re-distribution of the troops.
Roy Bareilly	-	5,212	-	5,212	An experimental station, abandoned on the concentration of the Force in Oude.
Chindwara (Sanitarium)	1,181	-	-	1,181	An experimental sanitarium, abandoned in consequence of unfavourable reports.
Sholapore	747	5,506	1,060	7,313	Abandoned on the re-distribution of the Force in the Bombay Presidency.
TOTAL £.	1,928	32,810	3,786	38,524	

Note.—The Artillery Barracks at Jubbulpore are not occupied, the revised distribution of troops not providing for Artillery at that Station; it, however, remains a Military Station for Infantry. The defects in the Barracks have been remedied for 30,000 rupees, but the buildings are not quite finished.

EXPENDITURE since 1862–63, in Construction of BARRACKS which are unoccupied, because they have given way, or are pronounced unsafe, or too hot for habitation for Soldiers.

STATION.	ESTIMATED COST OF WORK.		Loss, or Addition to Estimate, arising from bad Work.	REMARKS.
		£.	£.	
Saugor	-	165,000	95,000	Barracks abandoned as being unsafe. Saving in work and material which can be brought into use estimated at 70,000 *l.* Possibly need not be re-constructed on same scale.
Allahabad	£. Infantry, 173,110 Artillery, 27,241	200,351	22,500	Owing to bad roofs and other defects, some of the Infantry and Artillery Barracks are unoccupied, as being unsafe till repaired. The estimate for remedying the defects is 22,500 *l.*
Nusseerabad	-	85,502	11,500	Defects remedied, and Barracks finished, except one or two, but not yet occupied. Cost of remedying the defects, 11,500 *l.*
TOTAL £.	-	450,853	129,000	

EXPENDITURE since 1862-63, on BARRACKS now occupied by Troops, and the Number of such Troops.

STATION.	AMOUNT OF EXPENDITURE ON							European Force at the Station.*	Number of Men, excluding Officers.
	New Sets of Buildings.	Improvement of existing Buildings.	Hill Sanitaria. New Buildings.	Hill Sanitaria. Improvements.	Temporary Accommodation.	Rest Houses.	TOTAL.

W. T. Thornton.

Appendix, No. 12.

STATEMENT relating to CANALS in Operation during 1870-71, in the NORTH WEST PROVINCES and the PUNJAB (asked for by the Parliamentary Committee, 13th June 1871, Question 6879).

CANAL.	Length.		Area Irrigated.	Capital Outlay to 31 March 1871.	Maintenance and Repairs, 1870-71.	Direct Receipts, 1870-71.				Indirect Receipts from Increased Land Revenue.	Total Receipts.	REMARKS.
	Main Channels.	Distributaries.				Water.	Navigation.	Miscellaneous.	Total.			
	Miles.	*Miles.*	*Acres.*	£.	£.	£.	£.	£.	£.	£.	£.	
Ganges Canal	654	3,069	766,614	2,427,816	87,725	178,018	3,286	9,733	191,037	25,192	216,229	The Ganges Canal irrigates a portion of the North West Provinces lying between the Ganges and the Jumna; it came into operation in 1855-56.
Eastern Jumna Canal	130	606	212,715	197,332	18,175	54,438	- -	2,199	56,637	15,035	71,672	The Eastern Jumna Canal is the reconstruction of a long-disused Mahomedan work, originally made to water a royal park. New headworks had to be provided, falls and bridges to be built, the greater part of the canal to be dug on a new alignment, and the embankments raised throughout. It flows into the Jumna near Delhi. It was re-opened in 1830.
Doon Canals	67	- -	12,419	54,998	2,469	2,694	- -	1,617	4,311	475	4,786	The Doon Canals are five small works irrigating the valley of the Dehra Doon, at the foot of the Himalayas. Without them there could be no population or cultivation in the Doon at all.
Rohilkhund Canals	151	- -	56,233	53,314	7,420	2,505	- -	198	2,703	3,260	6,201	The Rohilkhund Canals are a number of small badly aligned works, irrigating the district of Bareilly. Projects have been prepared for remodelling and extending them, and in the meantime they are only kept in sufficient repair to meet existing engagements.
Bijnour Canals	32	- -	1,882	6,996	156	215	- -	23	238			The Bijnour Canals are two small works under the charge of the collector of Bijnour. The question of remodelling them is under consideration.
Baree Doab Canal	212	692	279,210	1,260,250	37,797	69,228	81	4,047	73,356	26,143	99,499	The Baree Doab Canal was commenced by the British Government in 1849-50, and portions of it came into operation in 1860-61. It irrigates part of the country between the rivers Ravee and Beas.
Western Jumna Canal	405	259	462,707	276,474	34,950	114,118	571	3,948	118,637	37,256	155,893	The Western Jumna Canal is an old Mahomedan work, re-opened in 1817—20, and in some places re-aligned, by the British Government. The main line rejoins the river near Delhi. Considerable improvements and extensions of some of the branches are under consideration.
Inundation Canals:												
Upper Sutlej	213	- -	77,070	56,455	10,447	5,055	- -	685	5,740	2,791	8,531	Nearly the whole of the Lower Sutlej and Chenab Inundation Canals, and all but 108 miles of the Indus system, were in operation at the annexation of the Punjab. They are distinguished from the perennial canals by supplying water only during the floods of the rivers which feed them.
Lower Sutlej and Chenab	632	- -	202,036	11,150	18,766	68	- -	15,358	15,426	21,330	36,756	
Indus	592	- -	174,342	38,911	8,761	8,505	- -	81	8,586	8,094	16,680	
Shahpoor	- -	- -	2,460	2,061	423	- -	- -	- -	501	- -	501	The Shahpoor Canals are two small inundation canals, taken over as Imperial works from the Local Government in 1870.

Public Works Department, India Office,
20 December 1872.

W. T. Thornton.

Appendix, No. 13.

PAPER handed in by Mr. *Thornton.* Appendix, No. 13.

ABSTRACT of the ESTIMATE of the COST of the HYDRAULIC LIFT DOCK at *Hog Island, Bombay Harbour*, prepared by Mr. *Edwin Clark*, C.E., 28th June 1867.

	£.	s.	d.
Price of materials fitted ready for delivery -	109,261	2	–
Freight and insurance - - - - - -	21,136	15	–
Erection - - - - - - - -	26,321	1	–
Total - - - £.	156,718	18	–

ABSTRACT of the EXPENDITURE actually paid in *England* for the Lift.

	£.	s.	d.
Payments to Messrs. Emmerson and Murgatroyd.	220,782	5	5
Commission to Mr. E. G. Clark - - -	10,750	–	–
Freight (one-third paid in England) - -	7,752	7	–
Sundries - - - - - - - -	360	10	6
Total - - - £.	239,645	2	11
To this must be added,— Freight to be paid in Bombay - - £.	15,504	14	–

And also certain minor expenses not yet paid in England, and some at Bombay, of which there is no record in this country.

NOTE explanatory of the discrepancy between the Estimate and the Actual Cost.

	Excess. £.
(1.) After the estimate framed by Mr. Clark had been received, a contract was made with Messrs. Emmerson and Murgatroyd on the 13th of December 1867, for the supply of all materials for the pontoon and lift in this country, the shipment being undertaken by the Store Department of the India Office. At the rates mentioned in Mr. Clark's estimate, this portion of the work should have cost 109,000 *l.*; the weight of material supplied was, however, in excess of that contained in the estimate, and the payment under this contract was 125,000 *l.* Of the excess, about 10,000 *l.* was due to the plates for the pontoon being made ½-inch thick throughout, instead of ⅜-inch - - - - - - - -	16,000
(2.) Mr. Clark's estimate omitted his own commission - - - -	10,750
Carried forward - - -	26,750

Appendix, No. 13.

	Excess. £.
Brought forward - - -	26,750
(3.) A contract for the erection of the pontoon was made with Messrs. Emmerson and Murgatroyd, on the 2nd of February 1869, but it was found desirable that the cost of erecting the lift should be paid directly by the Government, rather than by a firm which would have charged a very high lump sum for the work. It was eventually agreed that Messrs. Emmerson and Murgatroyd should provide the labour, and charge the actual cost, plus 10 per cent. commission, an arrangement by which Mr. Clark anticipated that only one-half the expense attendant on a contract would be incurred; instead, however, of the original estimate of 26,300 *l.* for erection of the pontoon and lift, the actual expense incurred was 15,750 *l.* for the pontoon, and 69,000 *l.* for the lift, the excess being attributed by Mr. Clark to the high price of labour, to longer time than he had expected being occupied in the erection, and to irregularity in the depth of the site, some columns being sunk in 73 feet of water, and rock having to be removed for others - - - - - - - - - - - -	58,450
(4.) Platform, stagings, and extra materials used in the erection of the lift, not included in Mr. Clark's first estimate, the precise site for the dock not having then been determined - - - -	18,000
(5.) Freight has cost 23,257 *l.*, instead of 21,137 *l.* as estimated - -	2,120
Aggregate of excess thus shown - - - £.	105,320

The actual excess up to the present time, so far as is known, has been 98,430 *l.*

W. T. Thornton, Secretary.

Appendix, No. 14.

PAPERS handed in by Sir *Charles Trevelyan.*

MINUTE by Sir *Charles Trevelyan* on a proposed Line of RAILWAY between *Cawnpoor* and *Lucknow*, dated Calcutta, the 18th February 1863.

CAWNPOOR AND LUCKNOW LINE.

MR. WILSON has proposed, in behalf of the Indian Light Railway Company, to construct a line from Cawnpoor *viâ* Lucknow to Byram Ghât, or some neighbouring point on the Gogra, without constructing a bridge over the Ganges at Cawnpoor, and it has been determined to refer the proposal for the decision of the Secretary of State. It therefore becomes my duty to record my opinion on this important subject.

As the object for which the credit and resources of the State have, by an abnormal arrangement, been pledged to a very large amount to the East Indian Railway, was to obtain a firm, military, and political hold upon the Great Gangetic Valley, it is an essential part of the plan of that railway that it should be connected with Lucknow by a bridge over the Ganges and a solidly-constructed branch, so that trains may pass into Lucknow at full speed either from Calcutta and Allahabad on one side, or from Meerut and Umbala and the other great military stations in the north-west on the other, and that Lucknow should be the Terminus from which the subsidiary system of railways for Oudh should take its start.

This object cannot be secured otherwise than through the agency of the East Indian Railway. This company alone is capable of building a bridge over the Ganges at Cawnpoor, which is an integral part of the work; and there must be only one line of railway and one management, in order that the rolling-stock which circulates through the rest of the Gangetic Valley may freely pass in and out of Lucknow.

The short railway (about 40 miles) between the bank of the Ganges opposite Cawnpoor and Lucknow is perhaps the most lucrative in India. There are no engineering difficulties; and the entire traffic of the great city of Lucknow, and of the rich and populous country connected with it, must, for years to come, pass that way. This small section is therefore eagerly coveted by railway companies; but it must be taken in connection with the construction of a bridge over the Ganges at Cawnpoor, which, as I said, is an essential part of the work. To give it to a railway company which would not also undertake to build the bridge, would throw away this rich resource, and postpone for an indefinite period the construction of the bridge. On the other hand, if both bridge and road are confided to the East Indian Railway Company, the profits upon the one will balance the loss upon the other, and the bridge may be at once commenced.

In my opinion, therefore, the East Indian Railway Company should be asked whether they will undertake the work. Their reply probably will be that they will if they can have a guarantee. I am as strongly opposed to such guarantees as anybody can be, but in this instance I do not care whether there is a guarantee or not, partly because the political and military considerations involved completely overpower any objection that can be raised on this ground, and partly because I am persuaded that the early construction of the Cawnpoor Bridge and Lucknow Branch will be advantageous even in a strictly financial point of view, and will lighten, instead of increasing, our burden.

Delhi must be regarded in the same point of view as Lucknow. Although it will not now be on the main line of the Gangetic and Punjab Railway, this city ought to be bound up in the closest possible union with the rest of our system, and, like Lucknow, it will be the starting point for a fresh system of railways across Rajputana, Hurriana, and the protected Sikh States, which is a region singularly suited for the construction of cheap railways. It is also traversed by a trade of first-rate importance between the dry countries which produce cotton and salt, and the rich Gangetic Provinces with their sugar and tobacco and other tropical produce; and, by the introduction of simply-constructed, inexpensive railways, this trade would be at once increased, and drawn into particular channels greatly to the advantage of the Customs Revenue. The remarkable effect of the opening of the

Appendix, No. 14.

Madras Railway upon the salt trade of the south of India indicates what may be expected from the creation of such new facilities to commerce.

The short Delhi and Lucknow Sections are therefore not properly branches, but integral portions of the main line leading to termini of first-rate importance, and any proposal which would impair the efficiency of these connecting links is strongly to be deprecated.

EXTRACT from a MINUTE, 4th December 1863, on the proposed OUDH and ROHILKHUND LINES of RAILWAY.

THE question on which the Governor General has consulted us, includes two main points,—1st, What kind of Railways it will be advisable to assist, and 2nd, what assistance should be given to them.

The official position is as follows:—

This Government has offered to concede to the Indian Branch Railway Company two lines branching off from the East Indian Railway, one from Cawnpoor to Lucknow, and the other from Khoorja to Moradabad, and to give a grant-in-aid for 20 years, of 100 *l.* per annum per mile of opened railway of the standard gauge.

The Branch Railway Company objects to being precluded from the narrow gauge; urges that the terms offered are insufficient if the standard gauge is to be adopted; and claims the concession of a "longitudinal line," leaving the East Indian Railway at Buxar, between the Gogra and the Goomtee, and extending through the provinces of Benares, Oudh, and Rohilkhund, till it rejoins the East Indian Railway near where the Ganges and Jumna issue from the Himalayas.

What is now proposed is to pay to the Company 100 *l.* per annum for 20 years for every mile of railway of the standard gauge open for traffic, and a suitable sum, in proportion for a narrow gauge line; to pay at the same rate on each 10,000 *l.* of the cost of any bridge the estimated cost of which shall exceed 10,000 *l.*; to pay half subsidy on mileage and bridges under construction, to be reckoned in part payment of the annuity for 20 years; and the Government to have the power of requiring either that the railway shall be originally constructed on the standard gauge, or, if it shall have been constructed on a narrow gauge, that it shall at any time be converted into the standard gauge.

I have always been of opinion that a fallacy is involved in the idea of light railways. The railway experience of England is greater than that of any other country. For many years after our railway system commenced, there was a constant craving after a cheaper kind of railway. Project after project appeared for the formation of light railways or tramways, but they were all dropped. Atmospheric and other eccentric forms of railway were attempted; but, however specious the light railway principle might be, there was something in it which always led to its being abandoned on close examination, and it never arrived even at the dignity of an experiment. Cheap agricultural railways are now being made in various parts of the country, but they are all solid, full-gauged railways, quite capable of bearing the rolling stock of the main lines with which they are connected, and their cheapness arises only from their being single lines; from the landed proprietors asking moderate rates for their land, because they are convinced of the advantage to them of the railways; and from the Parliamentary expenses having been reduced to a mere trifle.

Experience is so much better than theory, that I will not waste time in endeavouring to account for these results. The fact seems to be that a metalled road is a cheap medium of communication, and so also is a solidly constructed railway, but that a railway which is constructed in such a manner that it will not admit of the full application of the power of steam, is not an economical medium.

The practical difficulties in the way of converting a narrow gauge, into a full gauge, railway are so great, that I look upon the power which it is proposed to reserve to the Government of ordering such a conversion, to be entirely illusory. Earthwork, bridges, rails, rolling stock, all have to be constructed on a different scale for a narrow, and a medium, gauge; and, as observed by the honourable the President, in the event of conversion, a small section of the earthwork and ballast, and some buildings, would be all that would be saved.

The "longitudinal" line, of which the Indian Branch Railway Company desires the concession, is no branch, but a main line, more than 500 miles long, passing through some of the richest and best populated provinces of the Empire. Even the branches to Cawnpoor and Khoorja, connecting this line with the East Indian, are so important, that the Government very properly stipulated that they should be laid on the standard gauge. The commonest foresight, therefore, requires that the main line, as well as these branches, should be laid on the standard gauge; and if the Branch Railway Company obtains the concession, it must change its name and concentrate its efforts on the construction of an entire system, main line and branches, on the splendid field which will be placed at its disposal. The Indian standard gauge is five feet six inches. The gauge fixed upon by a Government commission for the Irish railways, as the smallest which could with advantage be adopted, was five feet three inches.

Appendix, No. 14.

EXTRACT from MINUTE, 21st September 1863, on a proposed BRANCH from the MUTLA RAILWAY.

ANOTHER important feature in the plan is, that it is proposed to construct the extension with a much lighter rail than has been adopted on the main line. I have already expressed my opinion that a fallacy is involved in the proposal to have light railways, and that the advantage of the railway system is very imperfectly obtained, if the line is not constructed with sufficient solidity to allow of the application of the full power of steam to it. The expediency of this is still more obvious when the railway is a branch of a main line which has been solidly constructed; and if this railway is to be looked to for the means of facilitating the communication between Calcutta and the lower stations on the Hooghly, this condition must be insisted upon.

EXTRACT from a further MINUTE, dated 4th November 1863, on the OUDH and ROHILKHUND LINES.

I ALSO think it right to call attention to the passage quoted by the Chairman from a letter of Mr. Wilson's, from which it appears still to be his intention to make the Oudh and Rohilkhund line a thoroughly light line. His expression is, "The only effect of the increase of the gauge upon us will be to lengthen our axles as regards the vehicles, which will in no other respect be changed, either in dimension or weight," and so on. He also says, "It is distinctly understood that the main line engines are not to come over our lines." This would, of course, greatly detract from the advantage of the railway. As remarked in my Minute, dated the 18th of February last,* the primary object of our railway system in the north of India is to obtain a firm military and political hold upon the Great Gangetic Valley, for which purpose it is necessary that our trains should pass into Lucknow at full speed, either from Calcutta and Allahabad, on one side, or from Meerut and Umballa and the other great military stations in the north-west, on the other.

LETTER from Major *De Bourbel*, R.E., to Sir *Charles Trevelyan*.

My dear Sir Charles Trevelyan, Nynee Tal, 9 November 1863.

I HAVE not written an official report on the Nulhattee experimental railway, as it is under the control of the Government of Bengal, and therefore out of my beat; and further, the line is so near completion that I was unwilling to say anything which might prejudice the undertaking at first starting.

I thought it would be best to let the experiment work itself out fairly, and to let the result show whether a light railway of this sort is a profitable concern.

I formed so low an opinion of its capabilities on the occasion of my visit there, that I have strongly advised the Government of the North-West Provinces not to commit itself to the introduction of this kind of light railway in its territory, until we know positively whether the Nulhattee line can be made to answer. The present structure of permanent way, rolling stock, stations, electric telegraph, &c., is so slight, that I do not believe in their being able to stand heavy work. The structure can, of course, be amended in form; but increase of strength means an increase of expense, which is not compatible with the assumed cost of these light railways, 4,000 *l.* per mile, and this, besides, would alter the character of the railway.

Railways can either be made permanent or temporary; the former method should always be employed where there may be a prospect of sufficient constant traffic between two fixed points to make the work pay; the latter mode of construction is admissible only in new countries, like the western portion of the United States, where, at the outset, the position of the towns and villages was undetermined, the direction of the channels of trade in future uncertain, and it could not be foreseen what deviations in the course of a railway might hereafter become necessary.

Permanent railways, though more costly in the first instance, are, no doubt, in the end, cheaper than temporary railways, which do not last, and have to be renewed at intervals, and which eventually are probably replaced by permanent works. The history of American railways teaches us this, and should be a warning to the public not to engage their capital in enterprises of this nature. It should be noted, however, that railways of any kind, whether permanent or temporary, are sure to benefit and improve the country at large, by giving a general stimulus to trade and industry, and, in a country where capital is scarce, it is better, perhaps, to begin with temporary railways of an inexpensive kind than to have none at all. The shareholders, though they may at first reap some profit, must, of course in the end suffer; but the country is a gainer at large, and as it increases in wealth, more money will be found to prosecute the works on a more permanent footing.

I look upon the light railways now being started in India, as temporary railways, for it will be impossible to do more with 4,000 *l.* per mile, their estimated cost. Any idea of attaining

* *See* page 663.

Appendix, No. 14.

attaining durability at this price is a delusion. In an old and settled country like this, with fixed channels of trade, and with English capital at command, there is no need to have temporary railways, unless it be in an experimental or tentative way in those provinces which are as yet thinly populated, hardly cultivated, and as yet but imperfectly known.

Permanent railways, again, are of two kinds, low speed and high speed. If made in a thorough manner, the former may be expected to cost in this country from 8,000 *l.* to 10,000 *l.* per mile, and the latter from 13,000 *l.* per mile and upwards.

In England, we commenced with low speed railways, having rails of 35 lbs. to the yard, engines of 7½ to 15 tons weight, carriages of three tons weight, and with trains of 52 tons load. (This is more or less the equipment intended for the Nulhattee line, only 4,000 *l.* per mile is too cheap for the work to be durable.)

As the traffic increased, greater speed and more power became necessary, and gradually high speed railways were attained, with rails of from 70 to 85 lbs. per yard, engines of 45 to 60 tons weight, carriages of 5 tons, and trains of 200 tons load.

It seems to me, therefore, that the amount of traffic which may be expected upon any line should govern the character of the permanent railway to be adopted. Taking the branch railways proposed in Oudh and Rohilkhund as a case in point, I would suggest the permanent way and rolling-stock being made sufficiently strong to stand moderate speed, viz., rails about 65 lbs. to the yard, engines of 35 tons, &c. With the small traffic at first expected,* trains might run at low speed; as the traffic increased, the speed might, as required, be raised to a maximum of 30 miles an hour; this would, I think, suffice for all practical purposes; such a railway could not, however, be made in this country for less than 11,000 *l.* per mile, and in no sense could it be called a light railway.

I trust that you will forgive the freedom of my remarks on this subject, and if there be any point on which you may wish for more information, I shall be glad to furnish it if I can.

Believe me, &c.

R. de Bourbel.

P.S.—The above remarks apply to locomotive railways only, and not to cattle tramways. I think that the latter would be preferable to any locomotive temporary, or light, railway in a new country, if the prospect of traffic be not good enough to warrant the construction of a permanent railway.

MINUTE on RAILWAYS for RAJPUTANA and CENTRAL INDIA, 14th January 1864.

I ENTIRELY agree that we should pause and review our position before we commit ourselves to any engagement in reference to railways in Central India.

The great central region of Rajputana and Malwa has been embraced by the arms of the Great Indian Peninsula, the Bombay and Baroda, and the East Indian Railways; and there is a pressure from various quarters for carrying extensions into it.

The Bombay and Baroda Railway contemplates two lines, one from Baroda to Indore, and the other, in extension of the Baroda and Ahmedabad line, by Deesa, Oodeypoor, Ajmeer, and Jeypoor to Agra.

The Great Indian Peninsula Railway is arranging for the construction of a branch from Asseergurh to Indore, with the intention of carrying it on by Gwalior to Agra.

In the north-west several projects are under consideration for the construction of railways for the accommodation of the great existing trade between the Valley of the Ganges, with its rich "colonial produce," and the dry, salt and grain-producing country of Rajputana.

The opinion at Agra is that the best line for their section of the frontier will be from Chandósee, a large mart on the eastern side of the Ganges which collects the trade of the Bareilly and Moradabad districts, *viâ* Alygurh, Muttra, and Bhurtpoor, to Jeypoor.

At Delhi, efforts have been made to get up a company for laying a rail to Bewanee, a mart on the Hansi and Bikaneer frontier; but the trade with Bewanee is not to be compared with that between Delhi and Jeypoor and the countries beyond.

From Jeypoor the line ought, of course, to be extended to Ajmeer and the Sambhur Salt Lake.

In short, we have to consider the wants and circumstances of the central region of India, which has as yet been unprovided with any system of railways.

In every point of view, political, military, commercial, and financial, it is very desirable that such a system should be carefully arranged without unnecessary delay. Every friend of civilisation will also desire it as the most effectual means of carrying the light of knowledge into those benighted regions.

The facilities are unusually great. Throughout the largest part of this region, the engineering difficulties are at a minimum. There are no great rivers, and the rails may be laid

---

* Owing to the great existing trade between the Gangetic Valley, with its rich productions of rice, sugar, tobacco, &c., and the dry, grain and salt-producing region of Rajputana and Central India, and to other causes, there are hardly any railways in India on which a larger traffic may be expected from the first, than on these cross lines between Cawnpoor and Lucknow, and between Shahjehanpoor and Moradabad and the nearest points of the East Indian Railway. *C. E. T.*

laid on the dry sandy soil, as they have been between Suez and Cairo. Like the rest of India, it is a country of towns and villages, with a people given to locomotion; and there are many populous and rich places, especially towards the south. But the main fact is, that there is a great existing trade between this central region, and the Valley of the Ganges on one side, and Bombay and Baroda on the other. This trade, even in its actual state, is sufficient in several directions to support a first-class railway; and its further development will, of course, be greatly promoted by the introduction of railways. The extent of this trade must not be judged by the poverty of the soil in the northern part of the region. This is one of many illustrations that trade does not depend so much upon actual produce as upon diversity of production. Appendix, No. 14.

The peculiarity of this Central Province of the continent of India is, that it is almost entirely occupied by Native States. This will render special arrangements necessary to secure the requisite grants of land, and exemption from, or the consolidation of, the transit duties, which most of the States still collect. More assistance than this is not to be expected from these Native States; nor in fact is it desirable, for if the Native States were partners in the undertaking, they would expect to be so also in the management.

There will be no difficulty in determining what lines of rails it will be advisable to construct, and in what order they ought to be constructed.

The point which immediately presses for consideration is of a different kind. It would be extremely difficult to preserve harmony of action among so many different railway companies; and there is also great awkwardness in a guaranteed trunk line constructing and working an unguaranteed branch. For these and other reasons, it would be desirable that a separate Rajputana and Central India Railway Company should be formed from among the shareholders of the three existing companies. Those companies are deeply concerned in the bridging of the great intervening space by a well-considered system of railways; and if they were all represented in the management, it would be likely to be done in a manner consistent with the interests of all.

Although the new lines will act as branches in reference to the existing railways, they will be trunk lines for other extensive regions, and they ought to be made, from the first, in a substantial manner, on the supposition of their having a full traffic.

I will not enter upon the question of State subvention. This must depend on the lines which it may be determined to construct after a general consideration of the whole subject. My belief is, that, if the lines are properly chosen, and economically constructed, the greater part, if not the whole, of them will, from the first, be self-supporting. The capacity of India for supporting railways has been altogether underrated. The very vastness of the country induces traffic by a sort of geometrical progression, owing to the large number of people who have, from various quarters, to pass through any given central point. This circumstance has special force in reference to Central India, which, geographically, is the heart of the whole continent.

The proceedings on this subject should be reported, without delay, to the Secretary of State.

MADRAS MILITARY EXPENDITURE.

MINUTE by the Honourable Sir *C. E. Trevelyan*, K.C.B., Member of the Council of the Governor General, 17 December 1863.

THE Governor General remarks that this subject has been nine months under consideration, and that the result seems rather meagre. The Papers were seen by me for the first time yesterday.

The changes which it will be necessary to make in the public establishments, in consequence of the general increase in the expense of living and the rates of wages, have constantly occupied my attention since my return to India. The subject has come before me in a variety of ways, and I am prepared to give a confident opinion on it.

The Madras Native Army cannot be dealt with as an exceptional case. Prices and wages are even higher in the Bombay Presidency than they are at Madras, and the causes which have produced these results in the south and west of India are rapidly making themselves felt throughout the north.

In whatever form assistance may be given to the Madras Native Army, whether by direct increase of pay, or by indirect allowances calculated according to the price of food, the notoriety of the concession cannot fail to bring upon us a pressure from various other quarters.

I entirely agree with the Madras Government that, of the two modes, the direct one is the best. We must give as much, according to the indirect, as according to the direct, method; and the former has the great additional disadvantage of being wasteful in its mode of application. Whether the allowance be given in kind, as it is on the western coast of the Madras Presidency, or in money with reference to prevailing market rates, there is great opening for uncertainty and fraud.

This mode of paying native troops is also prolific of perpetual irritation, owing to the variety of questions it raises between the troops and the Government, and is, therefore,

Appendix, No. 14.

very inferior to the ordinary method of giving a fixed rate of pay, leaving the soldier to provide for himself.

We must face this question as a general question for the whole of India, and we ought, therefore, to deal with it according to general principles. The case of the Madras Native Army has to be dealt with first, as the most pressing, but it ought to be settled on general principles which will be equally applicable to the rest of India.

If we merely increased the pay of the existing establishments in proportion to the increase in the expense of living, the Exchequer would soon be bankrupt. The true principle is, that increase of pay should be coincident with reduction of numbers. This would, in itself, be a great administrative improvement. The state of most of our subordinate native establishments, civil as well as military, is that we have more servants than are wanted for the work; that they are ill paid; do their work badly; and make up for the deficiency of their pay by obtaining assistance, in an indirect and often very oppressive manner, either from the Government or the people. Our maxim ought to be, "Few, but well worked and well paid." Pains would also then be taken to simplify the work and get rid of unnecessary processes. One of the bad consequences of having had an unlimited command of labour has been a general indifference to the adoption of methods of abbreviating and expediting the work, to which so much attention has been paid of late years in England.

In the beginning of 1860, Sir Patrick Grant and myself recommended to the Supreme Government that the 52 regiments of the Madras Native Army should be reduced to 40; but the reduction actually made was only to 44.

Since that recommendation was made, the Madras Native Infantry Regiments employed in Burmah and the Straits have been reduced from 14 to 6, and native troops have been liberated to the extent of at least 8,000 men, by the substitution of the organised civil police for the numerous detachments by which the Madras Native Army was formerly frittered away.

The reasons for the reductions recommended by Sir Patrick Grant and myself are now stronger than ever. We have more Madras Native Infantry Regiments than we well know what to do with. Regiments are kept at places where they are not wanted, merely because they must be stationed somewhere. The geographical character of the Madras Presidency, narrowing to a point, with two long seaboards, makes it easily capable of military control, and the facilities have lately been much increased by railways. All that is really necessary is a strong central force at Bangalore, with a few outposts. The people are among the most peaceably disposed and easily governed in Her Majesty's dominions. They have not seen war for two or three generations, and have forgotten the use of arms.

Forty well paid and contented regiments would be a far more reliable and effective force than 44 half-starved regiments.

Forty *good* regiments will be more than enough for the work which the Madras Army has to do under present circumstances. They will also furnish a disposable force, in time of need, either for foreign service, or to take the place of other regiments ordered on foreign service.

I am not afraid of the Sepoys unduly stinting themselves for the sake of their families, or for any other cause, when their pay is made sufficient. They did not do so in former years. The case of foreign service is exceptive. The Madras Sepoy is eminently a family man. He frets about his family when he is absent from them, and makes large remittances in their favour, but they live cheaply and happily when they are together.

For these reasons, I cannot agree with the letter which it has been determined to send to the Madras Government, proposing to grant relief, in the shape of compensation for dearness of provisions, to the existing force of the Madras Native Army, or with Sir R. Napier's note of the 11th instant, upon which it is founded, and I request that this Minute may be recorded as expressing my dissent, and that it may be forwarded, as such, to the Secretary of State.

The proper way of dealing with the subject, in my opinion, will be to reduce four more regiments, and to increase the pay of the rest.

In 1837 a pension of four rupees a month was conceded to the Madras Sepoys after 15 years' service, in the event of their being invalided. This has worked badly by creating a tendency on the part of the Sepoys to become non-effective, in order that they may retire and earn the present high rate of wages, in addition to their pension, and by unduly burdening the pension list. If a graduated scale of pay, increasing according to length of service up to 21 years, were given, as recommended, a corrective would be provided against premature removal to the pension list and the saving in the pension list would go far to compensate the additional outlay from the increased rates of pay.

The Madras Government propose that this increase of pay should be given without making any alteration in the other advantages, such as batta, rice money, hutting money, rations, and pensions, which the Native Army now enjoy. Colonel M'Goun, the Military Controller, admits that "the occasion was a tempting one for converting the compensation for rice into a fixed money payment, but there were obstacles to this very desirable measure, and hence it has been considered expedient to leave it untouched, at all events for the present."

I agree that no alteration should be made in the other advantages enjoyed by the Sepoys; but if compensation were also given according to the price of grain, the State would have to pay twice over, once in the shape of increased rates of pay, and again in the shape of compensation; and, as the price of grain is continually rising, the charge might become extremely serious. This point will require careful attention.

Calcutta, 17 December 1863. *C. E. Trevelyan.*

Appendix, No. 14.

PUNJAB FRONTIER POLICY.

MINUTE by the Honourable Sir *C. E. Trevelyan*, K.C.B., Member of the Council of the Governor General, 25th January 1864.

I RECENTLY expressed my intention of recording a few observations on the subject of our Punjab Frontier policy.

Even in a purely financial point of view, the matter is of vital importance. If our military force were frequently employed, as it has lately been,* twice our present army would be insufficient. As it is, the Commander in Chief has based upon what has taken place, a proposal for increasing the strength of all the Native regiments in Northern India.

Two opposite lines of policy have been followed at different times and places in India, in reference to warlike Hill tribes.

The first of these is mainly founded upon the principle of not unnecessarily molesting such tribes, of encouraging them to enter upon industrial pursuits, and, generally, of making it their interest to be quiet. Cleveland's successful exertions in the Bhaugulpore and Rajmahall hills, and Outram's pacification of the Bheels in Western India, are instances in point.

A remarkable example of the opposite treatment was deeply impressed upon my mind early in my public service. The country between Oodeypoor and Guzerat is occupied by semi-barbarous tribes of Rajputs and others, who had been accustomed, from time immemorial, to make occasional raids into the plains. As regularly as the cold weather came round, the troops from the neighbouring Bengal and Bombay stations were, for several successive years, assembled to punish these people. Villages were burnt, cattle were harried, but it was found that the more this was done, the more lawless and predatory the people became. What before was an agreeable and profitable pastime, became a dire necessity. Upon this state of things, Lord Metcalfe wrote one of his masterly Despatches exposing the extreme impolicy of this course of proceeding. The calling out of the troops was stopped, and we have heard no more of these people or their depredations. The recent military operations in the Jynteah hills is another case in point. If, instead of attempting to introduce the income tax, we had left these people to the enjoyment of their virtual independence, we should have been saved this bloodshed and expense.

These considerations apply with augmented force to the Punjab Frontier. The people there are extremely warlike. The line of distinction between the hills and the plains is well marked. On the plains, where our horse artillery and cavalry are able to act, we have it all our own way. In the mountains, even a large and expensively equipped force may be unable to make a serious impression, as we have recently experienced to our cost. Although warlike, the people are inclined to industry and commerce; and the great demand for the supply of our cantonments, and the opening of the roads to trade, give us unusual facilities for indulging them in this disposition. If the present high prices could, by the improvement of the communications, be brought fully to bear upon these mountain tracts, they would be the best pacificator of all.

It is unreasonable to expect that there should be an entire exemption from outrage in that quarter. If the frontier were thrown back, we should only be brought into connection with wilder and more warlike tribes, and our line of communication would be more difficult to maintain. It is a "highland" and "border" line, and we must lay our account for the occurrence of occasional outrages. We should, as far as possible, prevent them, and when they occur, we should punish them as we best can. I am as strong an advocate as anybody can be for an active state of preparation, and I freely admit that it may be necessary at times to take decisive measures of coercion. What I contend for is that conciliation and mutual interest should be the primary principle of our policy, and that the resources of this policy should be exhausted before we have recourse to other means. I also think that when military force has to be applied, it should be done only in proportion to the occasion, and that operations which are intended for punishment, should not be conducted as if subjugation were the real object.

The policy I advocate has, I know, been acted upon to a considerable extent on this frontier. In the Derajat, where there are available waste lands, portions of the Hill tribes have been encouraged to settle on the plains, and they have thereby become guarantees for the peaceable conduct of their brethren who have remained in the hills. If the same policy were applied throughout, according to the varying circumstances of the different sections of the frontier, and if the military force were held in reserve as an extreme remedy in case of need, there would be nothing left to be desired. The greatest of crimes is an unnecessary war, and this applies as much to the Punjab Frontier as to any other.

I also think that the liability to military operations on this frontier is increased by the circumstance that the civil Government of the Punjab is invested with a military character, by having a force permanently placed at its separate disposal, irrespective of the ordinary military authorities; but as the rectification of this would involve further changes which this is not the place to discuss, I shall content myself with this indication of my opinion.

Calcutta, 25 January 1864. *C. E. Trevelyan.*

* This refers to the Ambeyla campaign.

Appendix, No. 14.

REDUCTION OF MILITARY FORCE.

MINUTE by the Honourable Sir *C. E. Trevelyan*, K.C.B., dated 22 July 1864.

I TAKE the same view of this important subject as the Governor General.

India is passing through a social change, the bearing of which upon the finances requires the most attentive consideration.

Owing to the great and general rise in prices and wages, and to the demand for improvements in every branch of administration, the public expenditure is rapidly increasing. The expense of collecting and assessing the land revenue has risen from 2,030,489 *l.* in 1861–62 to 2,611,350 *l.* in the present year. Public Works, from 4,742,183 *l.* to 5,358,730 *l.*; Law and Justice, from 1,951,217 *l.* to 2,354,311 *l.*; Police, from 2,163,163 *l.* to 2,358,540 *l.*; and Education, from 342,593 *l.* to 561,175 *l.*, being a total increase in these five departments only of upwards of 2,000,000 *l.* in three years.

Even this rate of increase is likely to be exceeded in future. The necessity for increasing the pay of the subordinate establishments of the Western Presidency has only just declared itself, and we have only lately become fully aware of the extent of the prospective demands upon us connected with the army. The liberal additions to the pay and retiring allowances of military and medical officers arising out of the amalgamation of the army will entail a heavy expense for some years to come. Large boons have been conferred upon the European troops in extra clothing and improved rations, and still larger upon the native troops in increased pay to native officers, accelerated good conduct pay to native soldiers, and more liberal rates of compensation for dearness of provisions; and, behind all this, is the heavy additional charge upon the whole of the commissariat and ordnance expenditure, arising from the general increase of prices.

The permanent branches of revenue are, no doubt, steadily improving, but this ground of confidence is much shaken by the anxious and precarious state of the opium revenue. A new feature has been developed in the bearing of the general rise in agricultural wages and profits upon this branch of revenue. The cost of production has increased from 1,449,465 *l.* in 1861–62, to an estimated amount of 2,254,161 *l.* in 1864–65; and it appears from information which has been lately received, that a further amount of 477,100 *l.* will be required. Therefore, whatever may be the gross annual amount of the opium revenue, which is itself extremely uncertain, it must be taken subject to an additional dimunition of 1,281,000 *l.* for increased cost of production. I will not enter further upon this subject at present, because I shall shortly have to submit my opinion upon it in detail.

After all the discussion that has taken place about new direct taxation, it can hardly be necessary to enter again upon the question. I entirely agree with my predecessor, that "the faith of the Government is morally pledged not to continue the income tax beyond the period of five years, for which it has been imposed, unless absolutely necessary;" and I am of opinion that the establishment of confidence between Government and people, and the successful progress of our future administration depend more upon this faith being kept than upon anything else. A license tax upon trades and professions is a modified income tax, and we had better renew the income tax outright on the ground of necessity, if such necessity exists, than keep the word of promise to the ear and break it to the hope by the substitution of a license tax for the income tax. Moreover, a license tax, as an Imperial tax, would be very unequal, vexatious, unproductive, and expensive to collect. On these grounds Lord Canning shrunk from enforcing it after it had been enacted at a time when the finances were supposed to be in a very uncertain state. It is suited only for municipal taxation, where people know each other's means, and willingly contribute to objects in which they are immediately interested.

The inequality of taxation between the rural and town population is not so great as his Excellency the Commander in Chief supposes; for the land revenue, which the agriculturists pay, is what neither they nor their ancestors ever enjoyed. It is the Government share of the produce, the *hákimí hissa*. The Government is, in fact, joint proprietor with the agriculturist; and, as this hákimí hissa has been reduced of late years from half, or one-third, of the gross produce, to half of the net produce or rent, the ryot is more than ever exempted from taxation in those provinces where middle men have not been interpolated between the Government and the peasant proprietor. There is, however, an opposite side of this question, which has taken firm possession of the public mind both in England and India; and it is proposed, simultaneously with the abolition of the income tax, to charge the inhabitants of towns with the cost of their police, which will be a relief to the Exchequer to the extent of about 500,000 *l.*, and will be combined with the firm establishment in India of the municipal system, a measure pregnant with advantages of various kinds.

In the main, therefore, we must look to reduction of expenditure, rather than to increase of taxation, in order to meet the coming exigency. The change of circumstances, which involves increased expenditure in one direction, allows of a reduction of it in another. We must compensate enhanced cost by improved administration. No exertion is spared to reduce expenditure in the civil departments. The new police establishment in every part of India has been under revision for two years past, and large savings have been made, while others are still in progress. Steps have been taken to balance the increase in the expense of collecting and assessing the land revenue by diminishing the number of subordinate treasuries and by other arrangements. The large annual charge for allowances to district and village officers is to be revised. The costly marine establishments are in course of reduction. The dockyard at Calcutta and the ordnance manufactory at Cossipore are under inquiry

inquiry. The account and audit system of the department of Public Works has been thoroughly reviewed, and placed upon what is believed to be a satisfactory footing. The general system of account and audit is now occupying the anxious attention of two commissioners from England, in conjunction with the ablest financial officers of this Government. The annual charge for interest has been reduced by 500,000 *l.*, and exertions are being made to concentrate and economise the cash balances, in order to render a further amount available for the payment of debt.

But here, as in England, France, and most other countries, the only important savings that can be made are in the military expenditure. The cost of the Indian Army, here and at home, is about one-third of the whole of our expenditure. The cost of the army is also rapidly on the increase, owing to causes which have been explained, and it is necessary to place limits upon this branch of expenditure in pure self-defence. If the State does not control the military expenditure, the military expenditure will overpower the State. I do not hope for any considerable diminution of the charge for the Army; my expectations are limited to preventing its undue growth, and to keeping it as nearly as possible to the standard of 12,000,000 *l.* expenditure in India, besides the home military charges, amounting to more than 2,100,000 *l.*, which cannot be reduced.

During the rise of our power in India, great armies were maintained by us to balance large organised native forces, kept on foot in the interior of India by Runjit Singh, Scindia, Holkar, Nagpore, &c. These native armies have now ceased to exist, with the exception of Scindia's, which has been placed under strict limitation. The Native States were particularly strong in artillery. On this essential point we have now a complete predominance. Such, indeed, is the absence of any artillery force capable of making head against ours, that I believe we have heaped up military means in this arm much beyond what is called for by reasonable precaution.

On our frontier, the only two Native States which could furnish any ground of alarm are Affghanistan and Nepaul. But it is notorious that, however formidable these powers may be in their mountains, they cannot attempt to stand before our regular infantry, cavalry, and artillery, in the plains. Dost Mahomed, within my memory, proclaimed a jihád,* and came down upon the Sikh force at Peshawur with all the strength of his kingdom, but he was worsted in the fight which ensued. The last time the Affghans met us in arms, their best cavalry fled before a British detachment from Gujerat to Khaibar. When the Nepaul Brigade was called to our assistance during the Mutiny, their capacity for conducting civilised modern warfare on the plains was seen to be below contempt. Of course, if we unnecessarily thrust ourselves into the mountains, as we did at Ambeyla, we shall suffer for it; but we may hope that this mistake will not be repeated in our time. Even in their best and strongest days, the Native States, whether in the hills or plains, were incapable of combination, and it is not likely that they will display a new capacity in this respect now that they are reduced in power, contracted in limits, and, for the most part, widely separated. If the Native States could ever have been tempted to turn against us, it would have been during the Mutiny. Instead of this, we saw the unexpected and happy result that these States, having so much to lose, were more to be relied on even than our own subjects.

Our military position is also greatly improved in another respect. The ultimate object of the European Army is to control the Native Force which we must maintain in certain proportion. The native, so completely outnumbered the European, element in our army, as to tempt the native troops to rise in mutiny. This state of things has now been reversed. The Native Force has been reduced within safe limits, and it has been disarmed against ourselves by being almost entirely deprived of artillery and arms of precision. Not only does our military force preponderate, beyond all comparison with former times, over anything that can be opposed to it, but this force can now be relied upon. Our greatest danger formerly was our military force itself. Now we have reason to hope that it is only a cause of safety.

The Commander in Chief expresses doubts of the fidelity of the new police, and observes that, contrary to the principle on which it was intended that this force should be based, an undue degree of homogeneity has been given to it. Having assisted in the formation of this force and in its subsequent revision, I venture to express an opinion which does not accord with his Excellency's view. The new police is strictly local both in its composition and organisation. The men are engaged in each district for the service of the district. As far as possible, they are inhabitants of the district in which they serve, and, at any rate, they have no personal connection with the police of any other district. There are, no doubt, certain general principles of police management which are common to all countries, and in this sense only the police are homogeneous. But the application of these general principles, through the addition of the important element of European supervision, was the main object of the change. I am persuaded that these local district forces, scattered over wide areas within each district, under their respective European officers, supported by well-paid, trusty, European, East Indian, and native subordinates, will be found, when the day of trial comes, far more reliable than the old native troops or police. If the whole population turns against us, the police will be absorbed in the general vortex, but I have no fear of their separately opposing us.

It remains to be considered how we stand towards our own subjects, compared with former times. As long as foreigners rule in India, there will never cease to be hostile scheming and speculation; and the people of India are so credulous and susceptible that

* Religious war.

Appendix, No. 14.

there will ever be a periodical renewal of sensational rumours. But there is a vast interval between speculation and action. The people have been disarmed through the whole length and breadth of Northern India. In Southern India, they have not seen war for several generations, and the population has become so completely unaccustomed to the use of arms that there is no part of Her Majesty's dominions where, with ordinary good government, the public tranquillity is so completely to be relied upon. Even the native military force there has acquired a civil character. A strong division at Bangalore, with moderate garrisons at Madras, Trichinopoly, and Cannanore, would control the whole southern portion of the Peninsula. The Hyderabad country is sufficiently garrisoned by the strong force at Secunderabad, with its reserve, already connected in great part by rail, at Poonah.

The present military establishment was fixed about four years ago, and it was then laid down that it was to be open to revision as soon as the then existing circumstances had been altered by the progress of railways and other improvements. Since that, the railway has been completed nearly through the full extent of the great Gangetic valley. In the South of India, it has been opened from Madras to the opposite coast, with a branch nearly completed to Bangalore, and another to Cuddapah; and, still further south, the interior has been tapped from the port of Negapatam to Trichinopoly. From Bombay, the Deccan has been deeply penetrated in two directions, and another line has been opened to Surat, Baroda, and Ahmedabad, with an extension about to be carried on to Deesa.

But the great change which has taken place since 1860–61, is that, owing to circumstances which could not then have been anticipated, an industrial direction has been given to the mind and energies of the native population to a degree almost unprecedented in history. Both in town and country, everybody is occupied in pushing his fortune; and the only people who complain are the servants of Government, who are confined to fixed salaries, giving them a much smaller command than heretofore over the necessaries and comforts of life. The Ambeylah affair was a satisfactory test of the real disposition of the country. The elite of our force was held in check for some weeks by an obstinate enemy, and reinforcements were sent forward from every part of Northern India. There was abundance of "rumours," but nobody raised a hand against us outside the Affghan hills. The true explanation was the mountain of cotton at Allygurh, waiting to be sent to Calcutta by rail. People took a secondary interest in what was going on upon the frontier, but their heart was in their cotton screws, and in the fabulous sums reported to be made by merchandise of various descriptions. The salt trade was suspended, because everybody had "gone into" cotton, and the usual supply of bearers was not to be had for the hospital and other establishments of the reinforcements in progress to the North-West. They were earning wages such as their fathers never dreamt of, and would not respond to the call of the commissariat.

On the many occasions on which the distribution of the Army has been considered under Lord Elgin's and Sir J. Lawrence's Governments, there have always been regiments of European infantry and batteries of artillery which were unappropriated in the sense of their not being required at any particular station, and the difficulty was to know where to put them. The recent survey of the force from Peshawur to Meerut must, I think, have made upon the whole Council a deep impression of the overpowering nature of the military means at our disposal in that part of India. I do not believe that there is any part of the world which is so strongly garrisoned.

The Commander in Chief alludes to the increased difficulty of recruiting the European force. Surely this is an argument for husbanding it to the utmost, in the interest, not only of India, but of the whole Empire.

I do not, of course, enter into the question of the proportion of artillery required according to military rules. This branch of the subject has been worked out in detail by Sir W. Denison and others. As there are many thousand British troops at Gibraltar, Malta, and the West Indies, &c., which have not a single field gun, I believe it will be found that the proportion of field artillery to infantry and cavalry in India much exceeds that of the rest of the British Army. Under any circumstances, the greatest part of the Army must be left in garrison. The real question, therefore, is what proportion of artillery is necessary and available for that section of the Army which is likely to take the field.

Although I differ from the general view taken by the Commander in Chief and Sir R. Napier, there are several particular points on which I agree with them. I have given Sir R. Napier all the support in my power in his proposal to extend the East India and Punjab line of railway to Peshawur. Nothing could be more effectual, not only to strengthen our military position, but to develope the abundant commercial elements, and to supply a corrective to the exclusive military character of that frontier. I participate in the Commander in Chief's doubts as to the expediency of maintaining unsupported, uncontrolled, bodies of Native Horse in Central India. I am clearly of opinion that there was no necessity whatever for retaining any Native artillery in the Madras Presidency, and I doubt the necessity of keeping up a body of Native artillery, with their necessary reliefs, for service at Aden. I am also clearly of opinion that the separate Punjab Native Force ought to be placed under the same military command as the rest of the force in the Punjab, but this is connected with further changes in the military administration, upon which I could not enter without diverting attention from the immediate object in view, viz., making such a moderate reduction of the European infantry and artillery on the Indian establishment, as it would be safe to make at the present time and under the present circumstances of India.

Simla, 22 July 1864. *C. E. Trevelyan.*

Appendix, No. 14.

BOMBAY SUPPLEMENTARY ESTIMATE FOR PUBLIC WORKS.

MINUTE by the Hon. Sir *C. E. Trevelyan*, K.C.B., Member of the Council of the Governor General, 11 January 1864.

I WILL endeavour to state the case of the Bombay Supplementary Estimate for Public Works as concisely as possible.

The appropriation originally made for Public Works in the Bombay Presidency for 1863-64, irrespective of railways, was 48 lakhs of rupees, to which 10 lakhs were added when the general budget for the year was settled, making in all 58 lakhs.

After this, three lakhs were appropriated for the Kurrachee Harbour Works out of the reserve of 23,80,000 rupees for reproductive works, and the Government of Bombay was authorised to submit a Supplementary Budget for 5½ lakhs of rupees, of which 2½ were to be for permanent buildings for European troops out of the reserve of 30 lakhs assigned for that purpose, and the remaining three lakhs were to be for civil works out of the reserve of 23,80,000 rupees for reproductive works.

In my budget statement I announced, with the sanction of the Government of India, that any funds beyond the 4,995,100 *l.* appropriated for public works, that could be expended with advantage on cotton roads, or works of irrigation or navigation, or any other useful works during the year, would be granted, and this pledge was affirmed by the Secretary of State when he laid the Indian Budget before the House of Commons.

Upon this, the Governor of Bombay in Council held a conference at Poonah with the chief revenue officers, and the officers of the highest rank and experience in the public works and railway departments of that Presidency, which met almost daily for the 27th of July to the 10th of August, and discussed in detail the best arrangements for carrying on and completing the public works which were not already fully provided for in the Budget.

The result of this conference was, that the Bombay Government requested the sanction of the Supreme Government to a Supplementary Estimate for 56,19,903 rupees, subject to a deduction of 2,74,385 rupees from local funds and from a re-appropriation of funds already authorised in the yearly budget, making, after allowing for the 5,50,000 rupees previously authorised, a net additional demand of 47,95,518 rupees.

In answer to this, Colonel Strachey, by desire of the late Governor General, informed the Government of Bombay on the 25th of September last, that no orders could be given upon their communication, but that when proposals should be made in conformity with the instructions previously issued, whereby a Supplementary Estimate to the extent of 5½ lakhs of rupees had been called for, they would receive attention.

To this a rejoinder was received from the Government of Bombay, dated the 13th of October last, urging a reconsideration of the proposals submitted in the Supplementary Budget, and stating the additional fact that a portion of the expenditure provided for in it was actually in progress. The words of the Government of Bombay on this point, are:—

> 6. This Government, acting on the faith of this assurance, and after full deliberation with his Excellency the Commander in Chief, the Quartermaster General's Department, and the various superintending and executive officers, fixed on such buildings as were considered of an emergent character, and have directed the immediate commencement of the works.
>
> * * * * * * *
>
> 26. So confident was this Government that they were acting in accordance with the wishes of his Excellency the Governor General in Council and of Her Majesty's Secretary of State for India, that they issued orders to all officers concerned to the following effect, in forwarding to them copies of the Supplementary Budget.
>
> 1st. All works provided for in the Supplementary Budget which are actually in progress, or have been specially sanctioned for immediate execution, should proceed.
>
> 2nd. All works for which favourable contracts can be obtained will be immediately sanctioned, on application being made to Government.
>
> 3rd. All military works under the sub-head "Accommodation for Troops," which are not already in progress, should be at once put in hand, and considered as emergent.
>
> 27. It will now be impossible to defer such works without positive loss, or without breach of faith with contractors and with workmen and others whose services have been engaged, and they must therefore proceed even if a portion of the ensuing year's assignment be anticipated.

At this point the greater part of the papers came into my hands, and the correspondence in the Appendix took place between Sir B. Frere and myself by telegraph.

It will be seen from the concluding telegram, that a reduction of about 9½ lakhs of rupees can, in Sir B. Frere's opinion, be made on the Supplementary Estimate, by omitting some of the least pressing works, whereby that Estimate would be reduced to 38½ lakhs; and

Appendix, No. 14.

that 10 or 11 lakhs may be expected from the sale of land and marine stores at Bombay within the current year.

It will be impossible, within the limits to which I must confine myself, to give a complete analysis of the works included in the Supplementary Estimate, but I may state some leading heads.

About 11½ lakhs is for military works, of which 2½ lakhs is for the new gunpowder and gun-carriage factories, which have been already separately sanctioned; another 2½ lakhs are for the Bombay Harbour defences, in addition to an equal sum previously sanctioned in the ordinary Budget Estimate; and 6½ lakhs are for minor works for the accommodation of the troops, consisting of 44 items, of which the largest expenditure within the year on any one work is 60,000 rupees, and the highest estimate for completing any one work is 1,25,000 rupees.

The only work included in this portion of the Estimate, which seems to require the special attention of the Government of India, is the sum of 2½ lakhs for laying the foundations of the Middle Ground Battery in Bombay Harbour. There is a mass of sunken rock immediately in front of the most vital part of the city and anchorage of Bombay, and the Government of Bombay attaches the utmost importance to raising it above water at the earliest possible period, so as to place guns upon it. There are no papers before me to show the total aggregate cost of completing this battery, but the entire estimated cost of the whole of the fortifications is 47 lakhs. According to the best judgment I can form, I agree with the Government of Bombay that it is extremely desirable to construct a powerful battery in the position indicated with as little delay as may be.

The next general head of the Supplementary Budget is Civil Buildings, consisting of 17 items, the largest of which is 48,000 rupees for additions to the Mint. The amount required within the year is 1,67,920 rupees, and the estimated expenditure to complete all the works is 4,30,423 rupees.

The next general head is Works of Improvement, 37,04,353 rupees.

The first item of these is three lakhs for harbour works at Beitkool and Sedasheogur, provisionally sanctioned in the Budget Orders for 1863-4, in the following words:—

"His Excellency the Governor General is most desirous of doing everything to assist the Government of Bombay in carrying out these works, and will be prepared to assign needful funds when it is known what amount is required. Meanwhile, any expenditure that takes place must rest on the responsibility of that Government, and may be provided from the reserve fund; to allot any specific sum now appears objectionable."

It is now stated by the Bombay Government that "definite projects for the works needed, which consist chiefly of a lighthouse, an iron pier, an iron bridge, and a considerable length of stone wharfage, will shortly be submitted. In the meantime, as both the Home and Local Governments are pledged to the speedy establishment of this cotton port, the works must proceed."

The next item is 5½ lakhs for the Apollo and Moody Bays Reclamations at Bombay. This I have since proposed should be separately sanctioned.

Next come 16, Irrigation Works, for which the aggregate demand is 8,46,645 rupees; of these, estimates have been submitted for 9, *i.e.*,—

	Total Estimated Cost.	Already Expended.	Required for 1863-64.
	Rs.	*Rs.*	*Rs.*
Works on the Girna River, in Candeish - - -	5,74,796	- -	63,334
The Krishna Irrigation project - - - -	5,09,988	- -	1,00,000
Mitrow Canal - - - - - - - -	4,22,937	2,57,033	20,000
Canal from Sukkur to Shadadpoor - - - -	7,29,820	- -	1,25,000
Cuts in Bed of the Narra - - - - -	1,91,153	13,273	1,20,000
Four minor projects - - - - - -	1,25,792	44,739	68,311
		Rs.	4,96,645

The Girna and Krishna Works have been recently sanctioned.

The Mitrow Canal was sanctioned by the Secretary of State in 1860, and it will be seen that a large outlay has already taken place upon it. The canal from Sukker to Shadadpoor was sanctioned in December 1861, but no funds have ever been provided for it.

The cuts in the bed of the Narra, and the four minor projects, are brought forward on the authority of the Government of Bombay.

No plans or estimates have yet been furnished for the seven remaining works, but the demand within the year is as follows:—

	Rs.
Yerla Irrigation project - - - - - - -	1,00,000
Tank near Sholapoor - - - - - - - -	1,50,000
Five other projects for which the aggregate demand is -	1,00,000

Then

Then follow 50 works under the head of "Communications," with an aggregate demand within the year of 19,73,355 rupees.

Of these, the following seven works have been already sanctioned, and provision has been made for them to a certain extent in the Budget Estimate.

The additional grants asked for are as follows:—

	Estimate.	Expended.	Sanctioned in Original Budget.	Additional Demand.	Total to be Spent within the Year.
Roads—	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Vingorla to Belgaum, by Parpoollee.	5,60,110	2,49,239	1,50,000	1,00,000	2,50,000
Sattara to Seerwul - - -	1,63,282	1,11,741	30,000	21,541	51,541
Seerwul to Poona - - -	2,99,806	1,19,982	50,000	1,30,000	1,80,000
Ahmedabad and Gogo - -	6,02,825	3,34,000	50,000	2,00,000	2,50,000
Bridges—					
On the Belgaum and Warna Road.	1,66,031	10,026	60,000	50,000	1,10,000
On the Sattara and Seerwul Road.	75,416	48,695	20,000	6,721	26,721
On the Bunkapoor and Hurryhur Road.	1,21,804	- -	30,000	30,000	60,000
TOTAL - - -	- -	- -	3,90,000	5,38,262	9,28,262

The next item is 4,13,677 rupees for the Agra and Bombay Road.

Of this, 2,08,913 rupees is for the portion of the road from Agra to Indore, and from that to Nargaum, the nearest point on the Great Indian Peninsula Railway, which is as urgent as any such work can be.

The remaining sum of 2,04,764 rupees is for that portion of the Old Trunk Line which is between Mhow and Malligaum.

Provision has, besides, been made in the Budget Estimate of the year for the two preceding items to the extent of 2½ lakhs.

The remainder of the road works, amounting to 9,66,488 rupees, are shown in the following Table:—

Items in Budget.	District or Classification.	Aggregate of Estimates.	Expended.	Demand.	Remarks.
	A.	*Rs.*	*Rs.*	*Rs.*	
85-7, 105-6, 113-4	North Canara and Dharwar, in connection with the port of Sedasheogurh.	1,49,830	41,892 1,00,967	88,331 50,000	No Estimates for road from Aukola to Butkool, for which 50,000 rupees is asked.
	B.				
	Sattara:—				
90, 91, 118, 119	*a.* Sattara to Warna River	3,37,015	2,54,860	82,155	
2, 93, 107, 117, 120	*b.* Koambarli (Mahar) and Wurrunda (Chiploon) Ghauts.	8,42,887	6,28,146	1,20,756	
	C.				
94, 121, 122	Barsee Tramway - -	5,99,689	50,901	1,58,385	The proposal for the tramway is under consideration here. The Government of Bombay has in the meantime sanctioned the road as a common railway feeder.
	Ditto Bridge - - -	- -	- -	50,000	No estimate yet furnished for the bridge over the Seena-road.

Items in Budget.	District or Classification.	Aggregate of Estimates.	Expended.	Demand.	Remarks.
	D.	*Rs.*	*Rs.*	*Rs.*	
95	Road between Poonah and Kirkee Railway Station.	39,097	- -	39,097	
	E.				
	Railway Feeders:				
109	*a.* Dhoolia to Chaleesgaum	- -	- -	80,000	Estimate promised.
110	*b.* Malligaum to Munmar	1,47,601	56,857	87,762	
108	*c.* Dhurrumtur to Koorjut	1,19,920	20,000	70,000	
	F.				
123	Finishing Bridges on the Road from Poona to Sholapoor.	80,673	7,000	65,000	This road is parallel to the railwa
	G.				
124	Bridge over Goar River on Poona and Ahmednugger Road.	1,04,650	- -	50,000	
	H.				
112	Road from Ahmedabad to Neemuch.	- -	- -	25,000	No estimate as yet.
	Total - - -	- -	- -	9,66,488	

No provision was made in the Budget Estimate for any of the works included in the preceding Table.

The Barsee Tramway and Bridge, at an estimated cost of 6 lakhs of rupees form the subject of separate communications from the Government of Bombay.

It will be seen that no estimate has been furnished of the total cost of three of the projects, including a long line of road from Ahmedabad to Neemuch.

Following these road projects there is a project for improving the navigation of the Indus near Bukkur, at a total estimated cost of 2,05,984 rupees, of which 44,320 rupees has been expended, and 40,000 rupees is asked for within the year. This project was sanctioned by the Government of India, but no provision was made for it in the Budget Estimate of the current year.

The last item under the head of "Communications" is 24,928 rupees for travellers' bungalows, which no doubt are necessary for opening the country to European enterprise.

Then there is an item of 3,000 rupees for constructing a telegraph office at Mhow, and of 31,353 for telegraph offices on the Mekran coast.

The next item is for 1,70,859 for machinery and stores required from England, the explanation of which is as follows:—

> Item No. 137 is for machinery and stores required from England for employment in the construction of public works; 70,859 rupees of the total amount was entered under letter (A.) for the purchase of a list of articles required by the late Chief Engineer at the Presidency (General W. Scott), and one lakh is necessary to establish a depôt of plant in the Southern Division of this Presidency to provide machinery, &c., for the prosecution of various works in progress, or to be undertaken.
>
> This depôt is to be tried as an experimental plan, it having been found that individual officers are in the habit of foregoing the use of mechanical appliances, owing to the difficulty they find in supplying themselves with, and adjusting the value of, expensive articles, the cost of which no one work is able to bear.
>
> It is intended that the depôt it is proposed to establish shall meet these cases. Expensive plant will be issued from it to officers requiring such aid, and received back when no longer wanted at a reduced value to cover depreciation. It will thus be seen that the first cost of the depôt will soon be recovered, and it cannot be doubted that the use of mechanical appliances, such as powerful pumps, lines of tramroad, &c., will very much lessen the cost of works, and that the depôt will speedily in this way effect savings far in excess of the cost of its establishment. The sum now asked for may, therefore, be regarded merely as an advance.

This

This item is probably included in the reduction of 9½ lakhs, which has been made by the Bombay Government. It is not a fit subject to be proposed for the first time in a Supplementary Estimate.

Then there is an item of 10,225 rupees for mathematical instruments required, in addition to the 20,000 rupees sanctioned according to the Budget Orders.

The next item is 271,398 for repairs, the explanation of which is that 20 per cent. was arbitrarily reduced from the sum entered in the original Budget Estimate for current repairs, and the remonstrances which have since been made by some of the local officers have been so strong and so well supported, that it has been found necessary to replace the amount.

The last item is 1,50,000 for Establishments, which is truly stated to be a moderate allowance for the additional agency required for the works included in the Supplementary Estimate.

This subject resolves itself into two questions; first, as to the regularity of the course adopted by the Bombay Government; and secondly, as to the course which it is proper for the Supreme Government to take.

The Government of India and the Secretary of State expressed their readiness to authorise any further expenditure on public works, beyond the Budget appropriations for the year, which might be shown to be practicable and beneficial; and the Government of Bombay responded by reviewing, in a full and detailed manner, all the works in progress or projected in any part of the Presidency, and recommending the further expenditure suggested by this review. So far the Government of Bombay appears to me to have taken precisely the course which its duty required. It may be objected that the amount asked for was excessive, but it must be remembered that there were great and urgent works of reclamation and fortification in progress at Bombay, and that the demand for roads to convey cotton and other produce to the coast, and for roads and irrigation works to mitigate the excessive prices of food, was at its maximum in that Presidency; and, at any rate, it was for the Government of India to judge how much it was able to give.

But the Government of Bombay took the further step of ordering the immediate execution of a large portion of the works without waiting for the sanction of the Government of India. Nothing short of an urgent exigency of the public service, involving consequences of serious loss or disaster if immediate action be not taken, can justify the exercise of such a discretion; and the existence of such an exigency is not even alleged. Such a practice is entirely subversive of financial control. Every Government in India might, with equal propriety, exercise a similar discretion, and the State would then become insolvent, and all sorts of projects would be commenced according to the views of the different Governments, without a possibility of revision.

The course to be adopted by the Government of India remains to be considered.

The first and most necessary thing to be done is absolutely to prohibit any more discretionary action of the nature of that above described.

As regards the works included in the Supplementary Estimate, some of them have been since specially sanctioned; while others had been previously sanctioned and provided for to a certain extent in the Budget Estimate, so that what has now been done has been merely to hasten the progress of an authorised work, which is in itself an end to be desired. There are other works which had been sanctioned by the Government of India, but no provision had been authorised for them in the Budget Estimate for the current year. About 23 lakhs of the total Supplementary Estimate of 56½ lakhs come under one or other of these three heads.

The circumstances of the expenditure upon the fortifications are exceptional, as explained at page 674 of this Minute.

As regards the remainder of the works, the nature of them, and the fact that in most cases their merits have been carefully sifted by the persons most competent to judge, raise a presumption that they are sound and beneficial projects; but of some no plans or estimates have yet been prepared, and on others the Government of Bombay has not received the report of its professional officers.

There is this additional embarrassment, that the Government of Bombay has ordered the commencement of some of the works included in the Supplementary Estimate, without saying which.

It has been already stated that the Supplementary Estimate for 56,19,903 rupees was reduced by local funds and reappropriations to 47,95,518 rupees, and it will be seen from Sir B. Frere's telegram, dated the 26th ultimo, that this may be further reduced, by omitting some of the least pressing works, to a net sum of 38½ lakhs of rupees.

The amount of 10 or 11 lakhs expected to be received from the sale of land and marine stores ought, properly speaking, to have no place in the calculation, because it ought to be realised at any rate, and to be credited to revenue; but, on a rough calculation of ways and means, it may be said that the net amount required for the works included in the Supplementary Estimates is 28 lakhs. Financially, therefore, the matter is manageable. As the expenditure on a large scale on public works rarely keeps pace with the estimates, I do not believe that the sum asked for by the Bombay Government will be spent within the year.

Notwithstanding the irregularity that has been committed, I cannot recommend that any general order should be given for stopping the progress of the works.

The Bombay Government should, I think, be directed not to commence any more of the works included in the Supplementary Estimate which have not been specially sanctioned, and to submit, without delay, a revised Supplementary Estimate of the works in progress,

Appendix, No. 14.

showing in reference to each, first, the total estimated cost; second, the sum expended previously to the present financial year; and third, the sum expected to be expended during the present year, distinguishing what may have been already sanctioned for some of the works in the original Budget Estimate.

(signed) *C. E. Trevelyan.*

Calcutta, 11 January 1864.

APPENDIX.

From the Honourable Sir *C. E. Trevelyan*, K.C.B., Member of the Council of the Governor General of India, to the Honourable Sir *H. B. E. Frere*, K.C.B., Governor of Bombay; dated 19th November 1863.

EVEN now a copy of Colonel Strachey's reply, of the 25th of September, has not been sent. I have telegraphed to him for it. Do not commence more works till you hear from us, and help me in my ways and means to the extent of your power by the sale of ships, and stores, and land at Bombay. There shall be no delay that can be avoided.

From the same to the same, dated 20th November 1863.

YOU see the bearing of what is going on upon the Punjab frontier, and of the general scarcity of coin throughout India, upon the means of providing for public works. Be so good as to send me an estimate, first, of the sum really required within the financial year to meet the most necessary and important of the services included in your Supplementary Estimate; and, second, of the sum which may be realised within the year from the sale of ships, and stores, and land at Bombay.

From Sir *Bartle Frere* to Sir *C. E. Trevelyan*; dated 25th November 1863.

YOUR telegram of the 20th just received, and shall be acted on with all despatch. I have no doubt of being able to meet your wishes.

From the same to the same, dated 26th December 1863.

REPLY to your telegram of the 20th ultimo. It is found that a reduction of about 9½ lakhs of rupees can be made on the Supplementary Imperial Budget of the Public Works Department, forwarded to the Government of India by that Department, by omitting some of the least pressing works. To meet the outlay on the most necessary and important works provided for in the Supplemental Budget, a grant, say of 38½ lakhs, is required in addition to all previous assignments. There are no ships for sale. About six lakhs may be expected from sale of stores, and between four and five lakhs from sale of land at Bombay within the current year.

BOMBAY SUBORDINATE CIVIL ESTABLISHMENTS.

MINUTE by the Honourable Sir *C. E. Trevelyan*, K.C.B., Member of the Council of the Governor General, 1 February 1864.

WE lately had before us the distressed state of the Madras Native Army, owing to the great increase in the price of the necessaries of life, and I remarked, in a Minute dated the 17th ultimo,* that this could not be dealt with as an exceptional case, for prices and wages were even higher in the Bombay Presidency than they were at Madras, and that if we merely increased the pay of the existing establishments, in proportion to the increase in the expense of living, the Exchequer would soon be insolvent. The true principle, I added, was that increase of pay should be coincident with reduction of numbers, which, for reasons alluded to by me, might be connected with a great administrative improvement.

We now have upon us the subordinate civil establishments of the Bombay Presidency, not without an intelligible hint that the exigency may hereafter extend to the covenanted officers.

The Government of Bombay has already adopted two measures of relief on its own responsibility.

As long ago as the 26th of September 1862, that Government authorised batta being issued at the established rate to public servants drawing 8 rupees per mensem or less, when bajree was less than 13 seers for the rupee. This has since been sanctioned by the Government of India.

And

See page 659.

And on the 12th of December last, the following temporary increase of salaries below 200 rupees was authorised, with retrospective effect from the first of that month, in all districts where grain was below 10 seers of 80 tolahs to the rupee, of the staple common food of the district:—

"On salaries from 200 rupees to 111 rupees, an increase of 5 per cent.
"On salaries from 110 rupees to 51 rupees, an increase of 10 „
"On salaries from 50 rupees to 31 rupees, an increase of 15 „
"On salaries from 30 rupees to 17 rupees, an increase of 20 „
"On salaries from 17 rupees and below, an increase of 25 „

"but no one should get under the present rate of batta allowed by orders of Government "to those receiving salaries up to 8 rupees per mensem."

The cost of this is estimated at 32,854 rupees per mensem, or 394,248 rupees per annum; but this does not include the establishments in Sindh, or those connected with the Post Office or Electric Telegraph. The total additional charge, therefore, cannot be estimated at less than from five to six lakhs of rupees a year.

In August last* the Bombay Government, acting without the knowledge or sanction of the Government of India, ordered the immediate commencement of numerous public works included in a Supplementary Estimate for 56 lakhs of rupees; and now it has, in like manner, committed us to what must be considered a permanent annual charge to the amount mentioned in the preceding paragraph. The financial administration of India will be impossible, if each local government exercises the discretion of incurring such liabilities as this. Example is contagious, and advantages secured by one province cannot easily be withheld from the rest. By this assumption of power, the regulation of the finances has been virtually transferred to the Government of Bombay, and it only remains for the Supreme Government to provide funds to meet any expenditure which the local government may think proper to incur. If the Government of India is to be responsible for the finances of the whole of India, its control over the income and expenditure must be of a real and substantive character; and it is one of the greatest merits of the budget system that, by means of it, this control may be maintained without interfering with the necessary freedom of action of the local governments.

But, however irregular this proceeding of the Bombay Government may have been, there can be no doubt as to the necessity of the relief afforded. This is proved merely by the fact that the increases of salary allowed by the scale are dependent upon the common staple food of the respective districts being dearer than 10 seers for the rupee, and it is fully confirmed by the tables of prices contained in the correspondence, and by the whole tenor of the information before us, whether derived from this or from other sources.

This temporary increase of salaries is intended by the Bombay Government only as a preliminary step to a larger and more permanent charge.

The concession of the scale was accompanied by the following announcement:—

"The Revenue Commissioners and all subordinate officers should, however, bear in mind "that so large an increase of salaries as is involved in the present rise of prices cannot be "given without a reduction of numbers, or some means of adding to the income of Govern- "ment; and they should, therefore, take into consideration how both or either of these ends "can be best attained, so as to be prepared, when the question comes before them in a more "general form, with proposals under both of these heads."

The proposal actually made by the Government of Bombay, is contained in the following passage of Sir B. Frere's Minute, dated the 11th of November last:—

"I would ask leave of the Government of India to revise all permanent Civil establish- "ments, when the rate of pay is less than 200 rupees per mensem, and to give immediate "effect to the revision, under the following limitations:—

"That without special sanction from the Government of India, the total annual "expense of each establishment or department shall not exceed the standard of "1857–58, plus any sums which may be at the disposal of Government from the "following sources:—

"1. Commutation for the services heretofore exacted from hereditary district "officers under the settlement now in progress.

"2. Deductions in police charges, which may be effected by throwing on cities "and large towns a part or the whole of their local police charge.

"I have proposed the limit of 200 rupees because it is the class who receive salaries under "that amount who suffer most, and to whom, therefore, it is most desirable to extend relief "without further reference.

"But I would not wish it to be supposed that Government is less alive to the necessity of "raising salaries above that limit, or that any class would be excluded from consideration of "their equitable claims to a proportionate increase. The case of covenanted officers, especially "at the Presidency, and of all drawing salaries above 200 rupees per mensem, will, however, "require to be put on a somewhat different footing from that of the lower and menial class "of Government servants, including the police, and we can hardly ask for the same discre- "tion in dealing with the higher salaries without previous report or reference, which it would "be only reasonable to ask for in the case of the lower classes of Government servants."

The

* *See* Minute of 11 January 1864, at page 673.

Appendix, No. 14.

The necessity for a permanent increase in the salaries of the lower class of public servants in the Bombay Presidency appears to have been established.

The main causes of the increase of prices are the great extent to which agricultural industry has been diverted from the production of food to that of exportable produce; the great demands made by the railways and other public works upon the already insufficient stock of labour in the country; and the stimulus which has been given to the consumption of food by the abundant means possessed by the body of the people, owing to these and other causes. The present excessive prices will, no doubt, be mitigated by the equalizing effect of railways; by the extension of cultivation; and by increased importations by sea; but the career upon which India has entered, forbids the idea of anything like a return to the former state of things. All other classes, except the subordinate public servants, have been elevated, and a corresponding improvement must be made in their condition if we would avoid great evils to come.

But the particular proposal of the Government of Bombay is inadmissible. The Government of India cannot divest itself of the responsibility of exercising its own judgment in reference to the revised establishments to be maintained. The standard of 1857–8 is the highest that could have been taken; and the sums expected to be received in commutation for the services of hereditary district officers, and the reductions in police charges by their transfer to municipal funds, are large and indeterminate elements, within the limits of which any numbers or rates of pay might be included.

The revision ought to be carefully conducted by the ablest officers who can be selected for the purpose by the Bombay Government, with immediate reference to two principles.

1st. To ascertain, by a careful scrutiny, how far the work itself is capable of being simplified, and curtailed by omitting unnecessary processes, consolidating official forms, and generally by expediting and abbreviating the transaction of business; and,

2nd. To ascertain what is the smallest number of persons by whom the work can be properly done after it has been so revised; what rates of pay are necessary to secure the services of competent persons; and what arrangements should be made in order that the public may have the benefit of a selection of the best candidates for employment.

Owing to the unlimited command of a cheap description of agency and to other causes, there has been great indifference heretofore in regard to these essential conditions of good administration. The great change which has taken place of late years in our public offices at home, has been quite as much due to the simplification and reduction of the work as to the improvement of the men; but in India the public offices are still encumbered with duplicate accounts, unnecessary statements, and circumlocutory forms of proceeding of various kinds; and ill-paid clerks, with a low standard of qualification, and rising by a fixed gradation, with the smallest possible stimulus from competition and promotion by merit, are engaged *ad libitum* to get through this waste work. At Bombay, duplicate establishments are maintained to keep the accounts both in English and Mahratta; but surely the knowledge of English has sufficiently spread in that Presidency to allow of their being kept in English only. When the work has been rendered worthy of educated persons, and the rates of pay and conditions of promotion have been so adjusted as to offer a fair professional career, we shall get a superior class of public servants, and the business will be better done than it is at present, by a much smaller number than are now employed.

As soon as any considerable portion of the subordinate establishments has been investigated and reported upon, the Bombay Government should communicate with the Supreme Government, in order that this important undertaking may proceed with a proper mutual understanding.

There is an urgent necessity for dealing at once with the subordinate civil establishments, because the cost of living is the principal element in fixing their remuneration; but as regards the higher situations held by covenanted servants and others, many different circumstances have to be considered, and it would not be advisable to enter at present upon this part of the subject, unless a consolidation of offices or other arrangements for the improvements of the public service should be proposed.

But I should ill perform my duty if I did not direct attention to a more extended view.

Owing to various causes, of which the great rise in wages and prices is only one, heavy demands for increased expenditure are coming upon us from various quarters. This year five millions sterling were appropriated for Public Works, irrespective of railways, and it is of the highest consequence that this rate of expenditure should be maintained. Besides this, there are demands for improvement in almost every branch of administration, involving in the aggregate liabilities of a serious kind. We have just sanctioned a sanitary commission for each of the three Presidencies, which, in establishments only, will cost two lakhs of rupees a year, and when they set to work to make their reforms, it is impossible to say what the outlay will be. The pay of the Madras Native Army and of the Bombay Civil establishments has to be at once increased, and this will have to be extended in some form or other to the remaining establishments in the southern and western Presidencies, and also at no distant period to the northern Lieutenant Governments. A heavy expenditure is also immediately impending for barracks and other accommodation for the European troops. In addition to all this, we have to keep a reserve to meet the expiration of the income tax on the 1st of August of next year. This is the most urgent demand of all, for our possession of the public confidence, and, consequently, the success of our future administration, depend upon our keeping faith with the people of India on this point, more than upon anything else.

The prospect is serious, and if the transition is not regulated by a firm and wise hand, on a general

a general view of all the exigencies of the case, we may yet drift into a state of financial disorganisation. If we are to meet the new exigencies of the present day, as they ought to be met, we must not be deterred by slight reasons from taking down the machinery which has served the purposes of the past. If we have the old and the new charges upon us together, we shall simply become insolvent.

I will illustrate my meaning by what has taken place at Bombay. Besides 66½ lakhs of rupees, previously appropriated for public works in that Presidency, during the current year, 16 lakhs have been sanctioned for the purchase of land for railway termini, and 38½ lakhs on a Supplementary Estimate for roads, irrigation, fortifications, barracks, &c.; and now we have a permanent additional charge of five or six lakhs of rupees for the Civil establishments, with a promise of more to come.

On the other hand, I had been told to calculate upon large savings from the abolition of the Indian Navy, but these were arrested by the re-appropriation of one portion of the ships as transports, and of another as gunboats, and by the consequent necessity of retaining the dockyard establishment. The reasons for hiring freight when it is wanted, instead of maintaining Government vessels, are well known; and as regards the gunboats, we can all see the advantage of having the two powerful ironclad floating batteries promised by the Admiralty; but the vessels which have been adopted from the Indian Navy, being imperfectly, or not at all, provided with steam, and carrying guns of inferior calibre, could not stand against American steamers armed with Dahlgreen guns, and, in the event of war, Bombay must still be guarded by ships of the Royal Navy. Again, the Guzerat Irregular Horse, which are neither police nor military, and are not wanted for either purpose, are still kept up at an annual expense of nearly two lakhs of rupees. The circumstances are fully explained in the extract from Colonel Bruce's Report of the Bombay Police, in the Appendix.

It is impossible that the finances can be conducted on such conditions as these. They are only examples of a class of cases, of which several have been already indicated by me to the Council in other parts of India. We shall not be able to bear the burdens which are coming, if we do not relieve ourselves of the unnecessary weight which is still pressing upon us. These remaining peccant parts of our financial system will, I trust, be considered with a determination to deal with them according to their real merits.

I also earnestly represent that our action in this matter should not only be decisive, but that it should be taken without unnecessary delay. In finance, time is quite as important as money. In fact, it *is* money. There can be no postponement of the new expenditures of various kinds, which are required for the public service. Reductions take a longer time to mature, and if, in addition to this necessary interval, other needless delay is interposed, our resources are exhausted by having simultaneously to bear the charge for the old and new establishments.

There are still two measures in reserve which are at once pregnant with great social and political benefits, and offer an unlimited scope for the truest economy. The first of these is alluded to in Sir B. Frere's Minute. I mean the transfer to cities and large towns of the cost of the police specially employed for them, combined with increased powers of self-taxation and self-government.

The other is the transfer to local funds administered by district officers or municipal bodies, of the charge of repairing the roads, and of other purely local works.

It is simply impossible, as stated by Mr. Laing, that all the local works which are required for this great continent, according to the continually rising standard of the public requirements, can be executed and maintained out of the Imperial revenue. Local agency and local interests, which are as multifarious as they are inexhaustible, must be increasingly drawn upon, and the Imperial expenditure must be gradually confined to the objects which are of common interest to the whole of India. The action of the local Governments is tending in a greater or less degree in this direction, but there is an urgent necessity for more speedy and systematic arrangements. It will be my duty to call more particular attention hereafter to this important part of the subject.*

Calcutta, 1 February 1864. *C. E. Trevelyan.*

APPENDIX.

EXTRACT from the REPORT of Lieut. Colonel *H. Bruce*, C.B., Inspector General of Police in India, on the Police Establishments of the Bombay Presidency; dated 12th January 1863.

45. I WILL now proceed to notice the Guzerat Irregular Horse at present stationed at Ahmedabad. It will be remembered that this cavalry regiment was originally near 900 strong; that the first intention was to incorporate it into the army, but orders from England threw it upon the police expenses. It was then proposed by Mr. Mansfield, the Commissioner, and now Chief Commissioner in Sinde, to reduce the corps to about 550 sabres; to disband all the rest of the police horse in Guzerat, and to employ this body upon the police duties of the districts of Ahmedabad, Kaira, Broach, and Surat.

46. The

* *See* the Resolution of the Government of India, dated 31st August 1864.

Appendix, No. 14.

46. The proposition was, however, negatived by his Excellency the Right Honourable Sir G. Clerk for reasons given at pages 207 and 208, Appendix H., of his Minute dated 11th October 1861.

47. But, with all deference, I would submit that these reasons appear to me to bear more a military and political character than a police one, and I entirely dissent from the maintenance of a body of 350 horse altogether at Ahmedabad, regularly officered as an irregular cavalry regiment, and both officers and men being in addition to, and apart from, the officers and men of the police force, horse and foot, of Ahmedabad and the surrounding districts.

48. Such a measure is decidedly contrary to the spirit of the orders of the Secretary of State, noted at foot of page 207 of the Minute above quoted.

49. I would further submit that there is not another district in all India that has, in addition to the European officers of police, and a body of 150 mounted police for district work, a corps of 360 cavalry, fully officered with—

1 Commandant;
1 Second in Command;
1 Adjutant;
1 Assistant Surgeon (besides the station civil surgeon), for purely police purposes.

I would therefore say that the exact number of men requisite for the duties detailed by Sir G. Clerk might be supplied by the police to the different departments upon payment, and that we cease to continue the maintenance of a cavalry regiment of 360 sabres, which is police only upon paper, because the Resident of Baroda requires a personal escort of 25 sabres, or the Resident of Pahlunpoor 12 sabres.

50. I am the more convinced in opinion that the Guzerat Irregular Horse is really viewed more as a military body than as police, from having lately seen that it took its place in the line at a review lately held before his Excellency the Commander in Chief, and manœuvred with the rest of the brigade. I do not think we can afford to maintain, under the name of police, a body of men with so little police work to do that they are able to form up as a regiment, and take part with the army in a military display. I, therefore, beg to recommend that steps be at once taken to reduce the Guzerat Irregular Horse, which would create a saving to the State 1,65,606 rupees per annum.

51. When this corps is reduced or abolished, there will still remain the following mounted police in the three districts:—

Ahmedabad	150	Sabres.
Kaira	120	„
Broach	100	„

Numbers ample, I conceive, for all the mounted police requirements of those districts.

Appendix, No. 15.

PAPERS handed in by Mr. *Harrison*. Appendix, No. 15.

BENGAL.

Government of India.—Financial Department.

Enclosure to Despatch, No. 267 of 1872.

From *H. L. Dampier*, Esq., Secretary to the Government of Bengal, Revenue Department, to the Secretary to the Government of India, Financial Department (No. 2359); dated Calcutta, the 3rd June 1872.

I AM directed by his Honour the Lieutenant-Governor of Bengal to submit the statements and report called for in the Resolution of the Financial Department, No. 4510, dated 23rd October 1871, regarding certain of the imperial, and all the local, taxes levied in these provinces.

2. The figured statements are divided into three parts, namely:—

Part I. Imperial taxes.
Part II. Local taxes other than municipal.
Part III. Municipal taxes.

Land Revenue.

3. As much of the information required by paragraph 4 of the Resolution regarding land revenue is given in Part I. of the annexed tabular statements as is available. The revenue demands for 1857–58, 1870–71, and for 1871–72, are compared province by province in the first statement under this part. It would be hopeless to attempt to give the proportion of the gross produce of the land which is taken as land revenue in any part of these provinces, statistics being wholly wanting, and the efforts to obtain them being as yet in the earliest stage of progress. In most parts of Bengal rent and revenue have long been taken in money rather than in the shape of a proportion of the produce; it is believed that this has been so from times anterior to British rule. Farther, as in most other parts of India, wherever rent was or is taken in kind at all, it is so taken on grain only, or on what may be called normal crops; the more valuable crops paying special money rates. It may, perhaps, be said that in Bengal when rent is taken in kind the proportion paid by the lowest class of cultivator is generally one-half of his rice crops; but even if in any part of the country this could be assumed to be the general rule, and if it could also be assumed that the revenue payable to the State is equal to half or one-fourth of the rent paid by the cultivator, still it could not be said that the revenue is equal to one-fourth or one-eighth of the gross produce, because that would leave out of sight all the more valuable crops, such as sugar, jute, mulberry trees for silk, and so on. Probably the revenue in Bengal is but a small fraction of the gross produce; it may be a sixteenth or twentieth part, or even less. It will be long before any estimate approaching to tolerable correctness on this point can be given.

4. As regards the proportion of the revenue to the rent, it is also impossible at present to give any trustworthy information, none bearing on this point having been rendered in Bengal during the last half century or more. Not only are the assets of estates not known, but there are so many gradations of sub-tenures that scarcely any return gives the real assets of the land. Each item of assets of an estate on the Collector's books may be, and commonly is, the quit-rent of a sub-tenure, which again is composed of inferior sub-tenures, and so on through several gradations. Coming to the cultivators, we find them composed of numerous classes, enjoying various degrees of privilege; from the highest, which may occupy almost at a quit-rent, down to the lowest, which pays a full rack-rent. The valuation preparatory to the road cess now in progress in some districts will, it is hoped, give the assets down as far as the payments of the lowest classes who enjoy any privileges, and the better cultivators, and eventually we may hope to have this information for the whole country.

 5. In

Appendix, No. 15.

5. In a recent communication the Collector of Burdwan, the district which is assessed the highest of all, mentions that the returns as yet received for the road cess show that the collections of landowners in that district are equal to about four times the Government revenue in permanently settled estates, which pay above 100 rupees of revenue per annum, and to about eight times the Government demand on smaller estates.

6. Meantime it can only be said that the permanent settlement was made in the last century on the principle of taking for the State ten-elevenths of the net assets. A generation later the rule was to take four-fifths. Later again, and down to the time when the present inquiry commences (1858), two-thirds of the rental was the rule. Orissa and some scattered tracts throughout Bengal and the dependent provinces were settled on that principle. For some years past one-half the rental has been the rule, but no great province under this Government has been settled on those terms; only outlying tracts and estates. Orissa was settled on the two-thirds principle about 35 years ago, and the settlement having been renewed at the former revenue after the famine, while cultivation has extended, and prices and rents have risen, the revenue of that province is now, no doubt, less than half the rental.

7. In Bengal and Behar the revenue has been guessed to be about one-fourth of the rent; but this is a very vague conjecture, and the disproportion is probably in most districts greater. Great changes have taken place since the settlement. In some parts of the country, and in some estates, the rental is ten, twenty, fifty, or a hundred times the revenue. In some districts, such as Dinagepore and Burdwan, which were much developed and heavily assessed at the time of the permanent settlement, the proportion is much smaller than the last-mentioned figures; in some few estates the profit is not very large.

8. In Assam the settlement is ryotwaree; certain rates are fixed and taken from the cultivators individually, and no proportion of revenue to rent is laid down. The Lieutenant-Governor's impression is that the greater part of the true rent is there taken as revenue; and since the rates are high in proportion to the state of the country, the cultivators frequently abandon their old cultivation and take up new fields. Some land, however, is more valuable, paying only the standard rates when the rack-rent would probably be larger.

9. As regards the rate of revenue per acre on the land, no comparison of the periods can be given, owing to the absence of statistics. Most of the districts have been surveyed at different times, but in only a few is the cultivated roughly distinguished from the uncultivated area. An attempt may be made to give the rate at which the revenue fell on the cultivated area in these districts at the time of survey. Of course, the revenue remaining fixed, while cultivation increases the revenue rate continually decreases. An approximate estimate of the cultivated area has been obtained in some other districts. A statement of revenue rates on cultivated area, furnished for the most part by the Board of Revenue, is appended, marked Section 2 of Part I.; but the Lieutenant-Governor is not very confident of its exact accuracy, the statistics furnished in Bengal not being yet very trustworthy. This statement is, however, the best to be had at present, and probably roughly represents something near the truth. The result, it will be seen, is to give the average revenue rate on each acre of cultivation at about 10 annas or 15 pence at the time when the districts were surveyed. The Government is actively engaged in the attempt to increase its statistical knowledge.

* No. 1347, dated 27th March 1872. (*See* page 696.)

10. In connection with this subject, a letter* which has lately been addressed to the Government of India in the Agricultural Department, setting forth generally the causes of the increase of land revenue in these provinces since 1856–57, will perhaps be considered of interest; it is appended as Annexure A. to this report.

11. It will be seen from the general statement that the land revenue of 1871 72, according to the latest data, was expected to exceed that of 1870–71 by 1,29,415 rupees, or 12,941 *l.* Of this 5,464 *l.* are the result of the re-assessment and settlement of new territory taken from Bhootan after the last campaign, and now attached to the Cooch Behar division; the remainder of the increase is scattered throughout the province, but is principally to be found in the districts of Midnapore, Darjeeling, Shahabad, Moorshedabad, and in the Dacca Division. It is obtained by the settlement of estates, of which the temporary settlement has expired, by the assessment of alluvial formation, and by the identification of lands the property of Government, of which possession had been clandestinely held by private individuals.

In addition to the land revenue shown in these returns, certain sums have been realised by the sale of Government estates and credited as land revenue, by which the land revenue collections have been raised to nearly four millions sterling. No estates are being sold at present, the question being under consideration.

Forest Revenue.

12. Section No. 3 of Part I., shows the forest revenue.

13. The amounts levied in 1857-58, and 1870–71, are set down at 996 rupees, and 1,03,249 rupees respectively, and the sum estimated for 1871-72 is 1,65,000 rupees.

14. Licenses to cut and bring out timber from Government forests are granted only in Chittagong and Sikkim Divisions.

In

In Chittagong the rates levied vary from 1½ annas to 3 annas per cubic foot, or *Rs.* 4. 11. to *Rs.* 9. 6. per ton, for the superior woods, according to quality, inferior woods being paid for by the log at 12 annas, or the post at 3 annas; bamboos at 10, 5, and 2 rupees per thousand, according to description; and canes at 1 rupee per thousand. Before wood can be cut and taken out at these rates, the cutter is required to pay 8 annas per head for each coolie taken up to the forests, and 5 rupees for a distinctive marking hammer.

In Sikkim, for sâl wood obtained from the forests, a rate from 12 rupees to 15 rupees per tree is levied, and for the same wood at salè depôts a rate of from *Rs.* 1. 4. to *Rs.* 1. 8. per cubic foot. For firewood and bamboos the rates are 1 rupee per mensem for each ticket for cutting the former, and 1 rupee per hundred for the latter. Grazing dues are levied at 8 annas for each bullock and 4 annas for each cow per mensem.

The subject of forests has only lately received serious attention in the Lower Provinces, and new arrangements are being gradually matured. The extensive forests of Assam are being explored, and conservancy arrangements are contemplated. The various forest trees have been classified, and the rates that have been prescribed for felling them are 6 rupees for each tree of the first class and 3 rupees for each in the second class. A special rate of 8 rupees per tree is levied in the case of sâl, while trees of the third class are exempted altogether. No tree can be felled, the girth of which, at a height of 5 feet from the ground, does not measure, for first class timber, 5 feet; for second class, 50 inches; and for third class, 4 feet. In the case of first class timber, the height of the trees must not be less than 15 cubits or 22 feet 6 inches. By these restrictions it is hoped to confine felling to mature trees only.

It cannot be said that the administration of the department is yet at all satisfactory.

Excise Revenue.

14. The statement of excise revenue is numbered Section 4 of Part I.

For the sake of comparison the duty paid on imported wines and spirits and other imported liquors has been included on this statement, although it technically belongs to the customs. It is stated separately in the first head of revenue, so can be separated if desired.

The figures for 1856-57 are given in this statement in lieu of those for 1857–58, in which year the mutiny disturbed the conditions of this branch of revenue. From the statement it will be seen that the revenue has more than doubled itself during the period under review. But a very large proportion of this increase is due to the introduction of the opium monopoly into Assam, where the cultivation of the drug had previously been free, and where the consumption is great among Indo-Chinese races.

Farming system.

For many years before 1840 the excise revenue, either by entire districts or by known divisions of districts or pergunnahs, or for separate articles of excise, was farmed out under Clause 2, Section 19, Regulation X. of 1813, which provided that "an advertisement shall be issued, signifying that proposals will be received for a certain time for the farm of the duties leviable on the manufacture and sale of spirituous liquors, and the highest offers, provided they be accompanied with good and substantial security, shall be accepted." Section 8, Regulation VII. of 1824, extended a similar power of farming to the sale of tarí, putchwye, and drugs.

Direct management by the District Collector was the exception while the farming system lasted.

15. The annual excise revenue derived from all articles, declined from 19 lakhs in 1829–30 to less than 15 lakhs in 1837–38, and this falling off was ascribed to the defective and inefficient system of raising it which had prevailed. To remedy this, the Government in 1840, as a partial experiment, entrusted the superintendence of this branch of public revenue in the districts round Calcutta to a separate officer, designated Commissioner of Abkaree; and in 1844, a second Abkaree Commissioner was appointed; the two officers dividing between them the greater part of Bengal proper.

I reviewing the management of the owo special Commissionerships in 1849–50 and 185ⁿ–51, the Government and the Board of Revenue came to the conclusion that this branch of the public resources (which then am unted to 30,85,660 rupees) was susceptible of very little further development. The special agency was therefore abolished, and the excise management replaced under the Commissioners of Divisions and Collectors of Districts. From the time of the Abkaree Commissioners, however, the system of farming out the monopoly of the sale of excisable articles in large tracts of country was condemned, and the arrangements were made direct by the Government officer with each shopkeeper. They were made either by farming out each shop to the best offerer, which was the system then most general; or on the fixed duty system, which was then almost confined to rum manufactured on European method.

Fixed duty and daily tax system.

On the fixed duty system, a fixed rate is charged at the distillery for each gallon of spirits, as on the same system as in England, and it is similar in regard to other articles.

The system applied to country spirits before 1859–60, may be looked upon as an intermediate stage between the system of selling large monopolies by auction, and that of charging a fixed duty on the quantity consumed. Under this system a rough estimate used to be made of the capacity of a local still, and of the requirements of the locality which it was intended to serve, and with reference thereto a fixed minimum price was put upon the still and shop attached to it, in the shape of a rate per day or per month, on payment of which the still and shop were licensed for the manufacture and sale of country spirits; the payment of the tax was irrespective of the quantity actually sold. Although under this system the privilege was not avowedly put up to auction, the rate at which the

Appendix, No. 15.

excise officer fixed the tax was no doubt checked, and to some degree regulated by practical experience of the sums which those engaged in the trade were prepared to offer. If he put the rate too high, no one would accept it; if he found that other respectable men were willing to give higher rates, he would conclude that he might raise his terms; but instead of putting the monopoly up to auction, the Collector was thus enabled to regulate his license according to his discretion. Gradually, however, the exercise of this discretion appears to have died out; and it is found that now, in the outlying districts, in which (as explained in the next paragraph) the fixed duty system cannot be worked, the revenue is levied on the principle of a monthly tax, the rate payable monthly by each shop being settled at the beginning of the year by auction, or something nearly approaching to it, and the license for the year being given to the person who offers to pay the highest amount of monthly tax, provided that he be in other respects unobjectionable.

16. In 1856–57, the revenue from imported spirits, wines, and liquors, from country rum, and from spirits manufactured in a few Government distilleries, as well as from ganja and opium, was levied on the fixed duty system, but that from country spirits manufactured elsewhere than at the Government distilleries, that is by far the greater portion of the consumption, and from all other articles, was levied on the daily tax system.

Country spirits.

17. The principle of the fixed duty on the quantity actually consumed being so much more sound than that of the daily or monthly tax, the extension of the former system was pushed on as much as possible by the Governments of Sir John Grant and Sir Cecil Beadon. The manufacture and sale of country spirits was brought under this system in all districts, except the most backward and sparsely populated, in which it was found impossible to exercise the close supervision which is essential to the working of the fixed duty system. Indeed, it has been found that the Government went farther in this direction than was safe; and it has now been necessary to revert in some outlying districts to the daily tax system, under which every licensed shopkeeper becomes in his own interests a detective officer. Throughout the rest of Bengal, country spirits are made either in licensed private distilleries, or in what are designated central or public distilleries, which are inclosures belonging to Government within which private distillers are allowed to set up their own stills. The duty is levied at rates fixed with reference to the circumstances of each district. The maximum rate of duty fixed on the gallon of London proof strength is 3 rupees, this being the rate in the most advanced districts; the minimum is 1 rupee. The duty on the spirit is levied on the standard scale in force in the particular district, in proportion to its actual strength as compared with London proof. Besides this a license fee is levied for permission to sell country spirits by retail. Where the stills are set up and worked in a Government distillery, the distiller also pays a trifling fee per gallon for the use of the premises.

The fixed duty system was very unpopular with the distillers. The introduction of it led at first to some decrease of revenue and to much apprehension; the revenue has, however, more than recovered itself, having amounted in 1870-71 to 18,80,111 rupees (including 91,974 rupees of distillery fees), and in 1871–72 to 19,65,448 rupees (including 1,11,387 rupees of distillery fees) against 16,29,662 rupees in 1856–57.

The Government is now trying in some places the experiment of fixing the number of shops required in any locality to afford reasonable facilities for obtaining liquor, and also the minimum rate of license fee to be paid by each, and then putting each up to auction separately. This is only the mode of licensing shops for retail sale of spirits which have previously paid the still-head duty.

Ganja.

18. Ganja is a preparation from the hemp plant of a highly exciting character. A fixed duty is levied from ganja on a system which is much facilitated by the circumstance that the plant which produces the best drug is cultivated in a manner successful for this purpose only in the Rajshahye District, and in part of the adjoining district of Bograh. The cultivation is free from taxation, but the growing crop is kept under supervision of the excise officer. The rules require the quantities cut and stored for sale to be registered. The cultivator can sell only to a licensed purchaser. The wholesale purchaser having received his license from the excise officer of his own district, countersigned by the Rajshahye officer, exports the drug under excise supervision, and stores it in his own district still under excise supervision. It is not until he passes it out of his store to the different retail dealers that the excise officer levies the duty at the fixed rate. Up to 1853 the duty on ganja was levied either (1) by selling by auction the privilege by sale, or (2) by charging a fixed duty for each shop under the system described as the daily or monthly tax system.

From that year a fixed duty of 1 rupee per seer (of about 2 lbs.) was levied, and the retailer was bound to pay the amount of tax on a certain minimum quantity per month, whether he succeeded in disposing of it or not. That was the system prevailing in 1856–57.

In 1859–60 the duty was raised to 2 rupees a seer, but levied only on the actual quantity passed out by the wholesale dealer to the retail shopkeepers.

In 1869 the system was introduced of charging duty at three different rates, according to the manner in which the plant was prepared and packed, so as to equalise the incidence of the tax on the exciseable portion of the plant. The rates fixed were 4, 3, and 2 rupees per seer. These rates were in force till the beginning of the current year, from which time the rate on that which paid 2 rupees has been raised to 2–8 rupees per seer.

The effect of the measures taken with regard to ganja has been to raise a very much higher revenue while checking the consumption of the drug. In 1856–57, above 17,000 maunds (of 40 seers each) were exported from the producing districts, and 4,66,965 rupees of

of duty were paid on the drug; in 1859-60, the exportation had risen to 21,240 maunds, and the revenue to 6,44,963 rupees. In the following year (the duty having been raised from one to two rupees) the exportation fell to 13,000 maunds, but a still higher revenue, 6,77,000 rupees, was raised. During the last five years the consumption has averaged about 11,000 maunds, and the revenue bout 10,00,000 rupees (100,000 *l.*).

Lately the tendency appears to be to a rise in the quantity sold, but this is being watched, it being the policy of the Government to raise the duty, from time to time, to as high a rate as is feasible without giving rise to an illicit trade.

Opium.

19. Opium has largely contributed to the increase of revenue since 1856-57. The figures shown in the statement refer only to excise opium consumed within the limits of these provinces. The quantity estimated to be required for the consumption of the year is supplied by the opium agent to the excise officers of districts, from whose store the retail vendors purchase it direct.

No fee is charged for the licenses to sell; but the vendors are bound to leave their books open to the inspection of the excise officer, and to furnish any information he may require. This is with a view to detecting and checking the sale of illicit opium by vendors under colour of their licenses, which of course authorise them to sell such opium as they obtain from the excise officers, on which they have paid the duty.

The licensed vendors themselves fix the price at which they supply the drug to the consumer; competition between them keeps the selling price down to its proper level. No more than five tolah weight (about two-thirds of an ounce) may be sold to one person at a time.

The price at which opium is to be supplied by the Government,—in other words, the amount of duty to be levied in addition to the actual cost price,—has been a subject of constant discussion. In 1851-52 it was sold at different rates, varying from 10 to 16 rupees, the price being lowest in those districts which offered the greatest facilities for obtaining the drug illicitly. The rates in different districts were raised from time to time, and now the selling price is fixed at 22 rupees in all the districts of Bengal Proper. In the eight producing districts of Behar, and in the adjoining district of Puneah, it is sold at prices varying from 20 to 16 rupees. Out of these prices it is calculated that 7-4 rupees per seer, have lately represented the actual cost to Government of the manufacture and transport of the drug, the rest being duty.

20. The bulk of the increase of revenue is, however, owing to the prohibition of the cultivation of the indigenous poppy in Assam. Happily the ordinary Indian population do not show a disposition to use opium largely, that taste being confined for the most part to the Indo-Chinese races. In Assam, the consumption of opium was universal among men, women, and children, and up to 1860 they were unrestricted to growing their own drug. In that year its cultivation was prohibited by law; and the Assamese, like the Bengalees, restricted to the consumption of duty-paid opium supplied from the Government factory through the excise officer of the district. The selling price has been gradually raised from the year 1860 to 22 rupees, at which it now stands. In 1856-57, and the following years, while the poppy was cultivated, the annual consumption of duty-paid opium stood at about 280 maunds, yielding about 50,000 rupees; after 1860 it sprung up rapidly, till it reached 1,900 maunds in 1865-66, yielding 9,90,000 rupees. An increase in the selling price from 14 to 20 rupees per seer, and again to 22 rupees in 1866-67, has arrested the growth of consumption, which has gradually declined to 1,572 maunds, yielding a gross revenue of 13,82,929 rupees, and a net revenue of 9,27,191 rupees. As there is no reason to believe that illicit opium finds its way into consumption in Assam in large quantities, this decrease is a true subject of congratulation. The habit of consuming opium is losing its hold on the people; the good effects are already to be seen, and it is hoped that in the next generation they will be still more marked, as children are no longer allowed what has become an expensive indulgence, and so they will grow to maturity at least without suffering from its deleterious effects, and without having contracted the inveterate habit.

Tarí, Patchwye, and minor articles.

21. The minor articles of excise are tarí or toddy, the juice of the toddy palm; putchwye, a beer, made from fermented rice; charas, bhang, and majum, which are various preparations from the hemp plant; madad and chundoo, preparations of opium. On these the revenue has, since the abolition of the general farming system, been levied by licensing shops on the daily and monthly tax system. In the cases of madad and chundoo, the license-holders are bound to obtain the opium for their preparations directly from the store of the excise officer of the district, and not from licensed opium vendors. For the sale of fresh tarí (as distinguished from fermented), which is not stored, and which is obtained by simply tapping the trees, licenses are given at the nominal rate of one rupee per mensem, during the season when the sap of the palm is rising.

Assessed taxes.

22. The statement, Section 5 of Part I., shows the number of assessees and the revenue derived from the assessed taxes from 1860-61. The character and rate of tax in each year is shown in the column of remarks. There is a striking disparity between the number of assessees in 1864-65 and in 1869-70, although in both of the years the character of the tax was the same, and the limit to the incomes falling within its scope was identical (a minimum of 500 rupees a year).

There is reason to believe that the assessments of 1869-70 were made with unusual severity, and this is evinced by the reduction in number in the assessments of the following year. This cause is, however, insufficient to account for the excessive difference between the

Appendix, No. 15.

numbers of 1864-65 and 1869-70. The question is still under investigation. There can be little doubt that many who were liable to assessment escaped it in 1864-65, for it will be observed that in 1868-69 under the certificate tax on professions and trades (of which the taxable minimum was the same), the number of assessees was within 300 of the number in 1864-65, although persons deriving their income from the land or from investments on the funds, who were liable to the tax of 1864-65, were exempt from the certificate tax. The same two classes were also exempt from the license tax of 1867-68.

Tribute or contributions from States.

23. The annexed statement, Section 6 of Part I., gives the sum now collected as tribute or contributions from the so-called tributary States under the Government of Bengal; the amounts have remained unchanged since 1857-58. Most of these are not really Native States, being British territory which the chiefs govern under special laws and with certain limitations, but as they are dealt with on the footing of quasi-States, and are not included in the ordinary civil returns, they are shown in this separate return.

Taxes and rates for local purposes.

24. Part II. of the figured statements consists of taxes and rates imposed for local purposes, on which information is required in paragraph 11 *et seq.* of the Resolution. Toll collections have also been included as desired. The different classes of these rates and taxes are brought together in the accompanying statement. The following is an account of each tax and of the purposes to which it has been devoted.

Two regular cesses only are levied on land revenue, viz., the "one per cent. road fund" in certain limited areas and the "zemindari dawk fund" all over the country.

One per cent. road cess.

As regards the first of these funds, in the district of Shahabad, it has been the practice from the time of the permanent settlement to levy a cess of one per cent. on landholders for the maintenance of roads and for other local purposes. Since 1862, under orders of Government of India, the cess has been extended to all States not previously permanently settled, which come under settlement. On such estates a rate of one per cent. has been imposed in addition to the land revenue assessment. But in these provinces the area so assessed is comparatively small. The additional demand is leviable by the same process as arrears of revenue on the estate. The proceeds of the rate are devoted to the construction of roads and improvement of communications. The total sum levied during 1870-71 amounted to 37,569 rupees, and about the same amount is estimated for 1871-72.

Zemindari dawk cess.

25. As regards the zemindari dawk fund, under Regulation XX. of 1817, zemindars were required, in the fulfilment of an old obligation, to keep up district postal lines between the police stations and magistrates' courts, and they appointed and paid the runners employed in the transport of letters. With the actual appointment of runners, or the payment of the establishment, the authorities had no concern. Great and repeated complaints, however, were made to Government at various times by the magistrates as to the inefficiency of these dawks, and it was alleged that the runners did not receive their pay regularly, the law not empowering the authorities to compel zemindars to pay regularly.

In order, therefore, to provide for the better execution of this service, performance of which was incumbent on the zemindars, Act VIII. of 1862 was passed. The object of this Act was to enable the magistrate of each district to organise the service on an efficient footing, to give him control over the establishments, and to empower him to raise the funds necessary for the maintenance of these establishments from all zemindars, farmers, and other persons paying revenue direct to Government in respect of lands situated within the district, instead of leaving those persons to provide for the service themselves. The magistrate is required to fix and apportion rateably, on or before the last day of December, subject to the approval and revision of the Commissioner, the total sum necessary for the next ensuing year for the efficient service of the dawk in his district. The Act does not in any way interfere with the Imperial postal regulations. The amount levied under this head in 1870-71 was 2,35,773 rupees, and in 1871-72 the estimate was 2,47,219 rupees.

Embankment cess.

26. In two or three districts a sort of cess is levied on certain landholders to meet the expenses of the embankments which they are bound to maintain, the amount expended by public officers for their benefit being rateably distributed, but these accounts have not been submitted to the Government, and details are not yet available. The whole subject of these embankment obligations is in a very confused state, and the Bengal Legislature is now dealing with it.

27. The remarks in the first part of this letter, under the head of land revenue, will show that it is not possible in these provinces to estimate, with any approach to accuracy, the per-centages which the cesses on the land bear to the gross produce and net assets of estates, as required in paragraph 14 of the Financial Resolution, but it may be assumed that the proportion is almost infinitesimally small.

Moturpha tax.

28. The moturpha tax is a tax levied only in certain permanently-settled estates in Pergunnah Chowsa of the Shahabad district, which were received by transfer from the Ghazeepore district in 1819. It has since been realised as it was when the pergunnah belonged to Ghazeepore. The authority under which this tax was first levied in Ghazeepore cannot be traced. The annual collection is *Rs.* 178. 4. 2. only.

This tax is levied on tradesmen and other professional men, artificers, &c. It was in fact one of the most ancient and universal taxes in India. It has been successively abolished in each province, and was supposed to have been finally abolished for all India, when the income tax was introduced, by the law introducing the latter tax. The moturpha in these few villages of Shahabad is thus a very curious relic of an old system, and a proof how difficult

cult it is to enforce any general system when we have little knowledge of local details. It seems probable that the moturpha had been abolished in Shahabad before the transfer of these villages from Ghazeepore, while it was abolished in Ghazeepore after the transfer; consequently, it never was abolished in these villages, and no one connected with the Government knew of its existence till the Lieutenant Governor, in sifting the accounts through the Account Department, discovered this strange item, and found that the old moturpha was being regularly levied in these villages as a local tax.

Tolls.

29. The tolls which are levied on roads, ferries, canals, and rivers, for the purpose of constructing and keeping up communications are separately shown. The road tolls are devoted to the maintenance of roads; the ferry tolls, first to the maintenance of the ferries, and any surplus to the maintenance of the roads and providing accommodation for travellers. The tolls on certain canals and rivers are primarily applied to the heavy expenses connected with the maintenance of the canals and the keeping open the rivers; any surplus goes to the general maintenance of the means of communication.

The proceeds of all these funds have hitherto been credited to an amalgamated road fund, being transferred to that head at the end of each year; the Government distributed the available funds by annual allotments according to the requirements of each district, as shown in the estimates submitted by the Commissioners of Divisions; but from the commencement of the new financial year most of these funds have been made strictly local to the districts where they are raised, and are managed by the local committees.

Municipal taxes.

30. Part III. of the figured statement shows the municipal taxes.* The bazaar funds are levied in three towns only, Maldah, Durrung, and Nowgong. They are applied to keeping up the bazaars. They will now be amalgamated with the town funds.

* Town funds.
Bazaar funds.
Cantonment funds.
Chowkeedari funds.

No rates on consumption or octroi duties are raised in these provinces. In Calcutta rates are raised on houses, on carriages and horses, and on trades and professions.

31. Certain towns are assessed under Act IV. of 1864, Bengal Council. The principal receipts are derived from rates on houses, buildings, and lands, under Section 26 *et seq.* of the Act. There are also in some towns rates on carts, carriages and horses. The rate is levied at different per-centages of the rental in different municipalities; the maximum fixed by Section 26 being 7½ per centum on the annual value, except in one town of Dacca, where 10 per cent. is allowed, but has not been imposed.

The tax is devoted to the purposes of police and conservancy within the municipality.

32. The town funds under Act VI. of 1868 consist of assessments levied "according to the circumstances and the property protected" of the persons liable to the same under Section 44 of the Act. The limit of the tax is thus defined in that section: "The total sum to be raised by such tax in any year shall not exceed the sum which would be produced by an average rate of *Rs.* 2. 4. per annum for each holding; and the amount assessed in respect to any one holding shall not be more than 7 rupees per mensem.

This tax is also devoted to the police and conservancy purposes of the towns which are under the Act. The Act was intended for, and has been extended to, those rural towns which are not sufficiently advanced to benefit by the Municipal Act IV. of 1864 above referred to.

33. The chowkeedari or watchman's funds are raised under Section 10, Act. XX. of 1856, generally by an assessment on the circumstances and property to be protected of persons liable to the assessment, and the amount is limited as follows by Section 2, Act XXII. of 1871:

"If the tax be an assessment according to the circumstances, and the property to be protected of the persons liable to the same, the aggregate sum shall not exceed the average of 2 annas per mensem (1½ rupees per annum) for each house, and the amount assessed in respect of any one house shall not be more than the pay of a chowkeedar of the lowest grade. If the tax be a rate on houses and grounds, it shall not exceed 5 per centum of the annual value thereof."

The proceeds are applied to payment of the police.

34. Act VI. of 1870, Bengal Council, has for its object the reform of the village police of the Lower Provinces, which was considered to be in a disorganised state. Under its provisions the village police were to be brought under one uniform system of a force remunerated by money payments, and to be maintained distinct from the regular police. For the more efficient management and supervision of this force the Act provides for the appointment in each village, or union of villages, of a committee or punchayet, to whom is delegated, under the general control of the magistrate of the district, the duty of appointing and maintaining the village watch, of supervising this work, and of securing the regular payment of their monthly wages. The lands hitherto appropriated to the maintenance of watchmen were to be made over to the landholders on payment, in perpetuity, of half the present annual value. The Act, however, has only been introduced experimentally in a few places, and returns have not yet been received. It is not intended further to extend it, as it is proposed to incorporate it in a new Municipal Act, from which the appropriation of the service lands to the landholders has been omitted.

[redacted] fund is raised under Sections 14 and 15 of Act XXII. of 1864, [redacted] Act XX. of 1865, referred to in the preceding paragraph,

Appendix, No. 15.

graph, to any military cantonment. The funds raised are expended for police and for conservancy purposes, and for the general improvement of cantonments.

36. A Bill is now before the Legislative Council of his Honour the Lieutenant Governor, which has for its object the consolidation of all the municipal laws mentioned above, and the increase of the powers entrusted to municipal bodies, who will under it have the option of selecting out of several alternative forms of taxation. It will also somewhat widen the objects to which local bodies may apply these funds, including primary education.

District Road Cess Act.

37. It will be observed from the foregoing statement that no new taxes or rates have been levied in these provinces in 1871–72. But the Act, called the District Road Cess Act, passed in 1871–72, enables district bodies to impose a cess on immoveable property for the purpose of making and maintaining roads and canals and other means of communication. Under it the maximum rates which may be levied are as follows:—

On lands, mines, quarries, &c., one-half of an anna in the rupee of the annual rent or profits.

On dwelling-houses estimated to be of the actual value of—

	Yearly Cess.
	Rs. a. p.
Not less than 100 rupees, but less than 500 rupees -	– 1 –
Not less than 500 rupees, but less than 1,000 rupees -	– 3 –
Not less than 1,000 rupees, but less than 2,000 rupees -	– 4 8
Not less than 2,000 rupees and upwards - - -	3 for every 1,000 rupees, or part thereof, of estimated present value.

Shops and buildings used for purposes of trade, whose estimated present value is more than 25 rupees and less than 100 rupees, will pay a yearly tax of one rupee.

The local representatives, after estimating the requirements of each year, will strike rates not exceeding those above given.

A valuation being preliminary to rating under this law, no cesses can be levied for some time; but the Act has been introduced into several districts and the valuations commenced, and it is expected that some districts may be ready for assessment before the end of the present year.

This will be a new rate for local purposes on the rural populations, while the more general extension of municipal self-government and rating may add somewhat to the total of rates levied from the urban populations.

38. Following the precedent of other countries and the practice of former times, by which the landholders were bound to keep the roads and ferries passable and to mend the ways, it was thought just and expedient that local improvements of the nature of roads and communications should be borne by land and other immoveable property. That property chiefly benefits by such improvements. And as regards the rural districts, it was considered that a rate on immoveable property fulfilled the instructions of the Secretary of State, that such local taxation should be equally imposed on all property "accessible to the rate." It was deemed that personal property was not in country districts accessible to such a rate.

On the other hand, in towns, where the objects of local taxation are of a more general character, and personal means are more accessible, the taxation will be of a more personal character and more designed to touch all kinds of property and income, moveable and immoveable alike.

PART I., SECTION 2.

Appendix, No. 15.

STATEMENT showing approximately the Rate of LAND REVENUE per Acre of Cultivation in certain Districts of the Provinces of Behar and Bengal.

Name of District.	Approximate Rate per Acre of Cultivation.	Source from which Information is derived.
	Rs. a. p.	
Tirhoot	– 7 11	Board of Revenue and Collector.
Sarun	– 13 1	Ditto - - ditto.
Champarun	– 4 9	Ditto - - ditto.
Shahabad	– 14 6	Ditto - - ditto.
Gyah	– 7 8	Survey of 1842.
Hazareebaugh	– – 4	Ditto of 1860.
Monghyr	– 9 7	Board of Revenue and Collector.
Rajshahye	1 – 2	Ditto - - ditto.
Rungpore	– 7 3	Ditto - - ditto.
Maldah	– 7 7	Survey of 1848.
Moorshedabad	– 15 5	Ditto of 1853.
Burdwan	1 10 –	Collector.
Bancoorah	– 10 2	Board of Revenue and Collector.
Nuddea	– 13 6	Ditto - - ditto.
Jessore	– 9 2	Survey of 1856.
Dacca	– 5 10	Board of Revenue and Collector.
Fureedpore	– 6 1	Survey of 1859.
Backergunge	– 14 2	Ditto of 1861.
Sylhet	– 3 10	Board of Revenue and Collector.
Mymensing	– 5 11	Ditto - - ditto.
Tipperah	– 12 6	Survey of 1862.
Bulloah or Noakhally	– 10 6	Ditto of 1864.
General Average - - *Rs.*	– 10 –*	

* This gives the general average of the cultivated districts of Bengal and Behar to be about 10 annas, say 15 *d.* per cultivated acre. But some of these returns are from old surveys, and the present rate on an increased area of cultivation would be less.

H. L. Dampier,
Secretary to the Government of Bengal.

Number.	Name of State.	Amount now Collected.	Number and Date of Paper on the Authority of which that Amount is Collected.	REMARKS.
		Rs. a. p.		
1	Cooch Behar - - -	67,700 15 –	Treaty of 5th April 1773.—*Vide* Volume 1, page 151, of Aitchison's Treaties, Engagements, and Sunnuds, relating to India and neighbouring countries.	
			Chota Nagpore Tributary Mehals.	
		Rs. a. p.		
2	Sirgooja -	1,891 11 –	2,666 11 – Under a settlement, nominally, quinquennial, made in February 1825, but which remains in force up to date.	Jushpore and Udeypore were originally feudal dependencies of Sirgooja; the tributes received from all the three were, therefore, formerly shown in one item against Sirgooja. Jushpore still pays its tribute through Sirgooja. In April 1826, the feudal chief of Udeypore dying without issue, the estate was for some years made over to his half-brother, Dhiraj Singh. This man conducted the affairs of the State in the most unsatisfactory manner, and being eventually implicated in a murder case, was imprisoned for seven years. The estate was then managed by Government for several years; but in 1860 it was bestowed on Rajah Bindessuree Persad Singh, Deo Bahadoor, C. S. I., under orders of the Supreme Government, quoted in column 4, "as a reward for his very loyal and energetic exertions" during the Mutinies. From this time Udeypore became a distinct tributary estate, the Rajah paying his tribute *direct* to Government, and Sirgooja receiving credit for the same.
3	Jushpore -	775 – –		
4	Udeypore -	533 5 –	533 5 –	
		3,200 – –		
5	Gangpore - - - -		500 – – Under a settlement, nominally, for five and four years, made in 1828 and 1820 respectively.	For the early history of Udeypore, *see* Bengal Government Proceedings (Political) of 17th May 1860, Nos. 6–7, 12, 15–16.

H. L. Dampier,
Secretary to the Government of Bengal.

Appendix, No. 15.

(Annexure A. referred to in para. 10 of preceding Letter.)

From *H. L. Dampier*, Esq., Secretary to the Government of Bengal, Revenue Department, to the Officiating Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce (No. 1347); dated Calcutta, 27th March 1872.

I AM directed to acknowledge the receipt of your letter, No. 2-169, dated the 10th ult., requesting the preparation and submission of a statement showing the districts under settlement in Bengal in each year from 1856-57 to 1870-71, with a memorandum of the fiscal results, and enclosing a tabular form for adoption, with such modifications as the revenue system of the province may render necessary.

2. Returns cannot be submitted in the exact form called for, because there are no settlements of districts in these provinces made and reported in the form prescribed.

The districts of Orissa would properly have been so treated, a 30 years' settlement having expired; but, in consequence of the famine, the term of settlement was extended for another term of 30 years at the former revenue by Act X. (B. C.) of 1867.

3. In Assam, again, the settlement is ryotwaree, and made from year to year in accordance with the quantity of land cultivated. What is called a new settlement took place there lately; but it was only a revision of the rates to be paid by each description of land, leaving the revenue for each year to be settled annually.

4. In the districts of Chota Nagpore the greater part of the land is permanently settled with great zemindars or rajahs at what is now a mere quit-rent; but there are some more remote tracts not permanently settled, where a new settlement has been concluded with a considerable increase of revenue.

5. The small outlying division of Cooch Behar is composed partly of the territory of the native rajah of that name, which is now in British charge, and partly of British districts. Of the latter the old district of Goalpara is held permanently by rajahs on small quit-rents, and a small part of Julpigoree is permanently settled. The remainder is composed of the lately-developed district of Darjeeling and of the Dooars, or submontane tracts taken from Bhootan and attached to the Goalpara and Julpigoree districts, causing a comparatively large increase of revenue.

6. In one of the districts of Behar (Shahabad) a considerable increase of revenue was obtained after the mutiny, consequent on the confiscation and re-settlement of the great estate of the notorious rebel Koer Sing.

There has also been considerable increase in Behar, in consequence of the settlement of the alluvial accretions, which either fall to Government or are settled with the adjacent landholders. Where permanently settled estates are swept away, the old revenue is lost; but where new-formed tracts are found, or land which has emerged from the river becomes solid and valuable, a revenue commensurate with modern values is obtained. Hence there is a gradual increase of revenue from this source.

7. The province of Bengal Proper is, as is well known, permanently settled, and there can be no great increase of revenue. But in most districts there are, or have been, in the hands of Government, considerable estates which have lapsed, have been purchased in at sales, have been recovered from the Soonderbuns or other unsettled tracts, or have in one way or other come into the hands of Government. On these estates, after they have been managed and nursed for a series of years, an increase of revenue is obtained, which gradually adds to the rent-roll.

The Government have here also the same right to revenue from alluvial accretions which has been obtained in Behar, although the rights of Government do not appear to have been so systematically enforced.

8. Again, there are some outlaying districts of Bengal to which considerable additions have been made. The district of Cachar is almost a new creation, and considerable tracts not permanently settled have been brought under settlement in Sylhet and Chittagong. In these extreme eastern districts the system is very much ryotwaree. A portion of the Midnapore district is not permanently settled; consequently, periodical increases have been obtained, and a considerable increase is now expected from a new settlement.

9. A statement is now submitted showing the area and revenue of the several provinces of Bengal, and the revenue for each of the years 1856-57 to 1870-71 inclusive, with the total increase and revenue in the last year of the term, as compared with the first.

10. It will be observed that, from the various causes enumerated, there has been an increase in Bengal of about 35,000 *l.*, and upwards of 60,000 *l.* in Behar, of which last nearly half is in Shahabad alone, and is mostly due, as has been explained, to the confiscations

confiscations consequent on the mutiny. In Orissa the revenue has remained nearly stationary.

To Chota Nagpore and Cooch Behar a considerable increase has been added.

In Assam only has there been a very large increase. That country was for a long time rather a political dependency than a British possession; and when it came into the hands of Government, after long devastation by the Burmese and hill tribes, a scanty revenue was collected in a very rude and primitive fashion. A ryotwaree settlement was gradually made, under which the land revenue has much progressed, and latterly the province has been much opened out.

Steamers run in considerable numbers on the Berhampootra; the tea cultivation, though it has not materially added to the land revenue (the grants for it being nearly rent-free), has led to immigration and increased demand for food grains, and the prices of the staple products have altogether much increased.

It was consequently found possible, three years ago, to adopt revenue rates nearly double those which previously prevailed. This operation has been attended with the drawback that the area held under settlement has been very considerably diminished, much land having been thrown up in some districts; but, notwithstanding, the land revenue has been increased from 128,000 *l.* in 1867-68 to 208,000 *l.* in 1870–71, which is an unusually rapid increase.

11. In addition to the general statement now submitted, five separate statements are also forwarded, giving details of the districts in Orissa and Assam, and of the increase of revenue in the districts of Shahabad, Lohardugga, and Singbhoom, in which there have been considerable re-settlements during the period from 1856-57 to 1870-71.

The Bhootan Dooars being a new acquisition, of which the first settlement is still in hand, a separate statement is submitted regarding it, but the present revenue of the Dooars amounts to 1,80,797 rupees.

12. With regard to the revenue management of principal provinces, Bengal and Behar, I am to explain that up to last year it had been the practice for the Board of Revenue and the officers subordinate to them to settle in perpetuity all estates not previously so settled, which they considered fit for such settlement, and all alluvial accretions to old estates; but the present Lieutenant Governor has put a stop to this practice, pending further consideration.

Appendix, No. 15.

AJMERE.

From Colonel *J. C. Brooke*, Officiating Chief Commissioner, Ajmere and Mhairwarra, to the Secretary to the Government of India, Financial Department (No. 157); dated 8th March 1872.

IN reply to your office letter No. 1416, dated 22nd February 1872, I have the honour to forward copy of a letter (No. 439), dated 14th ultimo, from the Deputy Commissioner, Ajmere, enclosing statements of local rates and taxes referred to in paragraph 11 of Financial Resolution No. 4510, dated 23rd October 1871.

From Captain *H. M. Repton*, Deputy Commissioner, to the Commissioner, Ajmere (No. 439); dated 14th February 1872.

I HAVE the honour to acknowledge the receipt of your docket No. 176, dated 18th ultimo, and in reply to forward a comprehensive statement of all the Imperial and local cesses or rates levied in this district, which, I hope, will answer in full all the requirements of the Government Resolution, No. 4510 of 23rd October 1871.

2. The information formerly given was only for paragraph 13, as it is laid down in paragraph 8, that the rest of the information was to be supplied by the local accountant general in communication with the chief revenue authority, *vide* this office, No. 81, of 6th January 1872, in reply to yours of the 26th December 1871, No. 1536; and as for the information required in paragraph 12, and those subsequent to it, the Comptroller General had already communicated with the treasury officer, Ajmere, so that almost all the information was sent up, though through different channels. The only additions now made are as per paragraph 7, and recourse had to be made to the Neemuch Office records for 1858–59, and that the municipal items have now been given in more fuller details than before, so that, on comparing the present statement with each paragraph of the Resolution, I hope we will find that all the questions have been carefully replied to.

Endorsed by the Commissioner of Ajmere (No. 389); dated 16th February 1872.

COPY of the above, with the Statements in original, forwarded to Chief Commissioner in reply to his, No. 20, dated 13th January 1872.

N.B.—The information called for in paragraphs 4 and 14 of Resolution is not ascertainable, though information has been given which it is hoped will answer the purpose.

Transfer of the Government of the Indian Territories to the Crown, showing the Amount of the Produce of each Rate or Tax, prepared agreeably to Government of India, Financial Department Resolution, No. 4510, of 23rd October 1871.

Appendix, No. 15.

PUNJAB.

Government of India.—Financial Department.

Enclosure to Despatch No. 267, of 1872.

From *L. H. Griffin*, Officiating Secretary to the Government of the Punjab, to *R. B. Chapman*, Esq., Secretary to the Government of India, Financial Department (No. 373); dated Lahore, the 4th April 1872.

No. 9674, dated 28 March 1871, from the Accountant General. No. 771, dated 1 Feb. 1872, from the Secretary to Financial Commissioner.

WITH reference to the Resolution of the Government of India in the Financial Department, No. 4510, dated 23rd October 1871, I am desired to forward a statement furnishing the required information regarding Imperial rates and taxes levied in the Punjab before and after the assumption by the Crown of the direct Government of India, together with copies of the explanatory letters noted in the margin.

2. The statement of local rates and taxes will follow.

From *R. Taylor*, Esq., Officiating Accountant General, Punjab, to *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab (No. 9674); dated Lahore, the 28th March 1872.

I HAVE the honour to acknowledge the receipt of your No. 298, dated 23rd instant, and to submit herewith the return of Imperial rates and taxes called for in the Resolution of the Financial Department of the Government of India, No. 4510, dated 23rd October last.

2. This return shows, in juxtaposition, the actuals of 1856-57 as reported by the Accountant General, North Western Provinces, by whom the accounts for that year were prepared, actuals of 1870-71, agreeing with the Revenue and Finance Accounts of this Office, and the latest Estimate (based on 11 months' actuals) for 1871-72, under the following heads:

1. Land Revenue.
2. Tributes.
3. Forests.
4. Excise.
5. Assessed Taxes.

3. As regards the rates at which the taxes are levied, I beg to invite attention to Letter No. 771, dated 1st February, from the Secretary to the Financial Commissioner, giving very full information on this point, with copy of which you appear to have been furnished.

No reply has been received from the Conservator of Forests to a requisition for similar information; possibly it is difficult to furnish it with any precision, and this is in a measure anticipated in paragraph 6 of the Financial Resolution under reference.

4. Forest revenue of 1870-71 has, however, at the request of this office, been given by the Conservator in the following detail:

I.—Revenue of forests belonging to British territory.
II.—Revenue from forests taken over from native states.
III.—Revenue from rukhs taken over from revenue authorities.
IV.—Receipts on account of timber specially purchased for supply to State Railways, &c.

This division seems best calculated to furnish the Parliamentary Committee of Inquiry with the information it has called for. Items II., III., and IV. had no existence in 1856-57, and Item I., therefore, shows to what extent the revenue then realised has since increased.

5. The figures shown against Item III. in 1856-57 may, perhaps, be questioned. They are made up of "grazing dues," and are by the Accountant General, North Western Provinces, classed under forests, but ought probably to be transferred to land revenue. The transfer of rukhs to the Forest Department is even now incomplete, and it would consequently appear to be incorrect to class grazing dues as forest revenue in 1856-57.

Should this view be taken by his Honor the Lieutenant Governor, the return might be altered in your office before being forwarded to the Financial Department.

6. It has not been found practicable to detail "excise" in the classification prescribed by the Financial Resolution: details given are those prescribed for the public accounts.

Some further information might be obtained from the revenue reports and statements of 1870-71; but these unfortunately do not agree with the accounts rendered by this office.

7. I find it impossible, without very great delay, to comply with paragraph 8 of the Resolution. The Financial Commissioner's letter, No. 771 (already quoted in paragraph 3), does not give the "amounts of produce of each tax," but the revenue reports do.

8. As regards 1856-57, no comparison is practicable, as the Delhi Division was under the North

North Western Provinces Government then, and it has been ascertained that the Board of Revenue issued no revenue report for that year. Appendix, No. 15.

For 1870–71 such a comparison is possible; and as it is likely that a comparison may be made by the Committee, it may be as well to notice the difference at once.

	Rs.
9. At page 2 of the revenue report, the Financial Commissioner gives the total collections on account of fixed demand as -	1,86,20,928
while the accounts of this office show - - - - -	1,84,25,091
Difference - - - *Rs.*	1,95,837

Possibly, however, the Financial Commissioner includes "service commutations" (not separately noticed in revenue report) in his figures; and, if so, 1,39,254 rupees of the difference disappears.

	Rs.	*Rs.*
At page 5, miscellaneous and fluctuating revenue is given as -		11,57,193
While the accounts show—	*Rs.*	
Fluctuating - - - - - - - -	4,71,263	
Miscellaneous - - - - - - -	6,55,309	
		11,26,572
Difference - - - *Rs.*		30,621

2,006 rupees of this may be accounted for by sale of waste lands separately shown in the accounts. Similar differences will be found under excise, &c.

10. The Financial Commissioner, in paragraph 13 of his letter, No. 771, already quoted, explains his inability to ascertain discrepancies by stating that no annual accounts are rendered to him by this office. None have been prescribed, nor, indeed, do any seem called for. The Financial Commissioner is, however, monthly furnished with a list of the credits recorded by this office, including corrective transfer entries, and thus possesses the whole material from which annual account could be made up. Occasionally the Financial Commissioner brings to notice discrepancies between the Deputy Commissioner's figures and mine; and these references always meet with prompt attention, the account of this office being amended when necessary. Presumably, when no discrepancy is pointed out, none exists, and it is not, therefore, clear why the annual figures of the Financial Commissioner do not agree with those of the finance and revenue accounts. It seems worthy of consideration whether any statements of revenue collections should be put forward in revenue or other reports, which are not verified in aggregate, if not in detail, with accounts rendered to Government by this office. This suggestion is made with a view to the amendment of practice for the future; it would be very troublesome, if practicable, to amend past returns.

11. The Financial Commissioner's remarks regarding the rates, &c., in force in 1858–59 apply, it has been ascertained, equally to 1856–57, the figures of which are included in the return now sent.

Docket from *W. M. Young*, Esq., Secretary to the Financial Commissioner, Punjab, to *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab (No. 300); dated the 22nd March 1872.

In reply to his reminder, No. 59, dated 6th current, states that the information called for in his No. 1051, dated 29th November last, regarding taxes levied in the Punjab, was supplied to the Accountant General with this office, No. 771, dated 1st ultimo, a copy of which is forwarded herewith.

From *W. M. Young*, Esq., Officiating Secretary to the Financial Commissioner, Punjab, to *R. Taylor*, Esq., Officiating Accountant General, Punjab (No. 771); dated the 1st February 1872.

In reply to your No. 5991, dated 20th November 1871, calling for explanation of rates, &c., required by paragraphs 4, 5, and 7, and of discrepancies referred to in the latter part of paragraph 8 of Financial Resolution, No. 4510, dated 23rd October 1871, I am desired to communicate the following remarks by the Financial Commissioner.

Para. 4.—Proportion of net assets of land taken as Imperial revenue to gross produce for the two periods previous and subsequent to 1858.

2. The assessment of land revenue in the Punjab was conducted in the manner described in directions to settlement officers, North Western Provinces, as far as was practicable, and thus it may be contended that the instructions of paragraph 52 of those directions, which limit the Government demand to two-thirds of the net produce to the proprietor, were the guide to the settlement officers. In practice, however, this rule was not followed. No

Appendix, No. 15.

strict calculation of the value of net produce was made, and the first assessments were based upon an estimate of what the village communities could pay, with reference to their previous assessments, their present condition, their resources, and the value of the share of the produce which was taken in kind under the Sikh government.

3. When the first settlements were made, agricultural interests were much depressed; and as many of the old Sikh soldiery belonged to the agricultural class, it was an object to frame the assessment in such a way that this class might obtain a fair livelihood from the soil on which they might support themselves contentedly.

4. The rates fixed at settlement in various districts were determined by general considerations rather than by fixed rules; and it would mislead to say that any fixed proportion of the net assets of the proprietors of the land were taken as the guide to assessment.

5. An estimate of the value of a share of the gross produce was made to assist the judgment of the settlement officer, but this was not closely followed.

In 1858-59 some districts were under settlement, some had been settled, and in others a summary settlement only had been made.

6. In letter No. 1687, dated 7th November 1860, the Punjab Government instructed the Financial Commissioner that in future assessments of land revenue were not to be made at a rate higher than "half assets," as defined in paragraph 36 of the Saharunpore instructions issued by the Government, North Western Provinces.

This rule has nominally governed assessments made since that time in the Punjab; but, owing to the land being for the most part cultivated by peasant proprietors, the difficulty of determining the amount of net assets is so great that the settlements cannot be said to have been made strictly upon this basis, though theoretically the principle of half assets has been taken to regulate the maximum.

7. The Punjab Land Revenue Act XXXII. of 1871 declares the Government to be entitled to a share of the produce of land to be fixed by itself, and this share has recently been fixed by the local government at one-sixth of the gross produce.

Average rate per acre of Government demand.

8. This cannot be given for the period previous to 1858, as no returns exist upon which it can be framed; nor is it ascertainable for the year 1870-71, as under orders of Government, No. 645 of 28th March 1870, the statement which would furnish the information has been omitted from the annual returns. For the years 1867-68 and 1868-69 the information is supplied in the following Table:

	1867–68.	1868–69.	1869–70.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*
Rate on cultivation	1 – 9	1 1 3	—
„ culturable area	– 10 4	– 10 2	—
„ total area	– 5 8	– 5 4	—

Para. 5.—Excise rate of duty and scale of license fees.

9. In 1858-59 excise on native spirits was realised by selling the monopoly of manufacture and vend to a farmer for a specified tract of country. The excise on the various preparations of hemp was realised by sale of the drug in a specified tract of country to a farmer, in the same way as the monopoly of native spirits. Opium was similarly treated, and the cultivation of poppy was unrestricted.

10. The Sudder district's system was introduced experimentally, in August 1862, in ten districts of the province.

A still head rate of duty per gallon was fixed at the following rates:

Rates of Duty on Country Spirits Manufactured in Sudder Distilleries.		License Fees for the Vend of Native Spirits.			
Spirits of Less Strength than 25 per Cent. below Proof.	Spirits of a Strength ranging from 25 per Cent. below Proof up to Proof.	If Granted in a Large City.	If in a Large Central Town and Site of Head Quarters of the District.	If in a considerable Town or Gashah.	If in a Village or inconsiderable Town.
1–8 rupees per gallon.	2 rupees per gallon	15 rupees per mensem, or 8 annas per diem, at the option of the vendor.	10 rupees per mensem, or 6 annas per diem.	5 rupees per mensem, or 3 annas per diem.	2 rupees per mensem, or ½ annas per diem.

In

In September 1865, these rates of still head duty were to *Rs.* 2. 2. 8. and 3 rupees for the Divisions of Rawul Pindi and Multan and the Hazara District, and these are still in force in those places. In the other divisions the rates of 1868 are still in force; no change has been made in the excise on hemp and its preparations.

11. In regard to poppy cultivation, an acreage rate was imposed in the year 1860 in the following divisions:

Ambala,	Amritsar, and
Jalandhar,	Lahor,

with the exception of the Simla and Kangra Districts, and this is still in force. In other divisions the cultivation of poppy is unrestricted. The amount of opium produced is small and is less than is ruquired for local consumption in the province. Most of the poppy cultivated is used for the infusion made from the capsules of the plant, and known by the name of *pôst.*

Para. 7.—Rates, &c. of assessed taxes.

12. The accompanying statement, marked A, shows all the particulars which can be furnished from this office regarding the rates at which these taxes have been levied from their first introduction.

Para. 8—Discrepancies in Finance and Revenue Accounts.

13. With regard to this point, I am to observe that as no annual statement of accounts is received in this office from you, it will be necessary for you to point out any discrepancies which may require explanation. The revenue returns are ascertainable from the annual revenue reports published after compilation in this office.

14. With regard to paragraph 2 of your letter, I am to forward a statement marked B, showing the information required.

ESTIMATED RECEIPTS for 1871-72, under the following Heads of Revenue.

Enclosure to Despatch No. 6, of 1873.

From *C. A. Elliott*, Esq., Secretary to the Government of the North Western Provinces, to the Secretary to the Government of India, Financial Department (No. 2782A.); dated 8th August 1872.

REFERRING to Resolution No. 4510, dated the 23rd October last, I am directed to forward, for submission to the Right Honourable the Governor General in Council, the accompanying copy of the papers, noted in the margin, containing the information required by the Parliamentary Committee of Inquiry regarding the rates and taxes, both imperial and local, now levied in these provinces, so far as it can be ascertained.

Forest Department Return, dated the 7th March 1872.
Memorandum, dated the 4th July, by the Board of Revenue, North Western Provinces, with Returns.

2. An explanatory memorandum by the Board of Revenue, North Western Provinces, is also enclosed.

Appendix, No. 15.

Forest Department, North Western Provinces.

Statement showing the Rates at which Timber and other Minor Forest Produce was sold during the Years 1858–59 and 1871–72.

No.	Articles.	Rate. Per	Rate. Years. 1858–59.	Rate. Years. 1871–72.	Amount realised between 1st April 1871 and 31st December 1871.	Remarks.
			Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*

Office of Conservator of Forests, North Western Provinces, 7 March 1872.

M. Grant, Assistant Conservator in Charge.

MEMORANDUM.

THE Government of India, in their Resolution No. 4510, dated 23rd October 1871, asked each of the local Governments for a return, for the use of the Parliamentary Committee of Inquiry, of all rates and taxes, both Imperial and local, now levied in India, distinguishing, in the case of Imperial taxes, those levied before from those levied since the transfer of the Government to the Crown; and, in the case of local taxes, those levied before from those levied since the introduction of the scheme of Provincial Services. The accompanying statements prepared in the Board's Office, in communication with the Accountant General, give the required information for North Western Provinces, so far as it can be given by the Board.

2. *Land Revenue.*—Statement I. shows the collections under this head for 1858–59 for all districts; Statement II. shows the collections for 1870–71; Statement III. shows the estimates for 1871–72. Statement I., it will be observed, is in less detail than the last two statements, the numerous headings now in use having been introduced in the interval between 1859 and 1870. The total income under the head of Land Revenue for the whole province, shown by these statements for each of the three years, is as follows:—

	Rs.
1858–59	3,72,30,341
1870–71	4,13,55,175
1871–72	4,13,65,000

The increase since 1858–59 is due to the revision of settlement, which has been and is still in progress.

3. Statement IV., shows in detail the incidence of the demand of the year upon each acre of the total assessable and cultivated area for 1851–52, and Statement V. gives the same information for 1870–71. The incidence for 1858–59 cannot be shown, because the necessary detail of cultivated and culturable area does not exist for that year. It will also be observed that Statement IV. is not quite complete, the information as to some districts being wanting; but it is as complete as it can now be made. Statement V. shows that the rate of incidence of the revenue demand per acre of cultivation in 1870–71 was *Rs.* 1. 10. 9. The rate for 1851–52, shown by Statement IV., is *Rs.* 1. 12., but this is somewhat above the mark. The districts for which information is wanting in that statement are those in which the revenue demand falls at a specially low rate; and if they had been included, the rate for the whole province would have been somewhat lower. If these districts be omitted from Statement V., the comparison will stand thus:—

	Rs. *a.* *p.*
Rate in 1851–52	1 12 –
„ „ 1870–71	1 11 4

This gives the ratio of the fall in the rate of incidence. This fall is the resultant of several conflicting forces. On the one hand there has been great extension of cultivation, and in the districts where revision of settlement has not yet been completed, the revenue demand, which has remained undisturbed, now falls on the cultivated area at a lighter rate than formerly. On the other hand, where revision of settlement has taken place, the revenue has generally been largely enhanced. But in these districts the revenue has not necessarily been enhanced in exactly the same proportion as cultivation has extended. At the last 30 years' settlement made under Regulation IX. of 1833, the Government took as revenue two-thirds of the net assets of an estate. At the present revision of settlement the demand has been limited to one-half. If, therefore, the rates of rent paid to the landowners by the cultivators of the soil had remained unchanged, the revenue demand, except so far as it might be raised by extension of cultivation, must have fallen to the extent of one-fourth. But the rates of rent have not remained unchanged. The spread of irrigation, the improvement of communications, the late rise in the prices of produce, have combined to enhance them. Thus, in spite of the lowering of the rate of assessment, the revenue demand has been increased in many districts in a larger proportion than the increase of cultivation, and it may be anticipated that when the revision of settlement is completed throughout the province, the rate of incidence of the revenue on the then cultivated area will not be lower than it was in 1851–52.

4. As regards the proportion which the land revenue bore in 1859, and now bears, to the gross produce of the land, it is not possible to give any very accurate information. Attempts have been made from time to time to obtain trustworthy returns of the gross produce of the province, but with little success. Such returns have to be based upon estimates of the average out-turn of the various crops per acre, and the out-turn of any crop varies so much from season to season, and from field to field, that the difficulties in the way of striking a trustworthy average for the whole province for a term of years are practically almost

Appendix, No. 15.

insuperable. Again, even if the gross produce in kind were ascertained, there would still remain the difficulty, owing to the frequent fluctuations in prices of produce, of estimating its average value in money, while without such an estimate, it is impossible to make an accurate comparison of the kind required. Without, however, venturing on calculations for which no trustworthy data exist, a rough approximation to the proportion between gross produce and land revenue may be obtained in the following manner. The average rent taken by the landowner of these provinces from the cultivator of the soil is believed to be equivalent to a share of the gross produce lying somewhere between one-third and one-fourth. At the last 30 years' settlement the Government took two-thirds of this, that is, something between two-ninths and one sixth, or 22 per cent. and 17 per cent. of the gross produce. But, between that settlement and the year 1859, the pressure of the demand, both on the gross produce and the net assets, was considerably lightened by the extension of cultivation and by the enhancement of rents above alluded to. At the present revision of settlement the Government takes half of the net assets, and the proportion of this demand to gross produce on the above calculation lies between one-sixth and one-eighth, or between 17 per cent. and 12 per cent.

5. *Excise Revenue.*—No detailed information exists as to the revenue under this head for 1859–60. In the Accountant General's Office the records show the excise receipts as follows:—

	Rs.
License and distillery fees and duty from the sale of liquors and drugs - - - - - - - -	20,49,766
Sale of opium - - - - - - - - -	2,39,300
TOTAL - - *Rs.*	22,89,066

Further detail than this cannot be given. Statement VI., supplied by the Commissioner of Excise, shows the receipts for 1870–71 arranged, as far as practicable, in the form prescribed by the Resolution, and in the column of remarks the reasons for deviation from the prescribed form are given, as well as further particulars.

Statement VII. shows the detailed estimates for 1871–72.

6. *Assessed Taxes.*—Statement VIII. gives a detail of the assessments, under the Income Tax Act XXXII. of 1860, for the year 1860-61. Statement IX. shows the assessments for 1870–71, under Act XVI. of 1870. Statement X. shows the estimated assessments for 1871–72, under Act XII. of 1871. The column of remarks in these statements shows the rate of the tax and the classification of incomes adopted in each year. This being an Imperial tax, it is unnecessary here to enter into any statement of its objects and reasons.

7. *Local Rates and Cesses.*—Statement XI. shows the actual collections under this head for the years 1869–70 and 1870–71. Statement XII. shows the estimates for 1871–72, distinguishing the cesses in temporarily and permanently settled districts, and showing in separate divisions the old cesses; and the new Statement XIII. gives the estimates for 1872 73.

It may be useful to state here briefly the history of these cesses since 1857, when the period of 30 years' settlements in the temporarily settled districts first began to expire. Previous to that time the cesses for which the landowners of the North West were liable, both in the temporarily and permanently settled districts (omitting the allowance to the patwari or village accountant which will be referred to hereafter), were as follows:—

(1.) Rates, amounting ordinarily to 2¼ per cent.* on the revenue in aid of the Road Fund, the School Fund, and the District Post. These rates were levied by executive orders only, not by any legal enactment.

* Viz., 1 per cent. road fund.
1 per cent. school fund.
¼ per cent. district dâk.

(2.) The provision of patches of land free of rent for the maintenance of the village chowkeedars or rural police.

When the revision of settlement began in those districts in which the term of the 30 years' settlement first expired, it was determined that the chowkeedars should in future be remunerated in money and not by land. At first it was proposed to regulate their number and pay by the number of houses in each village, the owners of each village paying for their own chowkeedars. But this system was found to press unequally on the landowners, and to be inelastic and unable to accommodate itself to the varying conditions of the country. It was accordingly proposed in 1865 to introduce a new system, viz., that of imposing—

(1.) A uniform municipal cess at the rate of 2¾ per cent. on the land revenue of all estates without exception, and

(2.) A house tax recoverable from the occupants, the income so obtained to be formed

formed into a district fund for the pay of the rural police, with a small surplus for district improvements.

Act II. of 1865 was passed to legalise this arrangement, but in 1866 it was discovered that the municipal cess of $2\frac{3}{4}$ per cent. on the revenue was inadequate for its purpose, and the rate was accordingly raised, under the orders of the local government, to $7\frac{3}{4}$ per cent. This cess, added to the old rates of $2\frac{1}{4}$ per cent. for roads, schools, and posts, mentioned above, raised the total amount of the cesses to 10 per cent. on the land revenue, and at that amount, and under those orders, they were assessed in every temporarily settled district which came under revision up to the year 1870.

8. In the permanently settled districts, in the period referred to above, it was found that the mode of provision for the village police by the grant of *jagírs* (patches of rent-free land) was very varying and inadequate, and the question arose as to the advisability of resuming the *jagírs*. These lands, either from original insufficiency or from subsequent encroachment or change, were found to be in many cases altogether insufficient to meet the object for which they were intended. The landowners had in many cases themselves resumed the lands originally assigned, granting in lieu of them payments in cash or portions of inferior land. Under these circumstances, it was thought advisable that a uniform system should be introduced, and the Government resolved that the *jagírs* should be commuted to money payments. With this view instructions were laid down in a Government Order of 5th June 1868, the value of the *jagír* itself, as opposed to a per-centage on the revenue, being declared to be the proper standard of commutation. The proceeds, however, of the commutation alone were found to be wholly insufficient for the purposes contemplated. The difficulty was to find a source from which to make up the deficiency. The house tax, legally leviable under Act II. of 1865, was extremely unpopular, and was never enforced, and little action was taken under the Government orders for commutation.

9. This, then, was the position of affairs in the beginning of 1870. In temporarily settled districts, where the term of settlement had not expired, or where, though it had expired, revision of settlement had not commenced, the old cesses and the old arrangements for the maintenance of the rural police were still in force. In temporarily settled districts, where revision of settlement was in progress, cesses amounting to 10 per cent. on the land revenue were being assessed, and, for the sake of easy collection, were consolidated with the revenue. In permanently settled districts the old cesses were still in force, and commutation of *jágírs* hung fire.

10. In 1870 the scheme of provincial services was taken up by the Government of India, and it became necessary for the local government to review the whole system of local taxation, and to devise some means of meeting the deficit of 46,000*l.*, which was expected to result from the introduction of that scheme. The question as to the means by which to meet this deficit was discussed by the Local Taxation Committee convened under the orders of his Honor the Lieutenant Governor. The committee, endeavouring to follow out the principle that the incidence of the taxation to be devised should fall as equally as possible upon the trading and the landed interests of the provinces, suggested the imposition of a license tax upon all trades and professions, and an acreage tax on all cultivated land. The results of their deliberations were, in a somewhat modified form, embodied in two Bills; the License Bill, to legalise the imposition of a duty on certain trades and dealings in these provinces, and the Local Rates Bill (Act XVII. of 1871), to provide for the levy on land of rates to be applied to local purposes. Subsequently, however, it was found that, owing to circumstances which need not be detailed here, the budget could be adjusted without having recourse to the license tax. The Bill was therefore withdrawn on the 1st April 1871, on which day the Local Rates Bill became law. Thus the whole burden of providing for the deficit fell upon the land.

11. The Local Rates Act provides separately for rates in temporarily settled and in permanently settled districts. In temporarily settled districts it provides that, after the expiry of the 30 years' settlement, every estate is liable to the payment of a rate not exceeding 5 per cent. on its annual value, "annual value" being defined to mean—

(1.) In cases in which the settlement is liable to periodical revision, double the amount of revenue for the time being assessed upon the estate.

(2.) In cases in which such settlement is not liable to revision, or in which the land revenue has been wholly or partially released, compounded for, redeemed or assigned, double the amount which, if the settlement were liable to revision, would be assessable as land revenue on the estate.

The Act also provides that in estates in which, before its passing, provisional engagements had been taken for the payment of the land revenue and cesses in one consolidated sum, and in which it may appear to the Lieutenant Governor inexpedient to cancel the engagements so taken, one-eleventh part of such sum shall be deducted on account of such cesses, and shall be treated in all respects as if it were a portion of a rate levied under the Act. Thus, by these provisions, in all estates which, up to that time, had come under revision of settlement, and in which cesses at the rate of 10 per cent. on the revenue had been assessed under the executive orders of 1866, the action of the settlement officers was affirmed by legal enactment, and the liability of all other estates, as their term of settlement fell in, to be assessed at the same rate was declared.

Appendix, No. 15.

"The Committee then proceeded to consider the question of the extension of the municipal and other cesses to districts in which the period of settlement, as determined in Regulation VIII., 1846, has elapsed, but in which regular revision of settlement has not commenced, when it was resolved unanimously,—That on and after the dates on which the settlement of the respective districts lapse, a summary revision, being an addition of the 10 per cent. to the existing demand in lieu of present cesses and remuneration of village watchmen, can legally be introduced, such per-centage being attached under the same heads as the per-centage of 10 per cent. similarly enforced under circular order, Sudder Board of Revenue, dated 13th June 1866, exceptional cases being disposed of on their merits."

12. Up to 1870, the practice had been, in the case of districts whose term of settlement had expired, but in which regular revision had not commenced, or, if commenced, had not been brought to a close, to defer the introduction of the 10 per cent. cess until such time as the elaborate inquiries connected with re-settlement could be completed, the landowners in the meanwhile continuing to pay cesses at the old rates. This delay necessarily caused a loss to the Government, and in the interval which elapsed between the submission of the report by the Local Taxation Committee and the final passing of the Local Rates Bill, measures were taken to give effect to the 6th Regulation of the Committee, marginally quoted. That is to say, it was resolved to effect a summary settlement of cesses calculated at the rate of 10 per cent. on the existing demands in such districts as those described above. At this time the temporarily settled districts of the North-Western Provinces fell into the following groups:—

I. Districts in which the term of settlement under Act VIII. of 1846 had not expired:—Mathúra (1871), Etáwah (1871), Moradabad (1872), Agra (1872), Hamirpur (1872), Parganah Kashipur (1872), Banda (1874).

II. Districts in which the term of settlement under Act VIII. of 1846 had expired, but in which regular revision had not commenced:—Cawnpore, Fatehpur.

III. Districts in which the term of settlement under Act VIII. of 1846 had expired, and in which a revision of settlement was in progress:—Aligurh, Bijnur, Bareilly, Shahjahanpur, Farukhabad, Etah, Mynpuri, Allahabad, Azimgurh, Kumaon, Pergunnah Jounsar Bawar.

IV. Districts in which revision of settlement had been carried out, and in which cesses aggregating 10 per cent. on the revenue demand were already in force:—Garhwal, Saharanpur, Bulandshahr, Meerut, Muzaffarnagar, Gorukhpur, Basti, Jhansie, Jaloun*, Lallatpur,* Budaon. Arrangements were at once made to assess the 10 per cent. cess on all estates in the districts composing Group II., and on such estates in the districts of Group III. as had not yet come under revision of settlement. So much for the provisions of the Local Rates Act as regards temporarily settled districts.

* These two districts were exceptionally circumstanced, the 10 per cent. cess having only been partially imposed at settlement.

13. In permanently settled districts, the Act provides an acreage rate not exceeding two annas for each acre under cultivation. The Taxation Committee, when considering the form which the taxation to be levied on land of these districts should take, had found three plans open to them. These were in the imposition of—

(1.) A per-centage or cess on the land revenue.
(2.) A rate on the profits from land.
(3.) An acreage rate.

The reasons which led to the adoption of the acreage rate in preference to the other alternatives were thus stated by his Honor the Lieutenant Governor at a meeting of the Council at Allahabad in April 1871:—"First, A per-centage on the land revenue would have been in no way distinguishable from an increase of revenue; and from such we are barred by the terms of the permanent settlement; besides, the revenue itself had long ceased to be an index of actual profits. The second plan, or a rate on profits, would have necessitated a difficult and complicated investigation into net income, and have opened a wide door to corruption and harassing interference. For all this the acreage cess is free; the amount is certain; there can be no extortion. Undoubtedly it will not fall equally, since the value of land varies; but we shall carefully watch its effects; where it presses heavily, it will be our part to ameliorate the pressure; and hereafter, if necessary, we may perhaps be able to profit by the experience of Bengal, should a corresponding tax be there imposed."

14. Under the provisions of the Act, the acreage rate is paid by the landowner, independently of, and in addition to, the land revenue assessed upon the estate; and he may recover from every tenant an amount equal to one-half of the rate assessed upon the land held by such tenant; where the tenant intercepts the larger portion of the profits, more than a moiety of, even up to, the whole rate may be recovered from him. The cesses previously in force in the permanently settled districts on account of schools and district posts are merged in and superseded by this new rate; but the road cess remains undisturbed. Finally, in July 1870, detailed instructions were issued for the guidance of district officers in the work of commutation of *jagírs*. The work was pushed vigorously forward, and is now approaching completion.

15. The above paragraphs give with sufficient detail the history of the introduction of the local cesses now existing.

16. *Patwari Fund.*—The only other cess upon land revenue is the Patwari Fund. In the temporarily settled districts, up to the time of the revision of settlement, and in the permanently

permanently settled districts, up to the present time, the patwaris and village accountants have been remuerated in money or in grain, by fees or by a lump sum, according to the ancient practice of the village. In those districts which have come under revision of settlement, a new system has been introduced by which the landowners are required to pay a sum amounting to 5 or 6 per cent. of the land revenue into a tahsil or district fund, from which the patwaris' salaries are paid by the revenue officials of the district.

17. The above are all the rates and taxes the control of which comes within the province of the Board of Revenue. The only remaining local rates and taxes in the North Western Provinces are the *Mnnicipal Rates and Taxes* levied under Act VI. of 1868, "An Act to enable better Provision for the appointment of Municipal Committees in the North Western Provinces and for other purposes," and *Taxes in Towns*, under Act XX. of 1856, "An Act to make better Provision for the appointment and maintenance of Police Chowkeedars in Cities, Towns, &c." The set of statements marked XIV., with its accompanying note, received from the Accountant General, North Western Provinces, gives information as to municipal rates and taxes for 1870-71 and 1871-72. Statement XV. supplies information as to taxes in towns under Act XX. of 1856.

REMARKS.

A. No excise duty is levied in the North Western Provinces on imported rum. Import duty is paid at the sea-port.

B. Still head duty is levied at the rate of 3 rupees a gallon of the strength of London proof.

C. The right of vend of taree is farmed out in those districts in which the palm grows that produces the juice.

D. In the Kumaon, Gurhwal, Jhansie, Jaloun, Lullutpore, and Ajmere districts, and the Chukratta, Jhansie, and Nusseerabad cantonments, the right of manufacture and vend of country spirit was farmed out during 1870-71. In the rest of the North Western Provinces the revenue from country spirit was raised during that period by a still head duty of one-eighth rupee a gallon irrespective of strength, the spirit being distilled in Government distilleries, and by license fees for retail vend varying from 12 to 240 rupees per annum. There was also a nominal fee of 1 rupee per annum for the right to distil in a Government distillery.
The limit of 240 rupees for a license for retail vend was removed from the 1st April 1871.

E. No duty is levied on unfermented liquors in the North Western Provinces.

F. No duty is levied on the import of ganjah into the North Western Provinces. The right to vend it is farmed with that of other drugs; receipts on account of it cannot, therefore, be shown separately.

G. This is the full price realised from the sale of Government opium at 16 rupees a seer. The discount on the sale of it at 1 rupee a seer amounted to *Rs.* 34,650. 12. 3., and its cost price at *Rs.* 7. 12. a seer (credited to the Government of Bengal) to *Rs.* 2,51,682. 9. 2.

H. Receipts for licenses for wholesale vend of English spirituous and fermented liquors - and of retail vend of such liquors - -

	Rs.	*a.*	*p.*
	1,829	11	2
	11,241	12	4
TOTAL - - -	*Rs.* 13,071	7	6

are included in the miscellaneous receipts.
The fees for wholesale vend are 16 rupees per annum; those for retail vend from 2 to 8 rupees per mensem.

C. W. Carpenter,
Officiating Secretary.

STATEMENT VIII.—*continued.*

in the Year 1860–61 in the NORTH WESTERN PROVINCES—*continued.*

TOTAL.					REMARKS.
Number of Parties Assessed.	DUTIES. At 3 per Cent.	At 1 per Cent.	At 2 per Cent.	TOTAL.	
	Rs. a.	*Rs. a.*	*Rs. a.*	*Rs. a.*	
28,957	2,81,337 13	94,012 9	1,16,728 14	4,92,079 4	The Acts under which the income tax was levied during the year 1860–61 were Nos. XXXII. and XXXIX. of 1860. For the purpose of assessment, incomes were classified under four schedules, viz.:—
1,138	13,127 6	3,170 8	4,504 –	20,801 14	Schedule I.—Profits arising from all lands and houses in India.
18,393	2,10,298 3	70,082 12	70,578 11	3,50,959 10	Schedule II.—Profits arising to any person residing in India from any profession, trade, or employment, whether the same shall be carried on in India or elsewhere, and for and in respect of all interest of money, annuities, and other annual profits not being Government securities.
29,031	3,01,258 6	1,00,171 15	1,14,289 7	5,15,719 12	Schedule III.—Profits arising from interest, annuities, or dividends, out of the public revenues of India; and
5,815	56,387 3	18,648 6	23,793 12	98,829 5	Schedule IV.—Every public office or employment of profit in India, and every office or employment of profit in or under any company in India, and upon every annuity, salary, or pension, payable to any person residing in India, or paid in India to or on account of any person whatever by the Government of India, except annuities charged to the duty under Schedule III.
32,907	2,72,917 4	97,043 –	1,12,549 5	4,92,509 9	
		Lump Assessment - -		80,000 –	Upon incomes or profits falling under the above, a tax of 3 per cent. was levied. Under Schedule III. of the Act, an additional duty of 1 per cent. was imposed on all incomes falling under the above schedules. The assessable minimum was an income of 200 rupees per year. A tax of 2 per cent. was assessed upon incomes falling within 200 rupees and 500 rupees per annum. There were thus three rates of assessment. The figures in the statement show the final assessment under all schedules at each rate of duty.

Board of Revenue, North Western Provinces,
Alllahabad, 4 July 1872.

C. W. Carpenter,
Officiating Secretary.

OCTROI DUTIES LEVIED BY MUNICIPALITIES IN THE NORTH WESTERN PROVINCES. Appendix, No. 15.

The return has been prepared under the following heads:—(1) Piecegoods and metals; (2) Food and other necessaries; (3) Other Merchandise, and (4) Cattle.

The rates differ in almost every municipality; the average duties, based on the schedule of the leading municipalities, will be noted hereafter.

(1.) In sanctioning the taxation of these articles, the Government of India provided that the maximum duty should not exceed *Rs.* 1. 8. per cent. *ad valorem.* Most Committees imposed the maximum rate, but some contented themselves with the levy of a duty of 12 annas per cent., and some have since reduced the rate to this figure. The average may be taken at from 1 to 1¼ rupees per cent.

(2.) Grain is taxed at from 3 pie to 2 annas per maund, the cheaper sorts, and those therefore most commonly consumed being assessed at lower rates; sugar and saccharine substances from 6 pie to 8 annas per maund, a differential scale being observed in this case also; bhoosa and fodder for cattle about 3 pie per maund, but this duty is generally levied on loads carried or drawn by bullocks, a rate of from 3 pie to 1 anna per bullock being levied, and tobacco from 2 to 8 annas per maund according as to whether it is green, or for smoking or chewing.

There are many other articles falling under this head, such as fruits, vegetables, milk, eggs, pan, honey, &c., &c., on which *ad valorem* rates are usually levied, ranging from *Rs.* 1. 9. to *Rs.* 3. 2., and in some cases even to *Rs.* 4. 11. per cent. The most common rate is, however, *Rs.* 1. 9. per cent., or 3 pie per rupee.

(3.) Under this head are included articles of fuel, lighting and washing, building materials and drugs, gums, and spices. The usual rate is from *Rs.* 1. 9. to *Rs.* 3. 2. per cent. *ad valorem.* Maundage rates are, however, generally levied on the *heavier* articles, such as fuel, wood used for building purposes, stone, brick, lime, country iron, &c., the duty ranging from 6 pie to 2 annas per maund.

(4.) The following rates on animals for slaughter have just been sanctioned for the five municipalities in the Allygurh district, and are fair samples:—

Appendix, No. 15.

OUDH.

From Captain *N. M. T. Horsford*, Junior Secretary, for Officiating Secretary to the Chief Commissioner of Oudh, to the Secretary to the Government of India, Financial Department (No. 3515); dated 5th August 1872.

WITH reference to the Resolution of the Government of India in the Financial Department, No. 4510, dated 23rd October last, I am directed to forward the following returns therein called for:—

1. Statement showing the revenue realised in the province of Oudh before the assumption of the direct Government of India by the Crown in 1859, together with the actuals of 1870-71 and the estimate for the year 1871-72. The proportions of the gross produce and the net assets of land taken as Imperial Revenue in the two periods, and the rate per acre at which the assessment falls on the land, are also shown.

2. The details of excise revenue asked for in paragraph 5.

3. Price list of produce in the Oudh forests, and statement of forest revenue in Oudh.

4. A detail of assessed taxes.

5. A statement of cesses on land revenue.

6. A return of receipts and expenditure on municipalities in Oudh during 1870-71 and 1871-72.

7. A memorandum showing the authority under which each tax is levied, and the objects to which it is applied.

8. As desired, copies of petitions regarding the imposition of rates and taxes for local purposes, received in the years of 1870 and 1871, are attached.

Appendix, No. 15.

STATEMENT showing the REVENUE realised in the Province of OUDH before the Assumption of the direct Government of India by the Crown in 1858, and of those of later Origin.

Description of Revenue.	Actuals of 1858-59.	Actuals of 1870-71.	Estimate of 1871-72.	REMARKS.
	£.	£.	£.	
I.—LAND REVENUE:				RATE OR SCALE.
Fixed Collections - -		1,315,614	1,066,483	Both in 1859 and now the land revenue is half or 50 per cent. of the gross rental or net assets. The proportion which it bears to the gross produce cannot be stated with any degree of certainty; but when rents are paid in kind, the rent is for the most part two-fifths of the produce, and therefore in such cases the land revenue, assessed at half the rent, would be one-fifth of the gross produce.
Surplus „ - - - -		- -	279,047	
Kham and Khas Mehal Collections - - - - -	535,712	5,378	7,807	
Sale proceeds of waste land and redemption of land revenue - - - -		3,329	4,850	INCIDENCE PER ACRE.
Miscellaneous - - - -		283	413	As the settlement operations of the province are not complete, it is not possible to state precisely what is the incidence of the revenue throughout the province; but by the returns for the year ending 30th September 1871, it was for 10 districts and portions of the remaining two districts.
TOTAL - - - £.	535,712	1,324,604	1,358,600	*Rs.* 1-14-6 per acre cultivated. „ 1- 5-9 „ „ and cultivable, *i.e.*, assessable. „ 1—10¾ „ total area.
II.—EXCISE REVENUE:			* Actuals of 9 months.	* The estimates for 1871-72 were— £. License fees - - - - 13,290 Still-head duty - - - - 59,930 Farming drugs - - - - 8,400 Sale proceeds of excise opium - 8,600 Fines, confiscations and miscellaneous 80
Spirits, viz.:				
Rum, imported - -		1,088	910	RATE OF DUTY.
„ Country - - -		—	—	Drugs, Charas - - *Rs.* 10 per seer. „ Bhang - - 1 to 8 as. per seer. Ganja grown in Oudh „ 2 per seer. Opium - - - „ 16 per seer. Still-head duty on country liquor, 1 rupee per gallon. Ditto - ditto - - ditto 12 annas per gallon.
Fermented Liquors - -		68,561	45,898	
Unfermented ditto - -		975	862	
Drugs other than Opium and Ganja - - -	14,804	4,578	3,552	LICENSE FEES.
Opium - - - -		9,979	6,463	On wholesale shop, at 2 rupees each. On retail vend at 8 annas to 2 rupees per diem upon each shop, and 250 rupees downwards per month. On wholesale vend of European manufactured liquor, at 16 rupees. On retail - ditto - ditto at 48 rupees, p. a. On drugs, at 1 rupee to 4 rupees.

Appendix, No. 15.

PETITION of Rajishar and Surajlal Chowdhris, Gunga Putrs, Residents of Oudh Khas; dated 2nd December 1870.

STATES that the Bhadders, residents of Bhaddria Talah, in Oudh, have in regard to Ramjanki, Basdeo, and Niaghâts (which are sold by public auction), preferred an appeal for the ancestral proprietary right before the Commissioner, but that the said ghâts are the ancestral zemindari rights of the petitioners; that the petitioners have held on for thousands of years; that they have thousands of gift deeds granted to them by the Talukdars and the Rajas. That the Bhadders' profession from the time (old) has been begging alms (oil and mash), in honour of the god Saturn, and dancing and singing. It was only once when the Government had imposed a tax on these ghâts that these Bhadders by misrepresentation had obtained a lease of 100 choukis of Janki and Basdeo ghâts direct from the Government, notwithstanding the petitioners themselves were ready to grant it; but after two years following the annexation of the province, they could not retain the choukis. They have no proprietary rights, and admit they never have held the choukis. Moreover, in no holy place, Prag, Kashee, &c., are the Bhadders other than *Gunga Putrs* in possession. The petitioners' suit is pending in the Settlement Court, and no decision has yet been passed. The Bhadders' object is, that before a decision is given by the Settlement Court, to get by deception an order from the higher authorities in their favour. The petitioners, therefore, with a view to prevent occurrence of such a mistake, have submitted this petition, praying that until final decision by the Settlement Court, no order in favour of the Bhadders' proprietary rights be passed: otherwise there will be a great injustice to the petitioners.

OFFICE MEMORANDUM by *H. B. Harington*, Esq., Officiating Secretary to the Chief Commissioner, Oudh.

THE local authorities, after searching inquiry, decided that the auction of choukis was a mistake, and the old practice has been reverted to.

From *R. Davis*, Esq., late Castor-oil Manufacturer, Lucknow, to the Secretary to the Chief Commissioner, Oudh; dated 9th March 1872.

I RESPECTFULLY beg to bring to notice that in the "Octroi Schedule" for the ensuing year now under review, the oil-seeds of all kinds are entered under one general head, including "castor-oil seed." The latter, it is well known, does not contain so much oil as the other kinds, and are not so profitable, being greatly mixed with dried-up and red seeds, causing much loss in picking and cleaning; besides this, the oil-cakes are not used, as is the case with the cake of other kind.

The duty on prepared oil brought into the station is only 4 annas per maund, whereas it stands me about 12 annas *as duty* for procuring so much seed as yields a maund in my own factory, which compels me often to stop work, and cause much inconvenience to the public; my present selling rate being just the same as it was in 1864, when the seed was cheaper and duty much lower.

Under these circumstances, I beg to submit my case and to solicit the favour of your laying it before his Honor the Chief Commissioner for favourable consideration, in the earnest hope that the castor-seed may be separated from the other oil-seeds in the Schedule, and the duty reduced.

MEMORANDUM by *H. B. Harington*, Esq., Officiating Secretary to the Chief Commissioner, Oudh.

ON the report of the Commissioner and Deputy Commissioner, the duty was lowered from *As.* 2-6 to *As.* 1-6 per maund.

W. Stenhouse, Captain,
Officiating Conservator of Forests, Oudh.

POLITICAL ADMINISTRATIONS UNDER THE GOVERNMENT OF INDIA,
Except AJMERE, viz.:—BHOPAL, COORG, and INDORE.

From *W. Biss*, Esq., Assistant Comptroller General of Accounts, to the Secretary to the Government of India, Financial Department (No. 7001); dated Calcutta, the 12th March 1872.

I AM desired to submit the statements called for in Resolution No. 4510, dated 23rd October last:—

PART I.

RETURN required by Resolution, Financial Department, No. 4510, dated 23rd October 1871.

LAND REVENUE.

DISTRICTS.	Gross Produce.			Net Assets taken as Revenue.			Rate per Acre of Government Assessment.	REMARKS.
	1858–59.	1870–71.	Estimate, 1871–72.	1858–59.	1870–71.	Estimate, 1871–72.		
				Rs.	*Rs.*	*Rs.*	*Rs. a. p.*	
Bhopal	- -	- -	- -	81,676	- -	- -	– 15 3	Pergunnah Bairseeah, from which this revenue was derived, was made over to the Begum of Bhopal in 1870.
Coorg	- -	- -	- -	1,33,384	2,29,458	2,42,600	3 5 4	This rate is on rice lands.
Indore	- -	- -	- -	- -	4,280	5,800	- - -	In the absence of a survey the rate per acre cannot be given. The rates in force are for ordinary villages (dry land) *Rs.* 1. 5. per acre.
TOTAL	- -	- -	- -	2,15,060	2,33,738	2,48,400		

EXCISE REVENUE.

DISTRICTS.	Imported Rum.			Country Rum.	Fermented Liquors.			Unfermented Liquors.			Drugs, including Gunja and Opium.		
	1858–59.	1870–71.	Estimate, 1871–72.		1858–59.	1870–71.	Estimate, 1871–72.	1858–59.	1870–71.	Estimate, 1871–72.	1858–59.	1871–72.	Estimate, 1871–72.
	Rs.	*Rs.*			*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Coorg - - -	32,029*	–	–	–	–	3,408	4,000	–	1,27,844	1,07,000	–	642	900
Indore† - - -	–	93	–	–	26,590	37,717	43,600	2,511	792	- -	2,678	3,560	—
TOTAL - - -	32,929	93	–	–	26,590	41,125	47,600	2,511	1,28,636	1,07,000	2,678	4,202	900

* The excise was farmed in 1858–59; hence this represents the entire revenue derived, as details are not forthcoming.

† There is no duty on fermented liquor; the toddy trees are leased by auction. License fees are levied from shops in which European liquors are sold, 240 rupees per annum being the rate for each wholesale shop, and 120 rupees per retail shop. Retail licenses to sell country liquor in towns are sold annually by auction. In 1870–71 the bids ranged from 71 rupees to 1,602 rupees. In villages the rates of license fees are 15 to 20 rupees per annum. The rates of duty cannot be given for Indore, as the licenses are farmed.

FOREST REVENUE.

DISTRICTS.	1858–59.	1870–71.	Estimate, 1871–72.	REMARKS.
	Rs.	*Rs.*	*Rs.*	
Coorg - - - -	35,626	74,092	80,000	Teakwood was sold in 1870–71 at from 47 rupees to 63 rupees per ton; sandalwood from 320 rupees to 400 rupees per ton; other timbers from 9 rupees to 40 rupees per ton.
Indore - - - -	- - -	3,108	2,000	Charcoal at *Rs.* 1. 14, and firewood at 10 annas per ton.
TOTAL - - *Rs.*	35,626	77,200	82,000	

ASSESSED TAXES.

Assessed taxes - - -	- - -	3,86,359	3,78,000	In 1870–71 income tax was assessed at the rate of 3⅛ per cent., and in 1871–72 at 2 pies per rupee. In 1871–72, 78,000 rupees have been estimated on account of tax levied on interest payments at the Bank of Bengal. In the previous year the income from interest on promissory notes was chargeable as a part of general income only.

Appendix, No. 15.

TRIBUTES and CONTRIBUTIONS from NATIVE STATES.

	Actuals. 1858-59.	Actuals. 1870-71.	Regular Estimate, 1871-72.	REMARKS.
Tributes.	*Rs.*	*Rs.*	*Rs.*	
Oodeypore	2,36,346 [a]	-*	2,00,000	[a] Includes first instalment of 1858-59 and arrears.
Boondee	65,000 [b]	-	1,20,000	[b] The tribute was in arrear in 1858-59.
Kotah	- [c]	-	2,43,660	[c] The amount of this tribute is 1,84,720 rupees. It was wholly in arrear in 1858-59, and the excess collections in 1871-72 represent arrears also.
Banswara	27,387 [d]	-	39,129	[d] The tribute payable by this State was fluctuating.
Doongurpore	13,694 [e]	-	27,400	[e] This is the first instalment, the second credited in the following year.
Jeypore	2,64,999 [f]	-	4,00,000	[f] Includes first instalment and arrears.
Joudpore	800 [g]	-	1,08,000	[g] 97,200 rupees for Gwalior Contingent credited under debt, and 10,000 rupees remission for Omercote District not adjusted.
Jhalwar	- [h]	-	80,000	[h] In arrear.
Holkar	-	3,061 [i]	800	[i] Annual demand is 768 rupees—realisation in 1870-71 include arrears.
Mundy	67,000	-	-	Transferred to Punjab.
Chumba	10,000	-	-	Ditto - ditto.
Sokeit	7,500	-	-	
Nizam's Government on account of Mahratta choute.	1,08,108	1,08,108	1,08,108	
Petty States.				
Tehree	5,562	—	—	
Loodeepoorah	4,479	—	—	
Petty States in North Western Provinces.	1,396	—	—	
Ditto Punjab	15,436	—	—	
Kelcheepore	-	12,912	12,920	In 1858-59 shown under debt (Scindiah's Government on account of Gwalior Contingent), and subsequently transferred to the head tributes.
Rutlam	-	44,268	86,772	The estimate of the Rutlam State for 1871-72 includes recovery of arrear tribute, 21,252 rupees on account of 1870-71, while those of the Sillana and Amjeera States show the annual demand of tribute to be realised from them.
Sillana	-	26,650	32,760	
Amjeera	-	27,027	34,400	
Serohi	2,657 [k]	-	6,881	[k] 2,657 rupees are on account of arrears. Tribute due for this year, 7,500 rupees credited in 1859-60.
Shaahposra	-	-	10,000	
TOTAL	8,30,364	2,22,026	15,10,830	
Contributions from Native States.				
Joudpore	1,15,000	-	1,17,432	The difference in the first column as compared with that of the second is on account of arrears.
Bhopaul	3,43,004	1,81,819	1,82,000	
Oodeypore	36,542	-	50,000	
Holkar	-	2,38,152	2,38,152	Annual demand is 2,38,152 rupees. In 1858-59 shown under debt (Malwa Contingent).
Kotah	-	-*	2,00,000	* Credited in the following year.
Allirajpore	-	1,474	1,474	Annual demand is 1,474 rupees.
Dewus	41,278	37,150	33,000	Annual demand is 33,000 rupees. Excess recovery in 1858-59 and 1870-71 was on account of arrears.
Dhar	7,862	19,656	19,700	Annual demand is 19,656 rupees. Less realised in 1858-59.

* The tributes and contributions of the Rajpootana States for 1870-71 were credited in the books of the North Western Provinces.

Tributes and Contributions from Native States—*continued.*

	Actuals. 1858-59.	Actuals. 1870-71.	Regular Estimate, 1871-72.	Remarks.
Contributions from Native States—continued.

* At various rates not exceeding one rupee on each house.

† At 1 per cent. on original cost of tank.

Memorandum to Accompany Part II.

The cesses on land revenue are levied under the orders of Government, North Western Provinces, in regard to the conduct of settlements, the receipts of the Road Fund are applied to the maintenance and repair of district roads and those of the Putwarri Fund in the payment of the wages of village putwarrees.

The house tax is levied under Act XX. of 1856 and III. of 1869. The produce of the tax under the former is applied to the maintenance of police in towns, and to conservancy and improvements, and under the latter to the maintenance of rural police.

The tank collections are made agreeably to orders of Government, North Western Provinces, and are applied to the maintenance and repair of reservoirs, &c.

The sum shown as "octroi on food and other necessaries" includes a small sum on account of tax on building materials, and the like. The tax is levied under Act VI. of 1868, and the proceeds are devoted to various municipal purposes.

The Abkaree collections, &c. in Bhopal are the collections made in the Sehore Cantonment, and are allowed by the Begum for municipal improvements.

The ferries in Coorg are leased on contract. The other taxes are levied under the orders of the Chief Commissioner, and the income is devoted to construction and repair of roads, &c.

There has been no addition to the local taxes since 1870–71, nor have the rates at which they were levied in that year been altered.

Appendix, No. 15.

BRITISH BURMAH.

From *C. B. Cooke*, Esq., Officiating Secretary to the Chief Commissioner, British Burma, to the Secretary to the Government of India, Financial Department (No. 1374—135); dated 25 October 1872.

I AM directed to acknowledge the receipt of your Department Resolution, No. 4510, dated 23rd October 1871, requesting that a return of all imperial rates and taxes now levied in this province may be submitted, distinguishing the rates and taxes levied before from those levied since the transfer of the Government of the Indian territories to the Crown, and giving the amount of the produce of each rate or tax.

A. Detailed statement of imperial rates and taxes for 1858–59 and 1871–72.
B. Abstract of imperial rates and taxes for 1858–59 and 1871–72.
C. Statement showing the net revenue on account of local rates and taxes for 1870–71 and estimates for 1871–72.

2. In reply, I am directed to submit a copy of letter No. 2722, dated 13th September 1872, from the Officiating Deputy Accountant General, together with copies of its enclosures, containing Statements A, B, and C, as noted in the margin. It may be observed that the produce of each tax in the year 1871–72, as given by the revenue authorities, and the amounts shown in the finance and revenue accounts, do not agree, and district officers have been requested to furnish, if possible, an explanation of these discrepancies; but to obviate further delay, the Chief Commissioner directs the submission of the returns in question without the information which will be forwarded hereafter when received. As regards the figures for the year 1858–59, it may be remarked that Mr. Rule states that "this office cannot certify in accordance with paragraph 8 of the Financial Resolution, as the accounts prior to 1864–65 are in the office of the Accountant General, Bengal."

3. The statements called for in paragraphs 12, 13, and 14 of your Resolution under acknowledgment will be found in the Return C. I am, however, to point out that in one or two cases the authority under which certain rates or taxes are levied has been incorrectly given by the Deputy Accountant General; for instance, Act XIV. of 1856 is given as the authority under which municipal taxes are levied, whereas that Act has never been authoritatively extended to any town in British Burma, and such taxes are levied merely under local rules of very doubtful legality; this, however, is about to be rectified, as a Municipal Bill has been prepared and submitted to the Government of India, in the Department of Agriculture, Revenue, and Commerce, by means of which the Chief Commissioner hopes to establish properly constituted municipalities in all the more important towns in the province.

4. District officers have been requested to submit returns showing the actual receipts for the years 1870–71 and 1871–72, as well as the estimated receipts for the year 1872–73 in the forms attached to your circular letter No. 2017 of the 17th August last, and the authority under which each local rate or tax is levied will then be correctly shown, but it is to be feared that there may be some discrepancies between the figures then submitted and those now given in Statement C.

5. With reference to paragraph 18 of your Resolution under reply, I am directed to say that, as far as the Chief Commissioner is aware, no petitions from any persons in British Burma, regarding the imposition of rates and taxes for local purposes, have been presented during the years 1870 and 1871 either to the Supreme Government or to the local Administration.

From *E. Rule*, Esq., Officiating Deputy Accountant General, British Burma, to the Assistant Secretary to the Chief Commissioner, British Burma (No. 2722); dated 13 September 1872.

A. Detailed statement of imperial rates and taxes for 1858–59 and 1871–72.
B. Abstract of imperial rates and taxes for 1858–59 and 1871–72.
C. Statement showing the net revenue on account of local rates and taxes for 1870–71 and estimates for 1871–72.

WITH reference to your letter No. 436-420 (Revenue Department, Miscellaneous), dated 14th November 1871, forwarding copy of a Financial Resolution of the Government of India, No. 4510, dated 23rd October last, calling for a return of local and imperial rates and taxes levied in British Burma, I have the honour to submit herewith Statements marked A, B, and C, as marginally noted.

The information contained in the imperial rates and taxes is for the years 1858–59 and 1871–72, and are for the following heads of service:—Land revenue, excise, forests, and assessed taxes, and have been prepared in accordance with paragraphs 3 to 7 of the Resolution, as far as the said instructions are applicable to this province.

I regret to observe that the amount of revenue as given by the district officers does not in any one instance correspond with that shown in their cash accounts and recorded on the books of this office, although specially directed to agree in their returns. I append a statement of discrepancies more and less in the district returns with that credited in the books of this office for the year 1871–72. Further, the returns do not give, in many instances, the number of persons holding land, the value of produce of land per acre, the net assets of land.

In respect to the year 1858–59, this office cannot certify in accordance with paragraph 8 of the Financial Resolution, as the accounts prior to 1864–65 are in the office of the Accountant General, Bengal.

I regret

I regret the delay in the submission of the returns, but this office has been compelled to return the first returns submitted by the district officers, as some gave the information for 1856-57, others 1857-58, others 1858-59, and one the calendar years 1859 and 1871. This office prepared the form which is now submitted, and called upon the district officers to be careful in giving the correct information; but this has not been done in any one instance. I submit the compilation of the district returns as they have been received from the officers concerned, and will call for fresh returns, namely for the years 1856-57 and 1870-71, as these are the years which were examined by the Finance Committee in London; and further, as the officers will now go over fresh ground, and will possibly be more correct in giving the information. No form was submitted with the Financial Department Resolution, but this office was of opinion that the particulars called for were sufficient. Appendix, No. 15.

Great pressure of other work in this office prevented me from going into each district return when received, but I will in the fresh returns go over each item as soon as the statements are received from the districts.

With respect to Statement C (local rates and taxes), I beg to state that the revenue entered therein is correct, and that all the information available in this office is duly given.

In advertence to paragraph 19 of the Resolution, I beg to report that Treasury Officers have stated that no petitions have been addressed to the Supreme and Local Legislative Councils regarding the imposition of rates and taxes for local purposes, nor am I aware of any such petitions.

British Burmah.
